J. Q., Tavistock.—A writer in *Scientific American* of Oct. 7 states that the gall of the rattlesnake is an infallible cure for the bite of that reptile. Please answer through your valuable paper whether there is any foundation for this statement. Ans. We never heard of the remedy. The note in the *Scientific American* is from a Mexican correspondent, who says: "What I know from my own experience to be an infallible cure is the gall of the snake itself. One drop of it on the wound will effect a cure, even when inflammation is far advanced. I have seen a dog treated whose head had already swollen to twice its natural size, and I cured him almost instantaneously. The gall may be preserved in alcohol, or even dried, requiring in the latter case only to be moistened with saliva alone between two stones will do. (I have seen a case of this kind.) If preserved in alcohol, of course the whole bag of the gall is put into the liquid entire."  
J. B., West Park, N. Y.—Please inform me through your Answers to Correspondents: 1. What conditions are necessary for the thriving of wild rice, and would it grow in a lake with lily-padded borders, and a muck and rotten vegetation bottom, and if so would it interfere with the black bass fishing? Will it spread from year to year or will it die out, and when should it be planted, spring or fall? 2. Can hunters come from Dutchess county and carry off our game (Ulster county)? 3. What is the lowest figure that decoy ducks can be obtained, and of whom? Ans. 1. Wild rice should be planted in the fall as soon as the seed can be obtained. It is perennial and under favorable conditions will rapidly spread. It would be more likely to improve your bass fishing than otherwise, as it would in various ways increase their food supply. We see no reason why it should not do well in your lake. 2. There is nothing to prevent. 3. Write some of the advertisers whose names you will find in our columns.

FROM the first issue of this paper it has been used, and for nearly twenty years this particular space has been occupied by  
**ABBEE & IMBRIE,**  
who now say that they have given up advertising at least for the present.

**Sportsmen's Goods.**  
**FERGUSON'S PATENT REFLECTING LAMPS,**  
THOMAS J. CONROY, Sole Agent,  
310 Broadway, New York.  
With Silver Plated Locomotive Reflectors  
and Adjust-able Attach-ments.  
  
**UNIVERSAL LAMP,**  
For Sportsmen's use. Combines Head Jack (Front and Top), Boat Jack, Fishing, Camp, Belt and Dash Lamp, Hand Lantern, etc.  
**EXCELSIOR LAMP,**  
For Night Driving, Hunting, Fishing, etc. is adjustable to any kind of dash or vehicle. Send stamp for illus. Catalogue, and address all orders Lamp Dept.  
**BARGAINS IN GUNS.**  
1 Remington Mid-Range Target Rifle, .40-50, Vernier and wind gauge sights, octagon barrel, pistol grip, shotgun butt, lbs. weight. Price \$15.  
12-gauge Winchester repeating shotgun, new gun, perfect order. Price \$16.  
1 Scott & Son 10 gauge double gun, side snap, 32in., 10lbs., rebounding locks, straight grip, laminated steel barrels. Cost \$125. Will sell for \$50.  
**J. P. DANNEFELSER,**  
9 Chambers street, New York.

**Modern Training,**  
Handling and Kennel Management.  
By H. WATERS.  
A comprehensive and practical guide to the training, care, management and breeding of old dogs. Cloth, 373 pages. Price \$2.00.  
Forest and Stream Pub. Co., 318 B'way, N. Y.

**Guns, Revolvers, etc.**  
**CHEAPEST HOUSE**  
IN AMERICA FOR  
**GUNS! GUNS!!**  
  
AGENT FOR  
Remington, Parker, L. C. Smith, Lefever, etc.  
**THE H. H. KIFFE COMPANY,**  
473 Broadway, - New York.  
Catalogue free. Mention Forest and Stream.

**WM. R. SCHAEFER & SON,**  
Manufacturers and Dealers in  
**FIRE ARMS, FISHING TACKLE and BICYCLES.**  
Gun stocks bent, more crook or straightened and warranted to stay. Barrels chokebored, rust spots bored out and barrels re-browned. Gun stocks made to order; all kinds of Gun, Rifle and Revolver work performed.  
61 ELM STREET, BOSTON, MASS.  
**SHOT SPREADERS**  
make full chokes scatter more than a cylinder, 12-gauge only at present. Free circular and sample.  
WILKINS & CO., 97 West Kinney St., Newark, N. J.

**For Sale.**  
**TROUT FOR SALE.**  
YEARLINGS of the Brook Trout, Lake Trout, Brown Trout, California Trout & Landlocked Salmon.  
**EGGS AND FRY**  
of the same in season. For information inquire of J. ANNIN, JR., Caledonia, Livingston Co., N. Y.  
**FERTILIZED BROOK TROUT EGGS** and EX-cel-lent young fry for stocking, in season. Address TROUTMERE, Osceola Mills, Wis.  
**LIVE WHITE HARES** (*Lepus americanus*) captured and properly boxed and delivered to express in Bethel, Me., in good condition on receipt of orders and remittances at \$3 per pair. Refer to Hon. H. O. Stanley, Dixfield, Me., Fish and Game Commissioner. I. G. RICH, Bethel, Me.  
**FERRETS.**  
Old and young stock now on sale. Our celebrated handbook "All About Ferrets and Rats," mailed anywhere on receipt of 25cts. ADOLPH ISAACSEN & SON, 82 Fulton st., N. Y. city. Trade mark "Sure Pop."  
Lincoln Jefferies hammer gun, 10.32, 14.3. Good condition. Splendid duck gun, \$50. E. Norris, 718 Girard Building, Phila. 21  
For Sale.—W. W. Greener hammerless, 2 sets barrels, 10 and 12-ga., \$325 grade, \$100. 2 well broken English setters, both retrieve. H. D. Ogden, Chatham, N. J. 21  
For Sale.—\$100 Lefever hammerless, fine condition, 10-30-3½ for \$45. John Feulner, Unadilla, N. Y. 21

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NEMSUUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankee Land. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales.

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 200 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, \$7. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERCIER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/2. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition, Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

THE ILLUSTRATED CATALOGUE OF FOREST AND STREAM BOOKS WILL BE SENT FREE.

# FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, DECEMBER 2, 1893.

VOL. XLII.—No. 22  
No. 313 BROADWAY, NEW YORK.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

WE KNOW IT for we have much of the material already in hand and you believe it for you reason from the past, that the "Forest and Stream" this winter will be richly freighted with good things to read. But that friend of yours, with tastes like your own, does not realize what he is losing when he misses the paper. Give us his address and we will send him a complimentary copy. It will open his eyes.

*Our harvest being gotten in, our governour sent four men on fowling, that so we might after a more special manner rejoice together, after we had gathered the fruit of our labours; they four in one day killed as much fowl, as with a little help beside, served the company almost a week, at which time amongst other recreations, we exercised our arms, many of the Indians coming amongst us, and amongst the rest their greatest king Massasoit, with some ninety men, whom for three days we entertained and feasted, and they went out and killed five deer, which they brought to the plantation and bestowed on our governour and upon the captain and others.*—LETTER OF EDWARD WINSLOW, 1621.

## THE PILGRIMS' THANKSGIVING TURKEY.

THE observance of a day of thanksgiving had its origin very early in the beginning of New England. Barely a year had elapsed after the landing at Plymouth Rock, when Governor Bradford issued the first proclamation for the setting apart of such a day. The Indians had shown the new-comers how to manure their lands "with herrings or rather shads, which we have in great abundance, and take with great ease at our doors," and plentiful crops had been gathered. In November the ship Fortune arrived with a reinforcement of thirty-five colonists. There was abundant reason for the Governor's command. The 13th of December, 1621, was made a day of rejoicing; and the delectable custom of feasting on Thanksgiving turkey was instituted there and then.

The Pilgrim Fathers were sportsmen—not, perhaps, "true sportsmen" according to the highly artificial code we have developed, but sportsmen according to their lights in that day and generation. "Let your shot be most for big fowls, and bring store of powder and shot," wrote Edward Winslow to his friends in England in 1621. "Bring every man a musket or fowling-piece; let your piece be long in the barrel and fear not the weight of it, for most of our shooting is from stands." No shooting flying nonsense there we may well believe. It was meat the Pilgrim Father was after when he rested his piece, braced himself for the shock of the recoil, then pulled himself together and chuckled as he saw the devastation wrought by the swan-shot. Amid the hardships and dire privations of the planting of the colony—forty-six of the one hundred and one settlers, be it remembered, died in that first winter—there was no time nor thought for the fine frills of the art. He was the best sportsman who could show the most for it; and one of these days it will be in order for some appreciative student of colonial history—Rowland E. Robinson for example—to tell us how considerable and important was the part taken by these grim old Puritan sportsmen with their heavy-weights long in the barrel, in the establishing of Plymouth Plantation.

There was game galore in those days. "And now," writes Bradford, "began to come in store of fowle as winter approached, of which the place did abound when they came first (but afterward decreased by degrees). And besides water fowle ther was great store of wild turkies, of which they took many, besides venison, etc." That was written in 1621, and there you have, more than two hundred years ago, the noted beginning of game decrease

in America; a subject on which, no doubt, these first comers waxed eloquent in their old age, when they took to recounting old times to their grandchildren, and one as well, upon which every descendant of the Pilgrims may wax eloquent in our own day as he tells his grandchildren what duck shooting was when he was young.

The wild turkey indeed has been obliterated, not only from the bounds of Plymouth Plantation, but from New England. Some affirm that still he may be found in the wilder parts, the skulking survival of a noble race; but no Massachusetts sportsman of 1893 would dream of going out to shoot a wild gobbler for his Thanksgiving dinner, as did the men of Plymouth in 1621. To the "great store" in those early days does a grateful nation owe the blessed institution of Thanksgiving turkey. The name of the sportsman who shot the game for that first feast of rejoicing has been lost in the lapse of time, but if ever turkey hunter hunted better than he knew it was this man whose hunting and whose home-bringing set the pattern for the Thanksgiving feasting of 101 those hundreds of years. The wild turkey of New England has perished from the face of the earth, but he has left an indelible impress upon the Thanksgiving platters of a nation, and for this achievement the bronze plumage of the Pilgrim bred will shine for all time glorified as with the sheen of pure gold.

## THE COAST FISHERY CONFERENCE.

WHAT are the causes of the prevailing scarcity of food fishes in Atlantic Coast waters? What can be done to remove the destructive agencies and to restore the fisheries? These are questions which have been forcing themselves with growing insistence upon the attention of fishermen for months past. That the time is ripe for their consideration is demonstrated by the communications which are pouring in upon the New York Fish Commission in response to their circular published in our columns last week calling for a conference on the subject.

The meeting will be held in this city on Dec. 13. It will be attended by representatives of the United States Fish Commission, the Fish Commissioners of Maine, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia and North Carolina, the last two States having been included on the suggestion of United States Commissioner MacDonald. Fish protective societies, angling clubs and individuals will be represented. It is but fair to assume that the menhaden fishermen and the pound men will be there and give their side of the case.

The investigation is one which cannot be completed in a day; this conference of Dec. 13, let us hope, will only mark the beginning of a movement which shall not be abandoned until the important purpose declared by the projectors shall have been secured.

## AN IMPORTANT POWDER TEST.

WE print to-day the first portion of the report by Mr. Armin Tenner on the gunpowder tests recently conducted by him. The introductory paper is preliminary to the actual figures of the test; it deals with certain fundamental principles of the science of shooting; and like the entire report it is deserving of careful study. The conclusion of the report will be given in succeeding issues.

These tests by Mr. Tenner and the experts who acted with him are the most thorough, intelligent, comprehensive and exhaustive public trials of sporting gunpowder ever made in this country. The conditions attending them were such as to command confidence in their impartiality of conduct and correctness of conclusions. The trials are timely and meet a recognized demand.

Popular knowledge has by no means kept pace with the introduction of new and novel explosives. Sportsmen have had put into their hands compounds, of the constituents and properties of which they know absolutely nothing, beyond the bare statements of the manufacturer. The powders have been taken on trust; and their use has of necessity been in large measure experimental and uncontrolled by any adequate comprehension of governing principles. Under such circumstances, Mr. Tenner's report published in the FOREST AND STREAM will be welcomed by the shooting public; and we may expect not only that it will materially add to popular information on the subject of explosives, but that it will lead as well to a more reasonable and intelligent use of gunpowders.

Mr. Tenner's name is not unfamiliar to the readers of our shooting columns, to which he has been a frequent

contributor. Born in Thuringia, Germany, Mr. Tenner came to this country at the age of seventeen, enlisted in the 11th Missouri Volunteers, and at the close of the war took up his residence in Cincinnati, where he was connected with the German press. He was one of the organizers of the Cincinnati Acclimatization Society and the Cincinnati Zoological Gardens, serving as secretary of both these institutions and as manager of the Gardens. Going abroad as manager of the International Telephone Company, he secured franchises for the operation of telephone exchanges in Russia, Italy, Switzerland and other European countries.

Always interested in guns and shooting, he indulged his bent in that direction, and of late years has been active in promoting the popularity of trap-shooting in Germany. He was long a director in the German Shooting Association, and acted as manager of their tests of arms and powders. Concluding at length that, as he puts it, Germany was too small a country for him, Mr. Tenner came back to America, bringing with him a fine set of the most approved ballistic instruments of the day; and as he has already stated in our gun columns, he proposes to establish here a proof house for the test of firearms, on the plan which has proved so popular and so useful under his management abroad.

## THE RACCOON.

NO LONG description is needed to introduce to our readers the raccoon, figured in our animal supplement of today. Almost every man and boy in the country knows the coon, and most of them have had the pleasure of hunting it in the moonlight nights of the late autumn and early winter.

The raccoon belongs to the group of split-footed carnivores known as the *Arctoidea*, or bearlike animals, and is in the same family with the coati-mundis of South America, which are often seen in menageries, and may be recognized by their peculiarly long snouts and their long ringed tails. Its nearest relation in the United States is the raccoon-fox or *Bassaris* of the Southwest. There are two species of raccoons in North America and one in South America. The two first are known as *Procyon lotor* and *hernandezii*, and the South American form, the crab eater, is *Procyon cancrivorus*. This is somewhat larger than the common North American animal, but as its fur is much shorter, it does not appear to be so large.

The coon is distributed over the whole of the United States wherever forests grow, and we have also seen its track along streams on the great plains where the only timber consisted of an occasional cottonwood in the river valley. It is especially abundant in the South, and in that section is eagerly pursued by the negroes, who hunt it with dogs, driving it into a tree from which it is then shaken out, or, if the tree cannot be climbed, shot; or the tree is felled. The same method of pursuit is followed in the New England and other States.

The coon is readily tamed and becomes an amusing pet. As it gains confidence, however, it is likely to be troublesome, for its capacity for mischief is unlimited.

Past numbers of the FOREST AND STREAM have had numerous accounts of the pains and pleasures of coon hunting, and to these the readers who are not familiar with this fascinating sport are referred.

This number contains as an illustrated supplement a portrait of the Coon, drawn by Mr. Ernest E. Thompson. This is the third in a series of four. Those already printed are: The Moose, Oct. 14, 1893; Woodland Caribou, Nov. 11. The last one will be of the Virginia Deer, Jan. 6, 1894. The dates of the former series, of which copies can be supplied, are as follows: Sept. 8, 1893, The Panther. Oct. 6, The Ocelot. Nov. 3, The Canada Lynx. Dec. 1, The Bay Lynx. Jan. 5, 1893, Gray Wolf. Feb. 2, White Goat. March 3, Coyote. April 6, Antelope. May 4, Fox.

In one of our early October issues Mr. G. O. Shields, writing from Pelan, Minn., reported, "I have lately talked with many settlers who live in and near the moose country, and they all say that they shall continue to kill moose and other game, the same as heretofore, law or no law." Senator Henry Keller called at the office of the Hallock *Enterprise* the other day and gave out that when the Minnesota Legislature met again he would introduce a bill offering a reward of \$25 for the conviction of a person found guilty of killing moose or elk or prairie chicken out of season. We shall see what we shall see.

## The Sportsman Tourist.

### A STORY OF INDIAN DAYS.

No doubt there are some few moments in the life of every man, and of a mountaineer in particular, when he really thinks that his life is about done. And when he honestly thinks so, he acts just as though it was true, although he may really have been in no danger. At other times he may be placed in the utmost peril and danger; bullets may be flying thick around him, yet he seems to heed them not and does not get scared until the danger is over.

In the summer of 1861, I mined in Georgia Gulch in Colorado. I worked hard six days, and kept Sunday by hunting, as much for the love of it as for the meat I usually secured. Along in October we shut down our claim and began to scatter for the winter. Father concluded that he would stay on the claim; but I was too fond of hunting to want to spend another winter in the mountains so near the snow range. Some friends were going down to winter where the Arkansas River puts out of the mountain; and I concluded to go with them. Game was reported to be plenty and so it was. Snow had begun to fall in South Park and the traveling was heavy the first two days; then we got out of the snow belt. The first day out I killed an antelope, the next a big blacktail buck; and these kept the company in meat until we reached Cañon City. Here the teams stopped a few days while the men hunted around for a suitable place to winter. George and I went down on to a small stream called Hard Scrabble. Here we found game in abundance, such as elk, deer, black and white tail, antelope and turkeys, with good feed and plenty of water. We killed two deer and hung them up; went back, got the outfit, moved down, got our deer and then went to building a cabin on the Maxwell Grant for winter quarters.

I had begun to see that my friends were very stingy and thought they would get what money I had brought along, irrespective of what I was to pay for my part of the cooking, which was done by Al's wife. I made up my mind that I should leave them as soon as an opportunity presented itself. A man named Vicroy owned a ranch three miles below where we were camped; and he had started to build a mill. He wanted a man to dig out a place to set the wheel, so I took the job. I got my traps together, settled up with my friends, and went down to work. As there was no particular hurry for the excavation, I hunted more than half the time. We had all the game we wanted.

I had been in my new quarters about ten days, when one evening Vic wanted to know if I could drive oxen. I told him I could and that I had graduated in bullwhacking, and had stood up near the head of my class. Said he, "That's good. Will you take two yoke of oxen and go down to Major & Russell's winter quarters, and leave a light wagon and bring back a heavy one? It is fifty miles down on the Arkansas River. You can go down in two days and come back in two. Pueblo is half way." "All right," said I, "when shall I start?" "To-morrow."

The next morning early I yoked up two yoke of good oxen, hitched on to a light wagon, put in my blankets, some bread, a little salt, sugar and coffee, and a fore-quarter of an antelope, for I always like to have a piece of meat to roast when I am sitting around a camp-fire alone; it helps kill time.

"You can stop at Pueblo," Vic told me, "I will overtake you there."

I supposed it must be a town, but when I got there I found it to contain about a half dozen houses, all of which seemed to be filled with red pepper, or chili, as they called it, except one cluster, which was inhabited by a Mexican named Juan Chickette. A more bloodthirsty looking greaser I never met. I told him who I was and that Vicroy owned the team and would be there that night. Juan told me I could stay and put the oxen in his corral and feed them if I would pay him then. I told him I had no money, so I would go up on the creek and make camp, for I had some doubts about Vic's coming that night. I went up a short distance, camped, turned the oxen out, watched them until nearly dark, then hobbled two, and prepared camp for the night.

Next morning early I was up after my oxen, which had not gone far. I let them feed until I got through my breakfast, then hitched up and started on my road. I saw a great many antelope and a few whitetail deer, but none were near enough for me to get a shot at.

I kept hurrying up the oxen, and by three o'clock I had reached the big ranch. Here were those big prairie schooners, just such as I had used a few years before, chains by the ton, yokes by the cord, work-oxen by the thousand. It was their winter quarter for trains that had come out and could not get back before winter set in on the plains. Here I received kind treatment and was well cared for. I told the foreman who I was and what I came for; and that Vicroy had said that he would overtake me at Pueblo. "Oh," said the foreman, "he may not come, you can wait or you can take the wagon; for Vic may not come, he is one of those fellows who are always behind. I have known him for years."

When bed time came they wanted me to sleep in the house, but I would not; I was used to sleeping outdoors, and the weather was fine.

The next morning I told the foreman I would start back, as there would be no use of my waiting; so I hitched on and started. Sometimes I would get up in the wagon and ride, sometimes I would walk and hurry the oxen up, for I wanted to reach Pueblo before dark.

Along about noon I saw a small cloud of dust rising ahead. I thought it was Vic, and sure enough it was. He came up and began to apologize for not coming sooner; some teams had come down from the mines for vegetables and he could not get away. I told him that his friend Juan would not keep me unless I paid him in advance, which I would not do, for I was afraid to let them know I had a dollar.

"Well," said Vic, "you stop there to-night. I told him I would pay him when I come back."

"No," said I, "I would rather camp where I did coming down." Then we separated.

Probably an hour had elapsed. I was poking along behind the wagon, when I thought I could hear Indians yelling. On looking back I could see quite a cloud of dust rising. I got up into the wagon and stopped the team so I could listen. After listening a little while I

could hear Indians yelling. I started up the team, but kept watching back. I could see the dust plainer; it seemed to be coming, and I could hear the yelling more distinctly. My first thought was to leave the team and run for the river. If I could get to the brush I would be all right. But it was more than a mile. If I left the wagon there would be nothing to get behind to make a fight.

One thing was certain—they would soon be there. I had passed over a piece of rolling ground, which hid them, but the dust was rising nearer, and the yelling was getting to be very distinct. I was certain that the Indians were on the war path, that they had got Vicroy and had seen me and would soon have my scalp dangling from a girle.

I stopped the team, got up on top of the wagon box and could see them coming. Yet they must have been a mile and a half away. I thought I could see some near the timber.

I jumped down, unhitched the oxen, turned them round, chained them to the wheel, climbed back up into the wagon, took some bullets out of my shot-pouch, laid them on my roll of blankets, laid my pistol by them, and then rested my rifle across the hind end gate and waited for them to come. And come they did. One seemed to be at least a quarter of a mile ahead of the main body. I waited until this leader got within about 200 yds., when I fired. At the crack of my rifle down went the horse and rider. But in an instant the Indian was up and started to run for the river. The yelling was terrific; the Indians began leaving the road to head the leader off. I reloaded my rifle as quick as I could, but before I could get a cap on the nipple they began shooting at the dismounted Indian, and soon I saw him stumble and fall. Then they closed in around him. In a few minutes two of them started toward my wagon. They had a white handkerchief on a spear. I got down out of the wagon after sticking my pistol in my waist. They rode up within about 10 yds. and spoke to me in Spanish. I could understand them tolerably well; they told me they were friends to the white man. The Indian they had killed was a Comanche and had been stealing their horses and was on the best horse they had, and if I had not killed it he would have got away.

Soon they raised the bloody scalp on to a spear and began their war dance around it. I hitched up and left. But I was so weak that I could hardly stand up. It was nearly dark when I got back to Pueblo. I put the oxen in the corral and ate and slept in the house that night, for I had not got over my scare, and old Juan's cut-throat countenance looked like the harbinger of peace compared to those Arapahoes. The next day I reached home.

When Vic came he told me that his horse had bolted to the brush as he was nearer the river, and he hid until they passed. Then he did not know what to do, for he thought it was a war party. But he ventured near enough to Big Ranch to see people moving around; and when the Indians returned they stopped and exhibited the scalp. Then he felt much better, for he was afraid they had got my scalp as well as his team.

LEW. WILMOT.

### TWO DAYS AT HAMMONASSETT.

WE reached the club house nestled in this remote Connecticut valley at dark. On the way thither the president and I had picked up two flight woodcock and two quail and had given the dogs a preparatory run through stubble and alders in prospect of the work of the morrow. The Doctor arrived shortly after, having shot over the club land on the way up from Madison. He emptied his game pocket of two woodcock, a quail and a partridge. We sat before the blazing hickory logs taking our *otium cum dig.* and laid our plans for the morning. Rex, Wad and May lay stretched in lazy idleness before us and the birds of other hunts looked down on us from their hooks and perches on mantel and wall, and gave us prompting for many a story of doubtful accuracy.

The thermometer stood at 28° F. as we packed the dogs and ourselves into the club wagon at 8 o'clock next morning bound for the "Episcopal church region." The sun was just topping Pea Hill; not a cloud in the sky, every leaf and twig and blade of grass glistened like silver under the heavy coating of hoar frost.

What words can paint the fall glories of the woods seen through an atmosphere so clear that hills ten miles away seem to be close at our feet.

What pen can tell of the thrill of hope and courage and strength and thankfulness for very life, that infused us as we climbed those glorious wooded hills, up, up into the blue ether, away from the dust, the worry, the turmoil, the sorrow of everyday life, up toward the blue of God's Heaven, into the arms of our dear mother Nature, with her kindly touch, which softens all our sorrows and heals all our wounds.

In the shadowy depths of the woods the frozen ferns gleamed white and ghostlike on each side of the road, or looked like coarse lace set out against the darker background of forest and glen. We have cast aside all our troubles for the time. Here in a "Happy Valley" of our own, a Connecticut Arcadia, where the silver bill and the financial situation are not, our greatest anxiety is the fear that perhaps two steaks, some chops and ham and eggs will not be enough for dinner.

The first cover visited was a buckwheat patch planted by the club and allowed to stand and "die down," affording unlimited food and good cover. Old Wad had scarcely reached its edge when he began to make game, and the pup Rex, as he came around, backed up his grandsire in handsome form. Before we were organized for our shots the birds flushed wide off, but the Doctor's gun dropped a single. Wad retrieved neatly, and before we had gone twenty paces another and smaller bevy flushed at the extreme upper end of the field and dropped into some alders near the church brook. We found them without much trouble, and from a staunch point by Rex in thick cover I winged one bird which dodged off to the left, and an instant later fired at what proved to be a large hen bird to the right. I saw a cloud of feathers drift down and supposed I had killed; but after following my winged bird for some distance and being unable to find it, I returned for the other. The bird was not where it should have been, but some light feathers and a half point from Rex showed me that this bird, too, had been wounded only. The pup, however, took the trail, and working down slowly and snakelike, came finally, 60 yds. below, to an open spot with grass tussocks at the end and edge of the alders, where he made his final and unmistakable stand.

We watched the pup and called Wad around, who backed in great shape. The scene was typical of a point on quail in cover. A hundred yards below stood an old and deserted farmhouse, weatherworn and gray. The brook, ten steps from us, babbled and gurgled on its way to the sea, and the old church of ninety years, looking strangely out of place in this out-of-the-way region, loomed up against the cloudless autumn sky to the right. The dogs stood almost at right angles to each other. Rex, with his head inclined sharply to one side, slightly crouching, and his left hindleg cataleptically poised, stood as though carved in stone. Wad at his right on a most stylish backing point, head, back and flag all on a line.

We watched them and commented on them, and on our beautiful surroundings, on hills and woods, and on the delightful excitement of the moment. What was the hurry? A few seconds, or moments, made no difference and one don't get these sensations so often that they can be thrown away. At last I walk up and whirr goes the bird straightaway. I score a kill on an easy shot and Rex and Wad move on and point. Wad retrieves—Rex has not yet learned this senior year study.

I start to move down to where some of the birds were supposed to have flown, but missing my dog I turn and call "Rex," and see him pointing at the same tussock from which my bagged bird had flown. I walk back and say, "Why, Rex, you were a good dog to find that bird, but don't shake my trust in your intelligence by pointing again where she got up. Come away, come on, good dog, Rex; come on, don't be a fool." No reply from the graven image. I walk up and kick about the grass, but find nothing. "Rex, come away from there." Finally I take him by the collar, but as I do so he breaks his point and puts out his paw and rests it on a thick bunch of grass, and as I part the matted grass I see and lift out a fine hen quail in her last gasps. It was the bird I had wounded which had run with the other, and the sagacious brute of a dog had made his mind, or scent, up that there were two birds in that bunch of grass, and by his intelligence had added one to our bag.

We left this cover after the proper amount of caressing and good-baying had been done, and went up the hill to the upper buckwheat and into woodcock and partridge cover. The Doctor had three pretty chances on the way up, two at quail and one at a woodcock. The woodcock and one quail came to bag.

I was walking through a tangled thicket of sprouts, cat-briers and alders when Rex gave unmistakable evidence of being on a partridge trail. I "got ahead," "crashing through the brush," unable to make progress without noise. The pyrotechnics went off and so did my feather-weight gun, and I saw through the scrub oak which had not yet shed its leaves, a bundle of brown feathers fall to the ground, but only winged, and in my hurry to get to the spot on account of Rex's unfinished education, I lost an easy shot at another bird, which got up when I was hors de combat with the gun open and tangled up in a grapevine.

The dog took the trail and I lost him, but after a time came upon him lying down beside a rock and evidently satisfied with himself. I could see no bird and the dog would not go on when ordered to. As soon as I could get the Doctor with old Wad, I explained matters and a "dead bird" "seek" to the old boy disclosed my dead partridge within 10 paces of my dog and a hundred yards from where I had fired. As soon as the bird was bagged Rex got up and began hunting again as before.

We went down the hill to keep our appointment with the president at Bunnell's Bridge. Before noon we had started four bevs of quail, but we shot indifferently and the birds acted as though they did not want to come to bag, and at noon we had but five—three quail, a woodcock and a partridge. We lunched at Bunnell's Bridge, on the banks of the Hammonasset.

At this point our president left us for the club house and New Haven, and the Doctor and I finished our day by a tramp to the club, picking up three more birds and watching the fine working of the two dogs, Wad and Rex. We had a dozen points, but in many places it was impossible to shoot. We put our eight birds—five quail, two partridges and one woodcock—in the ice box, got into our sweaters and slippers, and dropped off after supper into that gentle insouciance which always follows a day's hunt and a good meal.

We hunted half the next day and added three quail, two partridges and two woodcock to our score. After luncheon we bowled down to Madison, eleven miles, behind the club pair, and at 9 o'clock were recounting another happy outing to our wives and indorsing our statements by the present of twenty-three birds—eleven quail, seven woodcock and five partridges. INCOG.

### A Moose on the Last Day.

WASHINGTON, D. C., Nov. 25.—Three weeks ago, just as I was about leaving here for a short trip to the woods, I read with interest a well-illustrated account by one of your correspondents of how he killed his first moose.

I killed my first moose on Oct. 26, 1883, still-hunting on a perfectly still day, with neither snow, rain or wind to help me. I am just back from my tenth moose hunt and report that on Saturday I killed my last moose, on a bitter cold windy day, with the frozen leaves covered with several inches of crusted snow, just the day when the sensible still-hunter stays in camp to clean his gun, boil bean soup, mend moccasins and the like.

This was my last day, however, so out I went and in the face of adverse circumstances got a young bull about five years old which measured 6 ft. 3 in. My measurements are those of one who has measured a good many and lived out. I have never yet seen a 7-foot moose. The head and horns weighed 77 lbs. My Indian shouldered these while I took the hide, 5 lbs., and we had a two and a half hour tramp with them the next morning in a blinding snowstorm. That is what I call good work and the sort of hunting that gives the most pleasure—the hunter's wits against the game's.

Your correspondent I mentioned wondered where one of his guides, an Indian, got the name of Seymour. His name is not Seymour, it is Ignace Simon. He and his brother Hyacinthe are both good hunters, and I have employed both of them at times as far back as 1884 and 1886.

They are sons of old Antoine Simon, who was drowned five or six years ago in the Ottawa River.

The Canadians drop the nasal twang in pronouncing French, and Simon becomes Seemo, mistaken by your correspondent for Seymour. CECIL CLAY.

# Natural History.

## WILD TURKEYS OF NORTH AMERICA.

BY D. G. ELLIOT.

ALTHOUGH the New World has contributed but one genus to the great family of the *Phasianidae*, yet the species that are comprised within it are the most important and valuable to man of all the known forms of gallinaceous birds, either in their wild state, as furnishing food to forest dwellers, or through the various domesticated strains which knowledge and ingenuity has been able to produce from the wild creatures themselves.

The turkey is of very ancient lineage, and existed in early geological times, various portions of the skeletons having been found both in the Miocene of Colorado and the post-Pleocene of New Jersey. These represented species larger, as well as smaller, than those living to-day.

Very confused ideas prevailed among Europeans of a few centuries ago as to the native country of these splendid birds, and the trivial name by which they are everywhere recognized was bestowed on account of the erroneous belief that they were introduced into England from Turkey, and were indigenous to that country.

Up to the last few years it was supposed only one species of the genus *Meleagris* existed, the common wild turkey, as found in the eastern border of North America, and that from it sprung all the domesticated races in their different forms, so familiar throughout the world, and it was not until 1856 that Gould separated the bird, then believed to be found only in Mexico, from its northern relative, as *M. mexicana*. This is very distinct from the common wild turkey, and undoubtedly is the source from which the greater portion of the domesticated birds are derived. The name of the genus *Meleagris*, from the Greek *μελαγριδ*, a guinea fowl, is another evidence of the confused ideas existing regarding these birds, and it was supposed to be the same species known to the ancients under that name. Externally, on a large scale, in their general form and mode of carriage, turkeys have a certain resemblance to guinea fowls, but their skeletons possess very different characters, and of course in these days there is no likelihood of any one confounding the two in any way whatever. They represent two well defined subfamilies of the one great family.

The visible characters which identify and separate turkeys from all other birds may be briefly stated as follows: Head and upper portion of neck naked, with a wrinkled skin, covered more or less with wartlike protuberances, an extensible appendage on the forehead, a dewlap present, a tarsus covered before and behind with broad scales, and armed, in the male, with a spur. The feathers are firm and smooth, and of highly metallic colors, especially in the male, which sex is also distinguished by a "beard," or tuft of lengthened hairlike feathers projecting from the breast. Turkeys are both arboreal and terrestrial, and are capable, when on the ground, of outrunning a fairly swift horse.

At the present time there are four species and subspecies of the genus recognized in North America, and one, a most gorgeous bird, fairly rivaling the hummingbird in the resplendent metallic brilliancy of its plumage, is a native of certain portions of Central America.

The four North American birds are about equal in size, having a general resemblance to each other in the colors of their plumage, but each possessing characteristic differences, which cause them to be readily recognizable. One has been known since the discovery of the North American continent, another was described, as already stated, in 1856, and the other two within a few years, one indeed only in the summer of 1892. They are *Meleagris gallopavo*, the common wild turkey; *M. mexicana*, the Mexican turkey, but not restricted by any means to that country; *M. gallopavo osceola*, the Florida wild turkey, and *M. gallopavo ellioti*, the Rio Grande wild turkey. These four may be characterized in a key somewhat as follows:

I. Plumage highly metallic.

- a. Upper tail-coverts and tail very dark reddish chestnut, the latter tipped with rusty.
- a'. Primaries white with black bars. *M. gallopavo*.
- b'. Primaries brownish black with white bars, not reaching the shaft. *M. g. osceola*.
- b. Upper tail-coverts and tail chestnut, tipped with buff. *M. g. ellioti*.
- c. Upper tail-coverts and tail tipped with white. *M. mexicana*.

It will be seen by the above that the first two species are very similar in appearance and that the main difference is in the coloration of the primaries, or long stiff feathers of the wing, sometimes called "flight feathers." In the common wild turkey the black and white are pretty equally distributed on these feathers, and they both reach the shaft, while in the Florida bird the white bars are narrow, somewhat broken, and do not reach the shaft. These markings, though apparently so insignificant and apt to be overlooked by the casual observer, are nevertheless constant, and it is by such characters, trivial as they may seem, that the subspecific forms are established and the geographical distribution of animals on our globe ascertained.

The next two, species and subspecies, have more evidence that they should be separated from the Northern and Eastern bird, and while the *M. g. ellioti* at first sight might be mistaken for the common wild turkey, by comparing the two it would be at once perceived how much they differ in the coloring of the rump, upper and under tail-coverts and tail. The feathers of the rump are black, with a metallic coppery bronze subterminal bar, and broadly tipped with dark ochraceous buff; the coverts are chestnut with narrow black crossbars, and broadly tipped with buff. The tail is mottled with pale chestnut and black, with a subterminal black bar, and broadly tipped with dark ochraceous buff. The feathers of the rump of the common wild turkey and also the tail-coverts are broadly tipped with dark chestnut, and the tail is tipped with rusty, giving a very different appearance to these parts, as shown in *M. g. ellioti*. The primaries of the last-named also are more like *M. mexicana* than those of *M. gallopavo*, and furnish an additional character to distinguish the Rio Grande bird. The female of *M. g. ellioti*, however, in the grayish tips of the feathers on the upper parts of the body and the pale buff tips on those of the under surface, differs so entirely from the females of all other species of turkey, that it raises a serious question

whether this form should not be accorded a full specific rank equal to *mexicana* and *gallopavo*. Lastly, *M. mexicana*, in its white-tipped tail-coverts and tail, is easily distinguished from the other forms.

Wild Turkey—*Meleagris gallopavo*.

*Meleagris gallopavo*, Linn. Syst. Nat., Vol. I., 1766, p. 268.

Habitat, eastern United States, from southern Canada to northern Florida and eastern Texas, west to the plains. Naked skin of the head and neck blue, the wattles red. Feathers of neck and body generally coppery bronze, changing with greenish or purplish reflections, and margined with black. Back and rump black, with red reflections; sides, and upper and lower tail-coverts dark chestnut, with a subterminal black bar, and with purple reflections, and tipped with dark chestnut. Tail chestnut, barred and mottled with black, with a subterminal black bar, and tipped with pale chestnut or rusty. A long, pendent tuft of hair-like feathers from the center of the breast. Bill and legs red.

It has been a moot question among writers what should be the proper name for this well-known bird, but as Linnaeus gave that of *gallopavo* to the "New England wild turkey" of Ray, there can be no doubt as to its rightful appellation. The turkey was first introduced into the West India Islands in 1526 in a domestic state, and into England in 1541. In the reign of Francis I. it was imported into France, and it was first served on the table in that country on the occasion of the wedding of Charles IX., in 1570. Bred with care it increased rapidly, and was soon introduced into Asia and Africa. At the time of the settlement of America the turkey was generally distributed all along our eastern seaboard from Florida to the New England States, but it has long since become practically extinct as a wild bird north of Pennsylvania, and in that State it is confined to a few mountainous districts. Its range was given by most writers as much more extensive than is really the fact, because it has been confounded with the Florida bird on the eastern coast, and with the Rio Grande turkey in the southwest, these forms having only lately been recognized as distinct. It may now be considered as restricted from Pennsylvania to northern Florida of the Atlantic States, through the Gulf States to southern Texas, north to Canada and westward to the plains. Its habits are so well known and the methods employed for its capture so thoroughly understood, that it is not necessary to discuss them here; but no more wary, keen-eyed, alert wild denizen of the forest exists in any land than this noble bird, and any hunter may well feel proud and elated when, by methods only permissible to the true sportsman, matching his knowledge and skill against the sagacity and cunning of this thoroughly game creature, he succeeds in outwitting and bringing to bag so splendid a quarry. Long may it be preserved, the grandest of our feathered game, to ornament our woods and rouse its echoes in the early spring time with its rolling challenge, sounded from some lofty perch, in defiance of its rivals or in response to the low call of the female.

Florida Wild Turkey—*Meleagris gallopavo osceola*.

*Meleagris gallopavo osceola*, Scott, Auk, 1890, p. 376.

Habitat, Tarpon Springs, Florida, and about the southern half of the Peninsula. Resembling *M. gallopavo*, but differing in having the white on the primaries and outer secondaries in the shape of narrow broken bars not reaching the shaft. The inner secondaries grayish brown without bars and mottled with brown on inner webs. The subspecies is found in the southern part of Florida, but its exact range has not yet been definitely ascertained. The type specimen came from Tarpon Springs, where it was procured by Mr. Scott. It is a well marked race, easily recognized from the common wild turkey by the characters given above. It is abundant in the section of the State it frequents, and is named after the celebrated Seminole chief.

Rio Grande Turkey—*Meleagris gallopavo ellioti*.

*Meleagris gallopavo ellioti*, Sennett, Auk, 1892, p. 167, pl. III.

Habitat, lowlands of southern Texas and eastern Mexico. Distinguished from other turkeys by the ochraceous buff tips on the tail and its upper and lower coverts, by the deep blue black of the lower back destitute of the brilliant metallic reflections of the other forms, and in the female by the grayish tips of the feathers on the upper parts, and the pale buff or grayish white edgings of those on the under surface. The tips of the tail and those of the upper coverts are paler than in the male. This is a very strongly marked form of wild turkey, so strongly characterized indeed in the female as would warrant it, as I have already said, to be considered an independent species. There is no female turkey that I have ever seen so peculiarly marked as is that sex of the Rio Grande form, the nearest being the female of *M. mexicana*, but this bird has no gray edgings on the upper back and only extremely narrow ones on the lower surface. The general coloring of the feathers is also entirely different.

Mr. Sennett, who procured and described this new turkey, states that it is common on the coast, and in the lowlands, from about the Brazos River in Texas, to Vera Cruz, in Mexico, wherever timber and food are abundant, up to an altitude not exceeding 2,000ft. above the level of the sea. No evidence has been obtained that it intergrades with any other form, all the specimens procured being remarkably alike, and exhibiting a conspicuous difference from the other known kinds of wild turkeys. It is a large bird, frequently weighing over 20lbs., and the males are very handsome indeed in their metallic and buff colored plumage.

Mexican Turkey—*Meleagris mexicana*.

*Meleagris mexicana*, Gould Proc. Zool. Soc., 1856, p. 61.

Habitat, Rocky Mountains, from western Texas to Arizona, and south along the table land of Mexico, above an altitude of 3,000ft.

The Mexican turkey can always be recognized by the broad white tips to the tail-coverts and tail. The general plumage is fiery copper, with black and green reflections, and the primaries are barred with black and white like those of *M. gallopavo*, quite different from those of *osceola* and *ellioti*. This bird is undoubtedly the source from which all the domesticated strains with white-tipped feathers arose. The jet black or bronze, domestic race, were derived from the eastern wild bird, but whenever a

tame turkey is seen with these peculiar white or very pale buff-tipped feathers, it is very certain it contains some of the blood of the Mexican species. This turkey is a bird of the highlands, rarely met with below 3,000ft. above the level of the sea, and from that up to 10,000ft. It is very common in the localities it frequents, often met with in large droves; I have seen thirty or forty of them together, and it does not differ in its habits from the other species. When the Spaniards first entered the City of Mexico they found extensive zoological gardens maintained by the Emperor Montezuma, containing nearly all the animals of his own country, as well as others brought from a distance, and to the beasts of prey, it was stated, that turkeys were supplied as food. High livers and greatly favored we must regard these pets of imperial majesty. When the turkey was first domesticated in Mexico is not known, but its introduction into Europe in the sixteenth century would show that it was reclaimed from the wild state long prior to the advent of Cortez.

The Mexican turkey grows to a very large size and it seemed to me that the average, judging from those I shot and saw in New Mexico on the borders of Arizona, was larger than that of our Eastern bird. The males are very handsome, and especially conspicuous from the amount of white, or buffy white, on the lower back and tail. They are shot mainly from the roosts on moonlight nights or in the early morning, and on account of the lofty trees in those localities and the height at which the birds perch, a rifle is the only weapon certain to reach them and bring them to the ground. They are very tenacious of life and many sorely wounded birds contrive to effect their escape amid the shadows of the surrounding woods, or in the dense brush and thickets of the mountains and valleys. I have treated this bird in this paper as a species, although in the A. O. U. List it is considered only a subspecies of the common wild turkey. Possibly the two forms may run together, but at present it is not known that they do, and so I leave it as a species.

With the last species the list of wild turkeys known at the present day to inhabit North America is exhausted; but before bringing this article to a close it would perhaps be well to say a few words upon the "noblest Roman of them all," albeit he is not a North American citizen—the gorgeous ocellated turkey of Yucatan and Guatemala.

This wonderfully plumaged bird is slightly smaller than our wild turkey, and is a native of the district lying between the base of the promontory of Yucatan and the extensive forests which overspread the northern and eastern portions of Guatemala, and westward probably to the lands bordering the Usumacinta and Rio San Pedro. It is doubtful if it is found in the republic of Honduras. It dwells in districts interspersed with open tracts and dense forests, is even more shy and wary than our own bird, if such a thing could be deemed possible, goes in small flocks, and in its habits resembles closely our wild turkey. The best description would give but a faint idea of this bird's appearance, but the following may help one to recognize it if seen for the first time: Head and neck deep blue, the lower part of the sides and front of the latter covered with bright red wartlike excrescences. A large, thick wattle between the eyes, extending to the bill, and another pendent over the bill, both deep blue, and terminating with yellow excrescences. Similar wart-like excrescences over the eyes and also between the eyes and the bill, bright yellow. Feathers of upper part of back bright metallic green at base, succeeded by a line of black and tipped with yellow. Back and rump feathers blue at base, followed by a line of black and broadly tipped with red, this last color richest on the rump. Scapulars like the back. Secondaries white, irregularly barred with grass green. Primaries white, barred with brownish black. Shoulders and smaller wing-coverts rich green, margined with black; greater wing-coverts deep red. Upper part of breast like the back. Flanks and lower parts generally black, feathers tipped with brilliant red. Upper tail-coverts and tail feathers light brown at base, mottled with black, followed by an irregular bar or broad spot of deep blue, margined above and below with black, succeeded by a line of yellowish; the remainder of terminal portions deep red. The coverts are very long, extending half way down the tail. Bill, legs and feet red. Such is the plumage of this extraordinary bird, which far outstrips the peacock in gaudy apparel, and vies in its changing tints and brilliant metallic hues, resembling the rainbow in their startling contrasts, with the hummingbirds, those fairy feathered jewels of the air. Various vain attempts have been made to domesticate it, and it is not probable that it will ever be, like its northern relative, a familiar object near the abodes of men.

## THAT WHITE RATTLESNAKE.

BEATRICE, Neb., Nov. 1.—In the issue of Oct. 28, "Dr. Jes.," of Douglas, Wyo., advances the theory that the white rattlesnake I mentioned as being captured near here was simply an ordinary rattler which was shedding his skin.

Mr. Chas. King, living 13 miles east of this city, has the snake still alive, and yesterday I drove out to see it. Mr. King's replies to my inquiries, I think, preclude any other theory than that the snake is an albino. I saw it a few days after he first captured it, and again yesterday, and I can see no difference in the condition of the skin, although about forty-five days, twice the time consumed in the process of shedding the skin, have gone by. I still hold to the theory I first advanced, that the snake is an albino, a freak in a specimen of the common black prairie rattlesnake. Mr. King tells me that the Smithsonian Institute is corresponding with him and will probably secure the little serpent for their collection. I hope this will be brought about, so that Eastern readers of the FOREST AND STREAM may see it too. Mr. King said:

"I captured the white rattlesnake about Sept. 20. The skin smooth and the color bright then, and I do not notice any change now in the condition of skin or in the color compared with the same at the time of capture. There is no change in any way that I can detect up to the present time (Nov. 13). The snake is perfectly healthy and livelier than is generally the case with a rattlesnake. I feed it milk and water mixed, once in two or three days. It does not lap the milk like a cat or dog, but puts its mouth down in it and drinks after the manner of a horse or cow and swallows very fast. If not disturbed it will drink all it wants before leaving the dish and then does not drink again for two or three

days, as near as I can determine. I have not noticed any change in the color of either the spots or the body since he has been in my possession. The skin is at the present time smooth and glossy, not inclined to roughness, nor does it differ from the skin of any snake except in color. I put a live mouse in the box a few days after capturing him. This one he struck and killed and then swallowed it. I have since put a number of field mice and common house mice in the box with him, but he does not molest them in any way, though they run all over him. The mice if left in the box a day or two become sluggish and die, though the snake does not touch them."

The little fellow is very lively for a rattlesnake and carries a set of fangs such as always go with the ordinary rattler; and he seems to be of a rather pugnacious disposition. If you so much as put your hand toward his box, when he can see you, he starts his "music box" and coils at once, all ready for business on short notice.

I would like to hear from other readers if any other cases of a like nature have ever come under their notice. I have killed many rattlesnakes, but never saw anything like this one.

EL COMANCHO.

#### AMERICAN ORNITHOLOGISTS' UNION.

THE eleventh congress of the A. O. U. was held at Cambridge, Mass., Nov. 20 to 23. The business meeting, which always precedes the public sessions, was held at the residence of Mr. C. F. Batchelder on the evening of Nov. 20. At this meeting the old officers were re-elected, as follows: Dr. Elliot Coues, President; Messrs. Wm. Brewster and H. W. Henshaw, Vice-Presidents; Mr. John H. Sage, Secretary, and Mr. Wm. Dutcher, Treasurer. The council for the year consists of Dr. J. A. Allen, Messrs. C. B. Cory, C. F. Batchelder, D. G. Elliot, Robert Ridgway, and Drs. C. Hart Merriam and L. Stejneger. Eighty-three associate members were elected, but there were no elections of honorary, corresponding or active members.

The new committee on "Classification and Nomenclature of North American Birds" consists of Dr. J. A. Allen, Wm. Brewster, Dr. Elliot Coues, Dr. C. Hart Merriam and Robert Ridgway.

The new committee on "Protection of North American Birds" is made up of Dr. Frank M. Chapman and L. S. Foster, Dr. Jonathan Dwight, Jr., Capt. C. E. Bendire and Mr. Montague Chamberlain.

The public meeting, at which the papers presented to the congress are read, was held in the Nash lecture room of the University Museum. In the absence of the president, Dr. Coues, who is detained in the West, Mr. Wm. Brewster, the vice-president, presided. On behalf of Harvard University, Dr. George L. Goodale welcomed the Union to Cambridge. The following papers were read:

Bird Migration in Chester county, South Carolina, viewed with Reference to its Cause—Leverett M. Loomis.  
Brief Remarks on the Origin of Bird Migration—Frank M. Chapman.

The Survival of the Fittest—D. G. Elliot.  
Protective Coloration and Natural Selection—J. A. Allen.  
Protective Mimicry—J. A. Allen.  
The Island of Trinidad and its Bird Life; Illustrated with Lantern Slides—Frank M. Chapman.  
On the Tongue of *Dendroica tigrina*—Frederic A. Lucas.  
Observation on the Ruby-throated Hummingbird—Jane L. Hine.  
General Impressions of Tropical Bird Life—Frank M. Chapman.  
The Labrador Duck. Another specimen, with some additional data of extant specimens—Wm. Dutcher.  
Remarks on the Nest of *Cistothorus palustris*—Louis B. Bishop.  
Habits of the Double-crested Cormorant (*Phalacrocorax dilophus*) in Rhode Island—Geo. H. Mackay.  
Remarks on the Fauna of Wyoming—C. Hart Merriam.  
Some Mexican Notes—E. W. Nelson.  
Change in Feeding Habits of the Night Hawk since the General Use of Electric Lights—A. P. Chadbourne.  
Instance of Reasoning in the Scarlet Ibis—A. P. Chadbourne.

The paper which had in it most of popular interest was that by Mr. Frank M. Chapman, on the Island of Trinidad and its Bird Life. It was read before a large audience on the afternoon of Wednesday, and was listened to with great attention. It was quite fully illustrated with lantern slides and was the paper of the day. Many other of the papers were of unusual interest.

It was voted to hold the next congress of the Union in New York city, a session to begin on the second Monday in November, 1894. Sixteen active and thirty associate members were present during the congress.

The members of the Union were invited to attend an informal reception on Monday evening, Nov. 20, at the residence of Mr. C. F. Batchelder to celebrate the twentieth birthday of the Nuttall Ornithological Club. During their stay in Cambridge every hospitality was extended to the visiting members of the A. O. U. by the Nuttall Club.

At the close of the meeting thanks were tendered to Prof. Geo. L. Goodale for the use of the Botanic Lecture Room of Harvard University; to the Colonial Club, of Cambridge, for courtesies extended, and to the Nuttall Ornithological Club for its cordial welcome and generous hospitalities extended the visiting members.

As remarked last week, the A. O. U. may almost be called the child of the Nuttall Club, and the parent on this occasion extended to its lusty offspring kindnesses which will long be remembered by the members of the Union. These and the other pleasant features of the congress of 1893 render the meet perhaps the most enjoyable that has ever been held.

#### Female Caribou Horns.

NEW YORK, Nov. 23.—Your picture of caribou I consider very fine. In regard to the female caribou with horns my experience has been that when with young they always carry antlers, sometimes so large and so well bunched that they come to an untimely end. I killed one on my last trip by mistake; a good sized cow seen with antlers 100 yds. away among the bushes can be very easily mistaken for a young stag.

I am glad they are going to have a carnival at Quebec. I only wish I was not so crippled, they always have a jolly time at these carnivals. I have been there and would advise all who are able to go by all means, it is a most delightful experience.

WAKEMAN HOLBERTON.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## Game Bag and Gun.

### MODERN SPORTING GUNPOWDERS

In the Light of the Public Powder and Primer Tests Carried out at Chicago and Carney's Point, New Jersey.

BY ARMIN TENNER,  
Expert in Gunpowder, Guns and Ammunition.

#### General Observations on the Theory of Shot Shooting.

FOR centuries black powder, which, as is well known, consists of a mixture of saltpeter, charcoal and sulphur, has been used as an explosive and as a propelling agent for all kinds of weapons, from the smallest pistol up to the heaviest cannon.

Saltpeter, or nitrate of potash, represents oxygen in a solid form, one volume of saltpeter containing about as much oxygen as 3,000 volumes of atmospheric air. When raised to a certain temperature, this oxygen will easily separate and combine violently with the carbon, thus forming carbonic acid and a certain proportion of carbonic oxide; and these in conjunction with free nitrogen constitute the principal gaseous products of combustion.

The charcoal employed in the manufacture of gunpowder is generally obtained from light, spongy wood. In England and on the European continent dogwood or alder buckthorn is considered to be best adapted for all small-arm powders. Lately numerous attempts, with more or less success, have been made to substitute other materials for wood, mainly with the object of diminishing the quantity of smoke usually developed by a charge of ordinary black powder.

The quality of the charcoal exercises a great influence upon the behavior of a gunpowder, inasmuch as the rate of combustion and the hygroscopic nature of the same are to a great extent governed by the kind of wood and the mode of burning employed in the manufacture of the charcoal.

The sulphur, having a great tendency to combine with oxygen at a moderate temperature—about 560° F.—facilitates the ignition of black powder. The comparatively non-absorbent properties of black powder and non-susceptibility to age are chiefly due to the sulphur. These qualities and its comparative non-susceptibility to dry heat and cold impart to black powder its greatest ballistic value. Many of the nitro powders do not compare favorably in this respect with the old propelling agent.

Fine-grained powder, as a rule, burns quicker in a closed space than coarse-grained, and the gases are generated accordingly in the same proportion. For this reason the recoil is generally greater and more perceptible to the shooter with the former than with the latter. Fine-grained black powder also develops a higher bursting strain in the gun barrel than coarse-grained, which in some especially fine-grained kinds frequently reaches and sometimes even surpasses the limits ordinarily drawn for nitro powders only. A finer grain than FFF should not be used in shotguns.

The object sought by the gunner in loading a still finer-grained black powder is the desire to propel the pellets as quickly as possible to the destination. Many shooters believe that this can be accomplished best with the fine-grained, and that on this account they need not lead a quattering bird as much as if they were using a coarser-grained powder.

While it is true that the finer-grained powder will bring the pellets to a distance of 40 yds. somewhat quicker than the coarser-grained, this difference does not practically cut any figure. A bird flying at the rate of forty miles per hour will travel about two to three inches further if the pellets are propelled by coarse-grained than if they were driven by fine-grained black powder; if, in both cases, the distance between the shooter and the bird at the moment of firing is 40 yds. Considering that the pattern at such a distance shows a diameter of from 2½ to 3 ft., this trifling difference will hardly increase the chances of hitting the bird.

The pellets constituting a pattern at 40 yds. never reach a point simultaneously. As soon as the shot has left the muzzle of the gun it begins to spread both longitudinally and laterally, and this dispersion increases with the increase of the distance. At a distance of 40 yds. the difference in time of the arrival between the foremost and hindmost pellets of a shot charge amounts to about ⅓ of a second; here the shooter has to reckon with a greater difference than the one caused by a smaller or quicker combustion of the powder, consequent upon the size of the grains. Some claim that owing to the particular nature of certain powders a greater stringing of the shot is caused than by some other powder. This assumption, however, cannot be substantiated by anything like a plausible explanation.

Chokebore barrels generally throw the shot through the air in a more compact form than those of open or cylindrical barrels. So far an unimpeachable explanation of this phenomenon has not been found. That theory probably comes nearer to the truth which asserts that the pellets sliding along and rubbing against the sides of the barrel when passing the choke are directed toward the center of the shot charge; because it is a well-established fact that the pellets having been subject to the most friction are the ones generally found on the target the furthest away from the center and among the scattering shots.

To determine this very question, as to what portion of the shot charge generally constitutes the center of the pattern, I have, on a former occasion, fired over 1,000 shots, using for this purpose shots of different colors.

The causes for the occasional scattering of shots from the chokebore barrel will be explained hereafter.

There can be no doubt that black powder has rendered valuable service, both as a blasting and as a propelling agent, and that for a long period of time it has met all reasonable expectations, as regards the purposes for which it was employed; but at length it has fallen under the same law to which all human creations are subject, viz., the old and good must give way before the new and better.

As a blasting agent, it has already lost much of the ground it formerly occupied. Nearly all great military nations have also substituted for the old black powder, as

a propelling agent for their infantry rifles, nitro or smokeless powder, mostly made of gun-cotton, and it is only a question of time when the former will take the place of the latter for heavy ordnance purposes.

Black powder has held its own thus far as ammunition for sporting rifles. But recently, very promising results have been achieved with nitro powder, even in this department; warranting the assumption that at an early day nitro powders will be employed for this kind of ammunition also, thus leaving for the black powder, for the present, only a use for revolver cartridges. But it can reasonably be expected that for this weapon too, a suitable nitro powder will soon be found.

As a propelling agent for shotguns, nitro powders have been long employed, among the oldest of which is the Schultze powder; formerly known in Germany as wood or Heitzbacher powder, and originally invented by the German Colonel Schultze.

The Schultze powder used in this country is of English origin, being manufactured in England under the supervision of Mr. Griffith, one of the most celebrated ballistic experts in the world, and to whom it owes many of its present valuable qualities.

The object aimed at primarily by the military authorities in introducing the nitro powder for infantry weapons was of a somewhat different nature from that which has and does present itself to the sportsman in choosing a smokeless powder.

In infantry weapons the principal aim was to create for the small caliber rifle and the long bullet a higher velocity, that is a greater penetrative force, than can be attained with black powder, thus rendering it possible to open an effective fire on the enemy at a longer range than heretofore. But all this can only be accomplished to a satisfactory extent by the aid of nitro powders, which, moreover, in case of rapid firing, obscure less the field of view.

Now, why should the gunner desert black powder in favor of a smokeless, in face of the fact that the limits for killing penetration with the shotgun and black powder can and will hardly ever be materially extended by means of another propelling agent, since black powder, summer and winter, in sunshine and rain, varies very little in its behavior, seeing that in proportion to its work, the strain upon the gun is comparatively low, that it reacts less violently under increased charges than many of the nitros, and does not create corrosion in the barrels as readily as some of the nitros, that it is less sensitive than smokeless powders to obstructions in the soul of the barrel? The answer to this question should easily be given by any intelligent gunner.

In the first place, it is the comparatively great amount of smoke produced by black powder, which, under certain conditions, especially in a quiet air, can become very annoying, inasmuch as it hinders a quick and certain use of the second barrel, rendering it frequently difficult for the gunner to determine quickly the effect of the first barrel. Then again, black powder, as a rule, produces a much heavier, and for the gunner more perceptible, recoil than nitro powders. The recoil of a service charge of fine-grained black powder, for instance, is nearly double that of a service charge of DuPont or Walsrode smokeless powders. In case of frequent shooting, this heavy recoil often compels the gunner to cease shooting, or at least effects detrimentally his shooting ability.

Furthermore, black powder is more noisy, heats the barrels quicker, and generally fouls them more than the smokeless powders.

Comparing one with the other, the advantages and disadvantages of black and nitro powders, leaving out of consideration for the present the question whether and to what extent the use of nitro powders presents a greater danger for the gun and gunner than black powder, the result would be always in favor of the nitros.

All nitro powders at present accessible to the gunner for use in shotguns, are more violent in their action than black powder. This greater violence, however, under normal conditions, can hardly be considered as an alarming element, but it can, through many causes, become really dangerous, and very few gunners are in a position to discover these causes and guard against them.

Here is the field for such instruments and devices as are scarcely at the command of the individual sportsman. Systematic experiments carried out under strictly uniform rules are necessary, and these again can seldom be carried out by the layman.

The qualities of a propelling agent, especially those of nitro powders, are more or less affected, (a) by dry heat; (b) by moisture in the atmosphere; (c) by long storing; (d) by the igniting agent; (e) by the wadding material; (f) by the method of crimping.

Now, if in any given case several of these causes which have a tendency to increase the violent nature of the powder combine, the gunner will meet with strange phenomena which will startle him, and probably induce him to discard the use of such a powder. As a rule, the gunner is thus tempted to condemn nitro powders in general, and to fall back to the noisy black powder. Several nitro powders in the market to-day, however, may be considered as comparatively safe in the hands of the intelligent, sensible sportsman.

The first requisite in the use of all nitro powders is to avoid, as much as possible, any and all excess over the standard charges, then the selection of a suitable shell and a proper wadding material.

In several of the European countries proof-houses are established and maintained, either directly by the States, or are conducted under the rules laid down by statute, where they merely test raw gun barrels and finished guns for strength. In addition to and independent of those proof-houses, there are private institutions in many of the countries maintained by contributions from the gunning fraternity. The object of these institutions is to furnish gunners on a broader scale all the information pertaining to the different branches of gunnery. Here the real qualities of gunpowders, guns and ammunition and parts thereof are determined by the aid of the most improved scientific instruments and devices, and in accordance with well established and uniform rules. The results of the work of these institutions are regularly and continuously put before the great mass of gunners through the medium of the sporting papers, or by way of printed minutes.

Of course these institutions are frequently looked upon with distrust by some manufacturers of or dealers in sporting arms and ammunition, at least from those who have good cause to fear a fair and thorough comparative

test between their own articles and those of their competitors. But that distrust has long ago given way to a better sense of understanding. The conviction now prevails that the work of these institutions not only benefits the gunners at large, but also the well-meaning manufacturers and dealers, and that they afford specially to the home industry a great assistance and help. It may be presumed that in this country also such an institution will not suit the taste of some interested parties, although an attitude of this kind would hardly conform to the general principle of American enterprise, for which it is claimed that our manufacturers willingly follow the progress of their industry. The gunners, however, can, if they follow the example set by their fellow sportsmen of the old countries, easily overcome all such unwarranted opposition or jealousy, inasmuch as they will simply patronize and bestow their confidence on such manufacturers and dealers as do not fear or hesitate to see their products subjected to a fair and honest comparison with other similar articles of manufacture.

The encouragement I received at the hands of numerous gunners from all over the country in respect to my intention to establish in this country an institution of the kind alluded to, makes it appear pretty certain that such an institution will meet with a great deal of coöperation and assistance at the hands of the intelligent and wideawake American sportsmen.

Following my request, numerous suggestions have been offered by gunners as to how the powder test should be conducted. As far as these suggestions touch a general interest, they have been taken into consideration. I have thus been obliged to dwell in my report on questions not in direct relation to these tests, and to give my report somewhat the character of a treatise on the theory of shot-shooting.

#### The Bursting Strain in Gun Barrels.

The combustion of nearly all gun powders takes place under different conditions in a confined space from those in the open air. In the open air most of the nitro powders burn comparatively slowly, and, contrary to black powder, without explosion. On this account, the handling of nitro powders is not as dangerous as that of black powder. As much as 300lbs. of gun cotton powder can be burned in the open air without creating thereby any serious danger for the surroundings. But when powders are brought to combustion in a confined space, their behavior undergoes quite a change. The nature of ignition plays in this case a very important part.

When a charge of powder is exploded in the gun barrel, the stored potential energy is transformed into live force. The developed, strongly condensed gases occupy about 230 times the space of the volume of the original powder charge, and, in consequence, a strong tension is created, first, in and near the powder chamber, and then along a certain portion of the gun barrel; this is termed bursting strain, or gas pressure, and imparts to the projectile, and in the shotgun to the shot charge, the propelling force. The more space afforded to these gases to spread in a gun barrel, the less the strain will be at a given point, and on the other hand this tension will increase if its spreading is for some cause made difficult, or if confined to a small space. For this reason the tension will always be comparatively low with such powders as generate their gases more slowly and gradually than with a powder which burns more suddenly, and which develops the great bulk of its gases before the shot charge has found time to move much toward the muzzle and create a larger space for the expanding gases.

The modern blasting agents develop, as a rule, their gases so suddenly that on this account they cannot be employed as propelling agents. Such a sudden combustion and development of the gases is called a detonation. Every gunpowder, the black powder not excepted, can, through the agency of a highly violent primer and for other causes, be brought to a very sudden ignition or combustion, although the black powder will, in this respect, resist many ordinary causes more effectually than the nitro powders. But this sudden combustion hardly ever assumes the nature of a real detonation, yet it may resemble the latter so closely that, especially with a powder susceptible to dry heat, it no longer conforms to the limits of safety for the gun and gunner.

The perceptible signs of such sudden combustions are generally an extraordinarily heavy recoil, producing frequently a ringing in the gunner's ear, a marked vibration of the gun and a bad pattern, sometimes coupled with a balling of the shot.

As long as the gunner uses a well built, strong gun, he is seldom exposed to any real danger, although, in some instances, the action of the gun is more or less damaged. But the case is quite different if such a shot happens to occur in a cheap, less substantially made gun, which, as a rule, does not possess sufficient strength to withstand such a high pressure. Here the locking device will likely fail to answer its purpose, or the barrel may bulge or burst. Even with powders not affected by dry heat, such a result can be brought about merely through the agency of a violent primer.

Nitro powders, as a rule, will not stand an increase of the charge beyond the standard load as readily as black powders, but in spite of these facts, many shooters will not draw correct conclusions from them. They seem to believe that the strength of penetration will grow with the increase of the powder charge, and do not conceive that such is not the case, that they frequently achieve just the contrary from what they are striving at, and that they create a source of eminent danger.

In a subsequent chapter it will be demonstrated that many American gunners are in this respect guilty of gross carelessness, and ill-informed. They simply indulge in the luxury of wasting powder and shot.

The loads of nearly all nitro powders are measured with the dip-measure, which affords ample accuracy. Three drams by measure represent, according to the specific weight of the different powders, from 33 to 44grs. by weight; equal to 2.65 to 2.78 grams. The corresponding charges of Walsrode powder are smaller by weight and in bulk, they are for 12-bore guns, 29 and 31, or 31 and 32grs.

All propelling agents develop in summer, and especially in warm and dry weather, a higher bursting strain than in winter in a low temperature or moist atmosphere, and fine shot again creates, owing to the larger surface of friction, a higher gas pressure than the coarse or larger pellets, and the bursting strain of 1½oz. is less than with 1½oz. of the same size shot.

In America much shooting is done in summer and during warm weather. A great number of our celebrated shots prefer to load for 12-bore ammunition 3½drs., instead of the normal charge of 3drs., or of Walsrode powder 3½grs. in place of 29grs.; forgetting that these maximum charges are only suited and intended for cold or wet weather.

As a rule the pattern is always less satisfactory from the large load than from the service charge, and in some cases where powders susceptible to dry heat are used, the chances of a balling of the shot are materially increased by the heavier load.

The quantity of powder loaded in excess of the standard charge is therefore uselessly wasted, and the same rule applies generally, as will be subsequently shown, to an increase of the shot charge beyond 1½oz.

The gas pressure in a shotgun reaches the highest point in the cartridge chamber and immediately in front of the same in the direction toward the muzzle.

Black powder, as a rule, produces at this point less gas pressure than the nitros, but a somewhat higher bursting strain in the middle and up to the muzzle than the latter. It has been stated, previously, that the bursting strain, especially when smokeless powders are used, is influenced by several causes. The soft, elastic felt wad diminishes the gas pressure compared with the felt or any other hard wadding material, and also diminishes the chances for a balling of the shot, which occurs much less frequently in Europe than in America, probably on account of the more moderate mean temperature and the higher percentage of humidity in the air prevailing there, compared with a large part of this country.

The true causes for the balling of shot have thus far not been satisfactorily established. Some advance the theory that owing to an exceptionally sudden combustion of the powder, the temperature in the cartridge is raised to a point of fusing a portion of the shot. But since the wad has its place between the powder and shot, the effects of such a high heat would naturally leave its traces also on the felt wad. The heated gases passing the edges of the wad to fuse the shot would necessarily char these edges more or less.

In the course of the experiments at Chicago, in a comparatively large number of cases, the shot balled, and these were nearly all cartridges loaded with more than 3drs. of nitro powder; but no charred or singed wad was found.

Again, others hold that the balling of shot is brought about by a friction of the shot differing from the normal conditions whereby the cohesive quality of the pellets is increased to such an extent that they cling together in lumps of greater or smaller dimensions. This theory likewise is not unimpeachable.

In my opinion, which is shared by many others, it appears more probable that in consequence of the sudden generation of the gases of a large powder charge and the high tension thus created in the shell, the energy developed ceases to exercise its forces in a gradually shoving manner, but more in the shape of a heavy blow, thereby causing a portion of the shot to press together. Such a heavy blow apparently is too strong for the wad to retain its quality as a buffer. As a matter of fact, the balling of shot occurs more frequently with hard wads than with soft and elastic ones; and this presumably for the reason that a soft wad more effectually deadens the force of the blow than a harder material. It was further proved in Chicago that the tendency of balling was less with harder shot than with softer, and less with pellets of a more even spherical shape than with those less regular in form. The balling of the shot occurs more frequently in the open barrels than in the chokebore. The cause for this may be due to the effect of the passage of the shot through the choke, whereby the bunches formed are again torn apart. If this theory is correct, the next question would be, why, in such a case, the choke should not show traces of bulging, since a hard and stiff top wad often suffices to bulge the barrel at the point of the choke in soft Damascus barrels.

Twelve-bore guns are generally chambered for 2½ and 2¾ shells. Some guns are chambered for 3in. shells. In guns chambered for 2½ shells, 2¾ shells can be used with about the same result as the longer ones, provided the proper wadding material is employed. In all such cases the felt wad should be somewhat larger in diameter than the bore of the barrel. An elastic wad 11-gauge will then be most suitable for a 12-bore barrel, in order to prevent the gases from passing the wad at the point between the end of the shell and the end of the chamber. The 2¾ shells, however, should not be used in a gun chambered for 2½ shells, and a shell 3in. long will, in such a case, present a serious element of danger. If the 3in. shell is crimped strongly it can be squeezed into a 2½ chamber, but when fired in such a chamber the crimped part cannot open and conform to the shape of the chamber in the regular manner. An artificial obstruction is thus created which prevents a normal expansion of gases and, as the Chicago tests have proven, is likely to cause a bursting strain in the chamber higher than the average gun can safely bear.

At the point where the cartridge chamber ends, and the so-called "soul" of the barrel commences, there should never be a perceptible shoulder; that point should be of a conical or tapering shape and ought not to be of great length. The latest American guns, as a rule, are in this respect made in strict accordance with what experience and science have proven to be the safest and most advantageous style, so are also the Francotte and other imported guns.

Wads made of cork or other materials less elastic than felt should never be used in connection with nitro powders, for the reason that they may give occasion for extraordinarily high gas pressure, and on similar grounds the use of brass shells is not advisable.

In order to achieve a thorough combustion of the nitro powders, the shells should be crimped at least ¼in. The strong crimp also serves to prevent the shell loaded in the left barrel from opening through the effects of the shots fired from the right barrel, or *vice versa*. But even if the shells are crimped well, it shows good judgment on the part of the gunner, if he, after firing several shots from one barrel, examines the cartridge loaded in the other barrel, or takes out the latter and loads it in the barrel for the next shot.

If the crimp of the shell becomes loose and the shot charge happens to move up a shorter or longer distance in the barrel and such a shell is fired, a bulge or burst may be the consequence, the effect being about the same

as in the case when the muzzle of the barrel is filled with dirt or snow.

Shells made of very stiff paper should not be turned down more than ¼in., and for such shells the round crimp is preferable to the square-edge crimp.

Pieces torn from a shell and deposited in the soul of the barrel ought to be considered an element of danger, inasmuch as they may serve as an artificial obstruction. If a fired shell shows traces of damage, or when other strange signs accompany a shot, the gunner should in all such cases ascertain whether his gun barrel is free of all obstructions before he continues to fire.

The question as to how much bursting strain a shotgun will safely stand has been put to me by numerous parties. This question can hardly be answered in a general way, since the gas pressure still comparatively safe for one gun may prove hazardous for another less substantially built gun. It may, however, be assumed that all shotguns placed in the hands of a gunner should be strong enough to withstand the bursting strain developed by a proof-house charge of powder and shot for finished guns.

The proof-house charge for finished guns, as prescribed by law in several European countries, for the testing of finished guns, is equal to about 7drs. black powder and 1½oz. of shot. In order to determine what gas pressure such a load would give in this country, and to establish a standard of comparison for all nitro powders in reference to bursting strain, 6½drs. of DuPont's FFF black powder, which appears to develop, bulk for bulk, a greater gas pressure than the European black powders, and 1½oz. shot, No. 7, were loaded into the gas-pressure gun at Chicago, and fired. This load developed a bursting strain of 1,100 atmospheres or 16,170lbs. to the square inch. Very few guns would prove strong enough to withstand such a strain for any length of time.

About 75 per cent. of the figures quoted is as much as the ordinary shotgun ought to be subjected to. The limit for shotguns is much lower than that drawn for the modern small-bore military rifles, which will stand a gas pressure as high as 3,500 atmospheres, or from 35,000 to 40,000lbs.

For measuring the bursting strain, a Hahn's pressure gauge for 12-bore was employed at Chicago and Carney's Point, and this caliber forms the basis for all experiments herein referred to.

The construction of this instrument, which at the present time is recognized as the most improved and reliable, differs from all the old similar apparatuses, inasmuch as with it the bursting strain can be taken simultaneously or separately on the old crusher gauge principle and by means of a spring device.

The bursting strain figures quoted herein were all determined with the spring device. The double spring taking the place of the metal cylinder on the crusher gauge is actuated by a piston plunger, reaching into the interior of the barrel and there conforming accurately to the side of the bore.

When the gases press against this piston, the latter acts on the spring, pressing it together. A pin reaching to the spring next to the barrel and resting there is driven outward in proportion to the degree the spring is pressed together, and this pin travels through a graduated screw disk, thus registering the extent of the contraction of the spring, or, in other words, enabling the operator, by means of the graduated disk, to read off the gas pressure in plain figures.

This spring is much more sensitive to low as well as to high gas pressure, than the metal cylinder, which, when pressed down to beyond a certain depth, will, owing to the increased density of the metal, offer much more resistance proportionately than it did in its original length and shape. Consequently the spring device, as a rule, furnishes somewhat higher figures than those obtained under similar conditions with the crusher gauge, but the figures secured with the former may be considered nearer the truth than those obtained with the latter. This explanation appears to be called for, since in its absence, and when the figures herein given are compared with those obtained with the crusher gauge, the former might be looked upon as far too great and therefore unreliable.

The fact that the gas pressure values as obtained at Chicago and Carney's Point seem rather high when compared with similar figures taken from the same powder charge in Europe, can hardly be accounted for simply by the difference in the instruments employed. There can be no doubt that these variations are, to a great extent, due to the difference in climate. It is certain that the majority of propelling agents will, when loaded bulk for bulk, develop a higher bursting strain in this country than in Europe, where the mean temperature is below that of America and the air less dry than in a great portion of the United States.

The gas pressure gauge plays in ballistic experiments a very important part. It is of great value and help to all gun and ammunition manufacturers, and indispensable for powder manufacturers.

In the absence of such an instrument, the ballistic properties of a powder, especially with reference to its degree of violence, can never be satisfactorily established, and, again, the causes for increased bursting strain in gun barrels can only be determined with the aid of such an instrument.

#### Velocities and the Method of Ascertaining Them.

The term velocity applied in a general way designates the rate of speed at which a projectile or the bulk of a shot charge travels through the air up to a certain point.

This velocity can be ascertained by various methods, but the instrument now generally employed is the chronograph Le Boulenger, originally invented by a Belgian military officer bearing that name. The application of this instrument is as follows: When a bullet or shot charge leaves the muzzle of the gun, it is obliged to cut a fine silver or copper wire stretched across the muzzle. This wire conveys a current to an electro-magnet on the upper part of the instrument to which a cylindrical rod, covered with a zinc sheath, is perpendicularly suspended and held by the attraction of the electro-magnet. This rod, which is called the chronometer, drops immediately the wire before-mentioned is broken and the current opened. The target is connected by wire with a second electro-magnet on a lower part of the chronograph, wherein a second current is created. To this second electro-magnet a shorter rod is similarly suspended called the registrar, which drops as soon as the perpendicularly suspended and sliding target is moved from its contacts and the current thereby interrupted. The shot charge having cut the wire stretched

in front of the muzzle of the gun and thus opened the first circuit, the chronometer is caused to drop. Before it has fallen below a certain point, the shot charge has reached the target and forced this away from the contacts, causing thereby the second rod or the registrar to drop. The shorter rod falls on a disk and doing so releases a spring, to which a knife is attached and which now flies horizontally to the falling first rod, thereby nicking it at a certain point the zinc cover of the latter. Now, the longer this chronometer falls—that is the longer time the shot requires to reach the target—the higher up on the long rod this nick made by the knife will be found; and, on the other hand, the quicker the shot gets to the second screen and causes the registrar to drop, the lower the knife mark on the zinc will be. With the aid of a graduated rule, which graduation conforms strictly to the laws of gravity, the time occupied by the traveling shot in reaching the target can easily and quite accurately be determined.

The velocities were taken at Chicago and Carney's Point with the chronograph at a distance of 40yds. from the muzzle of the gun. The figures quoted should be understood thus: When a velocity of, say, 804ft. is mentioned, it means that if the pellets had continued to travel a full second at the rate of speed they traveled up to 40yds., they would then have reached a distance of 80ft.

Velocities taken up to a distance of 40yds. are termed Initial Velocities, although, in a strict sense of the word, this term should only apply to the velocities at the muzzle. But it is almost impossible to take the velocities at this point, and, therefore, they are, as far as hand-fire weapons are concerned, generally taken at distances from 25 to 75yds., with the shotgun at 40yds.

Velocity represents life force or penetrative power. From the velocity figures a pretty reliable conclusion can be drawn as to the killing power of a shot charge; and no other means or methods employed for ascertaining the penetrative power constitute as trustworthy a guide as the figures obtained from the chronograph. For this reason the velocities will be taken herein as the basis for comparing and judging the penetration of the several powders.

Guns, as a rule, use for determining the power of penetration of a certain powder or gun a cardboard or paper pad. The results of such tests are unreliable and generally misleading. Lead bullets and shot deform more or less in striking any kind of an object, and this deformation is governed by the velocity imparted to them. Shot pellets driven with a comparatively low velocity will as a rule deform less than those propelled by a higher velocity, and the former will thus penetrate deeper than the latter, although they lack in actual killing force. To illustrate this still better it may be here stated that a bullet fired from a large caliber rifle will at a distance of 300yds. penetrate a sand pile or block of wood only half as deep as at a distance of 1,000yds., although at the latter distance the real penetrative power is only about one-half of that at a distance of 300yds. It is easily explained why such should be the case, the bullet is simply deformed to a much greater extent at the shorter distance than at the greater. The same law applies to shot pellets; and for this reason the results obtained by a penetration test of such a character are of very little value.

The gunner will do much better if, in testing a powder or gun for penetration, he will employ a metal plate of sufficient size as a target. This target should be painted with white lead or any other suitable color. Pellets No. 7 fired against this target at a distance of 30yds. should make marks about the size of a three cent nickel piece; that is, flatten out that much, if they strike the target with sufficient force.

The figures obtained with the chronograph, especially when, as it was done at Chicago, they are taken in connection and simultaneously with the bursting strain, offer many valuable hints for ballistic researches. If, for instance, the chronograph registers a velocity below 700ft., then the penetration is lacking and short of sufficient killing force. If, on the other hand, the velocity of a shot charge exceeds 900ft., an unsatisfactory pattern may generally be looked for. For 12-bore guns the most advantageous velocities are those moving between 800 and 900ft.

A propelling agent maintaining, under all conditions, a velocity of 800ft. and above, affords ample guarantee for a regular and sufficient killing power. If, on the other hand, the velocity drops below 800ft., it means a decrease in penetration, and all velocities under 700ft. will not kill, as a rule, at a distance of over 40yds. Nine hundred feet velocity may be considered the maximum speed for all shot charges fired from a 12-bore gun. Guns of a larger caliber loaded with standard powder charges will give a higher mean velocity than those of a smaller bore. The mean velocity of an 8-bore gun, charged with a standard load of black or nitro powder and shot No. 7, is about 890ft., that of a 10-bore gun 840ft., that of a 16-bore gun 800ft., and that of a 20-bore gun 770ft.

Larger size shot will, with the same powder charge, give a higher velocity than that of a smaller size. The difference between shot No. 1 and shot No. 3 at a distance of 40yds. is about 80ft.; between the former and shot No. 5, 60ft.; between No. 1 and No. 7, 90ft., and between No. 1 and No. 10, 175ft.

Increased shot charges generally diminish the velocity. The difference between  $1\frac{1}{2}$  and  $1\frac{3}{4}$ oz. shot in a 12-bore gun is about 30ft. in favor of the smaller charge, and in a similar proportion the penetrative power of the smaller charge exceeds that of the heavier. In other words, the larger the shot charge the smaller, as a rule, the penetrative force. But this fact alone would hardly warrant the advice to gunners to use as a maximum shot charge  $1\frac{1}{2}$ oz. shot in a 12-bore gun.

The object by the gunner in loading  $1\frac{1}{2}$ oz. of shot, is to increase the chances of hitting. He desires to obtain a closer or, at least, a larger pattern with the heavier charge. But, even in this respect, the desired end is very rarely reached, as a rule, and as the Chicago test has again proven,  $1\frac{1}{2}$ oz. of shot do not improve the pattern much compared with one obtained from  $1\frac{3}{4}$ oz. charge, and the chances of hitting are by no means improved. Taking it for granted that one particular gun will give a better pattern with  $1\frac{1}{2}$ oz. than with  $1\frac{3}{4}$ oz. of shot; the same as one gun will shoot one size shot better than another, and again, another gun will shoot one kind of powder better than others; all phenomena which afford the institutions for testing firearms, powder and ammunition, good opportunity for rendering the gunner valuable services by way of establishing for each gun the most suitable kind of

powder and powder charge, the best adapted shot charge and wadding material, etc.; a problem which the average gunner can hardly ever solve satisfactorily, yet, in general, the results reached in this respect in Chicago will fit the case pretty closely, and the experiments were conducted in the premises, as in all other lines, with a view only to the rule, not with regard to exceptions.

Attention has been called to the fact, previously, that the shot cloud in traveling through the air will spread both longitudinally and laterally, and that the pellets constituting a shot charge never reach a given point simultaneously. It has also been stated that, as a rule, the shot charge fired from a chokebore barrel, retains a more compact shape than that fired from an open barrel. Similar conditions apply to smaller or larger shot charges. The smaller shot charge generally will disperse less in proportion than the larger, and the difference in the arrival of the foremost and hindmost pellets is greater with the larger shot charge than with the smaller. This very difference, however, offsets all the presumable advantages of the larger charge in the way of an increased chance of hitting against the smaller charge, for the simple reason that even when the larger shot charge makes a better pattern on a stationary target, this difference in the time of the arrival of the pellets is never taken into account.

The conditions are different when in both cases the shots are fired against a moving object. In this event, only those pellets come in consideration which arrive somewhat like simultaneously and which constitute the pattern or killing circle. Here the size and density of the pattern is about the same from both charges, and consequently the chances of hitting are alike, with the killing force always in favor of the pellets from the smaller charge.

Pellets striking game very forcibly will accomplish best what is most desirable; they will produce a violent shock, and it is a shock which makes a bird, when hit, collapse and drop almost perpendicularly to the ground.

After this deviation from the object at issue, the main theme shall again be resumed.

The velocity of shot decreases as the distance of travel increases, and this law applies in a more marked extent to finer shot than pellets of larger size.

Shot No. 1, for instance, shows at a distance of 10yds. a mean velocity of 1,142ft.; at 60yds., only of 820ft. Shot No. 5 has, in the first place, 1,180ft.; in the second place, 720ft. velocities. Shot No. 7 shows, at 10yds., a velocity of 1,055ft.; at 60yds., of 640ft. Shot No. 10 has, at 10yds., a mean velocity of 1,080ft.; at 60yds., only of about 438ft.

The length of the barrel, above 24in., does not exercise a great influence on the velocity or penetration, especially with nitro powders, which generally develop the bulk of gases before the shot charge has moved more than about  $1\frac{1}{2}$ ft. in the barrel.

For nitro powders the maximum length for barrels is reached with 26in.

#### The Recoil.

The gases developed by a powder charge in the gun barrel have the tendency to expand uniformly in all directions; they act, therefore, with the same force on the bullet or shot charge and the breech or stock of the gun.

The backward acting force, push or kick transmitted to the shooter's shoulder is termed recoil. The higher this velocity creating the recoil the more perceptible the backward movement of the gun will be to the shooter, and heavier guns will give away to this backward movement to a less extent than guns of lighter weight; but the shape of the stock as such has no bearing on the recoil as long as the stock fits the gunner's shoulder. If the force of the recoil is exercised more gradually the gunner will hardly notice any difference between a light and a heavier gun, but if this force is brought to bear in a more sudden and pushing manner, the effect will be more sensible to the shooter, and in some cases it may assume such proportions that, as previously remarked, the shooter's abilities are seriously affected, or it may even compel him to discontinue the shooting for the time altogether. The extent of recoil is ascertained by means of several formulas, which serve their purpose better than the various recoil gauges or devices for measuring the recoil. Larger powder and shot charges naturally produce a heavier recoil than smaller charges, and this difference again will be more marked with lighter guns than with those of a heavier weight.

Nitro powders, as a rule, develop a lighter recoil than black powder, especially fine-grain black powder, and from this it would appear that the former generate their gases more gradually than the latter. This, however, is not the case. It is evident, therefore, that the recoil is influenced by other factors, which still await discovery.

The recoil takes effect from the moment the gases commence to develop, but it reaches its highest point only after the shot charge has left the muzzle of the gun.

The time occupied by this process is only about one-fourth to one-sixth of a second, and for this reason the shooter does not feel the effect of the recoil in accordance with its progressive development. The recoil is felt by him only after the shot charge has left the muzzle, because the sense of the recoil is not transmitted from the shoulder to the brain in such a short time as that elapsing from the moment of ignition and the moment the shot charge quits the gun.

#### The Effects of the Climate and Humidity Upon the Properties of Gunpowders.

It has been stated previously that all propelling agents are more or less susceptible to the influence of dry heat, moisture in the air, and low temperature, and that on this account many of them change their ballistic properties. The effect of cold, to which all gunpowders are subjected, may be presumed as being about the same in this country as elsewhere. This effect is seldom felt to any marked degree until the thermometer points to zero, and increases in extent as the temperature sinks and as the cool metal exercises a stronger chilling effect upon the gases generated by the powder charge.

All gunpowders develop in cold weather a lower bursting strain and velocity than in warm and dry weather.

This influence can never be neutralized totally, but it can be overcome to a certain extent by means of an increased powder charge. Such charges as  $\frac{3}{4}$ drs. of E. C., Schultze, S. S., DuPont and Wood, and  $\frac{3}{4}$  or  $\frac{3}{8}$ grs. of the Walsrode powders are then in place, and even the black powder, which is less affected by cold than the nitros, should be loaded in heavier charges.

Black and some nitro powders are very little affected by dry heat or humidity, but some of the latter are rather susceptible to these influences, and it is quite a difficult task in such a case, to find the means of successfully meeting and preventing these effects. The phenomena coupled with the effect of dry heat have been described before. The effect of moisture is especially noticeable with cartridges having been stored for some time. Generally a slower velocity or diminished penetration, an irregular combustion and a tendency for hang-fires are the perceptible signs of the influence of moisture.

Very few countries in the world can compare with some parts of the United States of America in regard to a high mean temperature and a high percentage of moisture in the air. These influences are, in all probability, the causes for the fact that several gunpowders show a different behavior in this country from that in Europe, and even act different in one section of this country than in another. It has also been pointed out that some powders developed at Chicago a higher mean bursting strain than they generally do in Europe, where the air is comparatively less dry than in the West. This difference will assume larger proportions in such localities where the moisture in the air or the temperature reaches extreme figures.

The mean temperature for the total year in Germany is about 50° F. or 10° C. The highest variation is 69° F., equal to about 20° C.

France has a mean annual temperature of 58° F., or about 12° C. The mean annual temperature in St. Petersburg, Russia, is 42° F., or about 5.50° C. In New York and along the Atlantic Coast the mean annual temperature is 52° F. or about 12° C., the highest variation 108° F., equal to 43° C. Turlock, in California, reaches a mean annual temperature of 80° F., or about 31° C., while in Texas Hill, Arizona, the mean annual temperature reaches the startling figure of 108° F., equal to about 43° C. The highest variation at this point is 122° F., or about 50° C.

In California and several of the Southern States the temperature seldom drops below the freezing point, but in a number of the Northwestern States frequently much lower than in Central Europe.

In the Central European States the moisture contained in the air averages during winter 83.7%; in the spring 72.3%; in summer 65.7%, and in the autumn 79%, therefore for the total year 75.2%. At Pike's Peak, at a point over 14,000ft. above the level of the sea, the humidity for the total year reaches 81%, and at Mount Washington, 6,000ft. above the level of the sea, for the total year 90%. The Pacific and Atlantic States show about the same degree of moisture in the air for the year, namely, 71% in the former and 77% in the latter.

In Europe the air is saturated with moisture the most in the winter. In this country the highest points of humidity are reached in summer, and frequently, on a hot, bright day, the moisture of the air measures 94%, a phenomenon which accounts for the fact that the same degree of heat appears often in this country comparatively more oppressive than in Europe.

Some of the States west of the Mississippi and in the South show a remarkably dry air. The mean humidity in Texas for the year is 68%, in Colorado 55%, in New Mexico 53%, in Montana 50%, and in Nevada 44%.

The variation in the percentage of moisture is greater in this country for the single day as well as for the total year than in central Europe, and the highest extremes are found again in America.

From the figures quoted it will appear evident that such powders, which are susceptible to dry heat, must show a different behavior in those sections of the country where a portion of their moisture is absorbed by the air, than in parts where the percentage of moisture in the air is more uniform and high.

A powder doing quite well in New York and California may, owing to the effect of the dry air, prove comparatively useless in Colorado, New Mexico and Texas.

The combustion of the dryer powder will be much more sudden and the gases will be developed a great deal quicker than under normal conditions, resulting, as a rule, in an extraordinary heavy recoil, a bad pattern, and perhaps, in some cases, in a balling of the shot.

For all such sections of the country those powders are the best suited which are non-susceptible to dry heat or a dry air, and the result of the Chicago powder test furnishes, in this respect, the necessary guidance. But, if the gunner prefers for some reason to continue the use of a powder to which he is accustomed, although it does not meet the requirements just referred to, then he ought, by all means, never to load more than  $\frac{3}{4}$ drs. for a 12-bore gun and the equivalent for guns of other calibers. He should likewise use an elastic felt wad and avoid a too strong crimp of the shell.

Gunners residing or using gunpowder in such parts of the country where the percentage of moisture in the air is high, should again consider the question if and to what extent a propelling agent is hygroscopic. A powder which absorbs moisture readily will hardly answer in this case, inasmuch as both the ignition and combustion of the powder will not take place under normal condition. The penetration will be lacking in force and hang-fires will occasionally occur.

In duck shooting, in rainy or foggy weather, and in snow, those powders will give the best results which are the least affected by humidity in the air.

At Chicago all powders were tested in regard to their susceptibility to moisture.

#### The Behavior of the Several Powders Toward Highly Increased Charges.

It has been observed, previously, that all nitro powders react to increased charges more violently than black powder. As long as the ordinary 2½in. shells are used, there is hardly any danger on account of an overcharge of powder, whether this increase has been brought about intentionally or accidentally. When the powder charge is much in excess of the standard load, the shell will either not permit the regular size wad, or the regular shot charge or the crimp or turn over will be shorter than usual. All these last named factors will counterbalance to a great extent the effect of an increased powder charge. But when longer or brass shells are used, or the Walsrode powder is loaded into shells not provided with an extra high base wad, then the reaction of the increase will exercise its full force, and in such a case more or less danger is created.

It will be shown that the various powders, as long as the

charges are only slightly increased, will still produce permissible bursting strains.

The question now remaining to be answered is: How will the several powders behave if the charges are increased, say by one-half of their bulk or weight? It is as considered necessary to solve also this question.

#### Clean and Corroded Gun Barrels.

The preservation of a person's teeth depends to a great extent on their cleanliness. If they are neglected, if the remnants of food are allowed to accumulate, the teeth will decay, and, sooner or later, fail to answer the purpose for which they are intended and needed. A good housekeeper will take pains to have her cooking utensils bright and clean. From a person moving in good society and laying claim to culture and refinement, it is expected that he should never allow dirt a resting place under his finger nails, and a good mechanic will always see that his tools are clean.

A gun is the shooter's tool; it is and ought to be also his pride. He should never allow the residue of powders to exercise a detrimental effect on the barrel, and this can only be prevented if the gun is cleaned immediately after it has been used, or perhaps one or two days thereafter.

A clean gun will do better service than a neglected one. Some gunners cherish the preposterous belief that a gun with the "soul" full of rust spots and cloaked with dirt will shoot sharper and kill better than one where the interior of the barrel is spotless and bright. Occasionally a person of this type will even go so far as to create rust in the soul of his gun artificially. It is hardly worth while to argue with such persons and to endeavor to convince them that they are doing a foolish thing. Against such stupidity the gods even will fight in vain.

The residue of all gunpowders, if left in the gun barrel for any length of time, will show a tendency to corrode them. Black powder, as a rule, will corrode the metal less than some of the nitros, which all contain more or less acids of some kind, and these will facilitate the corrosion of the metal. This effect may in some cases be strong enough to show its influence even in the case where the barrels are cleaned within a reasonable time after use. Such a quality of a powder is certainly not a desirable feature.

This question, too, has been considered important enough to be made the subject of a test.

#### Soft or Chilled Shot.

The question whether soft or chilled shot will give the better penetration or exercise the best killing effect is one of those frequently discussed in gunners' circles. A great many gunners hold that chilled shot, owing to its being somewhat harder than the soft shot, will penetrate the skin of an animal or the feathers of a bird more readily than soft shot.

The difference in the effect of both in this respect is very small indeed, so trifling that it will practically cut no figure. While it is true that the soft shot pellets will more easily deform than the chilled shot pellets, the killing qualities of both are yet about the same, because, as previously pointed out, it is the shock brought about by the pellets striking the game which produces the most effect, and this effect is nearly the same with both kinds of shot. The chilled shot is principally preferable to soft shot on account of leading the barrels less rapidly than soft shot.

#### The Effects of the Primer Upon the Qualities of Gunpowders.

On a previous occasion it has been said that the primer may influence the behavior of a propelling agent. This rule applies more particularly to the nitro powders, which generally—and as the Chicago and Carney's Point tests have again clearly demonstrated—cannot be exploded satisfactorily with the common or black powder primer. These powders require a special or strong primer, such as in this country is known as primer No. 3. These primers are made with due regard to the nature of the nitro powders. The fulminate is chosen with a view to bringing about a more effectual ignition than can be produced with the ordinary primer. To accomplish this requires a great deal of skill and knowledge of the action of the fulminates; since certain fulminates may, under certain conditions, cause too violent an explosion of the powder, and thus create a serious element of danger. On the other hand, the force produced by the explosion of the fulminate may prove so powerful that instead of igniting the powder it will develop sufficient gases to start the shot charge before the flame of the primer has found time to take proper effect upon the powder.

The question now arises: Do some of these strong primers as such and as lately introduced for the use of nitro powders, really represent an element of danger?

This question has been considered of so great importance that, although the Chicago test has solved it pretty satisfactorily, it was concluded to arrange a special primer test, which has been since carried out, and the result of which is herewith submitted to the American sportsmen.

All powders tested at Chicago were subjected to another test at Carney's Point, where the new Schultze powder called Pompton, and a new leaf powder made at Walsrode, and which reached me after the Chicago test had been concluded, were tried under the different conditions, and the result of this trial is now embodied in this report.

The velocities were taken at Carney's Point by one of the gentlemen connected with the firm named, and the bursting strain was again taken by Mr. Thomas, of the U. M. C. Co., with the assistance and under the control of myself and others. The Chicago test pointed to the fact that some of the powders would likely undergo a material change in their behavior if tried under different conditions and in another section of the country. This opinion has been fully verified by the Wilmington trial.

The primer test, as far as this problem involves the interest of the shooting fraternity, was made as thorough and exhaustive as possible, and the result of this trial in connection with that of the powder tests will, I think, settle quite conclusively many questions in the premises on which the opinions of the gunners of this country are at great variance.

In order to enable the reader not conversant with Continental European standards of weights and measures to digest all figures herein quoted, the equivalents of the various European weights and measures may here be given in American standards. One meter is equal to 3.2807 ft., ten meters are equal to 32.8087 ft. (In the tables of this

report the meter has been reckoned as being equal to 3 ft. and 3 in.) One millimeter is equal to .03937 in. One gram or gramme is equal to 15.4333 grs. One atmosphere is equal to 14.7 lbs. pressure to the square inch. Ten atmospheres are equal to 147.0 lbs.

All powder charges were carefully measured or weighed and the shot counted for each load with the shot-counter or trowel.

Watson's Park was selected for the Chicago tests. The proprietor of this celebrated shooting ground, Mr. John Watson, afforded us all possible opportunities for conducting the trial, and his son, I. Watson, rendered us throughout the test much valuable assistance. Both of these gentlemen and fellow sportsmen are entitled to the thanks of those called upon to conduct the test, and to those who witnessed the trial, for their complaisance displayed in the premises.

I am further under great obligations to Mr. William Thomas and Mr. C. S. Hissey, who volunteered to serve at Chicago as expert witnesses, and who devoted much time and rendered valuable assistance in the execution of the work. They controlled all experiments, and every gas pressure figure quoted in the report on the Chicago trial has been ascertained by these two gentlemen.

The primer test likewise bore a public character, and was carried out at the shooting ground of Messrs. E. I. DuPont de Nemours Co.'s gun cotton factory at Carney's Point, New Jersey, near Wilmington, Delaware. These gentlemen placed the grounds named and some of their instruments kindly at my disposal, and rendered us all possible assistance to bring the test to a satisfactory issue. The experiments conducted at Carney's Point were carried out under different climatic conditions from those at Chicago; and they constitute, therefore, a valuable link in the trial as a whole.

[TO BE CONTINUED.]

#### BOSTON MEN IN MAINE.

BOSTON, Mass., Nov. 25.—Of late a big number of big game hunters have been happy. There has been one or two "good tracking snows" in Maine, and deer have been obtained so much more easily than had previously been the case, with the ground deeply covered with dry leaves. Hunting, up to these snows, had, in fact, become "a game of chance," with the chances against the hunter. Deer are very wild animals to approach at the best, and with the woods full of dry, crackling leaves, the chances have been decidedly against the hunter. This brings me to mention what I am asked to mention by a gentleman well known to the hunting fraternity, Mr. L. Dana Chapman, treasurer of the Megantic Club, a gentleman greatly interested in fish and game, and well posted on fish and game subjects. His name here I use, not by his authority, but for the force it carries. He is surprised at the manner in which the newspapers of the day are treating the subject of big game hunting, especially this fall. "One would think, by reading these articles, that there were herds of game around loose, and to get a moose or deer, all the hunter, even the novice, has to do is to select his location in Maine and go there and come home with a full quota of game. There never was a greater mistake. While deer are really plenty," says Mr. Chapman, "it must be remembered that it takes hard and earnest hunting to get them, and sometimes for a good deal of time. Deer are a shy game to hunt, and oftener than otherwise the chances are decidedly against the hunter. This is right and does not discourage the genuine hunter in the least."

Some good work is being done by the Megantic Club in the way of stocking with landlocked salmon, under the direction of Mr. Chapman, Secretary Arthur W. Robinson and Supt. Robert Phillips. These gentlemen have recently returned from a trip to Big Island Pond, one of the ponds of the Megantic preserve, where they went to put in their new home 1,000 landlocked salmon of last season's hatching. The little fish are some 3 in. in length. They took them in cans up to Kennebag Stream. It was a job to keep the water sufficiently aerated till the cans reached the Phillips & Rangeley Railroad, when it was found that the roughness of the track gave the cans sufficient motion to keep air in the water. From Kennebag Stream the fish were carried in wire-covered pails to their home. Mr. Chapman says that not more than three or four fish were lost, notwithstanding the long carry through the woods, and he very kindly says that much of this success is due to the carefulness of their three guides, James Mathison, Will Haines and Jerry Wilbur. These guides take great interest in the restocking business in Maine waters. The little salmon were liberated in a brook that runs into Big Island Pond. They kept together for a time, but in the course of an hour or two they had all disappeared. The club, under the superintendence of Mr. Phillips, has built a hatchery at the same pond, where the location seems to be excellent, and the plan is to obtain a lot of trout eggs and hatch them. Mr. Chapman is also interested in obtaining a lot of smelt eggs from Lake Auburn in the spring and hatching them at the Big Island Pond hatcheries. This measure is proposed, in order that the landlocked salmon may have food. Commissioner Stanley is of the opinion that the success of landlocked salmon in Maine, or any other waters, is contingent upon a plenty of landlocked smelt for food. It has been found to be comparatively easy to get the smelt eggs, at their spawning time in the spring, and they hatch out in a few weeks, requiring no great care, when they are ready to be liberated.

Mr. Chapman's restocking party did not succeed in getting any big game on their trip, though in an excellent deer country. They saw them, heard them run and "heard them skulk," but the leaves were too dry to get within a gunshot. But at the same time over 40 deer have already been killed at the Megantic Club preserve this season; several since the recent snows. Dr. Heber Bishop, so well known as one of the promoters of the club, with a couple of friends is there at the present writing. They will hunt in the Kibby Valley. The Doctor usually brings out a moose.

Mr. A. R. Justice, A. W. Kelley and their friend Mr. Voorhees, of New York, have been to the Megantic Club preserve, with good success this fall. Mr. E. A. Best and friend Mr. Currier, of New York, have lately returned from Spencer Bay, on Moosehead Lake, where they got three deer. Mr. Henry V. Cunningham, attorney, with Melvin C. Adams, at 20 Pemberton Square, was to leave Sunday evening for Aroostock county, Me., on a much needed vacation. He is hoping to get a deer, though his stay will be necessarily limited. Dr. W. L. Simpson of

Boston, and D. L. Sperry have just returned from King and Bartlett with a couple of deer. Mr. S. C. Dizer, of Prouty & Dizer, of Boston, is back from the Maine woods. He got a deer.

The Harry Moore party got back to Boston on Monday. The party went away with small expectations, but the gentlemen have come back greatly pleased. They went, as the readers of the FOREST AND STREAM will remember, to Gerrish's Camp some 15 miles in from the Katahdin Iron Works, in Maine. They are charmed with the region, under the very brows of White Cap Mountain, one of the larger of the Katahdin region, in a deep valley. Early in the trip the ground was bare and the leaves dry, and they found it very hard to get shots at deer. But still they did secure one doe, which Mr. Calvin Austin, who was obliged to leave for home after two or three days' hunting, brought out. About the fourth day there came 3 in. of snow, and the right royal fun began. The whole party was delighted with the multitude of deer, as evinced by the tracks. Indeed the tracking of deer was almost bewildering, even on the first day after the storm. They found that the deer were amply able to take care of themselves, and had to be approached with a great deal of caution. Almost invariably the deer they were trying to approach would be behind some "blow-down," and often he would skulk; or if the hunters had got too near, he was off with beautiful bounds. Mr. Leroy S. Brown carried a shotgun. He had supposed that deer would not be plenty and that he could get a few partridges while the others hunted for deer. But when he found that deer were as plenty as partridges, his idea changed. He found it very hard to get within shotgun range of deer, though he had a number of shots that would have been easy for a rifle. At last he approached a "blow-down" with a good deal of caution, the tracks leading up to it in abundance. Out popped a handsome doe, and was off. Naturally, and earlier in the trip, Mr. Brown would have supposed that the game had all flown, but he had learned caution, and peered into the brush a moment longer. A big pair of eyes met his. His gun came to his shoulder. A beautiful buck fell at the discharge.

Mr. Geo. C. Moore got a handsome buck. Mr. Faulkner got a buck and Mr. Smith got a buck. Each of the party had a deer, except Harry Moore. Alas for him! Always the life of the party! Was he to go home without a deer? Yes; it must be so! But there is something to tell. He had shot a moose, a fat two-year-bull. Was Harry frightened when he came upon the beast? No. He had heard of the camel at the World's Fair, and his first thought was that one of them had strayed. His next thought was to shoot it. It was done. But oh, the misery of getting the camel down three miles from the side of White Cap Mountain and through dense woods to camp, where it could be transferred by teams! It was done, however, and the moose came to Boston. It was taken out to Harry's place at Jamaica Plain, and hoisted up into a couple of trees in front of his residence, where it was admired by a host of people. The next day Harry's provision man placed it standing on a couple of barrels, in front of his store, and within an hour there were hundreds of people looking at the creature. The amusing part of the story is that all the servant girls thought it was a camel sure. They had been riding in the electric cars, and "Didnt they see the hump?" SPECIAL.

Dr. George McAleer of Worcester, H. S. Seeley of New York, Senator Risteen and Dr. Heber Bishop, president of the Megantic Club of Boston, left last week for a two weeks' sojourn near the boundary mountains in northwestern Maine. Their main camp will be in the Kibby Valley, not far distant from the headwaters of the rivers St. John, Penobscot, Kennebec and Chaudiere in Canada.

#### THE MICHIGAN DEER SEASON.

DAYTON, O.—*Editor Forest and Stream:* Your correspondent from Marshallfield, Wis., hits the nail on the head in regard to the open season in that State, and the same applies to the Upper Peninsula of Michigan. I spent the season up there this year, and talked with many hunters, residents as well as visiting sportsmen. All agree that the open season should be November instead of from Sept. 25 to Oct. 25. The change would protect the deer for several reasons. In the first place, there would not be nearly so many does and fawns killed. As any experienced hunter knows, at that season of the year the majority of the deer killed would be bucks. Whereas, under the present law, it is just the reverse.

At the lake where I was camped there were three camps, and the total number of deer killed was just fifty; and I believe there were only ten or eleven bucks, the rest were mostly fawns. This will doubtless seem a very large score. But one of the camps was occupied by two professional hunters, who killed and shipped thirty-three deer. Is it any wonder that deer are getting scarcer? I need not tell any brother sportsman, who has hunted in that country, how they got so many deer; for we all know they get them any way they can without regard to law.

And that brings me to my second point, which is, that by making the open season in November much of this slaughter of the innocents would be prevented, because then they could not hunt at night with headlight, on account of the snow and moonlight nights, but would be compelled to get their deer by still-hunting in day time, the same as the rest of us. And even they do not object to that, because, being expert hunters, they could kill their share of big bucks, and one big buck would bring them more money than three little fawns. So even if they only killed one-half or one-third as many, they would be as well off, and it would make a vast difference in the future supply of the deer. Of course this night hunting is wrong, but I have my doubts if it can be stopped. As nearly every settler in that country has a headlight and uses it to get his supply of meat, it would require an army of game wardens to enforce the law.

I have hunted a number of years in both Wisconsin and Michigan, and my experience teaches me that in both States the open season ought to be the same and should not begin before Nov. 1. I hope the sportsmen of these States who enjoy legitimate still-hunting will bring such a pressure to bear on their legislators as to change the open season in both the States to November. It would increase the supply of deer and give us all a chance to enjoy legitimate sport. Besides, then there would not be so much venison spoilt by warm weather.

BUCKEYE.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## Philosophy Censured by Mr. Hough.

VINCENNES, Ind., Nov. 15.—The great sage of Concord, Ralph Waldo Emerson, was a thinker, but his thoughts do not all bear investigation, and, at best he must have shone more as a philosopher than a newspaper man, which latter follows much the harder calling. Philosophy is dead easy compared to news. Emerson, in one of his jagged rhymes, deprecates travel as follows:

"Who bides at home,  
Nor goes abroad,  
Carries the eagles and bears the sword."

This doctrine may do very well as applied to foreign travel, for we have a good enough and big enough country right here, but take it in general, it will do best for him who is out of affairs and concerned only to meditate. Travel is the best education, and had Emerson had more of it, he might have graduated out of philosophy into the higher plane of journalism, in which he likely would have been a corker, being naturally able to make it short.

I venture the assertion that, philosopher as he was, Ralph Waldo Emerson did not know how to clean a quail. Further, I will venture that a great many readers of FOREST AND STREAM do not know how to do it. Had I obeyed the advice of the philosopher whose ignorant wisdom I once loved because I couldn't understand it and didn't dare call it anything but wisdom, I should, perhaps, be now carrying more eagles in my pockets, but neither I nor the public at large would ever had known, let us say, how to undress a quail in the speediest and neatest way in the world.

## Clean Quail with Scissors.

To clean a dozen quail in six minutes, and do it without even soiling your fingers, you need a pair of scissors. The long-handled, short-bladed scissors used by taxidermists are best, as they cut bones with less exertion of strength. This morning my friend had a bunch of birds before him. Taking up one of them he removed the head, wings and feet in five brief clips, cutting off the wings pretty close up to the body, and the legs above the knuckle joint, just where the feathers begin. Then he tore the skin of the breast, rolled it back from the sides, and stripped it down along the back almost in one piece. A few plucks at the remaining feathers left the bird bare except the tuft of feathers on the tail. Again taking up the scissors the artist inserted a sharp point through the flank of the bird up near the shoulder, and made a clean cut back through the ribs to the thin part of the belly, under the end of the breast bone. This was repeated for the opposite side. Of course the bird then fell nearly apart, the viscera being all exposed. The artist did not now reach in with his fingers to eviscerate the bird, but placing the points of the scissors well up in the cavity of the body, just above where the heart lay exposed, he made one neat clip and cut the ligaments which bind the upper viscera to the back bone. Then still using the scissors and not his fingers, he easily and in one movement raked back all the viscera, which hung quite free of the abdominal cavity and attached to the tail or "Pope's nose." One more clip close up to the body severed the "Pope's nose" and viscera and tail feathers all fell at a stroke, the bird remaining in the hand clean and free from blood. The fingers of the artist were not soiled. He could have worn kid gloves and not have soiled them. The bird was as clean as any I ever saw, and the whole operation was performed in one half less time than I ever saw used in doing it before. If Ralph Waldo Emerson were alive I would back John A. Balmer, of Vincennes, Indiana, against him for all kinds of money in a quail cleaning match. For my part, every time I go away from home I learn something, if I have luck. This wrinkle, which Mr. Balmer learned in course of his amateur taxidermic work, is worth remembering. You can clean quail in the parlor in this way, and properly put in practice quail cleaning may thus be made a family amusement, in which one's wife, if he has any good one at all, should cheerfully and eagerly join.

## Philosophy, Field Trials and the Fair.

It all happened this way. Mr. Balmer, who is the best shot and leading sportsman of his town, was up at the Fair a few weeks ago and asked the Western representatives of FOREST AND STREAM to come down and go shooting with him after the close of the U. S. field trials at Bicknell, which point is only 15 miles from Vincennes. According to this programme, which fortunately was found possible of carrying out, Mr. Waters and myself met Mr. Balmer here three days ago, being brought over from Bicknell by force and arms by Colonel Albert G. Sloo, whose big plantation is about seven miles out of this city. Colonel Sloo, in his large-hearted way, asked Mr. Balmer to divide time with him, and so we shot all day Monday with both gentlemen and Mr. Tom Sloo, the Colonel's son, out on the wide acres which lie around White Hall. Monday night we could not resist the Colonel's hospitality and staid over with him and his charming family, to be joined again Tuesday by Mr. Balmer. Wednesday we shot with Mr. Balmer down in the Wabash bottoms, and to-day, Mr. Waters being called South by further field trial work, I am loafing and inviting my soul, and debating whether or not ever to go back to Chicago, and whether it would not be much better to stay here and watch Mr. Balmer clean quail.

## Has a Meat Dog.

Mr. Balmer has a home, and a nice wife and a fine boy. He also has a rattling four-year-old colt, and three dogs, and a great deal of leisure time. Compared to that of the city worker, his life is that of a prince, the more especially because one of his dogs, the old Gordon, Duke, is what the field trials folks contemptuously term a "meat dog." He plugs around, and finds birds, and points them, and you can kill them, and then he retrieves them. Any of these qualifications would, as I understand it, disqualify him for field trials work; but I confess they still seem useful to me. When I want to go out and get some birds, because there is a hard winter coming on, I want a plain, unvarnished meat dog, with no rifles on him, and a disposition to point birds, and a set of legs which will work like an eight-day clock. Duke has been run over by a wagon eleven times, and he only has one eye; but he can jump a wire fence, and on the morning of your fourth day of hunting he stands up on his hindlegs and hollers for joy

when he sees the guns come out. That sort of dog is good enough for me, and I don't care who knows it, and after a while plenty of shooters will think the same way. When it comes to field trials, it is another thing, for a day of trials running can in no way be compared to a day of shooting, the purposes of each being entirely dissimilar to those of the other; a fact which many overlook. When it comes to having sport at quail shooting, give me a meat dog or give me death, that's all I hope. *Vive le meat dog.*

## A Good Dog Country.

There are numbers of good dogs about here, the region being a sort of trainers' headquarters, and moreover, being the natural home of Bob White. Colonel Sloo always has a good dog or two about him, and we found three in his kennels when we were there, Jack W., Stocking and a puppy. Poor old Jack! his history is approaching its end. His life has been a grand and successful one in his doggy way, but now there are few glories and few pleasures left for him, for he is growing old. Tuesday morning we had the old fellow out for a couple of hours, but he went quietly, and though he pointed and retrieved his birds confidently as ever, he was gamer than he was strong. He went lame, and when he lay down at the house soon stiffened up sadly. Dog heaven is not far off for old Jack, I fear, and he will soon repose in Colonel Sloo's illustrious canine graveyard.

## Fair Abundance of Quail.

The quail crop for this section, pretty well south in Indiana, is perhaps not so good as it has been, but there seems to be a fair abundance of birds. On and around Colonel Sloo's place we put up eleven bevs the first day and eight during a part of the second. The cover to which the birds took is very rough and full of briars, the shooting trying one's skill thoroughly. Mr. Balmer is one of the best quail shots I ever saw, yet we only got thirty-one birds on our best day. Yesterday was nearly a blank. We went across the Wabash on the Illinois side, where, by reason of the singular differences in legislative wisdom, they have been shooting quail for six weeks. We only put up three bevs all day, and they were wild as deer. We are not getting a great many birds as yet, the weather being too cold for them to move much, but we are having delightful times and getting plenty for reasonable sport, and enough anyhow to practically illustrate Mr. Balmer's method of dressing quail and the ways in which Mrs. Sloo and Mrs. Balmer cook them, each and all of which is excellent in its respective way, though perhaps not so intrinsically wonderful and startling as the way in which I ate them. In this latter accomplishment I think there could be no question as between Ralph Waldo Emerson and myself. The situation being as it is, I can at present see no legitimate reason for staying here less than a year, and may condescend to write something further about it within the next six months or so, if not too busy shooting.

## The Cuvier Club Annual.

CHICAGO, Nov. 25.—In the mail here is an invitation to be present at the annual dinner of the Cuvier Club, of Cincinnati, an affair which I observed the Cincinnati papers mentioned as bidding fair to surpass all previous events of similar nature. The menu given by the daily papers shows that game has as large a place in the gastronomic proclivities of this body as the preservation and protection of game has in its purposes of organization. It would have been pleasure to meet so rare an assemblage, among them Col. Culbertson and "Kingfisher," through whose joint graces FOREST AND STREAM is honored. It is hard to send regrets in reply to a letter like the following from "Kingfisher," which is too characteristic to keep private:

A few days ago "the Colonel" sent you an invitation to attend the annual game dinner of our "Cuvier Club," and I trust you will see it in the light of a duty to your "innard man" to come down and partake of the spread. It will be no "swallertail coat" affair; just a plain assembling of the club members—over 400—and a very limited number of invited guests, to eat, drink and be merry, have a good time and swap a few lies. There will be no "blowin' bole" accompaniment, except in the shape of some wine and a few gallons—60 or 80—of "aig nogg," with three g's. I have not seen the "score sheet" (menu) yet, but it will be one that will satisfy the most "facetious," as Dick Macaulay would say, and I'm sure you will enjoy it all, for you will be among friends and brothers of the gentle craft. Come down. Leave Chicago Wednesday night and get here Thursday morning, 23d, and that will give you time to "profligate 'round" a little and get the lay of the land before the festivities begin. The Kingfishers will "be thar," with the possible exception of "Kelpie," and we will all be glad to see you. Call at the office of the Superintendent of Mails and ask for

JEEMS MACKEREL.

## Still Another Game Dinner.

Could one have been present Thursday at Cincinnati, he must have hastened away to reach Cleveland, at the other end of the State, in time for a certain little banquet there, the invitation to which reads for Friday, Nov. 24. This comes from an ex-Chicago man, Mr. John Howley, well known in insurance and in sportsmanship. Mr. Howley is now of New York, and writes me from there, but it seems he has a custom of coming out to Cleveland once a year to eat quail, since the menu speaketh thus:

Mr. John I. Lynch, sportsman, of Canton, Ohio, and Mr. John Howley (who is also a sportsman), of New York, will take part in an ancient custom and dine with their friends at the usual place, the Hollenden, Cleveland, Ohio, Friday evening, Nov. 24. The leading subject for discussion will be The Quail. You will, of course, be with us.

JOHN A. KELLY.

Yes, of course, we would be there, all of us who had the chance, but there was no chance to get to either Cincinnati or Cleveland, and regrets had to go again to the framers of the interesting symposium above.

## The Carlin Hunting Party.

The Chicago Evening Journal to-night, Nov. 25, reports in a dispatch from Portland, Ore.: Brigadier-General W. P. Carlin, sends to the Associated Press the following dispatch just received by him from Lieutenant Charles P. Elliott, of the Fourth Cavalry, dated Nov. 23, Falls of the North Fork of Middle Fork of Clearwater: "Carlin party found on river to-day. Carlin, Spencer, Pierce, Himmelwright are well. Colgate lost. Kelly joined them in mountains. Will work down river by boat."

Will Carlin, or Willie as his friends know him, is a friend of Capt. DuBray, of the Parker gun, who mentioned to me the trip which young Carlin was about to take into the Bitter Root country. Capt. DuBray spoke very highly of the young hunter's quality in sport, but I imagine he and many others will be rejoiced to learn news even no better than the above of a party exposed to so dangerous a hazard.

## Something of a Hunter Himself.

By the way, Capt. DuBray seems to be something of a hunter himself, as witness what I find in a Memphis paper:

Mr. A. W. DuBray, the representative of Parker Bros., the famous gun manufacturers, has been in Memphis several days. He spent two days last week at Vapona, the guest of Mr. Robert Galloway, the president of the club, and was delighted with the duck shooting there. He had no difficulty in making the limit of 50 in two hours the second day. Mr. DuBray has been given a cordial reception by the sportsmen of Memphis and vicinity, and has accepted several invitations, among them one from Somerville, where he will take a bird hunt to-morrow. He has shot hundreds of deer and many buffalo on the plains, hunted ostriches and other game in South America and birds everywhere. At the trap he is among the most expert in the country, but he is a thoroughbred sportsman and at his best in the field. Mr. DuBray is an Englishman by birth, but he has lived in America many years, and now resides at Dayton, Ky. He is by birth and breeding a gentleman, whom it is a pleasure to know and a sportsman whose company on any kind of a hunting expedition it is a privilege to have.

This be high praise, but I reckon we'll have to let it go at that, as I know of no dissenting voice. E. HOUGH.

209 SECURITY BUILDING, Chicago.

## THE HABITS OF THE CARIBOU.

NOTICING your article in a recent issue of the FOREST AND STREAM in regard to the actions of caribou under fire, I had some experience in the summer of 1893 that may prove interesting. On the evening of July 25 we were camped on the height of land between the Great Lakes and Hudson's Bay. South of us about half a mile were the headwaters of the Spanish River, emptying into Lake Huron. North about two miles the Moose River took its rise. Our camp was on a narrow ridge between two small lakes. While the guide was preparing supper I was as usual on the lookout for anything that might be in the wilds, and I saw a caribou swimming across a narrow portion of one of the lakes about 350 yds. away. We watched the animal until it reached the shore or low water bank of the lake. My companion intending to frighten the deer before it reached cover attempted to fire his .45-70 Winchester, but the cartridge failed to explode, making only a slight click. We had not been observed and the animal was quietly feeding, but when the rifle snapped it instantly sprang forward like a spirited horse from the lash of a whip, and after a few bounds disappeared in the timber. Considering the great distance and the trifling sound made the animal must have been very much on the alert. Ten days later, on the same trip, we were canoeing in an easterly direction through a lake about half a mile wide. On the north shore about a quarter of a mile off a caribou was traveling westward, sometimes on the bank and sometimes in the water. We turned the canoe in the direction of the deer, and without lifting his paddle from the water the guide propelled the canoe forward. When within 200 yds. the animal sighted us for the first time, though we were all the time in full view out in the open lake. The caribou came to a stand and stared stupidly in our direction. In order to observe its gait in running I fired a shot. The deer instantly turned around and galloped off in the direction from which it had come, keeping in full view for 200 yds. at least, though it might have reached cover at any time by a single bound. From the experience I have had I would advise the caribou hunter to be very careful to avoid noise and to prevent the deer from getting wind.

S. R. CLARKE.

TORONTO, Nov. 23.

## An Interesting Time While it Lasted.

MESSRS. JAMES AND F. A. DUPUY returned home last night from a ten days' hunting and fishing outing on Tygart Creek, Kentucky. Their brother Dr. Van Dupuy, of Dayton, was with them during the most of the time but returned home a few days ago. Mr. George Howland, of Tygart, also camped with them. During their hunt they killed seventy-five squirrels, two turkeys, some quail and other game. They had quite a thrilling experience one morning during their encampment. About three o'clock they were all awakened by a glaring light and ominous roaring and roused up to find the entire front of their tent in a blaze. Big patches of the burning canvas were falling on their beds and among their cartridges and it looked; to them on their first half-awakened gaze as if the entire universe was afire. The tent had caught from the camp fire which Dr. Van had been up some time before to replenish. By prompt work the blaze was extinguished and part of the tent saved, but not without some burns being received by each of the campers. F. A. was severely burned on the hand and had his hair, eyebrows and mustache singed, while James Dupuy received bad burns on his wrist. The Dr. and Mr. Howland also felt the hot touch of the fiery enemy. The embers set fire to their hunting coats and in two instances was found to be burning about pockets full of cartridges, but Dr. Van with a cup of water and some careful work succeeded in extinguishing the fire without any explosions. It was an interesting time while it lasted and all will remember their experience for some time.—Ironton Republican.

## Game About Hot Springs.

HOT SPRINGS, Ark., Nov. 20.—Editor Forest and Stream: As every winter and spring brings many sportsmen to this famous sanitarium, you may suggest to all the boys who contemplate coming, to bring along their guns and tog. We have very good game shooting here. Plenty of quail and gray squirrel shooting, and there is not much more exciting sport than the latter in our river bottom lands, where the frisky little fellows have to be taken on the run and leaping from tree to tree. More skill is required to bag them than quail or other wing-shooting. Duck shooting in the lowlands adjacent to this point is fine, while in the early spring we have good sport with snipe. Those who like large game may find plenty of deer in the Ozark Mountains all around this city, and some black bear. Our markets are generally well supplied with these varieties of game all through the winter season. The open season on deer in this State is from Aug. 1 to Feb. 1; on quail from Oct. 1 to March 1. Turkey may be shot till April 1. The other game I have mentioned may be taken at any time. Aside from the field shooting, I want to say to brother sportsmen that we maintain a good gun club here, with well-equipped grounds, and make it a point to entertain the best we can all shooters who visit our city. All they need do is to make their presence known to us and we will try and afford them some sport. We shoot regularly once a week, and our grounds are at the service of visiting sportsmen every day if they desire.

J. L. WADLEY.

## Reminiscences.

It happened on the Ohio River steamer Mary Houston, between Cincinnati and the Coney Island of the West. The boat was jammed with shooters and their families, and a jolly crowd it was with the hundreds of sportsmen on board bound for the Coney Island shoot entertaining those present with reminiscences. The best was that of Mr. Andy Huber, of the West End Rabbit Shooting Club of this city, who has a very badly crippled hand and which by the way may be termed the moral of the story related. Some fifteen or twenty of us were bunched together having a jolly time on the lower deck. Huber was talking, "Vell, poys," said he, "you fellers talk about sport, I don't believe you ever knowed what dead game sport vas. Now, I tell you. Apout twenty-five years ago, when I first come to dis gountry, dere vas a feller over the river, now where Fort Thomas is apout, what t'ought he could shoot rabbits better than anybody. Vell, anyway, we went out shooting, both of us. The first rabbit what got up he killed just so good as I or you could. Al and I t'ought my name vas Dennis, and I vas scared right there. Vell, we shot along till apout 10 o'clock, I having six and him three. We vas going along, he apout fifty yards back of me, when I t'ought 'I'll fool that duck,' like the fellers here say, you know. First thing you know I vas away from him, a little to his right, and over a little hill. I said now is my chance. I took one of my best looking dead rabbits, got behind a bush what was there and made him wiggle with my hand, just like he was playing, you know, when Peter Hans come along, and dat fool shot, and here's my hand to prove it. I yelled like an Indian, but it cost him anyhow \$2 for the trinks, and we laughed at that feller for years." WICK.

## How Long was that "First Close Season?"

Editor Forest and Stream:

If that reward for errors in the *Brief* holds good for all game seasons mentioned I take it that it must apply to the statement about the duration of the "first close season," which was the time during which Noah and the animals were sailing around in the Ark. The *Brief* prints this, with delightful indefiniteness, as "the year or more." Now I always supposed that Noah was shut up in the Ark for forty days. If I am right, you may send me the reward.

HARTFORD.

[If "Hartford" will look at the record he will find that Noah was in the Ark much longer than forty days, and if "Hartford" or any one else will tell us exactly how long that first close season lasted he shall have a copy of the *Brief* with the compliments of the publishers.]

## Florida Quail.

TALLAHASSEE, Fla.—In traveling over the country around Tallahassee I have noticed that the quail are even more numerous and in better condition than they were last year; and as one sportsman scored his 2,000 long before the end of the season you will be able to have some idea of their number. The country north of Tallahassee is well stocked with quail, but the ducks are not coming in as soon as usual. The country south of the town and on the Gulf coast is as well stocked as any sportsman could wish. Turkeys are numerous; deer fair; bear scattering, and geese and ducks coming in thick. Hunting parties are going out continually, and all report good luck considering the dry weather. The hunting laws of the State have caused the game to be very abundant and residents are well disposed to strangers.

G. A. L.

## Of all Fools an Old Fool.

WHEN we were returning from a canoe trip my friend B., to punish me for not taking a gun, took pains to call my attention to every flock of ducks and geese passing in easy range, until his "mark," "here and there," or "be ready for this and that" became exasperating. Near home and turning a sharp bend in the river we came upon a flock of black ducks, and when my friend called my attention to them I drew my revolver and fired two shots in quick succession. "Way too high," sings out B. "Crack," answers the revolver, and "give it to them again," says B., "you knocked one's head off." There was something on me, and somebody's decoy is minus its head, please don't sue for damages. MUX.

## Ferrets and Ferreting.

COMPTON, Que.—I cannot agree with your correspondent, W. H. W., under the heading of "Ferrets and Ferreting," in your issue of Nov. 18, as the title only brings to my mind the many happy days I spent on the old sod with ferrets. I think that there is not much advantage taken of a rabbit when he is bolted by ferrets, as I know from personal experience that he is extremely hard shooting, and no poor shot can shoot such a rabbit, but W. H. W. in his letter might mean with nets; in that case I agree with him, as that is as bad as poaching.

FRED. V. WETHERALL.

## About Avoca.

AVOCA, N. C., Nov. 10.—I was in Chicago the whole summer and could not rebuild hotel to my notion and enjoy Chicago at the same time, therefore I concluded to give the birds and turkeys a partial rest and let them recover from the terrible winter of 1892-3. The turkeys are in abundance and birds and deer moderately plentiful. Some of our old friends are constantly inquiring, and a few beginning to put in an appearance anyway. Myself and three sisters own an old style Southern plantation house, and we are caring for such sportsmen as will come.

W. R. CAPEHART.

## Louisiana Ducks.

NEW ORLEANS, Nov. 20.—Mr. E. J. Trenchard, one of New Orleans' leading sportsmen, returned after a very successful day's hunt at Boute station, having killed 79 mallards and one black duck. His hunt was the result of a morning shoot. The grounds are thirty miles from this city. Ducks are very numerous all over the State.

ANODRAC.

## New Brunswick Deer Increasing.

DORCHESTER, N. B.—Our new game act is being fairly well enforced and with very favorable results. The protection to deer is having a marked effect in the increase in the numbers to be found in our Province to-day. E.

## Beaufort Wildfowl.

BEAUFORT, N. C., Nov. 24.—Ducks are more numerous here this season than for any time in five years. Geese, too, are plentiful, and the hunting promises to be first class. Decoys and batteries can be had at any time. The climate is fine. A sailboat (Capt. Smith) meets all trains at Morehead City, which is two miles across the sound from this place.

M. P. ROBINSON.

## Montana Game.

BILLINGS, Mont., Nov. 15.—Chicken law goes in effect to-day. Have been quite plenty. Deer fairly good, but have had no snow yet here. Friend came in yesterday with three, the result of four days' hunting forty miles above here. Hope to have a trial at them myself soon.

J. W.

## Adirondack Deer Season.

WE went to the West Canada Lakes Sept. 25, 1892 (taking in the last days of bounding). The party who killed the doe went out about one week or so before we went in. The doe was in milk; but it is often seen later than that, one of our party killed a doe this year that was in milk in October.

T. A. B.

## On the Grouse Moors.

BOWDON, Eng.—I have just returned from the moor; had two days' grouse driving; five guns killed seventy-five brace first day; and ninety-three brace second day. Plenty of birds and very strong on the wing.

R. N.

## The Musky Odor of Venison.

DE BEQUE, Colo., Nov. 20.—Will not some one of your readers kindly give me a recipe for removing the strong, musky odor from venison killed in running time.

C. A. C.

## Sea and River Fishing.

## ANGLING NOTES.

## Fishing for Jack Salmon.

A CORRESPONDENT wishes information about the manner of fishing for what he is pleased to call "pickerel or jack salmon." Some of the questions he puts are these: What size of hook should be used? With minnows for bait do you use a sinker, if so what size and how far from the hook? When using frogs for bait where do you hook the frog, and what size should the frog be?

In the first place the fish in question is neither a pickerel nor a salmon; and furthermore it is not related to either of the fish named. The fish is properly a pike-perch, although it is sometimes called a wall-eyed pike. In spite of the fact that the word pike occurs in each of the common names given, the fish really belongs to the family of perches. In various waters it is called green and yellow pike, glass-eye, salmon, jack, dory, okow and hornfish. It has a smaller relative, very like it in appearance, which inhabits similar waters, and which is called sauger, sand pike, pickerel or pickering. Never before have I heard of the pike-perch by the names pickerel or jack salmon in the same waters, though each is common enough in waters widely separated.

But starting with the fact that the fish is a pike-perch, I will answer the questions at the beginning of this note as best I can. Nothing is said of the size to which the fish grow in the waters where the correspondent proposes to fish, but it is safe to say that hooks No. 1 to No. 1-0 will answer. I have frequently caught pike-perch on hooks of these sizes when fishing for black bass, and caught them, too, on hooks with single gut, although it would be advisable to use hooks on fine gimp if one was to fish specially for pike-perch, as it would in many cases prevent the cutting of the gut by the teeth of the fish, for the pike-perch has teeth closer set than the true pike, and more of them. In fact the pike is about the only fish that will drive the pike-perch.

Whatever the lure used for pike-perch, a sinker is required. As a rule they are bottom feeders, but have been known to take a fly on a shotted leader. The pike-perch is one of the few fishes that one does not always know where to fish for; they are here to-day and gone to-morrow. They appear to be fresh-water rovers, except at spawning time. For ordinary fishing put a sinker on the upper part of the snood, be it gut or gimp, which will bring the sinker six or seven inches above the hook. In still water with minnow bait a couple of split double B shot is all-sufficient, or even one if the minnow is not too large. The object is to carry the minnow near to the bottom and keep it there, and the sinker that does this is sufficient.

In hooking the minnow pass the hook through the skin under the back fin; a minnow so hooked will roam more than one hooked through the lips, a method used in casting and drawing, which is not necessary in pike-perch fishing. If frogs are used for bait get the small green frog about the size of a silver half-dollar. Pass the hook through the skin of the frog at the end of the spine where the hindlegs join, or pass the hook through the flesh of one leg. It requires more weight to keep a frog down than it does a minnow, and even then the frog, after being some time on the hook, will fill with air, become bloated, and come to the surface if it is not taken in hand and the air gently squeezed out of it, and many times, even then, it is better to put a fresh frog on the hook. I have spoken of the foregoing as the ordinary method of fishing for pike-perch.

There is another way, out of the ordinary, and I believe it never has been told in print until it was told to me. Lake Champlain is quite famous for its pike-perch, where, by the way, they are called Champlain pike. This style of fishing is practiced in water 20 to 40 ft. deep, generally in the inlet rivers, and the outfit consists of a rod about 2 ft. long, with a three-ring tip or a funnel top. Just above the hand-grasp is a wire cleat, in place of a reel, on which the line is wound. Sufficient line is unwound from the cleat, say 3 or 4 ft., and the end passed through the rod tip. To the end of the line is fastened a lead sinker about the size of a man's middle finger, and if the current is strong the sinker must be heavier, heavy enough in any event to take the line promptly to the bottom. Below the sinker is a piece of fish line, perhaps 2 ft. long, terminating in a gimp-snooded hook about No. 1½. The hook is baited

with a dozen or so of earth worms, putting the hook the middle of each worm and leaving the ends to form a wriggling mass.

To operate this curious outfit the lead is lowered to the bottom from a boat, and the boat is rowed up and down and across the current, while the fisherman with the cleated stick exercises himself to keep the lead on or very near the bottom as the boat moves, which drags the mass of worms 2 ft. after the lead. This style of fishing has procured large strings of pike-perch when other methods failed, and there was a determined effort to keep the matter secret, but a friend told me of it, without a pledge of secrecy, and now it has found a place in *FOREST AND STREAM*, where all good things find a place sooner or later. The Lake Champlain proper pike-perch have lately been taken with exactly the same tackle used in deep trolling for lake trout. This is an excellent method in big waters, for you are sure to find the fish by keeping at it, and I have already said the pike-perch is here to-day and there to-morrow.

## Transporting Fish Alive.

Another correspondent wishes to know the best way to transport black bass alive over a country road a distance of from five to fifteen miles. The least amount of water that would be required for half a dozen fish from 6 in. in length to 2 lbs. in weight, and if it would be a good plan to blow air into the water through a hose while transporting the fish.

To answer the correspondent intelligently I should know the season of the year when the bass are to be transported, and if little and big fish are in one can at the same time, and if it is an experiment to see how little water may be needed to get the fish from one water to the other, or merely the least approximate quantity that would be used ordinarily. If it is only a trial a few bass can be taken in wet cloths if the cloths are kept wet and cool, but I assume that this is not the case. It is not a parallel case exactly, but a can that will transport safely 40,000 shad fry will only transport safely 5,000 trout fry, and this will show the difficulty of calculating for 6 in. bass and 2 lbs. bass in the same can. Fish and fish fry that may be transported safely under certain conditions will be partly or wholly lost if transportation is attempted under other conditions.

I once lost 60,000 trout and salmon fry during a night run of 200 miles on the fast mail. I had 300 lbs. of ice, more than enough for ordinary purposes, but the cans were meant for 3,000 fry each, and I had 5,000 in each. I knew when I started that I had too many in each can, but I had to take them as they had absorbed the sac and there was nothing to feed them, and there were no more cans of any size. Again I received 50,000 sea salmon fry. They had been on the cars all night and the ice had given out and they were "sick." I iced them, put the cans in a wagon and drove rapidly for six miles over a rough road and planted a fair lot of fry, much recovered from their railway journey. Still, again, by direction of the U. S. Fish Commission, I took a carload of California yearling salmon for planting in New England. The last previous trip of the same car there had been a loss of about 8,000 yearling Atlantic salmon, and I had doubts about the result. The car was on an Eastern "flyer," and as we reached the station at which we were to stop we began to take the salmon from the tanks where water had been pumped by the steam pump in the car, and put them in transportation cans. I noticed that several cans were crowded and that the salmon were coming up for air. Hastily they were iced and "worked" with syringes, but still they came to the top and turned on their sides. As quickly as possible I got these cans into one of the wagons and took my seat by the driver to make the trip of three and a half miles, the next longest being one and a quarter miles from the station. I told the driver to pick out the roughest part of the road and let his horses run if the wagon would stand it. At the stream I had two dead fish, and all told the loss was less than thirty, chiefly fish caught in the gratings of the tanks under the car. The next trip the car made there was a loss of 8,000 yearling landlocked salmon.

There is a right season and a wrong season to transport most fishes, and the wrong season is during the hot months. Black bass are a spring spawning fish, and in the North hibernate during the cold winter months, but they are transported best in the spring before the weather becomes hot, or in the fall after it becomes cool. The best black bass for transporting are those weighing from ½ to 1 lb. each, and fry should not be used except in case of necessity. The larger fish can be handled more easily and safely, and they will become spawning fish sooner in the new waters. In the spring or fall fifteen ½ lb. bass or ten 1 lb. bass may be transported safely the distance stated by the correspondent in a common milk can holding ten gallons of water. This is not the limit, for a greater number of fish have been safely transported a longer distance in containers of this size, but what I have given is a safe number.

Some years ago 600 black bass averaging one and one-half pounds each, were transported a distance of about 300 miles and were on the road thirty hours. The time was June, and many of the fish—some as heavy as 2 ½ lbs.—were females heavy with spawn. There was a loss of only ten per cent. of the fish, and the water allowed them was four gallons per fish, for the entire trip. To show what may be done—a few days ago I saw two men on the Delaware & Hudson R. R. with a lot of bait fish, that they were taking from the Mohawk River to Lake Champlain. The fish were white chubs, which means the fall fish, and they had in their can over 800 fish, and at Saratoga had not lost a fish. They were ordinary bait fish, some larger and some smaller than a man's middle finger. The water had not been changed since they started, four hours before, and they did not propose to change it until they reached their destination, several hours later. In summer the same can would not have transported safely the same distance 200 of the same fish.

In transporting any fish it is better to use the water you start with than to attempt to procure fresh water on the journey. In all probability the fish are accustomed to the water they are started on their journey in, and to replace it is buying a pig in a bag. If necessary keep the temperature down with ice; if necessary to freshen the water in the can or container, do so, if it has a wide mouth, by taking out water in a dipper or other vessel and pouring it back from a height above the can. A transportation syringe is used for the same purpose, but for a single journey a make-shift will serve the same purpose. If there are two or more cans the water may be siphoned from one

to another by using a short piece of rubber hose. Any or all of these means will aerate the water. To "work" the cans is to use ice, siphon or syringe to reduce temperature and aerate the water, and to "work" the cans is attended with better results than to attempt to introduce fresh water.

#### Transporting Fish Fry in Hermetically Sealed Bottles.

At the very time that this question of transporting black bass came before me I was about to make a note of another way of transporting fish. Readers of *FOREST AND STREAM* will recall a discussion a few years ago about carrying bait fish in fruit jars that had been sealed. This matter came up at a meeting of the American Fisheries Society in Washington two years ago, after the reading of a paper by Mr. W. P. Seal upon "Transportation of Live Fishes." The discussion which followed the reading of the paper is not printed in the proceedings of the society, as it should be, but I distinctly recall that Mr. Worth said that he had made some experiments in this direction, and that bait fish in sealed jars lived little if any longer than those in open jars, the claim having been made that hermetically sealed fish would live longer.

In the History of the Fisheries of New South Wales, by Lindsay G. Thompson, Chief Inspector of New South Wales, published by authority of the New South Wales Commissioners for the World's Columbian Exposition, I find this very interesting statement: "About two years since the writer made the experiment of traveling trout fry to the several streams assigned to them in jars about three parts filled with water and hermetically sealed. This mode of transmission proved so successful that at Sydney it has quite superseded the old method of forwarding in open jars. Fry can be sent in the jars for any reasonable distance. After determining by actual experiment that it would exist so imprisoned for seventy-two hours, the method was still further tested by shipping to Wellington, New Zealand, some fry of the trout, which originally had been sent thence and hatched out in New South Wales. The attempt proved successful, and in like manner the experiment was repeated between Wellington and Sydney.

In the appendix to the history from which I have already quoted, is a paper upon "Fresh Water Fish Acclimatization," by John Gale, Queanbeyan. Mr. Gale relates how he distributed a lot of "American brown trout and English spotted trout." The descriptive terms, brown and spotted, have evidently been reversed in some way, but the fish were from three to five inches in length—"strong, vigorous fish." The trout were placed in cans of six gallons each, 150 in each can, and all were delivered at their various destinations without loss, except one portion which was lost by taking water from a brackish stream. "As an experiment we also brought four trout, three perch, and three carp, in hermetically sealed jars, and the result was successful, only one trout—a little fellow sick from the start—succumbed. The distance from Ballarat to Queanbeyan is about 350 miles, and the fish were thirty hours in transit. Bibbenlue is another hundred miles, and Braidwood thirty-four miles; so that our efforts, so far as placing the fish in the waters of their respective destinations, were highly successful."

#### Something for Fry Men to Think About.

Three rivers in which 60, 40 and 60 of these little trout, respectively, were planted, became thoroughly stocked with them, furnishing fishing in a few years that is now unsurpassed. The second year after planting hundreds of little trout were netted in one river as an experiment. Mr. Gale concludes his paper by recommending to the department that instead of planting trout fry that they be kept in ponds until a year old and then distributed.

A. N. CHENEY.

#### FLY-FISHING FOR POLLOCK.

HALIFAX, Nova Scotia.—In your issue of Nov. 4 "The General" wishes to hear from some one on fly-fishing for pollock. He says catching them on a light rod with bait "is great sport"; but let him take out his fly-rod and tackle, and follow my directions, and he will vote it even a greater success.

Let me give you one page from my own experience. Leaving the landing stage one afternoon in a light boat, having a good man at the oars, and equipped with a 10-foot lancewood rod, an oiled silk medium line and one fly on a 2-foot leader at the end of it, we rowed to a narrow channel where I knew the pollock were generally to be found feeding. Getting my tackle together, we watched till we saw one break water some 200 yds. away. Rowing rapidly to the spot, I made a cast, and almost immediately there was a gleam of silver and a fine fish was away with a great rush, making the line fairly hum. Three more similar rushes, and we had him in the landing net. Again I threw out my line, and again a fish. Now the school is gone, and we have to watch till another breaks water, and away we go again after the school. When we got back to our landing place there were 99 as fine pollock, ranging from 1 lb. to 1½ lbs., as you could wish to see. We were gone just three hours. Pretty good, was it not?

The fish go in schools; and to fish in this way a calm day is essential. However, should there be any ripple on the water, by rowing about and casting or trailing the line as for lake trout, one can often make a good catch.

They take the fly beautifully, often jumping right out of the water, coming down on top of the fly; and so sharply do they bite that a miss is almost never made by any one who can handle a rod. After they are once hooked they never break water; and afford as much sport every bit as either a trout or bass of an equal size.

A word as to flies. They are not very particular as long as you give them a light one; however, Parmacheene-belle is, I find, the best, and closely following are Jennylind, gold-bis, silver-doctor and red-coachman. Only one should be used, as the fish are so numerous and bite so sharply, that if you use more, as I once did, you will have trouble. I put four flies on a 6-foot leader, immediately hooked four fish, and almost as soon lost four fish, one leader and four flies, and all the fun I had out of it was watching the poor fish about four feet below the surface, all pulling away as hard as possible and in opposite directions. So, "General," use one fly only. Flies tied on No. 1 Sproat hooks are the best.

Should any one try this plan, I am sure they will say it is fine sport; and any more particulars any reader may wish I will be more than pleased to furnish from my past experience with pollock.

MICMAC.

#### THE VERMONT LEAGUE.

THE third annual gathering of the Vermont Fish and Game League was held at Van Ness House, Burlington, Nov. 17. The programme for the day called for a congress of the sportsmen of Vermont, to be convened at 2 P. M.

The meeting was attended by sportsmen from various parts of the State, regardless of membership in the League. Its object was to have an informal talk on subjects kindred to the aims of the League and the work of the State Fish and Game Commissions. The meeting was an experiment, it being the first one of its kind, and although the attendance in the afternoon did not at any time exceed thirty men, it was a pronounced success. Commissioner Titcomb presided, and Richard Rathburn of the United States Fish Commission was present and answered many practical questions. The following topics were discussed with much interest: The decrease of fish in Vermont waters and some of the causes; how to best increase the supply of fish and game; the introduction of new varieties of game; statutory limit as to length of fish—whether best form of protection; the protection of game. Three professional seine fishermen from Lake Champlain were present and contributed much information with reference to the decrease of fish in the lake. The statutory limit as to length of fish was perhaps more freely discussed than any other. Commissioner Titcomb suggested a plan to do away with the so-called "six inch law" as follows: Empower the Commissioners with authority to close up all the small tributary streams in which the trout do not grow over six inches before they work down into deeper waters. Post these streams and publish a list of them in the State papers, county by county. Have a heavy fine for the mere act of fishing in waters so posted, and allow free fishing regardless of size in the main streams. It was generally believed that such a law could be better enforced than the present six inch law, although the latter is quite generally observed by the market fishermen.

At 7 P. M. the board of management assembled, with Gen. W. W. Henry in the chair. Some recommendations for action at the annual meeting were made, and at 7:30 the annual meeting was called, Vice-President Henry still in the chair. The treasurer's report was read and adopted. Thirty-four new members were voted in. Dr. T. H. Bean and Richard Rathburn, members of the U. S. Fish Commission, were elected honorary members. The membership fee was reduced from \$5 to \$3 and the annual assessment from \$3 to \$2. The committee reported this list of officers, who were elected: President, H. R. Dorr, Rutland; Secretary, J. W. Titcomb, St. Johnsbury; Treasurer, A. W. Ferrin, Montpelier; Vice-Presidents, C. M. Wilds, Middlebury; E. C. Smith, St. Albans; J. G. McCullough, Bennington; W. S. Webb, Shelburne; F. D. Proctor, Proctor; Jas. W. Brock, Montpelier; Erastus Baldwin, Wells River. Executive Committee—Addison county, D. A. Bisbee, Bristol; Bennington, W. H. Bradford, Bennington; Caledonia, James Ritchie, St. Johnsbury; Chittenden, Wm. W. Henry, Burlington; Essex, Nathan Hobson, Island Pond; Franklin, F. J. Hawley, Swanton; Grand Isle, N. W. Fisk, Isle La Motte; Lamoille, E. L. Noyes, secretary, Hyde Park; Orange, W. S. Curtis, West Randolph; Orleans, H. S. Haskell, Derby Line; Rutland, C. A. Gale, Rutland; Washington, C. C. Warren, Waterbury; Windham, F. W. Childs, Brattleboro; Windsor, C. F. Chapman, Woodstock. Auditors, A. B. Noyes, E. W. Raymond, J. H. McIntire. Membership Committee, U. A. Woodbury, H. R. Dorr, J. W. Titcomb.

On motion, a committee was appointed by the chair, consisting of the president and the secretary of the League and one member from each county, to be known as the legislative committee; it being understood that this committee will be called to order at any time by the president or secretary of the League, or simply on the request of two members of the committee. The committee is: Addison, W. K. Peake; Bennington, M. S. Colburn; Caledonia, E. A. Silsby; Chittenden, Fred H. Wells; Essex, Nathan Hobson; Franklin, Chas. C. Gilmore; Grand Isle, N. W. Fisk; Lamoille, C. S. Page; Orange, J. B. Peckett, Jr.; Orleans, W. W. Miles; Rutland, S. E. Burnham; Washington, Geo. W. Wing; Windham, Julius J. Estey; Windsor, Wm. S. Dewey.

On motion, the president appointed a committee of five for the introduction of new game into our State, as follows: N. P. Leach, Highgate; W. Y. W. Ripley, Rutland; W. Seward Webb, Shelburne; Jerome M. Celot, Middlebury; B. R. Seymour, Burlington.

Directly following the annual meeting came the annual dinner. Just sixty-six sportsmen with their friends assembled in the dining-room to enjoy the menu prepared by mine host Clark, manager of the Van Ness. Among the various dishes named on the menu appeared the shad and wall-eyed pike of Lake Champlain and black ducks from the preserve of the Swanton Gun Club, with the compliments of which they were presented. Among those in attendance were Congressman W. W. Grout, of St. Johnsbury; Col. A. P. Childs and Wm. E. Hawks, of Bennington; Geo. Atkins, of Montpelier; Gen. W. W. Henry, Col. U. A. Woodbury, B. R. Seymour, Fred. H. Wells and J. G. Belrose, and others representing the sportsmen's clubs of Burlington; Capt. F. J. Hawley, Col. Charles C. Gilmore and Editor T. M. Tobin, of Swanton; Hon. Nelson Fisk, of Isle La Motte; Dr. C. A. Gales, of Rutland; State's Attorney John B. Peckett, of Bradford; E. W. Raymond, of Post Mills, representing the Ompompanoosuc Valley Fish and Game Club; Dr. W. S. Curtis and John F. Mead, of West Randolph.

H. R. Dorr, the president of the League, being prevented from attendance by sickness, General William W. Henry acted as toastmaster and in his happy faculty for telling stories contributed much toward the pleasure of the occasion. Toasts were responded to by H. S. Peck, who in the absence of Mayor Hazleton, welcomed the sportsmen to Burlington. Mr. Richard Rathburn, representative of the U. S. Fish Commission and member of the joint commission to adjust differences on the Great Lakes as between the United States and Canada, responded for the U. S. Fish Commissioner.

J. W. Titcomb, State Fish and Game Commissioner and secretary of the League, responded for the Commission:

Permit me to say that I believe the future prosperity of Vermont will be largely enhanced by, if it does not depend entirely upon, two essentials—namely, a careful attention to our roads and the protection of our forests, streams and ponds. The former essential, I am pleased to remark, is in good hands—a State road league recently organized; the latter is the subject which claims our attention to-night. The protection of our forests and streams in its liberal sense may be

interpreted as the protection of the forests with a proper care for their wild inhabitants, and the improvement of our waters by stocking them, and wholesome laws for the protection of their inhabitants from annihilation.

In our forests the deer are increasing rapidly and promise good sport in the future under proper restrictions. Our game birds have not decreased much in the past few years, but the market-hunters appear to be on the increase, which indicates that some law restricting the sale of game in the markets may be essential. New species of birds should be introduced. The English pheasants, introduced by our esteemed member, Dr. Webb, appear to have already obtained a foothold. A flock of quail introduced last summer survived the extreme cold of last winter. While no practical method of increasing our game by artificial propagation has been discovered, the art of raising fish artificially should put Dame Nature to shame. It is a curious fact that Dame Nature is quite as wasteful in sowing the seeds of fish life as in spreading the seeds of vegetation. Take, for example, the common maple. Its seeds are blown to the four winds of heaven, but few of them come to maturity. The same waste in varying proportions occurs to the naturally deposited spawn of the various food and game fishes.

While it is estimated that only 2 or 3 per cent. of spawn naturally deposited becomes the mature fish, 90 per cent. can be hatched out at fry and the larger proportion reared until fingerlings or larger. Under these conditions it is no longer a question as to whether our streams can be restocked, provided the water is kept free from mill wash or other deleterious substances.

The speaker then gave a resume of the work done at the State hatchery at Roxbury under the immediate supervision of C. C. Warren. The capacity of the hatchery is now 2,000,000 fry, with the possibility of rearing 250,000 fingerlings. From the estimates of the U. S. Fish Commission 100 fingerlings are equal to 1,000 or more fry. But of course there is always a loss in rearing from fry to fingerlings. They have in stock at the hatchery about 22,000 trout in all; 2,000 larger trout, 2,000 averaging 6 in. long, one year old last spring, and about 18,000 which are being reared from eggs which hatched last spring.

Col. Clark F. Rowell, of Keene, N. H., ex-president of the Cheshire County Fish and Game League, and traveling passenger agent of the Fitchburg road, responded for the Granite State sportsmen, and said in substance:

The cost of the New Hampshire hatcheries in the aggregate amounted to about \$4,000, while this year it will be nearly \$8,000. The annual income in that State from the summer visitors, sportsmen and anglers, is carefully estimated, \$8,000,000. Mr. Rowell said that his State was sometimes called the "Switzerland of America," and that they were trying to make her such in fact as well as in name. "And remember, gentlemen of Vermont," said he, "you are neighbors, so you too may cultivate this same desire to be a great summer resort; you have every qualification, with this beautiful Lake Champlain before you, one of the finest bodies of water in the world. I have beautified and heretofore made into national parks, I sincerely believe the water in New Hampshire or Vermont is worth more per acre than the land, and will soon pay a much larger revenue." He advised stocking the streams and lakes with trout, and where now hundreds are placed put thousands and Vermont will soon be rivaling New Hampshire for the title "Switzerland of America."

Congressman Grout said that there was no place on the continent better for the trout than the waters of Vermont. She has large natural facilities for furnishing fish of the small species. He thought Congress would sustain the hatchery at St. Johnsbury by liberal appropriations. In a few years there ought not to be a town in the State wherein there will not be summer boarders.

J. B. Peckett, Jr., of Bradford; Dr. D. A. Bisbee, of Bristol; Dr. C. A. Gale, of Rutland; Hon. Nelson W. Fisk, of Isle La Motte; A. P. Childs, of Bennington, and Col. C. C. Gilmore, of Swanton, also spoke. Gen. W. Y. W. Ripley, of Rutland, and a veteran sportsman, sent a letter, which read:

I take it that the object of your association is not only to preserve the fish and game of the State, but to make it more abundant. The first question that suggests itself is, is there a necessity for a State law? That such necessity exists is apparent to all. To the second question, "why?" the answer is easy. It is because the rate of destruction has been, and is yet greater than the rate of increase; unless you can increase the rate of production or decrease the rate of destruction, your fish and game are doomed to total extinction. Can you increase the rate of production? In some lines this is possible to a certain extent. You have now in successful operation a State hatchery for the propagation of fish, and the general Government is building another. Great hopes are founded on these enterprises; but in the nature of things it must be years before any marked results can be obtained, and in the meantime your native stock is steadily decreasing.

I speak now not of favored localities, but of the State at large; and not of a period of a single year, but of a number of years. I trust that some years are better than others, for trout, for example. A good breeding season, free from heavy rainfalls which create floods to wash away the spawning beds, is likely to make the fishing better in the third year thereafter. Favorable weather during the fishing season also increases the catch for that year; but taking a period of five consecutive years, most people will admit that there is a steady falling off in the supply both of fish and of game.

I do not think it is possible to increase the supply of game by any artificial means; furred and feathered game must stand or fall on its own opportunities. And taking fish and both classes of game together can see no better, and certainly no more economical method of preservation and increase than to allow each class better opportunities and more of them.

First, as to fish. I shall speak only of the trout, as I am not sufficiently familiar with bass to give an intelligent opinion. I would earnestly recommend increasing the limit of size from 6 in. to 9 in. Every trout should have at least one opportunity to try to propagate his species. The trout that is just under the legal limit of 6 in. on the 31st of August, when the season closes, is practically, and in nine cases out of ten entirely, worthless as a breeder. Most of them are immature and incapable; those which are capable produce but few eggs, and the result is almost nothing. These same trout are of legal size next May, when the season opens, and are legally killed, and have never had a chance to try for themselves to do what we so much wish to see accomplished, namely, the restocking of our brooks.

The trout of just under 9 in. in length that is put back into the water on the 31st of August is a mature fish of suitable age and size to make its efforts of some avail during the same season. Neither is it any considerable hardship to any one to make the limit 9 in.; and what there is of hardship would only last one or at most two years, for the number of 9-inchers would then be nearly equal to the number of 6-inchers now and afford much more sport to the angler, to say nothing of the vastly greater value as food. I am firmly of the opinion that no one enactment would do so much for the trout brooks of the State as such as one as I have suggested, but I would go further; I would shorten the open season at least one month, making the open season commence on June 1 and close Aug. 31, or commence May 1 and close July 31—it is not very material which. But three months fishing is all the brooks of Vermont will stand at the present time.

I would also recommend a shorter season for birds. It is not possible to fix a limit of size or age for them, nor is it possible, so far as it is now known, to increase the supply by artificial means; we must depend upon the birds themselves and they will surely disappoint us unless we give them a better chance. I would advise making the open season on both woodcock and grouse (commonly called partridges) commence on October 1 instead of on September 15 and close on the 31st of December. I have no doubt that I know that many people will take exception to this, especially as to woodcock. I have heard it said by sportsmen living near the north line of the State, that their woodcock had all migrated before Sept. 15 even. I think this is a mistake; the birds have simply changed their grounds; they have left the cold, wet swamps, finding themselves more comfortable among the ferns and white birch saplings on warm, sunny and shortening days, returning to the cold, wet swamps on the day of night. I have shot these birds every season, probably, for 40 years, and my record shows that the very best shooting has been the last 10 days in October, and the very best bag I ever made in this State was on Nov. 5, while I have killed them, one bird, at least, as late as Dec. 5. My observation has been that they do not leave a locality till they are forced to go by weather so cold as to make boring impossible for them, or till they are driven out by over pursuit, and in this last case, that they will be found within a mile or two if the sportsman knows where to look for them and has a thoroughly good dog.

Now, to conclude where I began. The whole question is in a nutshell; you must increase the supply or decrease the demand. If you put water into a barrel through an inch pipe and draw it, with no stop—ge, through a 2 in. pipe, your barrel will soon be empty.

## Fishculture.

### The World's Fair Aquarium.

Editor Forest and Stream:

I beg to be allowed to comment briefly on some of the statements embraced in the editorial on the "World's Fair Aquarium," in your issue of the 18th inst., regarding the character of the exhibit and the loss of the material in Chicago.

First.—All the material required to produce 75,000 gallons of sea water was in the Fisheries Building when I resigned my position as "In charge of the Aquarial Exhibit." This consisted of all the constituents—solid and liquid—of that amount of sea water—excepting the pure water. This material cost delivered in the Fisheries Building about \$400.

Owing to ignorance of the requirements in its re-incorporation with the water to restore it to its proper condition on the part of those charged with this work, this was not used, some 8 or 900 gallons of bitter residue in carboys being thrown away.

Something like nineteen iron tank cars of sea water were then transferred from the ocean, and most probably the salt alone of the original material was used to make an additional supply. Owing to favorable conditions, the shipment of sea water in bulk was successful. In warmer weather the water would have become fouled, and had it been very cold would have frozen solid in the tanks, and it would have proven an interesting and expensive problem to remove it.

I simply desire to make the point that 75,000 gallons of good, pure and genuine sea water, can be produced in Chicago for about \$400.

Second.—If 38,000 gallons per hour of fresh water was used, it was out of all proportion to the necessity, 10,000 gallons being ample under proper conditions.

Third.—The great cost of maintenance was due to excessive mortality, because of careless and incompetent methods in transporting and handling the fish, by reason of which they were very much bruised and lacerated, and thus became an easy prey to fungus and also to the fact that the conditions in the tanks were not healthy or favorable. There was an entire absence of aquatic plants in the fresh-water section, and but an insignificant showing in the salt-water ones, notwithstanding that the original conception promised all the luxuriance of vegetable life common to the ornamental pond, and that the fresh-water vegetation could have been procured right here, within the range of the Krupp gun. Plant life is an absolute necessity in the establishment of healthful conditions in the aquarium, and also in producing that feeling of contentment necessary to the successful keeping of live fish.

Prof. W. H. Dall criticised the unfavorable conditions and results so conspicuous in this exhibit, in the *Nation* of Sept. 14.

"Fungus" and "fish parasites" are everywhere where there is water, and are only virulent or troublesome under unwholesome conditions. During 1891 I furnished two articles to *FOREST AND STREAM* on this subject, but cannot remember the dates. One was entitled "Brackish water for injured fish," and the other "A curious parasite and its relation to temperature." In these articles suggestions were offered for dealing with these pests. Opportunity for extended observation and experiment in this direction was afforded in this work, but so far I have not seen or heard the suggestion of anything having been seen or discovered that would be of value in dealing with live fish.

The aquarium exhibit as a whole, was a very commonplace one, and leaving out the *Salmonidae* of which the showing was poor, and several species not difficult to obtain, I will guarantee to duplicate the fresh-water part of it with larger specimens in fine condition from the Lagoon in Jackson Park. Of the commercial food fishes, the lake trout (one and two years old, artificially hatched), sturgeon (small or medium specimens), black bass and pike-perch, comprise the list. Of the salt-water commercial species, there were sheepshead, red-snapper, sea-bass and tautog, represented by medium sized specimens, and scup, spot, croaker, and a few other species represented by small specimens.

The Wisconsin Fish Commission made a vastly better exhibit of valuable food fishes under nothing like so favorable conditions—even to carrying and keeping white fish in splendid condition.

The most striking features of the aquarium exhibit were suckers, catfish, mudfish and gars, and great tanks meant to be spectacular in effect were filled with fingerling fish.

All of the salt-water specimens shown at one time could have been transported in one, or almost, two carloads. At the close of the exhibit it was stated in the Chicago papers, that the exhibit comprised 2,500 specimens. As the greater part of the collection consisted of small fish, five carloads of 500 fish each, ought surely to be a liberal estimate for transporting them. This would leave forty-three (say forty) carloads of fish to cover the losses during the six months of the exposition, on the claim that nearly fifty carloads were carried there. Was ever such mortality heard of before?

The large amount of money and labor expended on this exhibit should have resulted in the making of a grand and comprehensive exhibit as outlined in the original conception.

The aquarium is a grand one and in tank capacity, next to that at Brighton, England, the largest in the world. Although compulsorily adapted to a building already designed and for temporary use only, it had all the conditions favorable to a great success, and it is therefore unfortunate that while we claimed to be able to accomplish results not heretofore achieved in this direction, and had supposed we had made some advances in methods of transporting and handling live fish, we should have made so poor a showing before the world.

WM. P. SEAL.

### New York Commission.

A REGULAR meeting of the Commissioners of Fisheries of the State was held Tuesday, Nov. 14. The business transacted was important in that it included the acceptance of the report of the Committee on site for the proposed new hatchery in Sullivan county and the appointment of the President, Mr. L. D. Huntington, as a Committee to have the plans prepared and proceed with the erection of the building. The land upon which the hatchery is to be located, was donated by the people of the neighborhood, and great interest was shown by all living at Rockland. This hatchery will get its water supply from the Beaverkill, one of the most noted trout streams in the State, and bids fair to be of great service in the artificial propagation of trout.

The following were the principal features of the report of the chief game and fish protector: In the second district, William Kidd reported that he had received \$100 penalties and \$20 costs in a suit against Jesse Connors and others for illegal fishing, and \$20 penalty and costs against William Van Wagner for shooting song birds, and \$25 and costs against Bruin Sawyer for killing quail. In the third district Matthew Kennedy reported that he had convicted Charles Nichols of maintaining a fish weir in the stream, and Nichols had been fined \$75 and costs. Thomas Parker and William Brigham had fled guilty to shooting duck from naphtha launch, and were fined \$85 and \$15 costs. Godfrey Smith, Richard Reed, Valentine Morrissey, Jacob Weber and William Pettinger, pleaded guilty to shooting duck at night and paid \$127.50 to settle the action. He, Kennedy, also brought an action against Rupert brothers, the sons of the New York brewer, for shooting from naphtha launch, and

against John Stall, Jr., for Sunday shooting and fishing. An interesting case was decided in the fourth district where a man named Harold G. Henderson was arrested for allowing dogs to run at large in the woods during the closed season. Henderson is a New York city man, and he claimed that he left the dogs in charge of one Frank Wood. The Court therefore held that Wood was the party who should have been arrested. The protector of the ninth district, Sherman F. Snyder, reported that the fish-ways on the New York side at Lackawaxen, Pennsylvania, are in very bad shape, and says that if nothing is done for them before winter they will probably go out with the ice in the spring. The fish-ways on the Pennsylvania side have been thoroughly repaired, and are all right. Henry C. Carr reported that he had secured the conviction of Joseph Barter and Charles Baker for maintaining a fish-way in the Susquehanna River, and they were fined \$50 each. He also reported that he had convicted five men for spearing fish in the Susquehanna River, and that they were fined \$15 each. George M. Schwartz seized and destroyed during the month fifty-two gill nets and seven fykes and valued at \$150. Charles H. Barber reports that on Oct. 1, three live deer were seen within three miles of Greenwich, and on Sept. 29, a deer was shot at Shushan within ten miles of Greenwich. This is the first time in twenty-five years that deer have been found in this immediate vicinity. Charles C. Clark, special protector, reports that he arrested H. Bingham for taking partridges. He was fined \$25 and all costs. On Oct. 21, he arrested George Phillips and William Spencer with twelve snared partridges in possession. They were taken before a justice of the peace and pleaded guilty and were fined \$20 penalty and costs. A great many trap nets and fykes nets were destroyed during the month. The Commissioners signed the circular already printed, which has been sent to all parties interested from Maine to Virginia, calling a conference to discuss the Atlantic Coast fisheries. It is intended at this conference to discuss the advisability of securing uniform legislation along the Seaboard States for the protection of food fishes. It is believed, that while there may be many causes for the gradually diminishing supply of edible salt water fishes, still the continued use of purse and pound nets has had much to do with diminishing the supply. It is believed that a law could be enacted abolishing the use of pound nets and providing that purse nets shall not be used in any waters the depth of which does not exceed the depth of the net used, and that valuable results could be obtained. There is no doubt but that fishermen are unanimously resolved that these agencies have had the greater part to do with the destruction of edible food fishes, and as recent investigations have to some extent at least proven, that the majority of fishes like menhaden, mackerel and others come into the shallow waters along our coast to spawn, and they should be at least protected during the spawning season. It is believed that there will be a large and representative gathering at this conference, and that many important suggestions will be made and much reform legislation influenced.

At the meeting of the Commissioners, the report of the Committee appointed to purchase the land necessary for the uses of the hatchery in Steuben county was adopted, and the Committee's purchase of land confirmed. The President was also empowered to address a letter to Hon. Edward Hannan, Superintendent of Public Works, urging upon him the necessity of providing for the repair and maintenance of the fish-ways of the State. The fish-way at the Troy Dam, the most important in the Hudson River as far as the salmon are concerned, is entirely destroyed, and the fish-way at Lackawaxen, which is absolutely necessary in order to allow the shad and black bass to ascend the Delaware into New York territory, is also sadly in need of repair. The fish-way at the Troy Dam need not be re-built, if, as the Commissioners have suggested, the superintendent will extend the apron in part of the dam so that the salmon pass over it, but the fish-way at Lackawaxen must be re-built. This fish-way has been of great value, and black bass and shad were caught above Lackawaxen in abundance during the past season as far up the river as its junction with the east branch of the Delaware. The entire power of maintaining these fish-ways is imposed by statute upon the Superintendent of Public Works, and he can use the general fund for the purpose of their support. The Commissioners of Fisheries are simply given advisory powers as to their first construction. After that they are entirely under the control of the Superintendent of Public Works and should be maintained by him. Numerous complaints have been made to the Commissioners of Fisheries and in the newspapers as to the condition of the fish-way. Commissioners have no power in the matter what ever, and reference in every case should be made to the Superintendent of Public Works. The Commissioners have called his attention to these matters frequently, but without any satisfactory reply.

E. P. DOYLE, Sec'y.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Nov. 23 to Dec. 1.—New Jersey K. L., at Newark, N. J. Dr. W. F. Seidler, Sec'y.

Dec. 13 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.

Dec. 20 to 23.—Northern Ohio Pet Stock Association, at Akron, O. H. F. Peck, Sec'y.

1894.

Jan. 22 to 26.—New Orleans Fanciers' Club, at New Orleans, La. G. W. Sautell, Jr., Sec'y.

March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y.

#### FIELD TRIALS.

Dec. 13 to 16.—Chicago K. C., at Chicago. G. H. Goodrich, Sec'y.

1894.

Jan. 1.—Southern California Field Trials, at Ontario, Cal. H. C. Hinman, Los Angeles, Cal. Sec'y.

Jan. 23.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.

Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

### Mascoutah entries close Dec. 4.

### Hamilton Dog Show.

TORONTO, Can.—The third and most successful of Hamilton local shows was held Nov. 18, and was a most gratifying success from all points of view. The entries according to the catalogue were 205, of which spaniels and terriers form the greater part. In the black cocker dog class there were 10 entries, including such well known specimens as King Raven (for exhibition only), Chaniller's Beau Kay, etc. The bitch class was still stronger, no less than 16 being entered. The other color dog class had 8, in which were Hamilton Jack, shown at Toronto; Russett, Red Justice, etc. Mr. W. B. Palmer showed for exhibition only the red dog Cherry Punch, received from Mrs. Smythe, Nov. 18, and is a winner of about 20 prizes. The corresponding bitch class had 4. From Dr. Griffin's Kennel were Principio, Kathleen Mavourneen, Edgewood Robin and White Rose, not for competition, as he judged these classes. Bull-terriers in all numbered 18; fox-terriers total 39, and include the smooth bitch Bonaly Belle and Policy, the latter not for competition. Irish terriers had two new ones in Boxwood Pat and Lady Alice, both very soft coated and bad colored. Dandies had 2, Skyes 1, Bedlington 4, Airedales 2, white English terriers 1, and black and tans 6.

Pugs were a poor lot of seven, and Yorkshires only two. The St. Bernards and mastiffs were also a poor lot, as were great Danes. Collies had a fair class of fourteen, in which Pinsbury Dude stood well to the front and won easily.

Judging was put off till 7 P. M. in order to draw the crowd. Mr. E. Tinsley took setters, pointers and all spaniels; Dr. Griffin, bull-terriers, and Mr. A. D. Stewart, advertised to judge the rest, was aided by other specialists in several of the terrier classes.

The show was held in the Drill Hall, a large, light and clean building, the dogs being tied to staples driven into the floor and placed in five long rows. Ample sawdust was provided and everything was beautifully sweet and clean.

Several Toronto men were there, including G. B. Sweetman, A. A. Macdonald George Bell, Mr. Bickford and H. P. Thompson.

H. B. DONOVAN.

**MASTIFFS.**—Dogs: 1st, Arthur Garrick's Don; 2d, W. D. Croy's Tom. **Bitches:** 1st, Thos. B. Stearn's Hope. **PUPPIES.**—Dogs: 1st, Mrs. Edward Martin's Grimsby Jack.

**GREAT DANES.**—Dogs: 1st and 2d, E. Jackson Sanford's Ormond and D. nau. **PUPPIES.**—Dogs: 1st, Chas. Osier's Toy. **Bitches:** 1st, E. Jackson Sanford's Metta.

**ST. BERNARDS.**—Dogs: 1st, D. Pearce's Jeffers; 2d, J. Somerville's Laddie; 3d, T. J. Senior's Help. **PUPPIES.**—Dogs: 3d, John Rose's Sam.

**NEWFOUNDLANDS.**—**Bitches:** 1st, John Radigan's Nell.

**GREYHOUNDS.**—Dogs: 1st, A. McEachren's Bute. **Bitches:** 1st, Dr. Lackner's Venus; 3d, C. Webster's Jess.

**COLLIES.**—Dogs: 1st, W. A. Mighton's Pinsbury Dude; 2d, J. Montgomery's Bruce; 3d, Mark O'Rourke's Kenneth. **Bitches:** 1st, E. Harris's Mayflower; 2d and 3d, J. Montgomery's Flossie and Jean. **PUPPIES.**—Dogs: 1st, Mark O'Rourke's Kenneth; 2d and 3d, R. Evans's Monarch and Colonel.

**RUSSIAN WOLFHOUNDS.**—Dogs: 1st, J. W. Steven's Guard.

**POINTERS.**—Dogs: 1st, J. W. Bowman's Boxer. **Bitches:** 1st withheld; 2d, J. Down's Nellie.

**ENGLISH SETTERS.**—Dogs: 1st, Dr. Malloch's Romany; 2d, J. Down's Towser; 3d, D. Murray's Sport.

**GORDON SETTERS.**—Dogs: 1st, H. Bryant's Jack; 2d, W. R. Harper's Ponto; 3d, Geo. Flett's Duke.

**IRISH WATER SPANIELS.**—Dogs: 2d, H. Bryant's Dash.

**FIELD SPANIELS.**—Dogs: 1st, J. R. Cline's Darkey Joe; 2d, Chas. Wilson's Ruben; 3d, J. D. Roach's Jacks. Very high com., J. McKeown's Jacko. **Bitches:** 2d, J. McKeown's Topsy; 3d, F. McKay's Ruby.

**COCKER SPANIELS.**—BLACK—Dogs: 1st, 2d, 3d and high com., Raven Kennels' Beau Kay, Chancellor, Jay Kay and Sport. Very high com., John Cooper's Blackie. **Bitches:** 1st, 3d and high com., Raven Kennels' Molly Bawn, Raven Croy and Modjeska; 2d, Charles Wilson's Reba. Very high com., A. T. Macdonald's Daisy. Com., R. J. Wood's Ruby and J. McCann's Nellie. **PUPPIES.**—Dogs: 1st, F. Flynn's Black Justice. Very high com., Gilbert Clayton's Black Prince. High com., G. T. Ritchie's Dandy. **Bitches:** 2d, Raven Kennels' Modesty. **OTHER THAN BLACK.**—Dogs: 1st, W. Tocher's Derby; 2d, T. Clappison's Hamilton Jack; 3d, Raven Kennels' Sunlight. Very high com., W. C. Niblett's Russett. High com., F. Flynn's Red Justice. Com., W. McLaughlin's Koko. **Bitches:** 1st, W. C. Niblett's Gypsy Queen; 2d, T. Gould's Golder; 3d, G. T. Ritchie's Scotty. **PUPPIES:** 1st, J. J. Guy's Heatherbloom.

**BULL TERRIERS.**—Dogs: 1st, Mark O'Rourke's Pup. **Bitches:** 1st, Dr. Rennie's Countess of Wentworth. Very high com., Robert Aitchison's Vixon. **PUPPIES.**—Dogs: 1st, Mark O'Rourke's Pup; 2d, W. Kilby's Dixy; 3d, R. Aitchison's Tartar. **Bitches:** 1st, Dr. Rennie's Countess of Wentworth; 2d, G. J. Reid's Mollie; 3d, E. Harris's Princess H. Very high com., Neil McLean's Maggie.

**FOX-TERRIERS.**—SMOOTH—Dogs: 1st, D. Gillies' Jack Vandal; 2d, Smith & Crosswade's Jack; 3d, C. Turner's Hamilton Jim. Very high com., Thos. Meade's Jerry. High com., James Miller's Pepper. Com., Miss Whitcomb's Jack. **Bitches:** 1st, Hamilton Fox-terrier Kennels' Bonaly Belle; 2d, J. Hood's Locaster; 3d, James Hutchison's Sultana. **PUPPIES.**—Dogs: 1st, W. B. Smith's Viper; 2d, J. W. Hammond's Jack. Very high com., J. W. Pearce's Bart and F. McBeth's Dinnie. **Bitches:** 1st, Fred. Henstridge's Josie; 2d, H. Bawden's Lilly. **WIRE-HAIRED.**—Dogs: 1st, John Hendrie's Wentworth Twig. **Bitches:** 1st and 3d, Miss M. McGivern's Sallie and Biddy; 2d, F. McBeth's Rags. Very high com., A. White's Rose. **PUPPIES.**—Dogs: 1st, F. McBeth's Domino; 2d, Miss M. McGivern's Tyke. **Bitches:** 1st and 3d, Mrs. Cook's Vick and Nellie; 2d, Miss M. McGivern's Nipper.

**IRISH TERRIERS.**—Dogs: 1st, Rev. T. Geoghegan's Boxwood Pat; 2d, J. Hood's Rugby Ben. **Bitches:** 1st, Rev. T. Geoghegan's Lady Alice; 2d, J. Hood's Rugby Kit.

**DANDIE DINMONT TERRIERS.**—Dogs: 1st, H. D. Steven's Dan; 2d, W. T. Ramsay's Inkosi.

**SKYE TERRIERS.**—Dogs: 1st, Geo. Johnston's Rats.

**BEDLINGTON TERRIERS.**—Dogs: Equal 1st, George Johnston's Badger and Patrick Booth's Blucher; 3d, G. T. Thomson's Danger. **PUPPIES.**—**Bitches:** 1st, Alex. Watt's Blue Bell.

**AIREDALE TERRIERS.**—Dogs: 1st, C. W. Rickett's Worry. **Bitches:** 1st, C. W. Rickett's Nell.

**DACHSHUNDS.**—**Bitches:** 1st and 2d, C. W. Rickett's Freda and Hulda.

**WHITE ENGLISH TERRIERS.**—Dogs: 1st, J. M. Harris's Turk.

**BLACK AND TAN TERRIERS.**—**Bitches:** 1st, J. E. Anderson's Grit; 2d, W. Presnail's Lady. **PUPPIES.**—Dogs: 1st, Perfecto Kennels' Charlemagne. **Bitches:** 1st and 3d, Perfecto Kennels' Bon Bon and Chocolate Chip; 2d, J. Baikie's Pearl.

**PUGS.**—Dogs: 1st, Miss Annie Dingwall's Punch; 2d, W. H. Thompson's Fred. **Bitches:** 1st, W. C. McAllister's Lily Herb; 2d, Mrs. W. Macdonald's Juno. **PUPPIES.**—Dogs: Prize withheld. **Bitches:** 1st, Mrs. H. Shadel's Milly; 2d, W. H. Thompson's Nellie.

**YORKSHIRE TERRIERS.**—Dogs: 2d, Miss Harris's Cricket.

**TOY TERRIERS.**—**Bitches:** 1st, John Connel's Lady.

**KING CHARLES SPANIELS.**—Dogs: 1st, Miss Chowne's Prince.

**BARBET E.**—Dogs: 1st, Mrs. J. Down's Pomeroy; 2d, J. Hartley's Beauty. **Bitches:** 1st, Mrs. J. Down's Dolly.

**FRENCH POODLES.**—Dogs: 1st, Miss Annie Hendrie's Figaro.

A Russian terrier was entered in the miscellaneous class; but did not come to time.

### Flaps from the Beaver's Tail.

TORONTO, Can.—*FOREST AND STREAM* noticed the sale of the Irish terrier Shagar to a gentleman in Canada. Dr. W. H. Drummond, of Montreal, his new owner, sends me the following particulars of the dog: "Shagar (E. K. C. S. B. 35,317) was formerly owned by Dr. A. Lees Bell, Dumfries, Scotland. He is by Ballymacarett out of Fair Lass and weighs 22lbs., whelped Jan. 2, 1893, and is the winner of twenty-five firsts and specials including cup for best dog in show. Is the sire, by different bitches, of Inverness Balfour and Lefroy, first and second respectively in puppy class, and Benbeach Biddy, second open, two thirds and one fourth, Edinburgh, last month. Considering the dog's youth and the fact that he has never been advertised at stud this record is a good one." I hope to hear a good account of him on this side.

Young stock from this kennel has been going freely, among others being puppies of the Commissariat-Tartayotter litter to the Very Rev. Dean Carmichael, Mr. Richard White and Dr. Prendegast, of Montreal; Mr. W. J. Crossen Cobourg, and Mr. J. W. Darcy, Boston, Mass. Dog puppy (Commissariat-Ballymoney) to Mr. Jas. Ferguson, Montreal, and dog puppy by same sire out of Rugby Norah to Mr. F. E. Caine, Montreal.

H. B. DONOVAN.

### McLin Gets His Deserts.

The McLin trial was concluded Nov. 24 and resulted in a verdict of guilty. McLin was sentenced to three years in the penitentiary. The charge on which he was tried was for perjury. He swore at his trial before the local Justice of the Peace that he had only four living dogs and no dead dogs in his kennel at the time the affidavit alleged cruelty. Thus ends one of the most dastardly episodes in the history of dogdom in this country. It is, we believe, unnecessary to point out that the sentence will serve as a warning to others, for we do not think there can be another man in the business who would be guilty of such cruelty.

## EASTERN F. T. CLUB'S TRIALS.

THE change of the scene of action from High Point, N. C., where the club's trials had been held for many years heretofore, notwithstanding the extortion, ill service and unsatisfactory field trial grounds which there obtained, to Newton, N. C., was a great and satisfactory gain to all concerned. There is hardly a detail or interest of the event, from the greatest to the least, but what is benefitted thereby. The Hotel Newton furnished comfortable accommodation. Compared to High Point, it was palatial.

The grounds were good enough for all the requirements of a field trial. They were largely cultivated, in a loose fashion, some of the fields with corn, others with cotton, and yet others with wheat. And there was in all a stretch of ground which gave room for the day's work. Every dog had ample room to display his range and judgment in seeking for beys in the open fields of stubble, corn and sedge, while there was cover enough to afford shelter for the birds and test the performance of the dogs on scattered birds, and close work in cover. There were but few thickets so dense that the dogs were concealed from view when working in them. The general features of the grounds were favorable, too. Long, parallel, uneven ridges, with shallow valleys between, broken here and there by irregular, gentle hills and hollows, with broad fields and stretches of woodland intermixed, made grounds which, for the purpose, were difficult to improve on. They were threaded with small runs, ditches and water courses, in a loose, scattering way, all of which was favorable for the habitat of the quail, and quail there were in abundance. Full, large beys were the rule.

Horses there were for all, though from the best to the poorest was a long span, with a motley collection of tempers, kinds and blemishes within it. Yet they were good enough for the purpose.

No animal, *en passant*, ever earns its \$1.25 per diem more plumply than a country horse at a field trial. However sportive or buoyant he may start in, or however great his self esteem may be, on coming out at the end of the week he is sedate and careworn and tired. What with plodding wearily through soft fields and thickets, jumping ditches or sprawling through them at a hazard, and going on, on and on hour after hour in a walk, trot or gallop, is it to be wondered at if the field trial horse could not smell the battle afar off, at the end of the week, or even could not smell at all?

The regularly appointed judges were Messrs. S. C. Bradley, Greenfield Hill, Conn.; J. B. Stoddard, Chicago, and W. W. Titus, Waverly, Miss., all professional handlers, whose deeds in the thick of successful field trial competition form no small part of the annals of it in this country.

Owing to some delay caused by a railroad wreck Mr. Titus did not arrive till Monday noon, therefore Mr. W. A. Coster, the secretary of the club, acted in his place by appointment of the governors in judging the Derby, which stake was run first.

There was a good attendance of sportsmen, many of them well-known field trial men, while there were a few new comers. Nearly all were from the North, as the following partial list will show: There were Messrs. James G. Orr, Brooklyn; P. Lorillard, Jr., E. R. Hearn, Thomas Sturges, W. Pritchett and Prof. E. H. Osthaus, New York; A. T. Latta and W. A. Latta, Denver; Edward Dexter, Boston; Albert Baker, Terre Haute; T. H. Gibbs, Columbia, S. C.; P. Moeller, Nyack, N. Y.; C. H. Phelps, Jr., Walter B. Smith, Philadelphia; P. Henry O'Bannon, C. T. Joyce, Greensboro, N. C.; G. Muss-Arnolt, Tuckahoe, N. Y.; T. H. Beall, Linwood, N. C.; V. L. Bossa, New Canaan, Conn.; A. V. Brewster, Troy, N. Y.; Prof. J. C. Schuyler and son, Lincoln, N. C.; Luke W. White, Fredericksburgh, Va.; J. S. Churchill, New York; E. J. Daw, Washington, D. C., and many others.

The competition was skillfully managed and satisfactorily decided. Much praise is due the judges for their painstaking industry and care. They had a perfect grasp of all the details of their duties, and could promptly estimate the value of any situation or combination of details to a nicety. They could easily understand the circumstances of any dog's work at a glance, yet a few of the handlers wanted some thought and effort in defining to them the excuses for a point which was birdless or a flush which was straight and inexcusable, yet they seemed unconscious that they made no impression on men who could not be deceived inasmuch as they were expert handlers themselves.

The new grounds and better accommodations seemed to be more satisfactory to everybody, and the prospects of the club are better accordingly for greater and better trials hereafter.

Of the winners in the stake, Miss Ruby, by steady, uniform work of good character, won first. She showed clean and quite thorough point work, besides industrious seeking for birds at good range and speed.

Dick Fox ran an excellent heat, showing dash, range and skillful point work. He ran under his hunting form in his first heat, which injured his chances for a higher place.

Third place was difficult to decide, there being several which had good and fast work, and others which had shown possibilities of working well. Kent Elgin, on the whole, ran best under his grade of work exhibited in the United States trials, and but little more praise than that he showed good speed can be bestowed on Count Gladstone. These two divided third.

## The Derby.

The Derby was for all setter or pointer puppies whelped on or after Jan. 1, 1892. Three prizes: First \$500, second \$250, third \$150, and Breeder's cup, value \$100, to the breeder of the winner of the Derby.

There were 19 starters drawn to run in the following order: T. H. Gibbs's liver and white dog Lad's Rush (Lad of Rush—Devonshire Bell of Bell), J. Wilson, handler, with F. R. Hitchcock's black, white and tan dog Solitaire (Roi d'Or—Tory Diamond), J. M. Arent, handler.

P. Lorillard, Jr.'s lemon and white bitch Beryl (Gladstone's Boy—Ruby D.), C. Tucker, handler, with F. R. Hitchcock's black, white and tan bitch Topsy (Count Gladstone—Tory Diamond), John White, handler.

Avent & Thayer's black, white and tan bitch Thalia (Jean Val Jean—Lucy Avent), J. M. Arent, handler, with E. L. Gilmer's black, white and tan bitch Miss Hattie (Gath's Hope—Queen Noble), F. L. Bevan, handler.

Charlotteville Field Trial Kennels' liver and white bitch Selah (Rip Rap—Dolly), Capt. C. E. McMurdo, handler, with P. Lorillard, Jr.'s black and white bitch Lady Araminta (Eugene T.—Dell Rivers), C. Tucker, handler.

P. Lorillard, Jr.'s black, white and tan bitch Leona Eugene T.—Bess of Hatchie), C. Tucker, handler, with John Brett's blue belton bitch Maid Marion (Rockingham—Myrrha II.), owner, handler.

Henry Pope's blue belton dog Cactus (Rockingham—Myrrha II.), John Brett, handler, with Eldred Kennels' black, white and tan bitch Pauline (Paul Gladstone—Kill Ray), W. H. Hammond, handler.

Blue Ridge Kennels' black, white and tan dog Blue Ridge Mark (Gath's Mark—Ollie T.), D. E. Rose, handler, with Greensboro Kennels' black, white and tan dog Rod's Mark, F. L. Bevan, handler.

Chas. P. Stokes's black, white and tan bitch Allene (Gath's Mark—Ruby's Girl), D. E. Rose, handler, with Avent & Thayer's black, white and tan dog Topsy's Rod (Roderigo—Topsy Avent), J. M. Arent, handler.

Chas. P. Stokes's black, white and tan bitch Bessie Shoupe (Gath's Hope—Countess Rush), D. E. Rose, handler, with Avent & Thayer's black, white and tan dog Tate (Jean Val Jean—Mamie Avent), J. M. Arent, handler.

P. Lorillard, Jr.'s black, white and tan bitch Antoinette (Antonio—Daisy Hunter), C. Tucker, handler, a bye.

The average performance of the competitors was not noteworthy for merit, though some of the best heats were fairly good. There were a number of heats which were inferior in the quality of the work exhibited. Some of the entries were short of experience, and several showed capabilities which, with more experience, ought to result in better performance.

None of the dogs ran with uniformity. The ones which ran best did mixed work, good and bad. Saving Topsy's Rod, the competitors were in merit from fairly good down to poor performers.

Topsy's Rod won the stake easily, he excelling his competitors in every particular, excepting Allene's work on scattered birds, and a matter of style in respect to several. He is industrious, enthusiastic in his work and a good performer. He goes at high speed and beats out a good range.

Allene in her first heat seemed to be a dangerous competitor, but her first heat was far the best.

Tate was a strong competitor for second. While he had not done any work which was high class, his work had been uniform, of a fairly good grade, and had made a spur or two when in thick work on scattered birds, his chances would have been far greater. Selah divided third with Tate. She ran in good form in one heat, but in her other heats she ranged with poor judgment, though seeking diligently throughout the heats.

## MONDAY.

The air was crisp and bracing, the sun, which shone clear and bright, not having dissipated entirely from the air the heavy frost of the previous night. The start was made about three miles from town. Birds there were in abundance, though at such times as ordinary dogs ran there appeared to be a scarcity. Yet, taking the work, good, bad and indifferent, there was by night a total result of twenty-two beys found, which was two beys less in count than the score of some other gentlemen who kept a tally on them. Save the work of four or five dogs, the competition of this day was inferior. Much time was lost between heats by the dogs being far away in the wagon.

## First Series.

LAD'S RUSH and SOLITAIRE began at 8:55 and ended at 9:45. Neither dog did any good work, though there were abundant opportunities. Solitaire went the wider, yet at times broke away from work to the gun and was difficult to again get in control. Rush pointed a bey nicely in the open, and was held some minutes while Solitaire was called in to back, but he was not within call. Rush was unsteady to shot. On the scattered birds, Solitaire flushed twice, and made one point to which nothing was found. Bird after bird was flushed on ground which the dogs had worked over. They made a poor showing under favorable conditions.

BERYL and TOPAZ began at 10:09 and ran 41m. Topaz pointed a large bey in sedge. It flushed wild. On the scattered birds Beryl pointed one. At the same time Topaz broke away from control and was quite unmanageable during the rest of the heat. Among the scattered birds she flushed five times in succession under good conditions for clear point work. Beryl was the better ranger, though not a wide one, and worked to the gun. Topaz needs a lot of finishing in her training.

THALIA and MISS HATTIE ran 38m., beginning at 10:58. Hattie pointed a bey in corn, though after the first stiffening she stood in a half point listlessly, then broke in and flushed the bey. After a short search Hattie pointed a bey nicely and Thalia backed when cautioned. As the bey flushed Hattie chased beyond control. Many opportunities to point on the scattered birds were not seized, though each got a good point on singles. Hattie required a lot of whistling and calling to keep her in control, and needs a good deal of training. The heat was ordinary.

SELAH and ARAMINTA were started at 11:50 and ran 35m. Excepting a bey flushed by horsemen, no birds were found during this time. The running was suspended and the party went to lunch. Lady made two flushes on scattered birds and Selah by the edge of a large ditch pointed a bey well which was in the ditch. Lady flushed a bird and next she pointed a bey well. Selah was much the better ranger and beat out the ground intelligently. She made the best exhibition of sensible ranging of any dog in the stake up to that time. The heat ended at 2:01.

LEONA and MAID MARION—Ran 30m., beginning at 2:06. Neither ranged wide, but the range of Maid was very narrow and her speed slow. Leona did all the work on birds, one point on a bey, one on a single and a point on a single which she passed on and flushed.

CACTUS and PAULINE were started at 2:41. Neither showed much above ordinary. Their range was narrow, and they seemed to be lacking in knowledge of bird work. Cactus made a point on scattered birds, and one on footscent. Up at 3:17.

BLUE RIDGE MARK and ROD'S MARK began at 3:20. A bey flushed suspiciously close to Blue Ridge Mark, but he evidently caught no scent of it, as he kept straight on his course. After a turn to the end of the field, the brace was worked back to the scattered birds which had settled in the open weeds. Blue Ridge Mark handled hard, constant whistling and calling being necessary to work him. Rod's Mark had found the trail of a single and was roading, when Blue Ridge Mark happened to come up on it and pointed it. The scattered birds then flushed. Moved on and both dogs soon roaded and pointed alternately. They were ordered in another direction, for seemingly they had failed to locate, but the horsemen flushed a bey close by which the dogs had almost roaded to a find. Up at 3:55. Both dogs handled hard. Blue Ridge Mark showed speed, but did not beat out his ground with judgment. Rod's Mark was diligent too, but had but average range.

ALLENE and TOPSY'S ROD ran the heat of the day, and a good heat it was for any competition. They began at 3:58. Rod made a point on a single in weeds. Then Allene pointed the scattered birds. Next Rod pointed and moved on and the bird flushed wild. Allene made two flushes on singles. In woods both pointed on the same single, then each got an independent point on single birds. In the open weeds Allene was roading nicely on a bey which one of the party accidentally walked up. She next pointed a bey in alders, and was doing good work. Next in the open she roaded and pointed alternately on the trail of a bey which she at last pointed, standing to it in stylish firmness. Rose did not go to the right place, though near the bey. He ordered Allene on, and Rod to one side was sent in and got the point. All the credit of the work belonged by right to Allene and it probably was so considered. Then Allene secured three good points on singles and Rod one, the latter also pointing, but nothing found to it. Up at 4:30. Rod was the wider ranger, yet he did not work out his ground so thoroughly as Allene. Both had excellent speed. Allene was the sharper and wiser in bird work.

BESSIE SHOUPPE and TATE began their heat at 4:37 and ended at 5:14. Bess pointed; nothing found. Tate pointed a bey and was backed, then on the scattered birds Bess outworked him completely, making three good points. Her style was the better of the two.

ANTOINETTE a bye, and was started under Mr. Stoddard's charge at 4:47, and ran thirty minutes. She had Rose, one of Mr. Lorillard's other dogs, for a running mate. In a hollow they found birds, but which was first it was impossible to determine. They moved up, and Antoinette had the point and Rose was backing when we got in sight of them. On scattered birds Antoinette pointed twice in woods just as the bird flushed.

This ended the day's work. The judges in the evening selected eight dogs for further competition, namely, Topsy

Rod, Allene, Bessie Shoupe, Leona, Selah, Antoinette, Tate and Blue Ridge Mark. It was quite a good selection, though in respect to Leona, I considered her work inferior to that of Beryl, though the latter made but little showing in point work, yet she could not make a good showing in competition with a partially trained dog, which of itself was not a poor reason for giving her further trial.

## TUESDAY.

Heavy clouds were piled together in dense masses, shutting off every ray of sunlight. There were signs of better weather, but a few moments before the first brace was cast off a light sprinkle of rain began falling steadily, which constantly increased in volume until it became a steady rain. The temperature turned colder. After the second brace ran the judges announced that the competition was suspended on account of the rain. Then followed an uncomfortable ride of five miles or more in the rain to town.

TOPSY'S ROD and BLUE RIDGE MARK were cast off at 9:35. They had hardly gone 50yds., when both struck the trail of a bey, Rod in the stubble where the birds had inferentially just left and Mark in the woods, the dogs pointing about 40yds. apart. Mark was nearer the birds and roaded to a point. Rod roaded rapidly toward the weeds and showed he could follow on a trail quickly and accurately. He was running in good form, diligently and cheerfully. Mark showed good speed and quality also, though not quite equal to Rod in range. Up at 9:50.

BESSIE SHOUPPE and SELAH began at 9:54. Selah in the open roaded nicely to a point on a bey. Rose called Bess in and brought her toward where Selah was roading, and she, too, got a point on the bey. Aside from showing that she could point, she had no claim to the piece of work. Selah was decidedly superior in range and speed, covering a good scope of ground and working with judgment. On the scattered birds Selah pointed a single and Bess pointed footscent apparently. Selah made an excusable flush, or rather the bird was wild and flushed as the bitch was walking toward it. Up at 10:06. The rain was thickening, and no further work was attempted on this day.

## WEDNESDAY.

The heavy rain had thoroughly soaked everything exposed to it, and the grass, weeds and other vegetation were burdened with heavy drops of water. A dense fog obscured the view, and there were signs which indicated that the storm might not yet be over. A late start was made, and after a three-mile drive over roads heavy with mud, the competition was resumed. The fog gradually lifted, the clouds broke away, and the afternoon was warm and pleasant. The work of the day was of a tame character. No dog ran a clean, sharp heat, or even a heat which was a uniform average grade of good field trial work from start to finish.

BESSIE SHOUPPE and SELAH, which were ordered up on account of rain yesterday, were started at 10:52 to continue their unfinished heat. Selah pointed a bey and was backed by Bessie, and to shot both were steady. On the scattered birds, Selah made several flushes, and Bessie made two points on singles and one point to which nothing was found. Neither showed above ordinary in range, potted frequently, and beat out the ground with little regard to regularity. Up at 11:17.

TATE and ANTOINETTE were cast off at 11:20. The weeds were so wet that the handlers preferred to ride horseback, and, with the consent of the judges, they so rode. Antoinette flushed a bey. Sent on, Tate pointed a bey in the open, which flushed wild. Tate pointed on the scattered birds, Antoinette backed well for a few moments, then broke her back. She was puppyish and inattentive to her work, though she ran well for her own pleasure. With more experience she will greatly improve. Tate hunted intelligently for birds, had a fair range, and did some clean point work. Up at 11:35.

ALLENE and LEONA, at 11:43, started in a cornfield. Allene pointed a bey well and was backed. Both were steady to shot. The birds were followed to dense cover, where Leona secured a point on a single. Allene pointed a bey in corn. Neither showed good range, while Leona was frivolous in her work. Allene did not work independently at times, and ran much below the form displayed in her first heat.

BLUE RIDGE MARK and SELAH were cast off after lunch, at 1:24, and were ordered up in 38m. without finding. Neither ranged with judgment. Selah made one point, to which nothing was found.

TATE and ALLENE began the final heat at 2:10. Allene pointed a bey nicely and Tate backed. They behaved well to wing and shot. On the scattered birds in cover Allene was quicker and sharper in locating and pointing. Tate pointed a single and Allene backed. Allene made two points on singles. Tate in the open made a flush on a bey, which flew but a few yards into cover. Allene got a good point on a single of it, and the heat ended. Time, 2:17. Allene outpointed Tate, while he was the better in range and judgment in working his ground.

The winners were announced as follows: First, Topsy's Rod; second, Allene; third was divided between Tate and Selah.

## The All-Age Stake.

This stake was open to all setters and pointers which had never won a first prize in an All-Age open stake at the Philadelphia, Southern, United States or Central field trials. The prizes were, first \$500, second \$250, third \$150.

It will be noted that 10 out of the 30 starters are dogs whose names have figured in field trials before. It was strictly professional in its composition, excepting one entry. The drawing took place on Monday night. The order of running was as follows:

P. Lorillard, Jr.'s orange and white bitch Miss Ruby (Gladstone's Boy—Ruby D.), C. Tucker, handler, with Blue Ridge Kennels' black, white and tan dog Dick Fox (Chance—Countess Rush), D. E. Rose, handler.

W. Carr's black and white ticked dog Dion C. (Roi d'Or—Mildred), T. H. Beall, handler, with Avent & Thayer's black, white and tan dog Chevalier (Jean Val Jean—Lucy Avent), J. M. Arent, handler.

F. R. Hitchcock's black, white and tan dog Roi d'Or (Roderigo—Bo Peep), J. White, handler, with C. C. M. Hunt's lemon and white pointer dog Grouse (Mainspring—Swain's Fly), John Lewis, handler.

Greensboro Field Trials Kennels' black and white ticked bitch Hope's Queen (Gath's Hope—Queen Noble), F. L. Bevan, handler, with Charlottesville Field Trial Kennels' black dog Winnie (Manitoba Toss—Pitti Sing), C. E. Buckle, handler.

Hempstead Farm Kennels' liver and white pointer bitch Sanford Druid (Exon Don—Sanford Quince), A. Cameron, handler, with Avent & Hitchcock's black, white and tan dog Count Gladstone (Count Noble—Ruby's Girl), J. M. Arent, handler.

T. E. Shreve's black, white and tan dog Mecca (Paul Gladstone—Latonia), John Lewis, handler, with P. Lorillard, Jr.'s liver and white bitch Antevolo (Count Noble—Trinket II.), C. Tucker, handler.

P. Lorillard, Jr.'s black, white and tan bitch Dot Rogers (Roderigo—Gladstone's Girl), C. Tucker, handler, with Blue Ridge Kennels' orange and white bitch Hope's Mint (Gath's Hope—Dashing Lady), D. E. Rose, handler.

F. R. Hitchcock's black, white and tan bitch Bess (Chance—Bessie Avent), J. White, handler, with Hempstead Farm Kennels' liver and white dog Bob Cooper (Roi d'Or—Miss Nellie Y.), A. Cameron, handler.

Major J. R. Purcell's liver and white pointer bitch Lady Margaret (Dick Swiveller—Countess Bang), owner, handler, with P. Lorillard, Jr.'s black, white and tan dog Eugene T. (Count Noble—Ruby's Girl), C. Tucker, handler.

Hempstead Farm Kennels' liver and white pointer dog Hempstead Duke (Duke of Hessen—Lass of Bow), A. Cameron, handler, with T. T. Ashford's black and white pointer dog King Elgin (King of Kent—Vera Bang), J. M. Avent, handler.

#### First Series.

MISS RUBY AND DICK FOX opened the competition at 2:40. Soon Miss made a good point on a bevy and was well backed by Dick. To shot, both were steady. Dick flushed a single. In the thicket, a quail was heard to give three or four sharp notes of distress, and a moment afterward a small hawk rose just clear of the undergrowth and heavily-winged, flew away with the quail in his talons. Unfortunately, the guns were not loaded and the marauder escaped unharm. The quail did not come back. Miss in a short time found and nicely pointed a bevy in the open, and was nicely backed by Dick. As Miss moved on, Dick passed close by the bevy, having the wind of it, yet he failed to recognize any scent. Each got a point on scattered birds, and soon thereafter Dick backed Miss' point on another bevy in the open field, both doing their part stylishly. A single point by Miss concluded the work on birds. Her judgment and skill were excellent, Dick had speed and fair range, but as a bird finder and in point work he was surpassed by Miss.

DION C. AND CHEVALIER were started at 3:13. Dion soon drew up on a point to a bevy by the edge of a ditch. He was steady to shot. Chevalier pointed on top of a hill, probably on footscent, as a couple of birds were flushed some yards away from the point by horsemen. At 3:30, they were taken to other grounds, a shooter having disturbed the birds in that section. In twenty minutes they were again sent on and ran till 4:12. No more birds were found. Chevalier was the speedier and wider ranger, though he started away in straight lines, or started away much as it happened without any intelligent plan in his work. Dion was diligent in hunting for birds. In pace he was moderate and his range was not wide.

ROI D'OR AND GROUSE were cast off at 4:17. Grouse soon secured a point on two or three birds in open sedge and was unsteady to shot. Roi made a half point and nothing was found to it. Grouse pointed next a bevy and two singles, and was unsteady each time. Up at 4:53. He was the wider and better ranger, worked his ground cunningly and was in a sneaky way unceasing in his efforts to find birds. Roi was diligent, a bit heavy in his gallop from too much flesh and not equal to his short-haired competitor as a bird finder.

HOPE'S QUEEN AND WINNIPEG started at 5:03. Each dog worked within a narrow limit at the start. Winnipeg pottered a great deal. Queen pointed a bevy and on the scattered birds picked up several points. Winnipeg flushed one and pointed one. The heat lasted a little over 30m., with the work of it in Queen's favor.

#### THURSDAY.

The weather was very similar to that of yesterday; the same dense fog in the morning, the same clear warm day after the fog was dispelled, though there was a difference in the latter part of the afternoon when heavy black clouds obscured the sky and rain threatened, though none fell. The competition was on different ground from that of previous days and was west from town. There were more cover and rougher grounds, though not unfavorable to good work. Birds were not found so plentifully as on previous days.

There were fifteen dogs taken into the second series whereas seven or eight would have amply filled the purposes of the competition. Playing to the gallery or to the whims of owners is not any part of a field trial competition. Some of the dogs taken into the second series were palpably inferior, and even the owners could not have expected a further trial of them. Encouragement to owners must be presented in some other form than running their dogs when they are palpably defeated. Moreover, there is an element of insincerity in running dogs as if they really had a chance to win when they have no chance. Up to the point of selecting the second series the judges had conducted the competition admirably and handled it well afterward, too.

SANFORD DRUID AND COUNT GLADSTONE began at 9:50 and ran thirty-five minutes. The heat was a poor one, and in point work fell far short of the opportunities. Druid was seen to leave a plum thicket, where he had been some moments, after which Count entered and a bevy was seen to flush from the thicket. The birds lit in open and plum thicket about 100yds. away, and Count was in their vicinity a few moments afterward and pointed to a flush. Next he flushed a single bird on a cast some distance from his handler, and next he pointed some scattered birds. He was self-willed and required much whistling and loud orders. Sent on after the scattered birds Count pointed one, and pointed to wing as some scattered birds flushed. Part of the time he did not work to the gun, and his handling was noisy and difficult. His work on birds was below the average. The one quality he excelled in was uniform high speed, which he largely misapplied. Druid was disposed to be overcautious and constrained when on scent, pointing inaccurately, and his speed was irregular as was also his range.

MECCA AND ANTEVOLO started at 10:39 and ran till 11:31, excepting fourteen minutes occupied in vacating the land of an irate owner or tenant. Mecca started a bit slow but gradually increased his range, sometimes searching wide and well, sometimes narrow and leisurely. In the open, Antevolo pointed a bevy and Mecca backed. Mecca got a point on one of the scattered birds. Antevolo was speedy but irregular in range.

DOT ROGERS AND HOPE'S MINT began at 11:46 and ran 34m. Dot pointed a bevy in pines and Mint pointed or backed, presumably the latter. Both were steady to shot. Dot in thicket pointed a single, and sent on in the open pointed a single and was backed by Mint. The latter made two points to which nothing was found. He ranged in a narrow scope and was not spirited in his work. Dot was fast and had a fair range, although she was running in playfulness part of the time and not seeking for birds.

BESS AND BOB COOPER started at 12:23 and ran thirty minutes, when the running was suspended while lunch was in order. Bob made a point on a bevy and Bess backed or pointed. Bob got a point on a single and was backed. Bess was neither fast nor a wide ranger, nor did she show any enthusiasm. Bob showed little merit as a competitor.

LADY MARGARET AND EUGENE T. were started at 1:51. Lady pointed a bevy well by the edge of woods and was steady to shot. Eugene showed good speed and range, while Lady, though diligent, was a bit irregular in her range, not remaining out at her work so constantly as she could have done, yet she kept up a good rate of speed. Up at 2:55.

HEMPSTEAD DUKE AND KENT ELGIN began at 2:48 and ran 40 minutes. Duke made game, but failed to locate. In woods, Kent pointed a bevy, and Duke, coming in, made an independent point on the same bevy. Duke made two points to which nothing was found. Sent on, Kent pointed a bevy and Duke backed. Each ranged very well, covering a good scope and maintaining a fast gait.

LUCKY DEAL had a bye and ran alone, Mr. Titus taking the charge of the judging of her while the preceding heat was being run. She was started at 2:49 and ran 30 minutes. She ranged irregularly, much of the time close to her handler. She made several flushes on scattered birds.

#### Second Series.

MISS RUBY AND DION C. started at 3:55 and ended at 4:11. Miss Ruby was the better ranger and had the faster pace. Dion pointed a bevy, then moved on resolutely, and Miss Ruby coming in pointed the bevy. To shot Dion was somewhat unsteady, and the heat then ended.

DICK FOX AND CHEVALIER, at 4:12, began their heat. Dick

pointed near the edge of briers, and Chevalier, about 80yds. away in the open field backed proudly. Dick did not have the birds accurately. He took a short turn, crossed the fence into the woods and pointed the bevy. On the scattered birds each got a point. Dick took a back cast in woods and pointed, and Chevalier backed. It probably was on footscent. On the rise of the bevy, Rose had shot toward it without aiming, and wounded several birds. Each dog pointed twice on the crippled singles. Chevalier was headstrong and required a deal of whistling and loud orders in handling him. He beat out his ground with inferior judgment, and needed prompting and helping a great deal in searching for bevs. Dick was ranging fast and with judgment, and devoting his attention to hunting for birds. Chevalier followed him betimes. As the dogs were ordered up, Dick caught scent in the open field and the next moment stiffened on a point on a bevy. He made an excellent showing. Up at 4:36.

DOT ROGERS AND GROUSE began at 4:42. Dot ran in high spirits, but was not always seeking for birds in her casts. Grouse was earnestly intent on bird finding, sneakily skirting the edge of likely places, and feeling the air carefully with his nose, which he carried rather low. In woods he pointed an outlying single, which he flushed and chased. Cast back to where he pointed, he pointed the bevy. On the scattered birds Dot crouched prettily to a point on a single. Grouse pointed to a flush, and next he pointed, roared to locate and the bird flushed wild ahead. He made another point on two birds, Dot backing him well. Up at 5:10. This heat ended the day's work.

#### FRIDAY.

A sharp freeze took place in the night, sufficient to make ice and freeze the surface of the ground. The rough mud of the roads the night before was solid in the morning, and made a most lumpy surface for the wagons to run over three miles to the grounds. As the sun mounted higher the wind died away and the weather turned warmer. Birds were found in ample quantities. They lay remarkably well to the points. The work of the day was, as a whole, inferior. There was no dog which showed even good work. The judges managed the competition skillfully, and demonstrated their ability to perform first-class judging.

KENT ELGIN AND LADY MARGARET began at 9:10 and ran 16m. Lady beat out but little ground. Kent ranged wide and at good speed, but selected the easy going. No birds were found.

HEMPSTEAD DUKE AND EUGENE T. started at 9:32, and Duke made a flush on a bevy. Eugene pointed scattered birds in pines. Both pointed in sedge and no birds were found. On a bevy marked down in the open Eugene roared almost through them, then dropped to a point. Eugene flushed two. Both ranged well, but their bird work was ragged. Up at 10:10.

HOPE'S QUEEN AND ANTEVOLO started at 10:11. Queen made three points, to which there was nothing found. Antevolo was much the wider ranger and swifter in pace.

COUNT GLADSTONE AND MECCA were cast off in a cornfield at 10:48. Mecca pointed a bevy and Count coming in afterward from the side pointed the same bevy. To those who did not see the occurrence it looked as if Count was pointing and Mecca backing. Mr. Avent went forward, flushed the birds and the dogs were steady to shot. Count next made a half point on a cripple which was flushed behind him. Sent on Count broke away from control. Mr. Avent mounted a horse and after some minutes found him and brought him back. The dogs were again started together. In woods on scattered birds Mecca pointed one and was a bit unsteady. Count pointed a single and was steady to shot. Mecca made two points to which there was nothing found and Count made a similar point. Each dog then at the same time pointed separately on singles. In the walk through the woods single birds were flushed right and left by the spectators on ground gone over by the dogs. They made a poor showing considering their many opportunities. Count had greater speed and ran wider, though it could not be called a range in any useful sense. Up at 11:45.

ANTEVOLO AND KENT ELGIN were cast off at 1:01, after lunch. In open weeds Antevolo roared up a bevy to a flush most carelessly and indifferently. About 100yds. further in the open weeds was another bevy. Antevolo pointed it and at the same time Kent, a few yards away, was half pointing and showed indecision almost in the middle of the bevy. The whole resulted in the birds being awkwardly flushed. There were two or three large bevs scattered in the open, the bevs having lit near each other. There never was a better opportunity for a dog to run up a large score of single bird points. Antevolo broke away from control and ranged elsewhere while Kent roared through the birds and got a point on a single and a flush on another, while the spectators following flushed 30 or 40 birds by ones twos and threes. It was slobbery work. Up at 1:15.

COUNT GLADSTONE AND KENT ELGIN began the final heat of the stake at 1:20. Kent pointed up wind of a bevy in corn. Avent held him on point and whistled vigorously for Count, the latter out of sight and heedless of the importunate calls. Kent roared up wind a piece, gave up the trail and no further effort was made to locate the birds. After the dog moved on, the birds were seen running in the cornfield near where Kent pointed and they were flushed by a horseman. In the open, Kent pointed a bevy nicely and Count backed. Both were steady to shot and wing. Up at 1:40. Count had the greater speed and ran wider. Kent showed a superiority in finding and working to the gun. Count, save in the one quality of speed, showed very ordinary field quality.

The judges announced the winners as follows: Miss Ruby first, Dick Fox second, Kent Elgin and Count Gladstone divided third.

#### SATURDAY.

##### The New Subscription Stake.

The drawing took place on Friday night, the five starters, Hempstead Duke and Topsy Rod, Miss Ruby and Count Gladstone, running in the order mentioned, with Rip Rap a bye. The latter is owned by the Charlottesville Field Trial Kennels, is by King of Kent—Hops, is black and white in color and was handled by C. E. Buckle. The others have been mentioned in the preceding stakes.

The morning was clear and frosty. It was arranged that Mr. Titus would take charge of Rip Rap's competition on the grounds west of town, while the rest of the competition was run on the grounds east of town, thus saving a full day in time with no detriment to the trials. There were much fewer birds and rougher cover and grounds west of town, hence Rip Rap could not make the showing in number of bevs found and points made as his competitors on the better grounds. It was much harder for him to work alone, too. Mr. Cameron delayed the start by not appearing on time, and barely escaped being shut out.

The conditions of the stake were \$50 entrance, subscription transferable. 50 per cent. to first, 30 per cent. to second, 20 per cent. to third. \$250 added to first by club.

##### First Series.

TOPSY'S ROD AND HEMPSTEAD DUKE began at 8:20. Topsy beat out about twice as much ground as his competitor. The going was hard owing to the ground being frosty and frozen, so that it was the more punishing to the faster dog. He was decidedly superior in his point work. He found four bevs, and showed quickness, dash and accuracy in pointing. Of points on scattered birds he made many. He is much the easiest dog to handle of Mr. Avent's string of competitors. Duke's pace was but moderate comparatively and his range fair. He false pointed several times, and made errors by flushing awkwardly. Up at 10:39. Their afternoon heat began at 1:15. The frost had been thawed by the warmer

temperature and the footing was better. Rod maintained his pace throughout, and was going quite as strong at the finish as at the beginning. Rod found two bevs and the third one was pointed by both. On single birds, he greatly surpassed his competitor, he being sharper, more accurate and enthusiastic. About fifteen minutes before the heat ended, Duke suddenly collapsed from cramp or a fit, and the signs seemed unfavorable for Duke's further stay in this world. After a few minutes he recovered and gamely tried to go on hunting, but he was too incapable to go much. There was not much go left in him at the end of the heat.

MISS RUBY AND COUNT GLADSTONE began their first two hours at 10:45. Miss Ruby got a point on the remaining half of a bevy after flushing the first part of it. Their work afterward was very clean on bevs and singles, though in this respect Miss Ruby was something better. Count made a little wider fling at times, yet their range was nearly equal, as also was their speed. The heat ended at 12:45. They were both a bit fatigued. They started on the second two hours at 1:18. Miss Ruby became very fatigued in the last part of the heat. Up to about the middle of the heat there was little difference in point work. In the last half he greatly outworked her, doing good work on bevs and singles, the latter being a weak feature of his ordinary work. He handled more easily. Miss Ruby was not prepared with a view to this event.

RIP RAP (a bye).—He was put down at 10. He started a bit slow, but soon caught an easy, swinging stride which he maintained well until 12 o'clock noon when the first heat ended. His range was but modestly wide, yet he worked his ground out cunningly, selecting such places for searching as bevs would be most likely to frequent. He located skillfully and was most reliable on point, holding every one steadily until the bird was flushed. His work, too, was nicely done with reference to the gun. Many of the bevs found were not followed. Rip showed that he could have made a large string of points on singles had he been worked on them. In his second heat he ranged slower than in the forenoon, and toward the last of the heat was easing up in his ranging betimes. The handler rode on horseback or went afoot, as he pleased. Nearly an hour was used before a find was made. Going down wind just after crossing a ditch, and flushed an outlying single, then pointed well on the bevy. By searching the likely corners well he found another bevy in sedge and made a good point on it. He got three good points on the scattered birds of it and made one flush going down wind. After more diligent searching he pointed an outlying single, and when it was flushed the bevy flushed wild shortly afterward. Next he pointed and nothing was found. He next was started after lunch, at 2:56. He wheeled prettily to a good point on a bevy in stubble. He flushed a bird in woods. Sent on, he located a bevy skillfully in woods and pointed it staunchly. He made four good points on the scattered birds and one flush. Nothing more was found before the heat ended, though much ground was worked out.

Nov. 27.—[Special to Forest and Stream.]—The Eastern Club's Subscription Stake was finished by noon to-day. Count Gladstone was first, Topsy Rod second and Rip Rap third. Count and Rod ran together 30m., and Rip Rap ran in better form with Ruby for one hour. B. WATERS.

#### GORDON SETTER FIELD TRIALS.

The initial trials of the Gordon Setter Field Trials Club were brought to a conclusion late in the afternoon of Nov. 21. Considering the hasty manner in which these trials were arranged, great credit is due to Secretary Mr. Chas. R. Taylor for his success in bringing so many Gordons together. In fact no one who has the good of the field dogs at heart could but be agreeably surprised at the comparatively large number of entries made, especially when one considers the fact that it was entirely a New England entry. None of the better known kennels such as Dr. Dixon's, James Blossom's and others were represented, and for the good of the breed these breeders should at least have countenanced the enterprise by sending an entry or two even if their dogs were not keyed up to field trial pitch. They would not have suffered greatly by comparison, as but few of the dogs that ran seemed to have had much preliminary work in the field. Several of them were as fat and looked as trim and as glossy as if they had just roused themselves from their master's hearth rug. Owing to the disadvantages under which the Gordon labors in this country, where he is scarcely considered a quota in the field element, it would scarcely be advisable to criticise the work done in these trials with too heavy a pen. At the same time there were two or three exceptions that showed work quite on a par with the average work seen in the more pretentious field trials between English setters and pointers. Taken as a whole, however, the running was mediocre, there was altogether too much pottering and nosing out of old trails that a more practical dog would never consider for an instant. There was also a good deal of hesitation on points, and most of the dogs were deficient in nose qualities. This, combined with the great scarcity of game, made the trials rather tedious, and many of the dogs had to be judged simply on supposition, as they failed to find game. Still, I don't think the judges erred in their decisions, for they certainly picked out the best dogs in both stakes.

The trials were advertised to start at East Treetown, Mass., a very rural district some ten miles from Fall River, Mass. The headquarters were at a farmhouse about five miles from the little station, and there being little provision for the entertainment of hungry sportsmen the visitors did not fare as well as they would have liked. The provident ones had secured beds in the house before coming down, but several others were not so lucky and were compelled to put up with the soft side of a board floor in the barn. This, with the thermometer down at freezing point, could not have been a very genial experience. The grounds hunted over were very rough and totally unfit for the purposes of a trial, as may be surmised when the whole day's work in the Derby resulted in no birds being found. One of the judges, Mr. A. R. Sharpe, a member of the New England Field Trial Club, offered the new club the courtesy of finishing their trials on the club grounds at Assonet, Mass., about eight miles away. This proposition was gladly accepted, and on Tuesday morning at 7 o'clock the party drove down to Assonet and completed the trial on the old grounds. Here the prospect of finding birds was a little better, but the scarcity of game proved conclusively that the N. E. F. T. Club were wise in declaring their trials off this year. The grounds have been improved by some cultivation and if the club could only devise some means to protect the birds they turn down, next year no doubt they would be well able to bring off their trials successfully. Among the visitors who followed the dogs during the two days' work were Noyes Billings, Dodgeville, Mass.; J. J. Scanlan, Fall River, Mass.; Walter Baylis and Dr. Heywood, Taunton, Mass.; J. W. Wells, Attleboro, Mass.; C. T. Brownell and W. Tomlinson, New Bedford, Mass.; J. J. Pearle, Hampden, Conn.; J. J. Arnold, Londale, R. I.; M. Medbury, Providence, R. I.; S. H. Roberts, Pawtucket, R. I.; Charles R. Taylor, Providence, R. I. The judges were Mr. A. R. Sharpe, of Taunton, Mass., who is well known as a setter breeder and whose dogs ran well in the N. E. F. T. C. trials last year, and Mr. J. A. Lawson, of Providence, who is also an English setter man. They performed their duties well and satisfactorily, we believe, to the owners. They followed the work closely and were not afraid to go wherever the dogs went, and that is saying a good deal, for some of this swampy ground is not by any means pleasant going. They kept the dogs on the move at a good pace, in fact quicker than we walked at Mitchell's Bay.

#### The Derby.

For Gordon setters born on or after Jan. 1, 1892, \$5 forfeit.

\$5 additional to fill. There were four entries drawn to run as follows:

H. O'Reilly's Flash Noble, handled by W. Tomlinson, with C. T. Brownell's Trim, handled by owner.

J. J. Arnold's Don, handled by owner, with Mr. Jewett's Punch, handled by W. Tomlinson.

FLASH NOBLE AND TRIM.—They were sent off at 11:27 A.M. The heat was a poor one. Flash was under little control, would not range, but keeping most of the time to the crowd and finally quit business altogether. Trim covered his ground fairly well, in fact did all the hunting, but had no opportunity to show work on birds. Up 11:46.

DON AND PUNCH.—Down at 11:47. Don pointed on foot-scent or rabbit trail. Punch gave an exhibition of speed quite unusual in this breed, and did he gallop with his head instead of his legs, figuratively speaking of course, he would be a good dog. He seemed, however, to be just gallop and nothing more. The way he cleared fences, ditches, etc., was quite amusing. In a cedar swamp a point was claimed for him, but nothing came of it. Finally Punch was lost for twenty minutes in a swamp. Up 12:55. Punch showed no intelligence in his range, and though Don did not get out far he worked out his ground with some idea of what he was there for. The party then adjourned to the farmhouse for lunch, as the lunch wagon which had been ordered to follow did not turn up.

#### Second Series.

The second series in the Derby was then commenced with DON AND TRIM. Down at 3:30. The going was more suitable here, being more in the open, than the ground hunted over this morning. A lot of varied country was covered, but neither dog found, and called up at 4:05. Don showed better work here, but both dogs potted a good deal. It was then decided to run a heat in the

#### All-Age Stake, First Series.

for which the dogs had been already drawn as follows:

C. T. Brownell's Gordon Grouse (Ben Butler—Gordon Rose), handler, owner, with Noyes Billings' Minnie T. (Ranger B—Diana).

E. K. Sperry's Jolly G (Juke—Redfield's bitch), handler, L. A. Pearle, with C. T. Brownell's Doctor (Ben Butler—Belle).

J. J. Scanlan's Dan (pedigree unknown), handler, owner, with Miss S. A. Nickerson's Count Noble (Ben Butler—Belle), W. Medbury, handler.

J. C. Lavin's Smut (Tom—Maud), with T. H. Hughes' Prince H. (Nat—Jessie).

As there was only one brace out, SMUT—PRINCE H.—they were put down at 4:06 in stubble. They potted on foot scent at edge of woods, but failed to make out anything; were taken up at 4:24 and put down in different ground, but neither found birds. They had only very ordinary range and did not display any symptoms of bird sense or of much training.

The party then gave up for the day and the lunch wagon having turned up, supper was eaten in the barn, and those of the visitors that remained were soon at rest.

#### TUESDAY.

The start for Assonet was made about 7:45. The ground was hard from the frost overnight and ice had formed in the ditches and shallow ponds. There was little wind, but the eight-mile drive was a chilly one and the sportsmen were glad to get to work at 9:50 with the continuation of the All-Age Stake in its proper order.

GROUSE AND MINNIE T.—They were cast off in the open country near the old Meeting House, and working down toward "Coster" Swamp, so named after "Wash" Coster last year, as it was here most of the birds were found in the last trial, when he judged. Several birds rose wild ahead of the dogs and were marked to cover. Here Minnie pointed one of the scattered birds nicely, but Grouse refused to back, taking no notice of the point. Mr. Billings flushed the bird, but did not kill; Minnie steady to shot and wing, Grouse cautioned. Getting into the open Minnie pointed again and bird flushed wild ahead of her. Beating out more ground without further result, dogs were up at 10:12. Neither dog ranged wide, but Minnie showed best control and was far more intelligent in hunting out her ground.

DAN AND COUNT NOBLE.—Cast off at 10:20. Both got out to their work fairly well, Dan having the wider range, but did not show much hunting sense, in fact, scarcely any, and amused himself by chasing crows. The heat was all in favor of Count; although there were no birds found, still he exhibited some speed, intelligent range and evidence of training.

SMUT AND PRINCE H.—These two ran again for six minutes, starting at 10:57. They hunted out some likely cover but failed to find. Both potted and did not get out far from their handlers.

JOLLY G. AND DOCTOR.—These two were then ready to run, and starting at 11:08 ran for 17 minutes, covering a lot of mixed ground, but without showing trace of a feather. The heat was all in favor of Jolly, for she hunted out her ground more intelligently and was seemingly better trained.

This completed the first series in All-Age, and the final in the Derby was then called for.

#### The Derby—Final Series.

DON AND TRIM were put down at 11:41. Their range was very ordinary, and instead of casting and making some use of wind and likely places, they preferred to nose around a good deal. Don seemed like an aged dog, and was too fat. Trim showed a propensity to chase small birds. Getting on to hill out of swamp, Don roared to a bevy which he pointed, but Trim came in ahead and walked the birds up. Arnold shot and killed and Don retrieved. Up at 12:18, and judges decided that Don wins first, Trim second, and Punch third.

We then went on with the

#### All-Age Stake—Second Series.

JOLLY G. AND DAN.—Put down at 12:27 in the same place to work toward scattered birds of previous bevy. They both soon made game in grass and briars, but potted, nosing out their ground like beagles on a cold trail. At edge of corn Jolly roared to a flush down wind. Neither dog showed much intelligence in casting for scent and very little method in working out the ground. Coming to cover again at the corner, Dan flushed and chased. Entering woods, Jolly pointed three birds nicely. Pearle shot and killed, Jolly retrieving well. Jolly redeemed her rather ordinary hunting by this piece of work, and showed good training. Up at 12:47.

COUNT NOBLE AND MINNIE T.—Down 12:53. Working in another direction and into very wet swampy ground both pointed a bevy, but Count Noble had the preference. Medbury shot and killed, dogs steady. Count retrieved nicely. The bird was thrown in again and Minnie sent to fetch. She was scarcely given sufficient time on such a bird and place, when Mr. Billings picked bird up and threw it in another place; Minnie then pointed where bird had lain, and afterward retrieved the bird. Getting out of woods on hill, at edge of another cover. Count flushed a single in going very slowly up wind, but redeemed himself by pointing another just beyond in nice style, Minnie honoring his point, bird flushed wild. Up 1:20. We were then feeling pretty hungry and making for the barn where the barges were found one of those All Night lunch wagons so familiar to residents in the manufacturing towns in this part of the country. It was the most elaborate lunch we have yet encountered at a field trial: "red hot" was steaming in a cauldron, the coffee was hot, and besides sandwiches, etc., an array of 100 pies served to chase away one's appetite even before eating. Leaving 90 pies still on the counter, we started the next brace.

DOCTOR AND DAN.—Down at 2:10, in a cabbage patch. Getting into pines a single rose in front of Dan, cross wind. Dan started to chase, but stopped to order. Doctor ranged out much the best, Dan not showing much inclination to leave his handler, potted around and seldom galloped out. Doctor showed better in this heat by comparison. Up 2:53. Doubtless by this time the judges had picked their winners, for

COUNT NOBLE AND JOLLY G. were called out at 3:07. The weather had been getting a little warmer and conditions were good for work if game had been more plentiful. In brush, at start, both potted a bit on old trails, but working out into open and up the hill they moved over to the bare, open country near the Meeting House. Here they astonished us by the width and speed of their range. They really ran up to good form, the little one, Jolly G., showing the most intelligent ranging and speed, although the bareness of the ground for the most part precluded any idea of finding game. The ground here is improved to what it was last year, a good piece of it having been sown with grain. No birds were found and dogs were called up at 3:40.

The judges after a little consultation decided that Jolly G. wins first, Count Noble second and Minnie T. third.

There is little to choose between the two first, although Jolly G. has the advantage slightly in speed and his work on birds was the cleaner. Thus ended the first outing of the Gordon Setter Field Trial Club. The silver epergne for the winner of the Derby goes of course to J. J. Arnold's Don, and to L. A. Pearle's Jolly G. falls the cup for best in All-Age Stake. The lunch wagon was visited again and then we severally made tracks for home.

H. W. L.

#### Newark Show.

This show opened Tuesday morning with a very high class of dogs, numbering 526. There are several good mastiffs such as Emperors William and Maximilian. St. Bernards are very strong, such dogs as Marvel, Princess Florence, Miss Anna Roland, Lothario, etc. being on hand, and a number of new exhibitors make the competition interesting. Smooths are also as good as anything outside of New York. The display of Russian wolfhounds is grand, Messrs. Huntington and Steadman Hanks showing strong kennels. The greyhound exhibit is almost up to New York form. Pointers contain capital entries from the Hempstead Farm, C. Heath's, Springside, Victoria and Netherwood kennels. English and Irish setters have many old faces, and so have the Gordon classes. Beagles are fair, and some well-known dogs are on the bench. Spaniels show up pretty strong with entries from Swiss Mountain Kennels, Dr. Bradbury, R. P. Keasbey and E. W. Fiske. Collies are rather poor, and we are disappointed not to see a better entry. Chestnut Hill Kennels seem to have a walk-over. Fox-terriers have some of the best in the country as entries come from Blemton and Rutherford Kennels, and Messrs. Smith and Hunnewell send some good wires. The other terrier classes are just average. Geo. Thomas is down with a team. Poodles are especially strong, and go ahead of New York entries, the Meadowmere Kennels making the principal entries. Prof. D. Burke will provide the trick dogs. The building is scarcely so well adapted for a show as it might, as many of the terriers etc. have to go upstairs. The show promises to be a success, as there is a good deal of local interest evinced. As we go to press as judging commences we cannot give the awards this week but will have a full report in next week's issue.

#### Akron Poultry and Kennel Club Show.

##### Editor Forest and Stream:

I beg leave to call your attention to the fact that we have changed our name by consent of American Kennel Club from Northern Ohio Poultry, Pet Stock and Kennel Association to the Akron Poultry and Kennel Club. Our first show, under A. K. C. rules, will be held in Akron, O., Dec. 20 to 23, and bids fair to be a grand success. We are working hard on our specials and are meeting with good success. So far specials are chiefly cash. We have secured a fine hall which will be well heated and lighted, and is situated in the business part of the city. Our specials and premiums will be paid on the last day of the show. We have secured the services of "Uncle" John Davidson to judge all classes. We hope to have some of the Eastern dogs stop off on their way East from Chicago. We will prepare a good place and take care of them until our show opens. Our premium list is now ready to mail to any one on application.

H. F. PECK, Sec'y.

AKRON, O.

#### Irish Setter Club Field Trials.

THOMASVILLE, N. C., Nov. 27.—*Special to Forest and Stream:* Heavy rain stopped the Irish Setter Club's Derby about the middle of the afternoon. There were five starters, Irish Boy, Gem, Nugget, Patrius and Hattie. The work was poor. It is certain that Gem will win first, Nugget second and Patrius third. The All-Age had six starters, Romaine, Claremont, Patsey, Teddy O'Rourke, Lady Alice, Nugget II. and Currer Belle.

Claremont Patsey was lost soon after starting and he has not yet been found. The stake will probably be finished by noon to-morrow. The Philadelphia trials will then begin.

W. S. Bell, Pittsburgh, was to judge both trials. In the evening Mr. Bell departed for home, having received a telegram informing him that his wife was dangerously ill with pneumonia.

B. WATERS.

## DOG CHAT.

#### The Hamilton K. C. Show.

There are not many kennel clubs, hampered with debt through the financial failure of their first dog show, that would indulge in further shows or hold together in the way the Hamilton boys seem to have done. There is the difference between fanciers and fanciers, and all those interested in kennel affairs should be pleased to hear that their latest venture has been successful. Although they gave simply prize cards and ribbons, still there was a heavy hall rent and other incidentals to be met, but no entry fees were charged, and the club feels proud that it can put even \$25 to its empty treasury. The attendance, we are told, in the evening was quite large, and a pleasant feature of the gathering was the large number of ladies present. Several of them exhibited, among them Miss McGivern, whose fancy runs still, we notice, to wire-haired fox-terriers. She won several prizes, in the open show of 1890 she was also successful. Miss Annie Hendrie shows poodles and her brother fox-terriers. Mrs. Cook, who seems to be a strong wire-hair advocate, entered three fox-terriers. It is always a hopeful sign when the fair sex turn their attention to dogs; they make better fanciers of their brothers and husbands. The latter are too often inclined to give up if everything does not turn out as expected, whereas the woman generally tries again. There is a "better-luck-next-time" expression about her that is wanting to a great extent among the sterner sex. When such shows as these can be held in Hamilton we may still live in hopes of a more ambitious one being held in the near future. We only wish the club members' purses were as big as their hearts. A pleasing feature of the show was the fact that the officers and managers of the show had their dogs "on exhibition only."

The clearest explanation of the new classification at English Kennel Club shows we find in the notice of the Birming-

ham show, and as there will surely come a change in our classification sooner or later, especially with regard to challenge dogs, we publish the new list: The old "challenge classes," in which winners of ten points in open classes at shows held under Kennel Club rules had to compete, are now abolished and "winners' classes" substituted, and in these classes competition is restricted to winners of four or more first prizes, but wins in puppy, local and selling classes do not count. The "open classes," which were formerly restricted to dogs that had not won ten points in open classes at shows held under Kennel Club rules, are now thrown open to all, no prize winner being debarred from competing. Winners in these classes will be recorded in the Kennel Club Calendar and Stud Book. As this classification permits the old champions and noted prize winners competing in both classes, "limit classes" are added for dogs which have not won more than three first prizes at shows held under Kennel Club rules, wins in puppy, local and selling classes not being counted, and a dog that has never won a prize is eligible for this class. One dog may be entered in any number of classes for which it is eligible. Novice classes require no definition. This will also serve as a handy guide for intending purchasers of English dogs when looking through the prize lists of shows held under E. K. C. rules.

We understand that some, in fact all, the entries of the Rinada Pointer Kennels are absent from the Newark show owing to distemper. This is a grievous disappointment to Mr. Pickhardt, as he had hopes to win a considerable number of blue ribbons there, and also hoped to dispose of some of the dogs. Good ones always find a market, and the dogs that were entered certainly are good ones, and had he desired to sell them they would have brought long prices.

#### Sefton Hero is in America.

A week or two since Mr. Freeman Lloyd reported that it was generally supposed that the collie Sefton Hero and the bitches purchased by Mr. Panmure Gordon were still in the latter gentleman's kennel, and rebuked him gently for not letting the public have the services of Sefton Hero. These dogs have long been in Mr. Pierpont Morgan's kennels, at Highland Falls, N. Y., and we have no doubt that Mr. Armstrong would be only too pleased to welcome any English bitches that may be sent to Hero. A friend of ours tells us of a capital puppy he owns by Sefton Hero out of Ormskirk Dolly, bred since the dog came over.

Mr. John Finlayson has sold his bulldog Governor, that has been mentioned at Brooklyn and New York shows, to the owner of Rinada Pointer Kennels for \$150. He will be shown at Newark.

If any one wishes to strengthen his pointer team Mr. Davey affords an opportunity when he tells us that he wants to sell Lady Gay Spanker, Miss Rumor and Josie Bracket. All these are well known on the bench, as they are in the challenge class and are broken to field work. Jone, the setter he ran at the Chatham trials, is also for sale.

#### Death of Hepsey.

One of the most unfortunate St. Bernards that ever came to this country was Hepsey. We write in the past tense, for Hepsey died last Wednesday night at Col. Ruppert's kennels. She had been brought down that day from the country, but on arrival was seen to be very ill. Before her death she had eleven fits, dying in the last one. Dr. Sherwood was summoned, but too late. The post mortem revealed that death was due to enlargement of the heart and congestion of the lungs. Hepsey was well known on the bench and was the highest-priced St. Bernard bitch imported to this country up to the advent of Princess Florence. She cost Mr. Dufferin \$3,500.

#### A Buffalo Kennel.

Perhaps our little rub had something to do with it; anyhow, we are pleased to see that Mr. A. W. Smith, of Buffalo, is not going to desert us after all; for he has gone into partnership with Mr. W. S. Patterson, and the kennels will be known as the Buffalo-Mayville Kennels. Of course black and tan terriers will be the breed, and they have one good one, known to fame—Louie—already in the kennel, besides several of Dr. Foote's strain.

Mr. C. H. Mason has resigned his position on the *Fanciers' Journal*. Disagreements in the management of the paper, it is rumored, is the cause of this step. It is not stated who will take his place.

Rather late in the day the president of the Mascoutah Kennel Club writes us that the club will hold its fifth annual dog show March 13 to 16, 1894. This show will of course be under the rules, and it will go far to solve two interesting questions. First, whether Chicago can stand two shows in four months, and second, what advantage a club having the indorsement of the A. K. C. has over a show that is held without the fold of its protection.

#### Old Trap or Old Jock.

We have it upon very good authority that the picture which is said to represent "Old Trap" in "Kennel Secrets," is not really of that dog, but of Old Jock. Trap had an evenly marked black and tan head with black spot on stern. His picture was published in the *Fox-Terrier Chronicle*, in the fourth number of Vol. I.

Mr. W. Tallman has taken charge of Messrs. F. E. & P. T. Lewis's kennel of pointers and setters. The kennel is strong in show dogs and will make a bid now for field trial honors. Messrs. Lewis are to be congratulated on the change.

We omitted to state last week in our remarks about the horse show in New York that Hempstead Farm Kennels' Macbeth won first in class for stallions calculated to get hunters.

#### Cocker Weight.

We note that in the National Dog Show to be held at Birmingham this week the following alteration has been made in weight of cocker spaniels: They must not exceed 25lbs. when full grown.

We are sorry to hear that Mr. Sam Rogers's Ebor Larchmont, a promising young wire-haired fox-terrier, that won first prize at Mount Holly, was poisoned last Saturday week and had a close call. Hot lard, raw eggs and mustard proved an antidote, as we should imagine it would, and now the dog is himself again, but thin, and it he probably prevented from showing himself at Newark.

There being no quorum present, the Eastern Field Trial Club held no club meeting during their trials this year.

The libel suit brought by Mr. Vero Shaw against the *British Fancier* has been settled amicably, but we see that as a result of the arrangement the manager of that journal has resigned.

The Eastern Field Trials Club have under consideration the establishing of a new stake, limited exclusively to shooting dogs, with such other restrictions as will keep the competi-

tion within the limits contemplated by the club. Such a stake ought to be very popular and well supported.

The English setter dog Rushwood and fox-terrier Raby Rasper were brought over through the firm of Toon & Thomas. Rushwood goes to Jos. Lewis' kennel and Raby Rasper to a gentleman in Los Angeles, Cal., and was purchased from Mr. Geo. Raper.

Maybrook Kennels have removed from Dover Plains, N.Y., and are now located at Englewood, N. J.

Mr. G. W. Sentell, Jr., secretary of the New Orleans Fanciers' Club, writes us that they intend to hold a much larger show than their first one, Jan. 22 to 26, 1894. They have a guarantee fund of \$1,000 and expect to raise more.

Mr. Henry Huber, owner of the pointers Glenbeigh, Sally Brass II, etc., has preferred charges before the Pacific Kennel Club against another well-known San Francisco fancier, alleging that he has issued false pedigrees, etc.

## Hunting and Coursing.

### Beagle Field Trials.

ROCHESTER, N. Y., Nov. 19.—*Editor Forest and Stream:* In last week's issue of *Turf, Field and Farm* a correspondent refers to "Billy's" mild report on beagle field trials, and also comments on report of trials in a Western paper, wherein reference is made as to how the rabbit was started, *i. e.*, Mr. So and So "kicked up" the rabbit, etc. The correspondent evidently was simply killing time or filling space, and in doing so he has innocently written what might be misleading or wrongly interpreted by the public.

In the first place, "Billy's" report of the trials was simply a compliment to his paper, as they had declined to instruct him to attend the beagle trials at their expense. Out of pure love for sport he visited Nanuet one day on his own hook, hence the mildness of "Billy's" report.

Secondly, this writer draws a comparison between his system of hunting rabbits with an old foxhound and that employed during trials of having a rabbit "kicked up" and dogs put on to run it.

I believe this system is generally employed by sportsmen to permit the dog to find the rabbit. In addition to this, a sportsman puts his dog on a rabbit that he may "kick up," instead of shooting him in or just starting from his form. Now, during trials of beagles time is limited, and much must be done within the time allotted for the sport.

A brace of dogs are put down at a time and three or four dozen men are scattered about watching the dogs work. The two dogs are carefully working up on a cold trail, the three dozen men are walking about and scattered over considerable area, when Mr. So and So "kicks up" a rabbit, and the judges order the dogs taken to the hot trial, and the race begins.

Does this method of testing the dogs' powers, then, present itself to him as improper? However, from a general impression and not from actual statistics, I would say that during trials the dogs themselves actually start as many rabbits as are started for them in the manner described, if an equitable handicap is allowed dogs for excess in area covered by men.

I do not make this explanation or statement as in any sense criticising the writer in question, as he frankly admits small practical knowledge of field trials; but simply to prevent a wrong impression being made on those who fancy beagles and have never attended a beagle trial.

H. L. KEUDER, Pres. Nat'l Beagle Club, Nanuet, N. Y.

### National Beagle Club Meeting.

PRESENT: H. L. Kreuder, in the chair; H. F. Schellhass, Geo. W. Rogers, John Buteman, A. P. Appleton, H. W. Lacy and Geo. Laick, secretary. The protest against Mr. P. Dorsey's Pade was acted upon. Mr. Dorsey's statement, made at the meeting held at Nanuet, N. Y., was read before the committee, particulars of which were published in *FOREST AND STREAM* at the time. Mr. Kreuder then read a letter which he had written to Mr. Dorsey and also Mr. Dorsey's reply. Mr. Dorsey offered a letter from the breeder of Pade regarding Pade's pedigree, and also a letter from Mr. Jones, of whom he purchased the dog, who gave it as his opinion that Pade contained the blood of bench-legged beagles, and, therefore, he considered the dog a pure-bred beagle. Mr. Dorsey also showed a photo of Pade. After considerable discussion it was moved and carried that,

Whereas, In the question of protest filed against Pade in Class B of the N. B. C. field trials of 1893, the field trial committee of said club having taken and considered all evidence both as to individual merit, pedigree, breeding, and *ex-parte* practical opinions, be it

Resolved, That whereas we, the field trial committee, from the best information furnished us and upon our best knowledge and judgment, do consider and declare that said dog Pade is not a beagle such as is defined by the standard adopted by our club. It is therefore resolved that we sustain said protest against said dog Pade and declare his win in Class B of said field trials null and void.

It was also resolved that Mr. Dorsey be exonerated from any intent of wrong doing in the matter. The committee then adjourned at 6 P. M., and the official placing of the dogs in Class B will be considered at a meeting to be called shortly.

## HUNTING AND COURSING NOTES.

THE coursing men in San Francisco all intent upon winning something in the coming big meeting, a local paper says: "To lovers of coursing it is quite a sight to see on the Point Lobos road in the early mornings the number of dogs that are now in training for the San Francisco Coursing Club's meeting, which will be held at Newark on Thanksgiving Day and the following Sunday. No less than thirty-two longtails were out in a bunch on Thursday morning last, accompanied by their various trainers. Six of the dogs, which are owned by T. Cronin, were all looking in the pink of condition. T. C. Cummings had Mr. Seal's dogs and one or two others he is training for the Newark meeting. Jerry Shea's trainer had also five or six fine dogs, among which was noticed the flyer Moondyne. They seemed to enjoy their outing immensely judging by the way they were scampering over the hills. M. Tiernan's and J. J. Edmonds' dogs Valley Queen and the old veteran Glenfarron, both looking as fresh and lively as puppies, were also taking a practice jog. News from San Jose, Merced, Sacramento and Stockton states that the dogmen of those sections are busy training their sprinters for the big meeting. It will be the first coursing event held by the San Franciscans, and as the recent rainfall has placed the ground in nice condition for dog racing the prospects of a good day's sport are first-class indeed." Petaluma is a favorite ground for the San Francisco coursers. Out there betting is indulged in to a great extent, and of course is responsible for a good deal of the interest manifested by outsiders.

The mastership of hounds or harriers is not confined altogether to the sterner sex in England, for we find, according to the *London Times*, the names of two ladies who are mas-

ters of harriers. One is H. R. H., the Comtesse de Paris, who hunts the country round Stowe. The other is Mrs. Cheape, who hunts the Bentley harriers in Essex.

Lady Ellen Hastings until recently hunted a pack in Ireland, but she is to be married shortly, and two masters in one household will not do, so her brother, the Earl of Huntingdon, takes her place with the pack. We remember that years ago Mr. James Hall's daughter "Pop" often hunted the Holderness hounds in Yorkshire, and we heard that after her father's illness or death assumed the mastership for awhile. But she was always a very manly young woman and the best "horseman" in the hunt.

The beagle bitch Baby Deane, shown at Toronto and Rhode Island shows under the name of Beauty, was recovered by her owner, Mr. E. W. Whitcomb, on a writ of replevin. After getting her Mr. Whitcomb sold her to the man who has had her the last three years. We understand that the name in which she was entered at the shows was not the name of the man who claimed to own her.

Some very good bargains in beagles are to be had in the new sales list Mr. Kreuder has sent out. Several prize winners, such as Fanny Racer, Fanny K. and Weenauan are among them.

A new coursing club known as the Noe Valley Coursing Club has been organized with the following officers: President, J. T. Kelly; Vice-President, J. Doyle; Secretary, W. Ring; Treasurer, T. Donovan; Board of Directors, J. O'Farrell, J. Moffit, D. Mahoney, T. Kelleher, D. Burfeind and J. Roche.

The West Chester (Pa.) Hunt Club held a fox hunt last week lasting six hours. The fox went away near Glen Loch, ran through East Bradford and was finally unearthed on a farm in West Bradford, where he had taken refuge. Reynard was taken alive.

In line with its misleading policy our Quaker contemporary would have us believe that its New England Beagle Club trials report was written by our correspondent "Bradley." This gentleman, so well known among the beagle and fox hunting element that it is almost superfluous for him to use this *nom de plume*, wrote a report of those trials for *FOREST AND STREAM* only. We think it only fair to "Bradley" to publish this explanation.

It is about time that Chicopee Lass—Pearl of Pekin fiasco was allowed to rust. There is no earthly use in wasting more ink over it. Whatever the merits or injustice of the case may be the rule is plain and decision should have been given at once according to the rule with no "ifs nor buts" from anybody.

## Rifle Range and Gallery.

### Cincinnati Practice.

CINCINNATI, Ohio, Nov. 19.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores appended, the conditions being 200yds. off-hand at the Standard target:

### Zettler Rifle Club.

At the weekly shoot, Nov. 21, with the exception of Fred Ross, who made the fine score of 249, and Gus Nowak, who captured the champion medal on the creditable score of 246, on his first entry, all the other members seemed to be rather out of form. It is not uncommon of a Tuesday night to see twenty or thirty scores made of 245 or better. President Walther contented himself with watching the others in their attempts to put up high scores. Another old time rifleman, John H. Brown, has got to be a regular attendant at the Tuesday night shoots again this season. His return to the use of his rifle again is highly gratifying to all the members.

Champion medal, 10 shots, first entry. Gus Nowak 246, C. Percival 243, F. C. Ross 242, H. Strate 242, B. Zettler 241, C. G. Zettler 240, H. Hoiges 239, Plaisted 237, Kolmetz 237, J. H. Brown 236, M. B. Engel 236, H. D. Muller 234, F. Fabarius 233, B. Busse 234. Best 10 shot score, 5 entries: F. C. Ross 249, Gus Nowak 246, R. Busse 245, H. Hoiges 244, J. H. Brown 243, C. Percival 243, H. D. Muller 242, C. G. Zettler 240, H. Strate 242, B. Zettler 241, G. W. Plaisted 240, M. B. Engel 240, A. H. Kohlmetz 237, F. Fabarius 235.

### Greenpoint Rifle Club Prize Shoot.

The fourth annual gallery prize shoot of the Greenpoint Rifle Club, which was held on the ranges in Knieston's Arion Hall on Nov. 18 and 19 was quite successful, both financially and otherwise. The programme called for eight prizes ranging from \$12 down to \$1, and an extra or consolation prize for the shooters having the lowest score, all shots to be on the target, no misses. This prize fell to Geo. Worn, with a score of 33.

Many of the Brooklyn rifle clubs were represented by their best marksmen. There were also visiting riflemen from New York and among whom were Wm. Rosenbaum and Louis Buss of the Empire Club. The two days' competition resulted in some good scores. The Empire Club's representative, Rosenbaum, got the first prize on two scores of 74 each or a total of 148 out of a possible 150. There were six ties for the last four prizes. Tickets 3 shots, two best to count:

Wm. Rosenbaum.....	74	74	—148
M. Gnte.....	73	73	—147
M. Gnte.....	73	73	—147
Louis Buss.....	73	73	—146

M. Knoetger.....	73	73	—145
G. Worn.....	72	72	—144
M. Albrecht.....	72	72	—144

### Greenville vs. Excelsior.

The team match between teams from the Greenville and Excelsior rifle clubs was shot in the Greenville Schutzen Park Nov. 25. The membership of the two clubs is made up of the best of New Jersey's rifle talent, and the rivalry is of that order that begets the best social relations, and stimulates a healthy interest. The clubs are comparatively young, but the membership contains many men who have been for years known to the fraternity as good shots. The Excelsior Club, under the leadership of Capt. L. P. Hansen, has for five years been one of the leading rifle clubs in Hudson county.

The Greenville Club, sometimes styled "The Farmers," is also composed of as equally good material, and is in fact more cosmopolitan

in its make-up than the Excelsiors, for its members are descendants from nearly every nation in Europe. The Greenville Club has shown its progressiveness by building a home (club house) for its members, a place where the members can come together for the enjoyment of rifle shooting as well as for those social relations which create good fellowship and those ties that bind together the best elements of manhood.

Since the club decided to build and own its own club house, which was less than a year ago, it has more than doubled its membership. With the club ranges for a primary school for the education of the members in the use of the rifle, and the close proximity of that old and popular shooting range, the Greenville Schutzen Park, there is no reason why the Greenville Club and the Greenville district should not become the hub around which the rifle interests of New York and New Jersey can revolve in a healthy whirl.

But to revert to the match, the result of which we started out to chronicle. Neither the Excelsior or the Greenville club had any great desire to deplete the treasury of the other by the winning of any large stakes, so the match in question was made for a nominal sum, sufficient to cover the cost of the use of the range and such refreshments as the needs of the members of the two teams might require during and subsequent to the match. Each team was made up of five men. The Greenville team was composed of the following men: M. Dorrier, captain; Geo. W. Plaisted, W. C. Collins, Colin Boag and C. H. Chavant. The Excelsior team were: L. P. Hansen, captain; John Speicher, O. J. Boyce, James Hughes and Wm. Weber. The conditions called for fifty shots per man, off-hand, at 200yds. It was expected that the shooting would be close and interesting, and as a consequence there was quite a gathering of the members and friends of the two clubs to see the shooting.

The weather conditions were fine considering the lateness of the season. A moderate westerly wind, the air sharp and crisp, and the light all that could be asked for. In the shooting house a good big stove with a liberal supply of coal made the shooters as comfortable as one could desire.

In the first round of 10 shots each Hansen led all his competitors. But from this point on the Excelsior team was not in the hunt. Dorrier and Plaisted struck one of those expert gaits that requires extra fine shooting to approach. Dorrier's total for the 50 shots was 1,112, an average of 22.2 per shot, Plaisted's 1,078, an average of 21.5. The nearest approaching score on the part of the Excelsior team was Captain Hansen whose total was 1,060, an average of 21.2.

W. Collins, of the Greenville team, started off in his first string, in great form, but for some reason he was not able to keep up his average. Colin Boag was in hard luck throughout the match.

Ford (32yds.), 111212100—8 Cave (31yds.), 2221211—9  
JOHN WATSON.

Harvard Defeats Yale.

HARTFORD, Conn., Nov. 24.—The Yale Gun Club and the Harvard Gun Club were unable to make satisfactory arrangements at Springfield for their annual match this year, so they met on the Colts Club grounds in this city. Here the arrangements were complete and the contest passed off satisfactorily, notwithstanding the cold and windy weather. Shooting commenced at 1:45 o'clock and was ended at 3:30. The best score was made by Mr. Benedict, of Yale. The two teams were accompanied by a number of friends. The judges were C. W. Pittkin, of Allen City; the referee, Fred Risley, and scorer, A. H. Pitkin, all of the Colts Club. The Harvard team won with the score of 119 to 113.  
Harvard.  
Gould, 11111111111110001010110111—24  
Lawton, 011111010101101111111111—25

W. Miller, 11111011—9 Kaufman, 101100111—7  
Gould, 101100000—8  
Cook won first money, Lee and Lawton divided second.  
M. F. Cook, Sec'y Colts Club.

Emerald Gun Club.

THE monthly shoot at Dexter Park, Nov. 21 was highly interesting. The weather conditions were favorable, and the birds were on the average a good lot. There were several instances where individual members received hearty applause for their good shooting in making kills at long range, at hard driving birds. P. McKenna was the recipient of much good-natured chaffing on the part of the other shooters for his inability to get on to his birds. He wound up his score with only two kills to his credit. Gus Nowak was resplendent in his old gold sweater. He was in good shooting form, having just returned from a successful rabbit chase on the eastern end of Long Island. Nowak spoiled his chances for making a clean score by losing his sixth bird get away. Fitzgerald was in hard luck when his bird, well loaded with shot, fluttered across the boundary to die on the outside. Both Col. Voss and Doeneick shot in that hard luck that all good shots sometimes fall into, when it seems almost impossible to get on to a bird. Dr. Hudson had the luck to get some birds whose external condition seemed to be impervious to the Doctor's shot, and flew away to fall victims to the evildoer's next round. The outside Counselor Cody started off in great form, and up to his neck in bird made good clean work, using his second barrel only twice. His ninth bird, however, was too foxy for the worthy counselor. His flight was as eccentric and as hard to cover as the proverbial flea, and when last seen was making a beeline for Connecticut. Messrs. Schortmer, Grieff, Fessenden and Nick Maesel shot in good form, and each finished their scores with 9 kills to their credit.  
Dr. Klein, 021000100—4 J. H. Moore, 0011010212—3  
M. Quinn, 010212112—8 Fessenden, 101212111—9

N. Maesel, 2222101222—9

Nassau Gun Club.

THE shoot of the Nassau Gun Club at Dexter Park on Thursday, Nov. 23, brought together only eight members in the club event. The weather conditions were fine for outdoor sports and the birds fairly good. Lee Helgans was the only man in the competition who was equal to the task of having his birds collected within the usual boundary. R. Woods was unfortunate in having one of his fall dead over the boundary, leaving him one behind Helgans on his total. A series of short drives followed the club event.  
W. Hatfield, 12100012—5 G. U. Forbell, 000121001—5  
R. Woods, 111212121—9 P. H. Vondule, 011012100—6  
M. E. Hayden, 011101002—5 C. Magee, 010111100—6  
E. Helgans, 21221222—10 T. T. Edgerton, 011202102—7

Referee E. Helgans.

Brighton Defeats Roseville.

THE monthly shoot of the Roseville Gun Club was held on Erb's Newark grounds on Saturday, Nov. 25, in a strong wind, which rendered target shooting extremely difficult, the discs flying blither and thither at their own sweet will. The attendance was fair. A feature of the day was the return match between teams of five men each representing the Roseville Gun Club and the Brighton Gun Club of East Orange, each man shooting at 25 targets. The result:  
Brighton.  
E. Leakey, 10012—9 Meeker, 10012—9  
K. K. K. 10012—9 A. H. Wharton, 10012—9  
Gowen, 10012—9 Gantz, 10012—9  
Canfield, 10012—9 Gantz, 10012—9  
O'Maley, 15—50 A. H. Wharton, 13—45  
During the afternoon eight sweepstakes at 5 targets each were shot, the results being as follows:  
1 2 3 4 5 6 7 8 George, 1 2 3 4 5 6 7 8  
Canfield, 2 2 2 2 2 3 3 2 AlbWharton, 5 1 2 3 3 1 4 3  
O'Maley, 3 1 2 2 3 3 3 1 Gantz, 5 1 2 3 1 1 1 1

Atlantic Rod and Gun Club.

THE monthly shoot of the Atlantic Rod and Gun Club, at West End, Coney Island, on Thursday, Nov. 23, was not favored with the attendance that one usually finds at the meetings of this well-known club. There are, however, many reasons for the light attendance at this season of the year, and the club will be glad to have the Atlantic, as well as with the other clubs on Long Island, whose membership is largely made up of enthusiastic field shooters. November is the month to which all lovers of the shotgun look forward to for an outing in the fields and meadows, and the regular club shoots are left to those who are unfortunate whose environments compel them to submit themselves to the routine of office and factory. In fact, they are chained to business. The shoot on Thursday brought together only seven members to compete in the club event. This was the last shoot of the season. The prizes put up by the club (two cups) are, we believe, won by Messrs. Morris and Ferguson, and will be presented to the two gentlemen at the next annual meeting, to be held in January next.  
The shooting on Thursday resulted in a tie between old veteran Thomas Buckley and young Ira McKane, each killing their 10 birds. The shoot-off for the cash in the pool was well contested up to the tenth bird, when Mr. Buckley slipped up on an easy left-quartering bird and left young McKane the winner of the pool.  
Young McKane's handling of his gun and the judgment in the use of his second barrel will make him a hard man to beat when he has had a few more years' experience at the trap.  
There is another prodigy connected with the club in the person of C. Ferguson, 24, the ten-year-old son of C. Ferguson, Jr. It was our pleasure to witness this little embryo sportsman in the sweepstakes, competing with his sire and the other members engaged in the shoot. The little fellow used a 16-gauge 5 1/2 lbs. Francotte gun, and although he was handicapped with a disabled digit, which would not permit him to get a firm grip upon his gun barrels, he succeeded in killing 6 out of 10 in the first event, and 3 out of 4 in the second, when his cartridges gave out.  
The club's honor shot, who is well known to the shooting fraternity of New York and the West, is C. Schmidt. He shoots well, handicapped as he is with only one arm, his left being amputated below the elbow. He killed his 10 birds in the first sweep, but two of them got over the boundary to die. In the second sweep at 5 birds he killed his 5 straight, but lost on the shoot-off on his first bird:  
J. B. Voorhees, 221112301—9 C. Ferguson, Jr., 221210311—0  
W. C. Wynn, 2211111—8 T. Buckley, 2212111—0  
I. McKane, 11123—10 C. Ferguson, 307021212—6  
C. Meyer, 213020111—7  
Sweepstakes, 5 birds, 25yds.:  
C. Ferguson, Jr., 11111—5 A. Schmitt, 22111—5  
C. Meyer, 22220—3 C. Ferguson, 2d., 21100—3

Opening of the Larchmont Season.

ONLY a small number of shooters took advantage of the opening of the 1893-94 shooting season on the fine grounds of the Larchmont Yacht Club, which occurred on Saturday, Nov. 25. While there was a lack in numbers, however, there was no lack in skill on the part of the few who took part, among them being Geo. Work, Fred. H. Hoy, C. Moore, Mr. Williams, Arthur W. DuBray, Dr. Wynn, Capt. A. W. Money, Dave Johnson, J. M. Knapp and Henry Smith. The grounds were in fine condition and the birds furnished by Fred. Knof were a rattling lot of flyers, above the average even for these grounds, where the birds are always good.  
The day's sport comprised seven events, Nos. 1 and 2 being at 5 birds each, three moneys; Nos. 3 and 4, 5 birds each, 50c entry, two moneys; Nos. 5, 6 and 7 were each miss and out events, \$5 entry in each, one money. In all sweepstakes shooting on these grounds high guns take all the money. The results:  
No. 1. No. 2. No. 3. No. 4.  
Williams (30), 103121—4 10211—4 2210222—6 10120w

Williams, 22220—4 No. 5. No. 6. No. 7.  
Moore, 22222—0 22220—4 221220—0  
Wynn, 22222—0 2111212 2212122  
Smith, 22222—0 1121110 12221220  
Hoy, 22220—4 2120 222219  
DuBray, 12210 12210 1220  
Johnson, 22220—4 1110 10  
Knowlton, 22222—5 22222—5 22222—5  
Work, 22222—5 22222—5 22222—5  
Money, 22222—5 22222—5 22222—5  
Knapp, 22222—5 22222—5 22222—5  
In event No. 5 Moore and Work divided the money; in No. 6 it went to Wynn and Work, and in No. 7 to the same experts.  
The number of birds killed and lost by each of the contestants were as follows: Work, 31, 3; Knowlton, 25, 2; Wynn, 32, 5; Smith, 32, 7; Hoy, 28, 7; Williams, 25, 8; DuBray, 25, 8; Moore, 27, 8; Money, 22, 6; Johnson, 15, 17; Knapp, 15, 2.

Erie Gun Club.

THE monthly shoot of the Erie Gun Club at Woodlawn Park, Long Island, on Wednesday, Nov. 24, was considering the cold, called in the midst of the game season, unusually well attended. Sixteen members participated in the club event. The conditions were for the best averages for the season, handicap rules, seven birds per man. Fine weather and a fairly good lot of birds enabled the members in the competition to put in a good afternoon's sport. Of the sixteen competitors only four were able to make clean scores. Charles Plate would have been in with a clean score only for a little hard luck with his fifth bird, which had just enough reserve force left in it to get over the boundary, where it was gathered, much to the disgust of the unlucky shooter. The time consumed in the club event carried the day so far into the shades of night that there was opportunity for only one sweep at three birds, and the ties in this event had to be divided on account of the approaching darkness. The scores:  
C. Plate, 11211—6 H. Dobner, 112111—7  
D. Lynch, 2100111—5 E. Victor, 210000—2  
G. Shufeldt, 0002230—3 E. Marryatt, 222111—7  
C. Lubersen, 1001014—4 M. Elsassner, 2210212—6  
W. Lair, 211102—6 C. Mohrman, 1112021—6  
J. Schmidt, 0230211—4 H. Balzer, 1222020—5  
H. J. J. J., 0230211—4 J. Schmadeke, 2111111—7  
Referee and scorer, C. A. Sellar.

Vernon Gun Club.

THE club held its monthly shoot at Dexter Park, Nov. 22, under the old Long Island rules of gun below the elbow, both barrels allowed. A warm southwest wind and a clear sky made the day pleasant for outdoor sport. This was the first time that the members have shot gun below the elbow; their scores are highly creditable. It was somewhat difficult for many of the members to keep their guns in the proper position until the bird was in the wing, and as a consequence some were subjected to discipline by the referee. As the day at the trap, however, will do away with much of the desire for the old habit of keeping the gun up to the shoulder:  
Dr. Little, 212121—7 Osterhout, 111113—7  
Gus Grieff, 111111—7 Weissenborn, 112111—7  
Dr. Schilling, 210220—5 F. A. Thompson, 121112—7  
J. H. Schmid, 110111—6 W. H. Thompson, 123111—7  
Wischner, 1021010—4 Dr. H. H. Thompson, 1031210—5  
Tie: W. H. Thompson retired; Weissenborn 0, F. Thompson 3, Osterhout 10, Grieff 12, Little 13.

The Swannanoa Country Club.

AS the climate of Asheville is so wonderfully favorable to outdoor exercise, it is very natural that the Swannanoa Country Club should play an important part in the social atmosphere of this attractive health resort.  
Kenilworth Inn being located just outside the city limits and surrounded by a large park of 160 acres, and the valleys leading therefrom so desirable for the hunts, the Country Club have their club rooms most favorably located in Kenilworth Inn, and also, near by, a well planned kennel provided with a pack of fine greyhounds. These hounds have been carefully selected, are great styers and make a smart pack. Every opportunity is afforded that visitors of Asheville, as well as residents, may enjoy the chase, and the club rooms are always the center of much social pleasure.  
The regular meets are Wednesday and Saturday afternoons. Occasional bear and deer hunts are made up by those who enjoy the wild sports, and the weekly opossum and coon hunts are a source of the greatest pleasure.  
Reached by the Richmond & Danville R. R. in through Pullman cars from New York.—Adv.

Canoeing.

A Coasting Trip on Lake Michigan.

If the reader will fancy a trim built St. Lawrence River skiff 22ft. in length, 54in. beam, body of cork pine, deck of mahogany, brass trimmed, cat rigged, with her name in white letters on a blue ground, surmounted by a still fancier scarlet pennant, both the work of fair handed a good idea will be had of the craft in which two voyagers made the coasting trip from Chicago to Muskegon.  
The first idea of the voyage was evolved in the long winter evenings, and dire were the predictions and lavish the advice showered upon the projectors thereof by well meaning friends. Sunstrokes, rheumatism, heat, cold, rain, squalls, inhospitable shores, murderous tramps and a thousand other cheerful disasters were predicted for any one foolhardy enough to attempt a trip of 175 miles in an open boat upon "treacherous" Lake Michigan.  
In the meantime the two mariners went on with their preparations. As they would be obliged to go ashore at night, or in case of storm, the Swallow was fortunately light enough to be beached with the aid of a couple of rollers, backed by a little "beef." It was also necessary to be provided with comfortable sleeping quarters, as they might be obliged to spend a hard blow to lay up for three or four days at a time on a comparatively uninhabited coast.  
A tent was obviously too bulky for their limited storage room, hence, after some cogitation, a plan was hit upon that proved so successful that future cruisers may do well to take note of it. A gossamer waterproof covering 18ft. long and 9ft. wide, and weighing not to exceed 3lbs. was procured; to the sides and ends of which were fastened snaps to which small bags of shot might be attached to hold down the covering in case of a wind storm. At night the boom would be hoisted about 8ft. above the deck, a crutch being placed between; over the boom was thrown the waterproof, forming a low long tent with open ends; which could be closed in case of rain, or covered with netting to avoid mosquitoes, though the latter was not found necessary on the trip.  
For beds a piece of stout, yard wide canvas with a strong hardwood crossbar at each end was drawn taut for the length of the cockpit, 14ft., by means of a block and fall. A crossbar amidships resting upon the gunwale of the boat prevented sagging, and with the addition of blankets and air pillows as comfortable a resting place as tired men could wish was thus provided, with the added merit of occupying a very small storage space when under way.  
The larer was abundantly supplied with the choicest brands of canned goods, including many delicacies, such as sardines, jellies and preserves. These, together with bacon, fresh eggs, coffee, tea, etc., as well as full liquid provision, were in the competent hands of the chef.  
Two small alcohol stoves fitting into specially made boiling tins proved an agreeable relief from slow and smoky wood fires. All cooking and table utensils with the exception of the bulkier tins were stored in a specially fitted basket, while in another would be placed such articles as were needed for a coming meal. Right here it may be said that one great source of comfort on a trip of this kind consists in system, in having a place for everything and keeping everything in its place. Both voyagers had past experiences with cargoes stowed helter-skelter, so it was determined in this instance that everything should be get-at-able at all times.  
The start was to be made from the Calumet Heights Club on the shore of the lake, 25 miles southeast of Chicago, so one bright Tuesday morning in August the skipper and his crew of one boarded the Swallow and amid the waving of hats and handkerchiefs headed for Michigan City, 25 miles distant, before a gentle southwest breeze.  
It was the tacit understanding that the skipper was to have full control of the boat when under way, the chef performing the duties of deck-hand, while on shore the chef was supreme, and the whilom commander occupied himself as dish washer and scullion generally.  
And, with the exception of a group of fishermen's huts three miles from the club grounds, no human habitation or being was met with for a distance of 18 miles.  
The Swallow skidded steadily along these shores of solitude and sand dunes until noon, when a landing was made and the first luncheon eaten under the shade of a friendly poplar, our only visitors being the sociable little wrens, who peered and twittered inquisitively at the strangers from the branches scarcely an arm's length distant. Our bill of fare consisted of gumbo soup, ham sandwiches, stewed tomatoes, crackers, marmalade and coffee served on white china and plated ware, for the artistic soul of the chef despised the rust and grease of tin and iron table furnishings.  
After luncheon a delicious half hour of nicotine repose in that strange solitude of lake and beach and sky, backed by the tall sand dunes covered with the growth of crab apple and pine, we again embarked, but the wind falling we drifted along slowly until dark, being eight miles short of Michigan City.  
We camped for the night about a mile east of a group of huts inhabited by fishermen, and a rude sort of roadhouse. Here our sleeping arrangements were for the first time tested, with much satisfaction, and in the intense stillness, broken only by the lapping of tiny waves, let us pass the night in dreamland.  
At daybreak the skipper had thrown aside the covering from his end of the boat and was drinking in the glory of the dawn. While musing upon the impressiveness and fascination of the birth of the new day, ever recurring yet ever mysterious and beautiful, he observed a great commotion at the little settlement a mile back; the keen eyes of the fishermen had already discovered the Swallow, apparently washed ashore, and there was haste to get their heavy sailboat off the beach and to embark to secure the prize. From their huts the fishermen appeared to be filled with a noisy and joyful anticipation of a rich find, for the flotam and jetsam of the great lake forms no inconsiderable part of their scanty revenue.  
It was with a feeling of lazy amusement that the skipper debated whether they should be allowed to land, that he might witness their discomfiture, or whether he should prize himself and whether he should awaken the chef that breakfast might be served in the latter course voyagers and when the wreckers were still a quarter mile distant the voyagers emerged from their shelter, to the evident surprise and disappointment of the crew of the smack, and after putting about and vainly trying to beat against the light breeze they took to their heavy oars and labored back in a dispirited fashion to their delayed morning meal.  
In the meantime the sun was rising, and cloud and wave were glowing in crimson and gold, while the chef, enlivened by the incident of the morning, was busy preparing a famous meal, to which the fullest justice was done. A smart land breeze springing up we were soon spinning along for Michigan City, which was reached at 9 A. M.  
Here the chef went up town to make a few purchases, and his blue-gray knickerbockers and blouse, straw helmet and well-filled stocky, and there was haste to get their heavy sailboat off the beach and to embark to secure the prize. From their huts the fishermen appeared to be filled with a noisy and joyful anticipation of a rich find, for the flotam and jetsam of the great lake forms no inconsiderable part of their scanty revenue.

Arriving shortly after the bathers had disappeared we found the owner of the place, from whom we received a courteous assent in answer to our request to camp out on his beach.

After the Swallow was hauled up, preparations for supper were begun, to the great interest and amusement of the lady bathers, now emerged from their dressing rooms, and who proved to be city people enjoying their summer outing at Lakeside, such being the name of the beach. After supper a stroll was indulged in, and shortly after dark the occupants of the Swallow had turned in and were about half asleep, when they were aroused by the sounds of merry voices, and the summer boarders were again on hand in the usual proportion of a half dozen of the softer sex to one male. Singing and skylarking at a camp-fire are highly interesting doubtless, but when one is sleepy and not "in it" there are other things more absorbing, so the fitful snoring of the two mariners was soon a sort of obligato to the song and laughter on the beach.

We were shortly after awakened from our doze by the sound of whispers and suppressed giggling near at hand, which proceeded from a bevy of girls, who, like true daughters of Eve, were curious for a closer inspection of the outfit of the two strangers, whom they believed to be asleep, and whose quarters they had been audaciously approaching on tiptoes. Much feminine comment was whisperingly indulged in over our table, which was set for breakfast, and we were amused at the commiserating tones in which they spoke of "two men trying to do their own cooking." It was to be feared at one time from the indignant, though smothered grunts and snorts that emerged from the *chef's* end of the table, that he was about to emerge from his shelter and argue that point with them.

At length, however, they withdrew, and we knew naught more until daylight. After an early breakfast we were favored with a visit from our host, and after a stroll with him over his grounds, the Swallow was headed for St. Joe, twenty-two miles distant.

Scarcely a breath of air was stirring, and we crawled along with a head wind, the sun being directly in the air, and upon us with a fierce and constantly increasing intensity, until it became too much for even our seasoned parties.

At 11 o'clock, warned, in spite of moistened cloths worn inside our hats, by the throbbing of our temples and the strained fullness of our eyeballs, that the danger line was approaching, we slowly made the beach, about a mile distant, and after the temporary relief of a bath, lay quiescent on the sand, the air being cool and the sun's rays a welcome respite.

The spot chosen proved to be a desolate one, the settlement being a couple of miles back from the coast on account of a long inland swamp behind the timbered sandhills. Not a breath of air was stirring, the leaves of the trees hung lifeless, the hot sand shone with a gleam painful to the eyes, not a sound was heard save the constant hum of insects and the metallic chirp of the locust—all nature seemed oppressed with the overbearing sultriness. After the lightest of luncheons, we tried vainly to read, to talk, to sleep. It seemed as if our exposure of the morning had affected our nerves, for without energy we were filled with a strange restlessness. Covering the upper part of our faces with damp cloths to shut out the fierce light, we dozed away the day fitfully and uneasily, pestered by all manner of humming, buzzing and crawling things.

All day long we lay in our retreat until about dusk, a land breeze springing up, we embarked, hoping to recuperate our wasted energies as well as to make a few miles' headway in the cool of the evening. The breeze continued to freshen, and as the Swallow sped joyously along under full sail our spirits revived and we threw off the dull lethargy of the day.

St. Joe was 15 miles away, and we reeled off mile after mile in fine style until pitch dark, when the *chef* suggested that we go ashore for supper and camp. The skipper said little, but kept right on sailing. The breeze was an ideal one and perfectly steady. Up to evening we had made but four miles. Our average was suffering, and though the night was dark as a pocket, the rush through the water and the play of the breeze were delightful after the unconscionable heat of the day.

"Keep your eye open for fish-bits and stakes, you men of pots and pans," quoth the skipper, "and you shall sleep in St. Joe this night." "Luff her, har-r-d!" fairly yelled the *chef* in reply, and the Swallow brought up quivering in the darkness within 10ft. of a fish-pound. It was a close shave, but no damage, and on we sped for another half hour with the St. Joe light looming up in the distance. "Luff again!" yelled the lookout, and again we brought up dangerously close to a net. Fearing lest the fish-bits become numerous as we approached St. Joe, and the breeze having materially freshened, we shortened sail and felt our way slowly till we rounded the light and at 10 o'clock drew up on the beach alongside the bathing toboggan of the Hotel St. Joseph.

A dance was in progress and all was bright and gay at this resort, and in the intervals the piazza was thronged with couples awaiting the return of the two sun-baked and tanned travelers. Time passed, intent upon supper and bed, and followed by curious and inquiring glances from many a white-clad maid.

After a fine night's rest and an excellent breakfast a start was made at 9 o'clock for South Haven, distant twenty miles, with a head wind and quite a lump of a sea, the worst possible conditions for a boat of our type, which, being a small cutter, never sailing, can make but little headway in rough water on the wind.

Soon after setting out the wind freshened and rolled up such a surf that it was not possible to land without wetting both ourselves and cargo, and the latter being well covered against spray, we settled down for an all-day beat, and we certainly had it, and most exasperating it was to note our slow progress and poor course in the big seas. His company, however, was the only comfort, and the entire day the skipper was half hidden in a violet haze of profanity.

But all things have an end, and after a long day of tossing and buffeting we made South Haven about dark, and, leaving our craft at the Life Saving Station, proceeded to a hotel. We must confess appearances were against us, and we were not surprised when the clerk appeared to the landlord: "Say, these fellows want a double-bedded room." "Well, they can't get it," was the prompt and somewhat apologetic rejoinder. "Yes, begad, they kin, too; blankety blank me if I didn't clean forgot about 80; give 'em that."

Thirty proved to contain two very good beds, and the travelers were soon in the land of nod, though both confessed to tossing in their dreams in continuation of the shaking up had during the day.

A strong N. wind and a heavy sea, while adding materially to the view from the bluff, put a veto upon the prospect of a fine day; so our time was not put in doing the town and vicinity. The former has rather an unusual situation, being intersected by several deep ravines, giving it something of an individuality, while the view lakeward from the bluffs is very fine, reminding one of the New Jersey coast. A number of beach resorts finely situated lend an air of liveliness to South Haven, although the town is so dependent upon the summer boarder for its prosperity as to be the very center of the winter belt, and boasts a daily line of steamers to Chicago.

South Haven is a prohibition town, but future voyagers may be assured that their liquid needs can be supplied without difficulty by dint of a little quiet inquiry—at least we had no trouble in getting our orders for the "goods" filled promptly, and an excellent quality of Milwaukee beer.

During the day a visit was made to the State Experimental Farm in the suburbs, and we were much pleased at the results of "know-how" as applied to farming. We were especially struck with the fine appearance of a 25-acre field of corn this drouthy season, its condition being perfect in every respect, while throughout the vicinity the corn had either been cut for fodder or was so badly fired that not much was to be expected of the crop. The farmer, however, does not seem to realize that it pays to farm with "brains," to judge from appearances.

Beyond the State Farm we came on a friendly old peach farmer, and during a half hour's gossip he kindly filled us with ripe peaches from his early trees. During our stay we were also the recipients of many courtesies at the hands of the president of the village of South Haven, but we regret to state that having neglected to look the locker in our boat, we were relieved, in our absence, of an unopened quart bottle of 3 star Monongahela. This was doubtless the work of some ardent prohibitionist who desired to remove temptation from our path, and who could not conceive that the liquor was intended for medicinal purposes only.

The next morning we started under a reef, with a strong, puffy land breeze from the S.E., and made a run to Saugatuck, eighteen miles, in three hours, passing Ganges Pier on route. Saugatuck is a quiet village, perhaps a mile inland, on a picturesque river which widens into a lake, on the opposite shore of which is the small village of Douglas. The view from the observatory at Saugatuck, both lakeward and inland, is especially fine.

From Saugatuck to Ottawa Beach was a long, slow beat, the wind having headed us, and we arrived about 3 P.M. and found both Ottawa and Macatawa beaches populous with sixteen carloads of excursionists from interior points. Steam launches, ferry and excursion steamers, canoes, yachts and all manner of pleasure boats, together with numerous bathers and promenaders, made an animated picture equalled by few resorts on this coast.

The shores of Lake Huron were found fully occupied with resorts and summer cottages. At the lake, about six miles from the beach, is the thriving town of Holland. This was settled, as was most of the surrounding country, by Hollanders, who were attracted by the low lands, so like those they had left across the ocean. Lately new blood and modern methods have infused fresh life into the old town, and it now boasts a fine new hotel, kept up in good style, together with many handsome stores and buildings. Many of the signs as yet, however, tell of the presence of the De Groots, Van Trumps, De Pauws, etc., in goodly numbers.

After a night at Ottawa Beach we started next morning for Grand Haven, 20 miles, with a fine S.E. breeze, arriving about noon. After dinner we took the little excursion steamer for a trip around

Spring Lake, which we found to be a beautifully situated and irregular sheet of water, upon the banks of which are found many pretty villas and resorts, the chief of the latter being the Spring Lake House, adjoining the village of that name, and three miles from Grand Haven. At the head of the lake, eight miles distant, is Fruitport, once a thriving resort, but the hotel was destroyed by fire a dozen years ago and has never been rebuilt. Throughout this locality are found magnetic springs specially valuable in rheumatic complaints, and at any of the bath houses one may see a fine assortment of the be-caned, be-haired and be-cruetched testing the virtues of the waters.

On our return to Grand Haven we found the wind had hauled to the north, and for a few hours the entire community was weeping, sneezing and coughing from the smoke from the forest fires raging between the city and Muskegon. Fortunately, however, the wind shifted later in the evening and relieved us from what promised to be a most disagreeable night.

The following morning we headed toward Port Sherman, the harbor connecting Lake Michigan and Muskegon Lake, and distance 13 miles from Grand Haven, Muskegon being about six miles inland, on the bank of the latter lake. We had but little breeze at starting and were soon after becalmed, making three or four miles in so many hours.

We could see and hear the forest fires raging and roaring about half a mile inland, but the beach being protected by the sand hills intervening, we went ashore for luncheon, after which, still being without wind, we got out a tow line and did the "mule act" for a couple of miles, the Swallow towing almost as easily as a rowboat.

A slight breeze from the north setting in, we again set sail; but could make little headway, so at 4 o'clock we decided to put up for the night at Lake Harbor and proceed to Muskegon by the Lake Harbor Suburban Railway.

We found Muskegon to be a prosperous and handsome city of 35,000 or 40,000, well built and paved, and with all modern improvement. Having friends here, invitations for luncheon, visits, etc., were plentiful, but our appearance at one trip was too late to be so traumatic that we were compelled to decline in most instances. A rent in the basement of the skipper's best trousers he decided was inconsistent with a too extended social indulgence.

During the night a heavy rain fell—the first for six weeks—and the morning broke wet and cloudy, but we made for Lake Harbor on the early train with the view of having the Swallow towed up by the aid of a small oil launch, which we had observed there. We found the captain, but he represented that it would be a great inconvenience to get the launch out; he had not steamed her up this season, and she was doubtless out of order; he would have to get help to take her over the bar at the harbor mouth; it would interfere with his regular trip with his excursion boat up Mona Lake, etc., etc., at which the sagacious skipper winked significantly at the attentive

Cards, which will make it easy for him to send for the paper. . . . .

*chef*, which that functionary furtively returned, both wisely inferring that a large fee would inevitably result from all these preliminary objections.

It was now 9 o'clock in the morning and pouring rain, so it was decided to take the excursion trip around the lake with the captain before sundown, whether the Swallow should be towed or sailed to our destination. There was but one other passenger and the captain complained bitterly of the lack of patronage this season, as did in fact every resort keeper on the east shore. "Everybody spending their money at the World's Fair," said he. "Some of 'em here leave their butcher's and grocer's bills unpaid, but they're bound to go to the Fair. Goin' myself, 'gosh, a little later on!"

The *chef's* whose experience is mainly with city prices, almost fainted away, being prepared for a demand of at least five times that sum. However, it was not found necessary to get out the launch, as the clouds lifted somewhat and a fresh land breeze sprang up before our return and we headed the Swallow for Port Sherman after a friendly handshake with the honest captain.

Arriving at Port Sherman it came on to rain heavily again and we had a wet beat up Muskegon Lake, but finally arrived at the Goodrich dock about noon, when we put the Swallow aboard the City of Racine and arrived at Chicago without incident the following morning. Here the captain very kindly dropped our craft for us into the river and we coasted quietly past the World's Fair to South Chicago and reached the club house about sunset, this completing our coasting trip of 175 miles without the slightest mishap or inconvenience, and so well pleased with our experience that it is planned next season to continue the trip from Muskegon to Macinac Island.

### The A. C. A. Meet of 1894.

A MEETING of the executive committee of the Atlantic Division, American Canoe Association, was held at No. 360 Broadway, New York, on Thursday, Nov. 23, Vice-Com. Schuyler calling the meeting to order.

There were present, Vice-Com. Schuyler, Rear-Com. Fredericks and Messrs. Lake and Hand, of the executive committee. Vice-Com. Schuyler stated that the purpose of the meeting was to determine on the site of the annual meet of 1894, the selection of which had been referred to the executive committee of the Division by the general executive committee of the Association at the annual meeting.

Mr. Lake stated that he with several members of the committee had visited Croton Point and found that it would answer the wants of the Association in every respect; that the proposed site had been thoroughly gone over and had been found ample for the requirements of the meet; that Com. Dorland had consulted the owner of the point, Mr. Cockroft, and obtained permission to camp on the point, to thin out the trees and to build a road and otherwise prepare the site for the meet. Mr. Lake further stated that Mr. Cockroft had been very obliging, and had promised to do all in his power to make the meet a success, including the use of a launch; and would further agree to have the passenger propeller running from Sing Sing to Rockland and Haverstraw, stop at the camp twice a day. Mr. Lake moved the adoption of Croton Point as the site for the meet of 1894. Rear-Com. Fredericks seconded the motion and it was unanimously carried.

On motion, duly seconded, the meeting adjourned.

JAS. K. HAND, Acting Secretary.

### CANOE NEWS NOTES.

The annual meeting of the Royal C. C. was held on Nov. 23, and though no report has reached us of the proceedings, it is quite probable changes of the most radical nature have been made in the measurement rules. The R. C. C. is an example of the old cruel conservatism, and only last year it refused to recognize the sliding seat, while clinging tenaciously to the useless and illogical qualification of clinker build; but now there is a likelihood that it has swung to the other extreme, and removed all limitations on the beam of canoes. The effect of such a measure, should it be generally adopted, would, in all probability be to exterminate the 16x30 canoe. So far as sailing is concerned, substituting a nondescript type of small sailing machine.

Mrs. Geo. L. Paruleau wishes, through the FOREST AND STREAM, to thank those members of the Eastern Division, and such other members of the A. C. A. as are in any way interested; for the choice and beautiful gift, which they presented to her, through their representatives, Messrs. Knappe, Red, and Banks on her birthday, Oct. 26, 1893.

### Summer Homes.

A BEAUTIFULLY illustrated book; list of over 3,000 summer hotels and boarding houses in Catskill Mountains and central New York. Send six cents in stamps to H. B. Jagoe, Gen'l Eastern Passenger Agent, West Shore R. R., 363 Broadway, New York, or free upon application.—*Adv.*

## Yachting.

In replying to the remarks of the *Marine Journal*, we have been led to a greater length than we at first intended; but the whole question is so complicated that any attempt to discuss it in a few words would inevitably lead us into the same hasty generalizations and incorrect definitions on our side as are found in the explanation of our opponent. It would be a good thing if the question could be settled, once for all, and still better if some new term could be found in place of the clumsy expression "sloops, cutters and yawls," to distinguish these various yachts in a general way, without regard to minor points of rig, centerboard, etc., just as the term "schooner" is applied to every yacht with a fore and mainmast, regardless of model and of details of rig. The term "sloop" is no longer applicable to singletick yachts, and the term "cutter" is not popular with Americans, though strictly correct.

THE FOREST AND STREAM recalls with pride that it was one of the first "cutter cranks," at the time when that term was considered by its inventors an opprobrious epithet, when the man who dared to say that as good a yacht could be built from a design on paper as from a model whittled from a pine block was called a fool; when he who advocated a higher standard of seamanship, Corinthian sailing and racing rules was called an Anglo-mauled dude, he who maintained the value of lead ballast and a deep hull was compassionately set down as merely crazy, and he who dared to say that the existing American sloop did not represent the highest degree of perfection attained or attainable, was a dangerous, mischievous and evil-disposed fellow. Somehow or other we have lived through all of this opposition, we have seen one after another of the principles which we were the first to advocate in print, the deeper hull, the cutter rig, the paper design, the lead keel, and dozens of others engrafted into American yachting; with what result is seen in the fleet of to-day.

We have also had occasion to notice whenever any particular feature, such as the lead keel, after first being abused, has been adopted; that the cry has invariably been raised that it was either a new American invention, or that it had always been a part of the American sloop; and it is by this process that the term "sloop" has by degrees been twisted from its original meaning at the beginning of the controversy to include to-day everything fast enough to reflect credit on its designers.

In looking back, we find nothing to be ashamed of and little that we would change; time has brought an ample justification of the position which we took in matters of design, model and rig fifteen years since. Many things which we once advocated as the best have been superseded by later improvements; but in their day they were the best, and superior to the equivalent features of the sloop.

On one material point we were wrong, and we have no hesitation in admitting it, in fact have done so freely for some years. We made the error of mistaking for a law of nature, fixed and immutable, what was only a very bad rule of a yacht club and of mistaking as real the fictitious value of extreme narrow beam as shown in the racing under that rule. We have no excuse to make for this error, perhaps we should have known better; but we have seen a similar mistake made in later years, and with added opportunities for knowledge, by experienced yachtsmen, who have recognized as a law of nature the misleading conclusions derived from the rules which restrict the length and enlarge the sail area of racing yachts. Are our old opponents also ready to admit their mistakes in deriding the yacht designer, the cutter rig, the lead keel and the flush-decked keel yacht, or will they continue to build cutters and call them sloops, forgetful of the volumes of printed controversy in which they have put themselves and their typical rig and model on record forever?

WHILE maintaining, as a matter of technical truth, the cutter origin of the modern American singletick yacht, we have no intention of depreciating the work of Mr. Burgess and other American designers; on the contrary, we consider them deserving of the highest praise for having led the great body of yachtsmen against their will to something infinitely better than had been known before. The sloop men died hard, they stood by their beloved craft until she figuratively speaking capsized and sank under them; but after the victory of Puritan gave them an opportunity to come down gracefully, and with characteristic modesty to adopt the new type with the claim that they had always believed in it and nothing else, they have vied with the "cutter cranks" in hurrying from one improvement to another.

While the distinctive features of yachting as it is carried on to-day, including the science of designing and the art of construction, as well as the model and rig, are all of British origin; there is hardly a detail in any part of the work that has not been improved in being adopted by Americans. At the time when the sloop and cutter first came into actual competition, the adherents of each type were equally blinded by conservatism, the American by his belief in a length rule, in childish theories of the increased resistance at greater depths and in the necessity for very light draft; and the Englishman by his unquestioning faith in the perfection of the old tonnage rule as a basis for racing measurement. The American was the more fortunate in having his beliefs rudely shattered at an early stage of the fight, and being compelled, against his will, to reconstruct them on a sounder scientific basis, while the English yachtsman continued for some years to race the narrow cutter at home, and only awakened to the faults of the type and of the rule which produced it when he tried to recapture the America's Cup and was beaten by a wide American cutter. There is so much for Americans to be proud of in the improvements made since 1855, and in the production of such racing craft as Volunteer, Gosssoon, Gloriana, Wasp and Vigilant, that it seems small and mean to deny and misrepresent the true origin of all this advancement.

THE New York *Herald* is rapidly making a reputation as a comic paper, and yachtsmen who tire of dry technical details will find much to amuse them in its columns. The story of Navaboe's voyage was funny enough, telling how Captain Carroll actually navigated her for twenty miles by dead reckoning, but it was surpassed a few days later by the graphic account of the sailing of Valiant. In this thrilling story it is told how Captain Vanderbilt before the "ropes were cast off," was "going down stairs" in his yacht when he fell and actually sprained his hand. After damages were repaired, Captain Morrison pulled a "rope" as seven bells were sounding, which happened to be at half-past three o'clock, and the yacht sailed away with the New York Y. C. burgee fluttering over her stern, the reporter offering no explanation as to where she displayed her ensign. After all this it is not surprising to read a few days later that the Ericson war vessel Destroyer, which has been sponsored at the Erie Basin, has had "numerous stays put in along the outer side of the hull to give greater buoyancy." The climax was reached this week, however, in an editorial on the stability of warships in which the meta-center is defined as "the center of gravity of the volume of water the vessel displaces." In reading such nonsense one is led to think of the time when the reports of American yachting in the *Herald* were as full and accurate as those of the weather in Paris and four-in-hand-driving in Europe.

CENTERBOARD CUTTER "NELLE."—DESIGNED BY F. W. MARTIN FOR COM. SEARLES, RACINE Y. C., 1893.

BODY PLAN.

good old sloop men like Capt. Coffin and "Devoted Yachtsman," would turn in their graves at the suggestion of an American sloop with a cutter rig, a lead keel of 70 tons and a draft of 14ft.

We cannot close without an allusion to the very comical argument of the *Marine Journal*, that a cutter is not a cutter because other varieties of boats or vessels are called cutters. This multiplication of meaning in nautical terms is so common that it is understood by all, and no one but a landlubber would be in the least confused or would suppose that *Valkyrie* was a ship's boat because she was classed as a cutter. If the reasoning of the *Marine Journal* is correct, then a yawl-rigged yacht is a sloop because the term yawl also applies to a ship's boat, and a schooner like *Volunteer* is also a sloop because the term schooner is commonly applied to a small vessel used for the rapid and comfortable transference of beer in bulk. The term "revenue cutter," which has its parallel in "gun sloop" and "sloop of war" is one of those misapplications frequently met with; the early armed sailing cutters were used mainly in chasing the French and Dutch smugglers in the English Channel, and the term was quite naturally transferred in course of time to the steam vessels which replaced the old sailing cutters.

There is nothing in the history of yachting that is more fascinating and instructive than the study of primitive models and rigs, and of their gradual changes, and improvements, with the influences such as measurement rules, local conditions and increased technical knowledge which have produced these changes. If anything is to be learned from such a study, however, it must be conducted from a purely impartial technical standpoint, setting aside all patriotic and political feeling and looking only for established facts, wherever they may be found.

The Centerboard-Cutter Nelle.

The yacht illustrated in the accompanying drawing was designed by F. W. Martin, of the new Racine Boat Manufacturing Company, of Racine, Wis., for Commodore Jesse Searles, of the Racine Y. C., and is intended for both cruising and racing on Lake Michigan. The draft being limited by local conditions, a large amount of beam has been taken, 13ft. extreme beam on 30ft. l.w.l., giving ample stability and plenty of deck room on each side of the cabin trunk, but at the same time a very fair and easy form has been secured, both in the cross sections and the waterlines. The total overhang is quite moderate, but has been disposed to give a very shapely and pleasing appearance to the topsides, while permitting of a good ending to the diagonals. The keel will be of iron, about 7,000lbs., the centerboard of 3/4 in. iron plate, working through it, the frames will be of steamed oak, and the planking of 1 1/2 in. cypress, single planked to the waterline and double planked on the topsides; the decks will be of white pine 1 1/2 in. square. The interior will be finished in quartered oak. The depth of the hull allows the centerboard to house under the cabin floor, the after end coming into the cockpit where the hoisting tackle is rigged, leading aft, so that the hauling part is near the main sheet. The tackle will run under the cockpit grating and the chain pipe will take the drainage from the

SAIL PLAN.

cockpit. The yacht will be commenced at once as soon as the new shop is ready; another similar design has been made by Mr. Martin for a Chicago yachtsman.

YACHT NEWS NOTES.

Valiant, steam yacht, W. K. Vanderbilt, sailed from New York on Nov. 19, on a long cruise to the Mediterranean, the Red Sea, and possibly to Ceylon or the East Indies, the cruise to last ten months. On board the yacht are Mr. Vanderbilt and his family and a party of guests.

White Layde, steam yacht, lately under charter to Ogden Goellet, arrived at Cowes from Newport, R. I., on Nov. 14, having sprung her mizen mast, stove her skylights and sustained other damage in a gale on Nov. 9.

ANSWERS TO CORRESPONDENTS.

Anonymous communications are not replied to by newspapers nowadays.

WANTS A COMPANION.—Erie, Pa., Nov. 21.—I would like, through the medium of your valuable publication, to enter into correspondence with some young man with the object of planning a canoe voyage and fishing trip to be taken next summer.—HARRY N. COLE (223 West 20th street, Erie, Pa.).

C. C. M., Philadelphia, Pa.—What is the proper proportion of shot to use, using 3drs. E. C. powder in a 12-gauge, moderate choke Parker gun? How should it be wadded to produce best pattern and penetration at 40yds. and at 80yds.? Ans. 1 1/4 oz. Next the powder use one pink-edge, one thick felt, and one thin card. Over the shot use a thin top shot wad. For further information on this subject see Greener's "Breech Loader, and How to Use It." Postpaid \$1.

SAVE YOUR TROPHIES.

REWARD

For the first notice of an instance where the law quoted  
in the *Game Laws in Brief*, prescribing game and fish  
seasons of any State or Territory, is not the general law  
in force at the time of this revision, I will give \$5.

For first notice of an erroneous statement of a game or  
fish season in any State or Territory, or of an omission  
of a prescribed season, I will give \$1.

These offers relate to general, not local, laws, and to  
recognized game and fish (not, for example, to the Connecticut bobolink, rice bird and robin season).

\*\*\*\*\*

## Christmas Books.

EVERY year just about Christmas time we receive by mail and telegraph many orders for books from persons who have put off until the last moment the purchasing of their holiday gifts. When these customers have finally made up their minds what it is that they want, they wish to have their orders filled at once—by telegraph, if that were possible.

This year we urge those who contemplate sending to us for their Christmas gifts to forward their orders at once, so that they may be sure to receive in time whatever it is that they desire. About Christmas time all business people are pushed to their utmost to fill their orders; the mails and express companies are overwhelmed with parcels; transportation is slower than at other times, and mistakes in the delivery are likely to occur. It will, therefore, be a real advantage to our customers as well as a great help to ourselves if orders can be sent in at once.

To facilitate this, by aiding customers to making a selection, we print in this issue a very full descriptive list of our books covering two pages of FOREST AND STREAM. To this list we refer such of our friends as may contemplate ordering books for the holidays. In it will be found standard works on all forms of out door sports, and at all sorts of prices, so that a selection should not be difficult.

FOREST AND STREAM PUBLISHING CO.

## THE MASSACHUSETTS TROUT LAW.

THE proceedings instituted by Mr. Walter L. Gilbert, of Massachusetts, to test the meaning of the statute forbidding the sale of trout during the close season has just been terminated by a decision adverse to Mr. Gilbert handed down by the Supreme Court.

Mr. Gilbert is engaged in the industry of trout culture. He raises fish for the market and has long been contending for the privilege of marketing them in the close season. He was the author and promoter of a bill in the Legislature to permit the sale of artificially reared trout at times when wild trout might not be taken. The bill was defeated, its opponents contending, and rightly, that thus to open the market for domestic trout would result in the capture and sale of wild trout.

Then, throwing consistency to the winds, Mr. Gilbert claimed that the law already existing gave him the very privilege which he had been endeavoring to secure by the proposed new law. He contended that the statute forbidding the sale of trout in close time was intended to apply only to wild trout; and that in despite of it he might lawfully sell his cultivated fish. To test the case he sold one of his own trout in the close time, and induced a friend to lodge complaint and institute a prosecution. The lower courts decided against him and he appealed to the Supreme Court, which (in the opinion printed in full in our angling columns) declares that artificially bred fish are not exempt from the provisions of the statute. The court further holds that such a law is constitutional, even though "owners of property may thereby to some extent be restricted in its use," for "it has often been declared that all property is acquired and held under the tacit condition that it shall not be so used as to destroy or greatly impair the public rights and interests of the community."

This outcome of Mr. Gilbert's putting the statute to the test is just what we predicted it would be. There is a vast deal more of bed-rock constitutionality in the fish and game laws than many lay critics give them credit for; and the more clearly the principles of protective legislation are comprehended, so much the more reasonable and constitutional do the statutes reveal themselves to be.

We have never fully shared the ferocious opinion that Mr. Gilbert should be drawn and quartered for his assault upon the trout law. We are quite ready to believe that he has been engaged in an honest fight for what he thought to be his individual rights. Now that the courts have found against him, and that his efforts have resulted only in demonstrating the impregnability of the statute

he was contesting, we trust that he may still find abundant reward for his commendable enterprise as a trout culturist, with the opportunities afforded him under the law as it stands.

## AN APPEAL FROM "PISECO."

THE story was told the other day of the experience of "Piseco" (Capt. L. A. Beardslee, of the Navy) and his command in the terrible storm which swept the Sea Islands last August; and some account was given of the devastation then wrought, and of the suffering which followed. But the half has not been told, nor can it be told, of the desperate condition of the survivors. The storm destroyed everything—houses, clothing, food, crops. The people, some thirty thousand of them, were left absolutely destitute of the means of subsistence, without even the opportunity of working to earn food. All that now stands between them and death by starvation, cold and disease, is the supply of rations, clothing and medicine contributed from outside and issued to them under the direction of the Red Cross.

By virtue of his position as commandant of the Naval Station on Paris Island, Capt. Beardslee has had thrust upon him the responsibility of caring for the hundreds of helpless people on the island, and, assisted by Mrs. Beardslee, he has been acting as Miss Barton's agent on the island. For months Capt. and Mrs. Beardslee have been surrounded by this misery and distress, to the mitigation of which their daily thought and endeavor have been devoted. To bear up under this constant strain, we may well believe, has called for fortitude in an unusual degree.

With the coming of cold weather the condition of the storm sufferers is more desperate than before. The demand for succor should be answered more promptly and more generously than ever before.

Because of the pleasant, and in a way intimate, relation which "Piseco," as a contributor to FOREST AND STREAM, has so long enjoyed with its readers, and because we honor him for the noble work he is doing and for the lofty spirit which animates him in that work, we second his appeal in behalf of the storm sufferers of the Sea Islands.

"Thus it stands," he writes. "There are 30,000 American citizens who must be almost entirely supported by charity until they can get a spring crop in April or May. Unless they are furnished with food they will starve; with bedding, they will die from exposure; with medicines, they will perish of fever. Everything not perishable is needed, especially money to buy lumber, nails, brick and hardware to rebuild the houses; cast-off and warm clothing, cooking utensils, pans, pots, spoons, &c. Most of the express companies send free all articles directed to

MISS CLARA BARTON,  
President Red Cross Association,  
For Storm Sufferers, Beaufort, S. C.

Articles sent to the Clyde S. S. Co., Pier 29, East River, New York, then to care of James E. Edgarton, Agent, will be forwarded to Beaufort free.

## MEDAL AND DIPLOMA.

THE World's Fair medal, which is to come to FOREST AND STREAM one of these days, will be of bronze and in diameter a half-inch more than the width of this column. The design has been submitted to the Secretary of the Treasury by Aug. St. Gaudens and the medals will be ready for delivery in about six months. The obverse side bears a figure of Columbia, which in this particular instance is typical of the character of the FOREST AND STREAM as a national journal—national in scope, in sympathy, in influence, in warm support. On the reverse will be a figure of Youth, which on our individual medal will signify that the prize-winning sportsmen's journal of America will never lose the buoyancy, the vigor, the enthusiasm, the sprightliness and the joyance of the youthful spirit.

The diplomas will be ready with the medals. Mr. John Boyd Thatcher announces that the matter to be placed on each diploma will be limited to 300 words. Now does any one dream that it will be possible to put into 300 words all that ought to be said about the FOREST AND STREAM's exhibit at Chicago?

## THIRTY-SIX PAGES.

THIS ISSUE contains thirty-six pages, provision thus being made for the prompt giving of our annual list of all the field trial winners of the year.

## SOME FOREST AND STREAM CONTRIBUTORS.—I.

COL. SAMUEL WEBBER—"VON W."

NO ONE who should have seen "Von W." in mature life, standing over 6ft. 2in. in his stockings, would have supposed that he was such a puny infant that his grandmother made a standing joke of having put him in the coffee-pot when a baby (in 1823); but it was, perhaps, due to that very delicacy in infancy that he owed the robustness of later years.

His father, an old physician, devoted as much care to his physical development as to his mental education, and he was brought up, like most country boys, to groom and drive the horses, take care of the cows and pigs, hoe corn and potatoes, and saw and chop wood, and encouraged to frequent holidays in the woods and fields. Like Christopher North, he became a fisherman as soon as he was breeched, and at twelve years old was the possessor of an old-fashioned French flint-lock fowling piece and was a pretty fair rifle shot.

From that time until he left home at seventeen to get a mechanical education in the mills and shops at Lowell, all his holidays were spent in the woods, and if neither fish nor game were in season he collected wild flowers and rare plants. In those boyhood days, from 1836 to 1841, the hills of the Connecticut Valley were clothed with a heavy old growth of oak, beech and chestnut, the abode of numerous gray

squirrels, and it was no uncommon thing to get half a dozen before breakfast any good autumn morning. But the advent of the railroads in New Hampshire has stripped the hills of those trees, and gray squirrels are usually scarce, though "Von W." reported an unusual invasion of them last year. This was the favorite game of his early years and gave him skill with the rifle as well as with the shotgun. Ruffed grouse were always more accessible in the old woods than in the present sprout lands which have taken their place, though there are possibly more birds now than then. But as yet sporting dogs were almost unknown in the country towns; wing shooting was a hidden art, and "Von W." says he never claimed to be anything more than a fair shot on the wing, though he often took a squirrel on the jump.

His especial weakness was trout fishing, and he had the reputation among his townsmen of being able "to catch trout out of a stone wall," and in fact, some of the mountain brooks were little else in late summer.

During the first half-dozen years of his mill life his annual "fortnight's vacation" was always obtained in June and spent on the trout brooks of New Hampshire and Vermont, and in later life, when more deeply engaged in business, he always found time to slip off once in a while, for a day or even a half day, to some neighboring stream or old nook known as a haunt of ruffed grouse or gray squirrels, or perhaps to a woodcock cover, and by the active exercise in the open air keep himself in good fighting physical condition. Always very fond also of equestrian exercise, he spent many hours every year in the saddle, until he met an injury received from a fall due to the breaking of the transom bolt of a wagon in 1861 while driving in the rain to inspect a camp ground for use by the battery of artillery, which he had raised, as well as two of the New Hampshire regiments. This mishap disqualified him for service in the field, as well as for future saddle exercise. It, however, in no way interfered with his pedestrian powers, and since 1871 when he gave up "mill life" and devoted himself to the practice of his profession as a hydraulic engineer, he has been able to devote many odd days to the trout, as well as some to the birds and squirrels, and when in 1876 he was appointed chairman of the New Hampshire Fish and Game Commission, he visited many of the waters of the State with the view of stocking them.

In connection with his colleague, the late A. H. Powers, Col. Webber introduced the "winnish," or landlocked salmon, into New Hampshire, and built the first State hatching house at Livermore Falls, in 1877. He also planned and superintended the erection of the fishway over the Amoskeag Falls, at Manchester, N. H., one of the most successful ones ever built.

A year in '50-'51 was spent in Europe, where he served

as one of the jurors on machinery, at the original "Crystal Palace" in Hyde Park, and after his return he arranged the interior of the one on Reservoir Square in New York, afterward destroyed by fire. He was one of the judges at the Centennial in Philadelphia in 1876, serving on four groups; judge at Atlanta in 1880, and laid out Machinery Hall in New Orleans in 1884, and arranged the engines and shafting. The title of Colonel, by which "Von W." is commonly known, was earned by service as aide-de-camp to the Governor of New Hampshire in '61-2-3, in charge of camp grounds for new regiments.

A subscriber in early life to the old *Spirit of the Times*, "Von W." was well acquainted with many of the "Spirit Crowd," Wm. T. Porter, "Frank Forester," Phil Anthon, *cum multis aliis*, of the old sporting writers. His professional duties have carried him into every State in the Union east of the Mississippi, and he has been over most of the country from Nova Scotia to New Orleans, though his fishing and shooting have been confined to New England, taking in Maine, New Hampshire, Vermont and Massachusetts, with whose waters he is pretty familiar.

Though fast approaching the allotted period of three score and ten, "Von W.'s" love for the woods and the waters, the fields and the flowers, and "all that dwell therein" are undiminished, and though he can not discern the sights of a rifle as well as of yore, he can still cast a fly or wield a paddle, though he prefers a mountain stream to the cramped confinement of a boat or canoe.

## The Sportsman Tourist.

### DANVIS FOLKS.—XVI.

#### Going Fishing.

At an early hour the two anglers were behind the woodshed, Pelatiah turning the moist soil, dotted with green tufts of young motherwort and catnip, while Uncle Lisha stooped before him, turning the clods with his fingers and picking up the lusty worms as they were disclosed.

"The 's satisfaction in fishin' from the fust start," he said as he dropped a worm into the battered teapot between his feet. "More 'n there is in huntin'. You don't see nothin' afore you when you're puttin' powder int' your horn an' shot int' your bag. But when you grab holt of a worm's head an' feel him a lettin' go of the airt, slow an' reluctant, you c'n eenamost feel a trout snatchin' at him. An' there bein' worms goes to show the' must be fish, bein' that they was made for one 'nother. There, Peltier, I b'lieve we've got 'nough," and he arose, straightening his spine with the backs of both grimy hands which he then brushed on his trousers, and the two set forth.

A dappled sky, filtering soft streams of sunshine, and a constant waft of south wind invited them; the long whistle of meadowlarks called them, and a highhole on a dry stub drummed a rapid, ringing roll to accelerate their steps.

Presently they came to a thicket that bordered the brook, where gray stumps of departed trees stood half disclosed among the misty ramage of saplings and the dark pyramids of young evergreens, and where yellow beds of adder tongue mimicked sunlight, while spears of bloodroot pierced their own green shields and the first moose flowers splashed the shadows with their white blossoms.

As they entered it a partridge uttered a note of alarm and went hurtling away out of a flurry of dead leaves, and a woodchuck smothered his own querulous whistle as he retreated into his newly opened hole.

Uncle Lisha, feeling in his pocket for his knife, slowly searched for a proper rod.

"An' the's consid'able en'jyment gittin' a pole," he continued, as if his discourse had suffered no interruption. "You don't wante be tu fast, er you'll be lierce tu run away f'm good uns an' git desput an' take up wi' a mean un, jest as lots o' folks du in this world, 'go in' through the woods an' takin' up wi' a crooked stick,' at last. Then agin, you don't want to be tew slow an' perticular er you won't never git tu fishin'. An' arter all there will be disappointments, Peltier," he went on, bending down a sapling and slashing it from the stump. "You pick you aout one 'at looks all right, but when you come to trim it, it's crookeder 'an a snarled waxed eend, erless it's top-heavy, er suthin', an' that's the way o' the world agin. But you don't want to give up fer that, an' say the' haint no decent gals—fishpoles, I mean, an' say you'll be dummed if you try tu go a-fishin', fer the's jest as good fishpoles stan'in' as ever was cut, an' the's lots o' fun waitin' for you, tu git your sheer."

"When you've got a holt o' the best lookin' one the' is an' it turns out tu be brittler'n dry popple, what's the use o' tryin' to pick aout another?" Pelatiah asked as he carelessly trimmed a young birch.

"It wan't nothin' but dry popple an' you misjudged," Uncle Lisha answered as he neatly trimmed the branches and knots from his pole, "an' you wante try agin, not seddaown an' mump."

He put the finishing touches to his work, snapped his knife shut against his hip and began to tie on his line.

"I don' callate the's as much fun gittin' ready for huntin' as the's fishin'. You buy your gun er borry it an' you do know what it's goin' t' du, maybe kick you like all possess-an' kill nothin'. If it's one you've hed you know all about it, an' haint no expectations one way ner t'other. An' you don' make it er fin' it, o'ny feed it so much powder an' tow an' shot. I don' callate these fellers 'at has 'em a j'inted pole, wi' a leetle brass windlass on 't, gits half the en'jyment we du. They must feel alers affered o' breakin' on 'em er suthin' an' they must feel almighty mean to be a foolin' fish wi' them feather contraptions. Fishes' feelin's orler be considered some. We give 'em the chance o' gettin' suthin' good. They offer 'em nothin' more 'n dry hus's. But le's we git tu fishin'."

The trout were as plenty and as hungry as they had been the day before and gave these simple anglers all the sport they desired, wherein, if no fine art of the craft was

exercised, much good judgment and knowledge of the habits of the shy trout were displayed.

Making their slow way down the stream, they crept stealthily up to every promising place, taking here a wary old trout from his log-roofed stronghold or root-netted hiding place, and there, three or four from beneath a circling raft of foam bells that slowly wheeled and undulated at the foot of a tiny waterfall, reinforced with new bubbles as others burst and keeping ever the same.

They came to an alder-arched bit of water that looked promising, but there was no chance to make a cast. Uncle Lisha hunted the bank for a chip, which being found, he coiled his line upon it and set it afloat. It went tossing and whirling down stream among the shadows and the sparkle of rapids, uncoiling the line as it went, till it was all out and the baited hook was drawn overboard, and with a wavering plunge went out of sight.

There was a sharp tug, responded to by a too vigorous strike, and a fine trout came flying out of the water with a long, upward curve that hung him on an alder bush 6ft. above the brook.

Uncle Lisha waded down stream to secure him, beginning to discourse again as he splashed cautiously along the slippery bottom.

"As I was sayin', I callate fishin' is better'n huntin' most any way you take it. You're more sartain o' gittin' suthin' as a gin'l thing, an' ef you don't you don't feel no wuss ner nigh so tired. An' what you git, you git, an' what you waound, goes off an' gits well, stiddy a-lingerin' an' suffrin' an' dyin' mis'able. Then agin—"

He was reaching up for the dangling fish, rising on his toes, "it's soothiner," both feet slipped, and with a great splash he sat down, half damming the current that swirled and gurgled about his hips.

"Yes," he reiterated stoutly as Pelatiah helped him to arise and regain the bank, "It's soothiner, but I won't say I like it quite so dumbed soothin'. But I don't keer a darn, I've got the fish."

His clothes were rung out and they fared forward, the

A SNAP-SHOT ON "VON W."

old man still enjoying the sport while his trousers slowly dried in the genial air.

The brook babbled its endless story to them. From distant meadows came the songs of meadowlarks, the cackle of flickers and the long wail of a plover. On the soft breath of the south wind were wafted past them in wavering flight the first butterflies, purposeless of aught but mere enjoyment.

"It's soothiner," he repeated, "on accaount o' hunting bein' excitiner. You git more time tu sit an' think about nothin' an' look araound an' listen an' git tu feelin' peaceable, when the luck haint tu almighty bad. But that don't make a feller so grumpy an' rantakerous as onlucky huntin'. When I ben a humpin' over ol' boots and shoes till I do know myself by smell or feelin' f'm a side o' so luther, the' haint nothin' 'at fetches me tu myself agin like goin' a-fishin'. I'd livser git a mess 'an tu not, feelin' better carryin' hum a respectable string an' hevin' more pluck tu go agin female opposition nex' time the fit takes me, but if I don't git enough tu raise a smell in the pan, I've hed me my fishin'. I've seen the brook an' heard it a-talkin' tu itself an' mebbly to me, I do know, an' like 'nough seen some odd capers o' birds er animals an' got the kinks aouten my joints an' so don't caount I've lost the day."

"Sh-h. See that pleggid mink."

He pointed out the lithe, alert dusky form poised on the verge of a brookside boulder, intently scanning the eddying current beneath, and the two watched him make a noiseless arrowy plunge, and emerge with his writhing prey and bear it into the net-barred fastnesses of the bank.

"An' he's a hevin' his leetle fishin' tu, which I don't be-greth it tu him, seein' he does it so slick an' handy."

"An' naow, Peltier, I guess we might as well call it we've got enough. We might git more but we do wante be hawks. You've got a string o' fish 'at ought tu make a man happy an' contented an' fergit lots o' trouble, an' I hope it does, better'n all Hamner's pizen, which it's hopesin' you've forsook. Naow, whenever you git daown-hearted go a-fishin'. You'd a leetle druther hev it a good day, but go anyway if you can't make the weather an' you're feelin' starve."

So they took their way homeward in the gathering twilight, with the vibrant purr of the toads ringing all about them, and now and then a startled bird scurrying out of the dead grass before them.

"See the pooty pooties, bubby," said Uncle Lisha,

dangling his string of fish before the delighted eyes and reaching hands of Sam's baby. "No, couldn't hev 'em naow, bubby, but when he gets big an' wears trouses he shell go 'long wi' Uncle Lisher an' ketch snags on 'em, an' mammy'll cook 'em an' tell us tu go ag'in."

ROWLAND E. ROBINSON.

## OUR FORESTS AND STREAMS.

### Their Destruction and Necessary Preservation.

NEXT to and co-equal with food, wood and water are the first necessities of life, whether savage or civilized; nor can any food except fruit, be properly fitted for the use of man, without the aid of both. The explorer, the emigrant, the miner, and the sportsman, all seek for them at the end of the day, as essential needs for the shelter and rest of the night, and the classes to which I have referred, are all well aware how essential to each other are these two great factors of existence.

The wood will not grow without the water, nor can the water be so retained and preserved as to yield its full share of blessings to man without the aid of the woods to protect the soil from the burning rays of the sun, and check the consequent evaporation in the heats of summer, while the annual fall of the leaves in autumn, aided by the mosses which have grown up under the shade, retain the water of the winter's snows, when melted by the coming spring, and yield them gently and slowly to the streams, through thousands of hidden channels, to find their way in due time to the sea, whence drawn up by the sun, they return to the earth in rain, and perform their annual and ceaseless round of beneficence.

This is no new topic, and my words may seem hackneyed and tiresome, but the questions of forest preservation and water supply form one of the greatest engineering problems of the immediate future, and I write them as one, because they are so intimately and inseparably connected that it is impossible to divide them, and because the water supply of New England, to speak of my own knowledge, is already being perceptibly diminished by the destruction of her forests.

I am writing from a quiet country village on the banks of the Connecticut River, where I was born many years ago, and to which I have returned within a few years, after a busy life, mostly spent among the great water-powers which have grown up on our sister river of New Hampshire, the Merrimac, having commenced my apprenticeship to mechanics and engineering in the then new city of Lowell 52 years ago, and having seen the first water-wheel put in motion in what is now the busy city of Lawrence. I have seen these cities grow up until the water power which brought them into existence was utilized to its full original capacity, and seen dams raised, new canals dug and extra "flowage rights" purchased, the channels from Winnesquam and Winnepesaukee deepened, and every possible means employed and precaution taken to save the greatest quantity of the annual spring surplus of nature's precious fluid, and steam engines added to keep the mills in steady operation during the year, until the amount of steam power in Lowell equals, if it does not exceed, the full provisions for water, and doubles of itself the full scheme of the original projects.

After six years at Lowell and five years at Lawrence I spent four years on the Chicopee River, at Springfield, Mass., and then returned to the Merrimac, at Manchester, N. H., where beside some interregnums, I resided for 16 years. All this time I have seen the rivers shrink to lower and lower levels in the summer droughts, as the forests were gradually destroyed around their sources in the White Mountain region, and the spring freshets become more destructive to roads and bridges and arable land along the meadows on their banks, and the steam engines called into more constant use, until it is a question asked by many people, although I must say I do not agree with them—Is water power worth having?

It was not, however, my recollections of my experiences among the waterpowers, which have prompted this article. It was the sight of a couple of loads of huge oak logs, which I saw yesterday morning, on their way to a sawmill just behind my residence. This mill was built some thirty or more years ago, for a boot and shoe factory, and was for some years quite successful, but the death of one of the partners in the business, and the greater economy of manufacture in the region of southern New Hampshire and eastern Massachusetts, where the business has concentrated, rendering an isolated factory unprofitable, caused the abandonment of the enterprise, and a larger steam engine was put into the building, and its purposes diverted to stripping the neighboring hills of their remaining forests.

The manufacture of pargeitized kerosene cans, made of sapling pine, and saturated with glue, was carried on for some years, but was finally taken to another town, where cheaper rents and a more abundant supply of second-growth pine was offered, and for three or four years past the shop has been employed in getting out chair stock, which is sawed out here in the rough and sent down into Massachusetts to some of the large furniture factories, to be put together and finished. A word or two will describe the situation. This is no new village just started in the edge of the woods; it was settled nearly 150 years ago, and was a frontier fort in the time of the old French War, and an important shire-town at the beginning of the century, and claimed among its inhabitants some of the most prominent lawyers in the State, and had at one time 1,800 population, now shrunk to barely 1,600.

It stands on a gravelly terrace about 100ft. above the beautiful meadows, or "intervale," as it used to be called, of the Connecticut, just about midway between its sources and its mouth. These meadows are here about a mile wide, and are inclosed by parallel ranges of hills in New Hampshire and Vermont rising from 35 to 500ft. above the river in the first ranges, which are backed by successively higher elevations, until they reach the Green Mountains on the one side and the backbone of New Hampshire on the other. This gravelly terrace, jutting out from the eastern hills, was probably once the bed of an old glacial lake, the ice and the waters being held back by the bold rocky cliffs which close in on the river at Bellows Falls, eight miles below. It is permeated with veins of bog-iron sand, which render the water derived from wells somewhat unpalatable for drinking, being decidedly chalybeate, and entirely unsuitable for laundry purposes, and the consequence is that the main supply of water for the village has for many years been derived from copious

springs which broke out all along the base of the eastern hills, and here, at last, we come to the point of my story. For years past the supply of water from these springs has been becoming more and more uncertain as the hills were stripped of their clothing of wood, and the difficulty became serious last year, in the late summer of 1892. This was followed by a very cold January this year, 1893, with but little snow, and the consequence was that nearly all the lead pipes from the springs froze up and burst, giving the village plumber all the business he could attend to for many weeks this spring, and freezing all the small brooks up solid, and destroying all the trout, for which this section was once famed.

Although occasional showers have kept the surface of the ground in a moister condition this year, so that agriculture has not been materially interfered with, yet there has not been rain enough to fill the springs, and many families are to-day suffering from want of their accustomed supply of water.

This may seem trivial, but the greatest results are brought about from an accumulation of small causes, and there are probably hundreds of New England villages that can tell the same story of the extinction or diminution of their water supply, due to the destruction of the forests.

"Many a little makes a mickle," as the old Scotch proverb says, and these notes of the effects of forest destruction in one New Hampshire village, multiplied by the number of instances to which it is equally applicable, show the serious dangers which threaten our water supply.

There is still another point of importance to New Hampshire which at first sight might be sneered at by the "Gradgrind" school of political economists, and that is the value of the forests to the State as an attraction to summer visitors.

Independent of the great beauty they add to the scenery, and the welcome shade they offer in the heats of summer to the mountain climber and the glen explorer, they keep the streams full and supply the lover of field sports with that most delightful of all recreations, trout fishing, which is one of the great attractions to the hosts of visitors to the White Mountains, who on a conservative estimate are said to leave in the State \$5,000,000 annually.

To return to my observation of facts as a practical and pertinent illustration. Up to the time of opening the Connecticut River system of railroads, up this valley in 1847-9, the ranges of hills on either side the river were practically heavily clothed with hard wood timber, maple, oak, beech, birch and chestnut, with a few remaining pines and hemlocks.

The great bulk of the pine timber had been cleared years before, though I well remember, when a small boy, more than sixty years ago, being taken by my father to see the bonfires one evening, where they were burning the pine logs in piles, where they were cut to clear a small piece of land near the village. There were a few old Norway pines left on top of the Vermont ridge, and some small lots of white pines belonging to old estates. The Norways have long since gone, and all the white pines except a few which served to mark the boundary lines, or grew on ledges or ridges inaccessible to any mode of conveyances. The straight oaks and chestnuts were converted into railway sleepers and ties as fast as possible, and the tops and branches used for fuel for the engines. Luckily for the lovers of the forests, coal is now cheaper than wood, and the roads all burn that for fuel instead, and it is rapidly coming into use for all domestic purposes, for which, on the basis that one ton of coal is equal to two cords of wood, it is cheaper.

The destruction of the old chestnuts and oaks has exterminated the gray squirrels, of which my gun furnished many a good family dinner fifty years ago, and the trout brooks, from which my rod secured many a Sunday's breakfast in spring and early summer, are deserted forever by their spotted denizens, who have either been boiled or frozen.

A dozen or more years ago when, as a member of the New Hampshire Fish and Game Commission, I was examining the waters of the State with a view of restocking them, and particularly of restoring the salmon to the Merrimac and Connecticut rivers, in both of which they were once abundant, I met my old friend, the late Hon. Geo. G. Fogg, who had returned from serving his country as Minister to Switzerland, and he said to me that "our labors would be useless unless we began at the other end and restored the forests first."

He had seen in the course of his residence abroad the damages which had been caused in years past by the mountain torrents in the spring in both Switzerland and Germany, and studied the forestry laws which those nations have adopted to compel the land owners to cut only full grown trees, and forbidding them to strip the hillsides entirely of all the wood, great and small. As the result of such observation he made the remark above quoted, and the correctness of it has been proved by the fact that several brooks, which I have since then restocked in the Connecticut River Valley, have been again stripped of their trout by the dry summers, and the result of my labors entirely destroyed.

Thus, as I have said, from minor and trivial facts as illustrations, I have drawn up to my point of the importance of the preservation of our forests as the conservators themselves of our water supply.

Either by State or national legislation the cutting of "natural growth" timber less than 12in. diameter at a height of 3ft. above the ground should be forbidden, and by this I intend to exempt all artificial plantations, such as may be grown for use as "hoop, hop or bean poles," and should also compel the removal from the forests of all the refuse of tops and branches as well as of the merchantable timber instead of leaving it on the ground to be kindled by a spark from the fire or pipe of some careless sportsman or heedless boy and thus destroy miles of forest to no purpose. It may be said that the State has no right to interfere with private property, to which I reply that the health and welfare of the whole people are always considered as superior and paramount to the pecuniary rights of individuals, and that the same law of eminent domain which is exercised in laying out railways and determining many public rights is equally applicable to prevent the undue destruction of the forests, when it can be shown that such destruction is far-reaching and harmful in itself.

The State of New Hampshire foolishly sold all its "wild lands," about the heads of its principal rivers, "for a mere song," to lumber speculators twenty-five years ago,

but many of the other States yet own such lands in their own right, and with them as with the National Government, there is no difficulty in enacting the necessary laws, while as above stated, it seems to me that the application of the laws of eminent domain will permit all the States to accomplish the same purpose of forest preservation. It is often said that there are more acres growing up to wood in New England than are being cleared, but I am skeptical as to the truth of the statement, for I know that from the highest hill-top in town I cannot see half the woodland which was visible in my young days, and where a tree had to be climbed then, after reaching the summit, to get a view there is now a barren quartz rock with a few blueberry bushes growing up round it, whereas the eye has a clear sweep of from twenty to forty miles in every direction.

Should this process of devastation continue, as it has within my recollection, the hills of New Hampshire will in time be left as bare as those of Spain or Judea, which tax both faith and imagination, to conceive of as ever having been the promised Canaan, "flowing with milk and honey."

So much for prevention; let us now look at another side of the question, greater economy in the use of wood, and the substitution of other material for various purposes. I spoke of the loads of "oak logs," coming into the mill, to be cut up into "chair stock." Surely here is a chance for the mechanic and metallurgist to devise chairs and tables of brass or steel tubing, as well as bedsteads, which latter can be seen any day in New York, near Union Square, imported from Birmingham, and sold if my memory serves me, for \$20, as light, neat, clean and affording no harbor for noxious insects.

Another great object to be attained is a metallic railway tie or sleeper, to which purpose thousands—I know not how many—cords of wood are devoted annually. European engineers are experimenting on this matter, and it is high time we were attending to it ourselves. There are so many purposes for which wood is indispensable that we must use every effort to preserve it for them.

Another great cause of forest destruction is the manufacture of wood pulp for paper, and here nature offers a multitude of substitutes, many of them even better fitted for the purpose than wood, although at present the first cost may not be so low. The dry stalks of flax, where it has been raised only for the seed, all the plants of the nettle tribe, all the milkweeds, the stalks of the cotton plant, are all valuable paper materials, and I see in a paper before me to-day that some establishment in Kansas has succeeded in making paper from sunflower stalks! There are surely annual vegetables enough which can be grown in sufficient abundance to furnish materials for paper stock, without destroying the forests which preserve the other great necessary for its manufacture, the water!

Then again, like the inhabitants of all older countries, we must have more brick and stone houses to live in, instead of contenting ourselves with "shingle palaces." The extra first cost will in time be saved in insurance. Our ancestors found the New World an unbroken forest, and hewed their way into it with axe and saw in the best practicable manner. Their descendants, following the methods which were a necessity then, but are an extravagance now, bid fair to leave it a desert, like the Old World countries of which I have spoken already, and it behooves every one who is able, by voice or pen, to warn his countrymen in time of the dangers which may follow if the laws of Nature are heedlessly broken. SAM. WEBBER.

## Natural History.

### WHAT IS A SALAMANDER?

BY DR. R. W. SHUFELDT.

ALL sorts of opinions in history, both past and present, have been entertained as to what the nature of a salamander is. Aristotle, who wrote when science was comparatively in its infancy, believed that there were some animals so constituted that they were incombustible. In proof of this he cited the salamander, which "when it walks through fire, extinguishes it." Elian, too, evidently believed this to be the case, and although he is careful to state that salamanders are not born of fire, nor is that their natural habitat; yet when the bellows of the forger fail to quicken the flame on his forge, there is a salamander near, and the only remedy is to find and destroy it. Pliny, another sage of early time, firmly declared that the saliva of a salamander applied to any part of the body whatever would cause the hair to fall out; consequently we find Dioscorides referring to pre-

listic moderns refer to the spirits of fire as the salamanders of that element, and it is by no means uncommon even to-day to find people in plenty who still have the salamander myth in their minds, and will innocently ask if such a creature does not really exist, and possess the power to pass unharmed through an ordinary fire, quickly. I know a captain in our army whom I never could convince that those spiny-coated lizards of the west, popularly known as "horned toads," were not "some kind of a salamander, or a crustacean, that could pass unharmed through the flames of a camp-fire." And another officer of the same regiment, more open to conviction, had his mind disabused by me of the belief it had, that larval salamanders and the famous "Gila monster" were one and the same animal, and that their "breath was poisonous," and would cause certain death to the person who unfortunately happened to breathe it.

In Europe, from the very earliest times down to the present day, all the tail-bearing amphibia were considered by nearly everybody to be salamanders, and consequently popularly associated with the mythical creatures so named by the ancient and mediæval writers.

Over a century and a quarter ago or in 1768, a naturalist by the name of Laurenti designated a genus of vertebrated animals of the Class Amphibia, as the genus *Salamandra*, and to this genus biologists now restrict all the typical forms known to us as salamanders. They are most interesting creatures to study, and it is hardly necessary to add, that they are not possessed of any of the remarkable powers which the writers of the middle ages, and both before and since, would have us believe.

For the reader to fix the position held by the salamanders in the natural system, he must know that the great group we designate as the Amphibia, is primarily divided into four other chief divisions, these being known as the Urodela, the Anura, the Peromela, and the Labyrinthodonta—the last being all extinct and are known to us only through their fossil remains. In the third mentioned we classify the peculiar little worm-like or snake-like creatures of which the *Cecilia* is an example, but their natural history cannot occupy our space here. Anura include a perfect host of animals—the tailless batrachians—of which frogs, toads, and their kind are prominent examples. Lastly we have the *Urodela*, a group created to contain such remarkable and diverse forms as the Siren, the Proteus, the Amphiuma or "Congo snake" of the Southern States, the Menopoma, and then a subgroup of the Urodela—the *Salamandrida*, and it is the first subdivision of this—the *Mecodonta* that contains, among numerous other genera, the genus *Salamandra*.

Salamanders are found distributed very generally over nearly the whole of Europe, especially the central and southern parts, and they occur also in Syria and in Algiers. Great Britain, or the British Isles, lack them entirely, nor are the salamanders found in the fauna of the United States. These truly harmless little creatures secrete themselves under the debris of the forest in damp and shady localities, where they feed upon numerous kinds of insects and worms. They are viviparous, the thirty or forty eggs of the female parent developing in the oviducts at one time, and the young when born being deposited in sluggish, stagnant water, where they live and grow for some time. To the biologist, the development of the young of the salamander offers a chapter in science of great interest and importance, as they pass through a series of stages, or a metamorphosis of a very instructive nature. Neither physiologically nor structurally are they for some time as high in the animal scale as the parent animals. In other words, among other things, they possess external feather-like gills, and consequently are comparable with the adults of a group of creatures lower in the scale of creation than *Salamandra*—I refer to the *Perennibranchiata*.

I have said that we have no true salamanders in the United States, but what we do have, are a number of genera of amphibians, the representatives of which are more or less nearly allied to *Salamandra*, and of these genera, the genus *Amblystoma* is especially rich in forms, being variously distributed all over the country.

Some naturalists have fallen into the habit of calling them salamanders, and in reality in external appearance, one of our American "Elfs" or amblystomas, closely resembles a continental salamander. Like the latter, the young pass through a "tadpole stage," and a "perennibranchial stage" before assuming the adult form. In the latter condition they live in the fresh water pools, have four limbs, and breathe by gill-slits, that possess feather-like external gills. To better appreciate the appearance of the adult of one of these creatures, I submit here a drawing of our "tiger salamander" (*Amblystoma tigrinum*) made from a photograph that I succeeded in

THE TIGER SALAMANDER.

Natural size, from a photograph by the author.

pared salamander oil to be used as a depilatory. According to Pliny, too, the salamander was of cold complexion, and had the power of emitting a cold, venom-like aconite, but of such a virulent nature that it poisoned the wood of trees over which the animal crept, and bread baked with such timber would kill whoever ate of it. What was mythical and fabulous in the writings of the early authors, passed down with mediæval history as actual beliefs—beliefs strongly impregnated with similar absurdities. This is seen in that remarkable work of the time, the Physiologus, which still taught that a salamander could quench fire. But the Arabic Physiologus taught that it was a stone that possessed that property. Later, asbestos proved to be the stone in question, asbestos was the salamander of Marco Polo, and a kind of incombustible cloth was manufactured from its fibres. Thus the Arabs, who knew not whether a salamander was beast or bird, and in some way mixed it up with the Phoenix, came to believe that asbestos cloth was made either from the feathers or else the hair of a salamander. So Bacon and some other writers of his time called asbestos salamander's wool. Caba-

obtaining in New Mexico. During the aquatic existence of one of these amblystomas, they are known in Mexico and southwestern United States as the axolotl, what Cuvier, the great French naturalist, for a long time thought to be an elf tadpole. He was the more certain of this, inasmuch as they can in this immature stage reproduce their kind! Axolotls were even referred by naturalists to a different genus—*Siredon*, and were there retained for a long time. Some of them were kept and studied with great interest in aquaria at the Jardin des Plantes at Paris, and it was here, to the astonishment of all, that their true nature was revealed. Without any apparent reason one of the specimens one day suddenly was transformed into an adult amblystoma, and the fact threw a flood of light into the natural history of the entire group. Since that time they have been studied by biologists all over the world, and the writer of the present article had an excellent opportunity to gratify his own tastes in that direction during a sojourn in New Mexico for a period of five years. Through the Smithsonian Institution I sent upward of 300 of the living young of

the "tiger salamander" (see fig.) over the United States and Europe, where they were very generally distributed in the biological laboratories of the various institutions of learning. The results of my own personal studies have already been published (*Science*, Sept. 25, 1885), and are of too great length even to abstract in the present connection. Fingers and toes, and even more of the limbs, of these creatures will reproduce themselves, after having been amputated, and this is also an interesting fact about them.

Personally I have never examined the spotted salamander of Europe, but we read that the "body is covered with warty glands, which secrete a milky fluid of a glutinous

THE COWBOY—WORLD'S FAIR.

and acrid nature like that of a toad, and which, if not capable of affecting the larger and more highly-organized animals, appears to be a distinctive agent to some inferior species. Thus Laurenti provoked two gray lizards to bite a salamander, which at first attempted to escape from them, but being still persecuted, ejected some of this fluid into their mouths; one of the lizards died instantly, and the other fell into convulsions for two minutes, and then expired. Some of this juice was introduced into the mouth of another lizard; it became convulsed, was paralytic on the whole of one side, and soon died. This power is the only foundation for the long-cherished notion that the salamander was one of the most venomous of animals." The same writer asserts that "a copious secretion of this fluid might damp a moderate flame for an instant or two to which a salamander had been committed, and the animal suffer no harm," and this accounts for the other long-cherished myth!

Mind you, I do not vouch for either of the above accounts and only give them for what they are worth. They may be true, but I think it would take an heroic dose of salamander juice to kill a good healthy man, that is all I have to say on the matter.

This contribution will not have been written in vain if it succeed in convincing a score of its readers, who may have been influenced by previous and contrary ideas, that a salamander is nothing more than a small, harmless amphibian, with a history brimful of interest, and at any rate, in so far as man is concerned, its bite is not venomous, and if you chance to be bitten by one you can ignore such proverbs, as "if bitten by a salamander at once summon as many doctors as the animal has spots," or "if a salamander bite you, put on your shroud," and the like. Further, I beg of you not to put any faith in its saliva as being a sure cure for leprosy, nor in the statement of a former time that a salamander has the faculty of transmuting quicksilver into gold. Such myths are now only entertained by the hopelessly ignorant and superstitious. In the history of all that is and has been, no such miracles have ever been known to nature, and it is quite safe to predict that they never will be. Myth and miracle both have their origin in ignorance, and the only radical cure for either affection known to me, is a heroic dose of a full knowledge of the facts pertaining to any particular subject.

#### Another White Rattlesnake.

NEW YORK, Dec. 4.—I saw an article in the *FOREST AND STREAM* by El Comanche, about a white rattlesnake. In the spring of 1890 I was on a ranch in the southwestern part of Texas, about forty miles from Beville; and there rattlesnakes were very thick, especially after a rain. We have killed as high as fifteen in one day; and one week we killed on an average six a day and there were only five of us. One of the boys killed a rattlesnake that was very white except his rattles, they were light brown. At that time I said it was born that way; and the skin was thick and tough as any rattlesnake's skin. It was skinned and stuck on the back of a saddle. But that was the only one I ever saw or heard of. FRED SAVAGE.

#### The Linnæan Society of New York.

REGULAR meetings of the society will be held at the American Museum of Natural History, Eighth avenue and Seventy-seventh street, on Tuesday evenings, Dec. 12 and 26, 1898, at eight o'clock. Dec. 12—Frank M. Chapman, "The Mammals of the West Indies." Louis B. Bishop, M.D., remarks on the Breeding of Brewster's Warbler, with exhibition of specimens. Dec. 26—Mrs. Olive Thorne Miller, "A Rocky Mountain Study." B. H. Dutcher, remarks on the Fauna of Montauk Point, L. I. Frank M. Chapman, "An Analysis of the Bird Life of the Vicinity of New York City."

ARTHUR H. HOWELL, Sec'y, 212 Madison st., Bklyn.

## Game Bag and Gun.

### AT CAMP LUCKY.

WHEN we broke camp the last of February it was agreed to hunt there the following season. We had taken a fine lot of fur and shot all the game we wanted near by camp, and, best of all, there had never been a cross word or jar between us during the five months we were together. The last of September found us on our return over the same route as before, making the trip in the same length of time, but working much harder owing to the low stage of water. It was near sunset when we reached the landing, a short distance from the camp, whose roof was seen above the bushy banks. Our labor was ended, we would soon have supper in our tidy, cosy camp, and turn in early to enjoy a well-earned rest.

But our pleasant anticipations were checked on entering the camp yard on seeing it littered with piles of moose hair, shank bones and scraping frames. The story it told was plain enough. After we left a pack of Canucks from from over the border had come in on their annual raid on the moose yards, making Camp Lucky their headquarters. We knew of several yards in easy distance where it was probable there were twenty or more moose. We had shot but one. All the others, doubtless, were killed by these butchers and their skins unhaired to lighten them. We dreaded seeing the inside of the camp, and found it even worse than we expected. The ground was strewn with browse, bones and hair, shreds of filthy garments, cast off mits and socks. Our pine-plank table, our pride as a nice job of backwoods cabinet work, had served as a meat block. We had partitioned off a fur room at one end with cedar splits. That had been torn out for fuel and a large pile of dry wood went with it.

When we found speech I allow it was not to breathe a prayer. After fetching up our duflie and supplies, we jumped in with a will to get out the rubbish, for it was growing late. The browse in our berth followed the rest. And when it was fairly decent Joe went to break browse while I got supper. In a few days we had the camp set to rights, including a new partition, for which we found splits at an old logging camp a mile distant.

This done, Joe started one morning to look for beaver sign at a chain of ponds, leaving me to watch for caribou at a pond a short distance from camp. This pond was about a hundred rods in length and two hundred yards in the widest part. On either side a narrow bog extended the entire length, with many caribou paths, and was a favorite haunt of that game. The wind was blowing half a gale, but I got a sheltered position in the edge of the black growth. It was about ten o'clock, and I had about decided to leave when I saw three large bulls come on to the bog on the opposite lower end. They were large, and as near alike as so many peas, with great head-works. They came on deliberately, and halted opposite me. I at once threw up, but found it impossible to hold on so strong was the wind. A few yards in front was a stub; this I gained and got a good brace. As I went I calculated on the allowance for distance and wind. Holding well up and on the wind about 18 in., I fired, and down went the bull apparently stone dead. The one in front turned calmly around and snuffed of him. He offered another fair broadside, but I didn't want another.

To get to that side I started to the lower end to cross on a fallen tree. It was nearer to keep on the bog, but a

best chances for trapping and are always availed of. I have in mind a hunter who took sixteen sables at a moose that was shot and lost.

Some six weeks later we were assured the carnivora were feasting by seeing tracks of fox, fisher and sable leading in the supposed direction of the caribou. So one morning we started with a couple of traps in the trail of a fox. A fox has a better nose than sable or fisher, and so would take a straighter course; for until comparatively near the bait both fisher and sable tack and try back. We made no mistake, for the carcass was found about a mile in an air line from camp. The shot went clean through,

THE INDIAN WARRIOR—WORLD'S FAIR.

taking the liver in its course. The antlers were fine, with twenty-seven points. These we cut off with a portion of skull and pate for a trophy; then hauled the carcass on to a knoll, chopped off legs and neck, packing them on top, and cooped all in by driving stakes closely together around it, except an open space of some six inches at either end. Next we roofed it with flakes of bark from a dead pine, with large flakes projecting well out over the openings where the traps were to be, all weighted down with culis of green wood. Then were set two tilt-ups for the chain of each trap to be fastened to, so that when caught the animal would be swung well up from the ground, secure from injury by others, and as regards fishers, to prevent self-amputation, as is their wont. The result justified Joe's prediction, as we took off seven sables and a pair of fishers. PINE TREE.

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

#### Lost Opportunities.

VINCENNES, Ind., Nov. 23.—As I have before remarked, Ralph Waldo Emerson was a great man. In fact, he was so great that my parents named me after him, on which account I have always retained for him about the only lasting respect I ever had for anybody. I have always felt, since I was named after him, that he was right in my class. Ralph Waldo was all right, and as I have said, was way up in his business—of philosophy. Yet I have lately entertained serious doubts as to whether he knew how to dry out a rubber boot. A good many people don't. If Ralph Waldo Emerson, when he came from a day's walk in rubber hip-boots, had taken two tin tomato cans, capacity of about one gallon each, and had cut the top and bottom out of each, and had inserted the thus cylindrical cans, one in each boot leg, and had then hung the boots up in a warm place by the straps he would have had a scheme for getting the air into and the damp out of his boots, which would have been philosophically correct and useful. The trouble with Ralph Waldo Emerson was he didn't seem to catch on to his opportunities. You may search faithfully in his writings on Power, Wealth, Culture, Beauty and all that, but you will find no hint as to a method of drying rubber boots. Some men seem to just throw away their chance. Ralph Waldo had a real good start, once, but he couldn't seem to keep up with the procession, even though he did hitch his wagon to a star. This way of drying out boots I found to be practiced by Mr. John Balmer, here at Vincennes, with whom I have been continuing my quail shooting for a week or so more. I have been chained to business here.

#### The Second Oldest Town.

Vincennes is the second oldest town of the United States. Mr. Reynolds, the editor of *FOREST AND STREAM*, has written a very interesting book about "Old St. Augustine," and could make one just as interesting about old St. Vincents, which even yet has a strong French flavor, transmitted from the early days. Once upon a time, a long while ago, three French explorers, one of them, maybe, De Soto, struck the Wabash River on their way to the great unknown inland country of America. The Wabash was good enough for them and they went down it a-boiling, because she was high that year. When they had passed the submerged bottom lands for miles and miles, and seen nothing but yellow jaunders and opossums in the woods, they came to a high gravelly knoll, on the left bank of the river, and here there was the village of some friendly Indians. At this point the voyagers paused. They lived there for a year or more, and one of them married an Indian girl or so, in a fit of abstraction, and remained there when the others pushed on down the Wabash and the Mississippi, to eventually get it in the neck somewhere in Texas. Still, the fellow that staid behind didn't have any the best of it, for he died of fever and ague to a moral certainty, though he sort of made a

AMERICAN GAME IN STAFF AT THE WORLD'S FAIR.

family of beavers had built a dam that season, so it was flooded in places and I struck into woods a little way. With a parting glance at my game, which still lay quiet, I hurried so as to skin it out while warm, but I was perhaps twenty minutes on the way and only to find the caribou gone. In getting up he seemed to have swung around as on a pivot, pressing down the deep moss making a basin which was full of crimson water. I felt pretty sure of finding him, however, as his track led into a plain path which the others had taken. Evidently the chilly water stanchied his wound, which perhaps revived him, as not a drop of blood was seen after a few first steps. All kept in the path till it terminated a quarter of a mile at a low, hardwood ridge. Here the whirling leaves stopped me, so I returned to camp.

About sunset Joe came in with a bunch of ducks and partridges and a good report of the beaver. The incidents of the day were talked of till bed time, and Joe allowed we would find the caribou later by following the animals that would follow and feed on it, in which case it would be worth more than if taken to camp. Carcasses of game as well as the offal where game is dressed out, offer the

nucleus for a white settlement which I presume was the second stopping place or rallying ground made by the whites on this continent. The historian can put these facts into longer and better shape, and Mary Hartwell Catherwood can get incident for another early-Indian romance, than which not even any of her earlier stories shall be more interesting, more thrilling or more American.

#### Survivors and Descendants.

I am not sure it was De Soto who went on down the river after the building of the city, but it must have been one of the De Soto family who staid behind. Allowing for the natural changes wrought by time, one might thus account for old Sal Soda, still prominent in that region, as he who runs may read, if he tackles one of the country biscuits. Vincennes is in the heart of a very permanent and enduring sort of country. Round about her stretch green and fertile farms, to be sure, but the forest primeval still lines the wimpling Wabash, and under the walnut and hickory trees there prevail the ways of other days. Rude shanties, every other one deserted, and clearings overrun with shrubs and vines, the tears of nature at her scars, gash here and there the silent woods. Even today, there are wild turkeys in numbers in these woods, and squirrels many and many a one, and quail, and yellow jaunders, and rabbits, and feve'n-aig', and sal soda, and coffee, which you will do well to take in capsules. It is, in the woods country, all much as it was in De Soto's time. Half of the countryside obstinately clings to its age, or its youth. The other half bustles on, commercially and modern. The first half shoots still the old muzzleloading rifle. The latter half uses the hammerless shotgun, and kills the quail which the first half overlooks and unconsciously protects.

#### The Quail Supply.

Mr. Balmer and I have hunted in different directions about town, and he tells me the quail are far less abundant than is usually the case here. Still, this has not troubled us, for we have had all the shooting we need ask, bagging in all our trips up to date I suppose, nearly 150 birds, less than a dozen to the gun daily. Our

AMERICAN GAME IN STAFF AT THE WORLD'S FAIR.

biggest day was over at Bicknell, where John Mayfield took us out, leading us in part, I fear me, over the trial grounds of the U. S. Field Trial Club, for which courtesy I beg to thank the members. Certainly these preserves are well stocked. In our few hours of shooting in that day we put up 15 bevs, all large and full. Without following the singles very much, and killing only two or three birds out of each bevy, which would benefit rather than injure next year's crop, we bagged 37 birds, intending to stop at the three dozen mark. On that day Mr. Mayfield took out with him Mr. J. Freeman's field dog Nellie Hope, a very bright and snappy worker, and a young dog, St. Blaze, belonging to Mr. Charles Baggott, of Cincinnati. Mr. Balmer had along his old Duke, and between the three we got a lot of work on birds, and had really a most delightful day in every way, not the least charm of which was the dinner we ate at the Widow Horton's farm, four miles out from Bicknell. Three such hungry men I warrant the Widow Horton never fed before.

At Bicknell we saw a lot of dogs of all sorts, among these my old friend, Dame Bang, now the property of Mr. Peabody, of Cincinnati. Dame Bang, I understand, scorned to monkey with field trials, and didn't get a place. She shows much more *embonpoint* now than when I saw her last. Also in George Gray's string we saw Stride-away, just sold for \$1,000 cash, a good price for a youngster.

We saw and shot over dogs and dogs, but in the end always came around to Duke, Mr. Balmer's old reliable meat dog, of whom I am constrained to say something more, because the longer I know him the more affection I have for him. Duke is the sort of dog of which we have too few—the old-time dog, with no antecedents, no records, and no limits. Duke has hunted for us now eight days, over all sorts of country and in all sorts of weather, and he is as good as new to-day, in spite of his unknown weight of years. As I said earlier, Duke has only one eye. His mother only had one eye, and his sire may have been One-Eyed Riley, for aught any one knows to the contrary, although Riley is an Irish name, and Duke is a Scotchman, being one of the despised Gordons. As if the breed of a bird dog made any difference, after he has proved that he has nose, and legs, and brains. All these Duke has. This week I saw him worry a skunk, and thereafter go right on pointing birds, just as if nothing

had happened—a thing whose possibility I have heard ignorant folk deny. As to Duke's legs—well, a big mastiff mauled him up yesterday, and ate one of his legs nearly off, but on the three remaining he manages the deliberate trot which serves him as a field gait. As to brains—well now, you would only need to shoot over him one day to see that he has brains. He knows bird hunting

AMERICAN GAME IN STAFF AT THE WORLD'S FAIR.

as well as a man, and he will swing around ahead of a running bevy, and point them surely in his low-headed style, and then retrieve, and point another bird while he still holds the dead bird in his mouth—another thing declared mythical sometimes. He will break shot, in his old-fashioned way, because he is used to seeing meat, and loves the touch of feathers in his mouth, but his sort of breaking shot is not hard to condone, for he is always after the next bird also. Moreover, Duke is a large-hearted, magnanimous fellow. When the puppies steal his points, and monkey around and bother him, he does not resent it, but holds his point, and you can wager there is something there, too. And when the erratic and ignorant youngsters straighten out on a point, he will back any one of them as far as he can see him, though he must often know it is only courtesy on his part. I recall a pretty picture out of yesterday's day, which Mr. Adam Balmer, of Decatur, Ill., and I put in together. We had out only old Duke and Gwendoline, another of Mr. Balmer's lot, and one with a nose keen as a brier. It was a cold, windy day, and the birds were wild as deer. We had a bevy spread on dry leaves, a situation which a dog must be a good one to master. Time after time the little one got ahead of Duke and snapped up the single points, and he in his slow, deliberate way, backed her every time. At length he started on a puzzling trail of his own, and had just located his bird when Winnie sprang in ahead of him, and stole the point, crouching all twisted to one side. I know Duke was angry then, but he never flinched, though he did insist on retrieving that bird himself. The two made a pretty field scene as they crouched, motionless and eager, and I can see it keenly and sharply outlined even now, as I think it will long remain in the mind.

Duke has a bare spot on his nose. It is a mere trifle. One day he followed his master upstairs in a grocery store. Becoming lost or frightened he jumped out of the second story window, smashed through the awning and

AMERICAN GAME IN STAFF AT THE WORLD'S FAIR.

landed on his nose on the stone sidewalk. It is hard to down a good dog. Duke has been accidentally shot twice, this by his first master, a market-hunter. Once he was shot square in the side with No. 8, and once in the head with No. 6. This was where the poor fellow lost his eye. His remaining eye is big and soft and brown, a luminous, kindly eye, with the melancholy in it, but with no harshness in its glance. Slow, deliberate, awkward, with no style about him at all, Duke is plodding on toward the end of his life, doing his duty every day, unenvyous, unboastful, charitable, kind. I meet a man like

that once in a while, and I love him every time. These are the great characters, man or dog. By what formula, and through what type, shall we produce these characters, man or dog? What kennel Guelph or Ghibelline, my friend Waters, friend Johnson, light men all of ye, and not profound enough to love a meat dog without "type," or "quality," or what not—what one can theorize this out, and say how or why such a man or such a dog is born? Nay, I can say why myself. It is to make us love humanity and caninity the more.

Type me no types, when it comes to choosing friends. Dukes in Indiana, Dick (dead now) out in Kansas, Rex (long since dead) of Iowa, Ben of Illinois—I have known perhaps a dozen of these dogs that I call great, and never a one had a reputation. Such dogs are like gold—where you happen to find it, *sans* science and beyond the province of theory. The best of kennel science can do no more for sportsmanship than to give us more of just such dogs. Perhaps, when professionalism, and rancorousness, and jealousy and all the uncleanness of poor commercialism shall have had their day in the world of dog—a day now speeding to its natural waning, for we must have better ways for so great and growing an industry; we shall see or at least hear, of more dogs like these nameless ones, which you buy for \$25, and wouldn't sell for their weight in precious stones. Then, my friend Johnson, my friend Waters, and all other men great in kennel wisdom, we can each declare and believe that he has the best dog on earth, but we won't necessarily despise a dog because he has cockle burrs in his tail or quail feathers mixed up with his back teeth as Duke has.

#### A Side Hunt.

I notice the words of wisdom the editor of FOREST AND STREAM has for the question of "side hunts." Shall it be confessed, I have just engaged in a side hunt myself. The Chief boasted of his prowess on quail, and it seemed well to sit on him some, therefore we agreed to shoot score for score on quail for two days, the low bag at the end of the second day to pay for a supper for the two, or for such friends as might be about at the time. I had along two guns, a cylinder Lefever, and a Smith, nearly cylinder right and choked left. The Chief thought he

AMERICAN GAME IN STAFF AT THE WORLD'S FAIR.

would rather shoot one of these than to use his own gun, a heavier Parker. We agreed to shoot these two guns, changing at the end of the first day, and the Chief allowed he would rather shoot the scatter gun first. Unfortunately for him he didn't know which was the scatter gun, and so I thought it about right to give him the close gun first, telling him it was the scatter gun. "All you have to do is to point over in the direction of the bird," I told him, "and you'll get it sure if you shoot quick enough." Well, he shoots his left barrel first by habit, and so he was trying to follow instructions with a gun whose first barrel wouldn't spread six inches in the firing distance. Somehow he didn't get very many, and I told him to shoot quicker, and he did; but still he didn't get them. The next day he said he guessed he'd rather have the chokebore after all. So I gave him the cylinder and told him to take his time. "All you have to do with this gun," I said, "is to wait till your bird gets steady on the wing, take plenty of time and don't shoot too quick." The Chief followed copy, but he had worse luck than before. He was awfully deliberate, and sometimes when we saw him waiting on a bird with that old scatter gun (Mr. Balmer was in the secret with me) we could hardly keep respectfully quiet. The result of the FOREST AND STREAM staff side hunt need not be told. All the Chief said when he was enlightened was, "Well, I hadn't any too blame much confidence in you anyhow, but I didn't think you'd do a low-down thing like that."

#### The 'Simmon Fruit.

Down in Indiana grows a wild sweet fruit, derided, mocked at, unappreciated—the persimmon. In late November, after the frosts have taken out the pucker and brought forth the blended sweets of this odd woods product, you shall go far before you find a morsel to assail your palate with a keen savor. To walk the brown woods till lunch time and then to sit you down to rest and eat your hunter fare, beneath a 'simmon tree, with the ripe, delicate fruit about you for dessert—you first having duly counted and spread out before you for admiration the brown birds from your game pockets—now, now, now, this is not a bad world at all so long as it has this chance within it.

"Forest and Stream" was First.

Nov. 24.—FOREST AND STREAM, printed in New York, was the first paper on the ground at Bicknell with the report of the U. S. field trials. This I know because I was

there at the time it arrived. The tardier rivals had nothing to offer readers about the trials for they had already seen the FOREST AND STREAM report. It is no wonder that the sporting world turns to FOREST AND STREAM. It stands to reason. The world moves.

At Vincennes it was my fortune to attend the trial of McLin, the fiend who burned up the dogs at Bicknell. As stated elsewhere, McLin got three years in the penitentiary as a consequence of his crime. The verdict gave general local satisfaction. There are stern features if need be in sportsmanship.

#### About the Midway.

Mr. Howley writes further: "My Thursday evening dinner *pièce de résistance* is FOREST AND STREAM. I read with especial interest the thrilling experiences of yourself and Mr. Waters while among the natives of the Midway in search of copy."

Evidently Mr. Howley is laboring under a mistake. So also must be Mr. and Mrs. Claude King (of *Sports Afield*, Denver) whose card left for this office says: "Called to offer our congratulations on your serio-comedy, 'The Midway Plaisance.' That was, honestly, great."

There must be a wide-spread misapprehension out somewhere about this, because Mr. Wilbur Dubois, of Cincinnati, writes the same thing, as follows, to Mr. Waters:

"The 'Staff Story of the Midway,' in FOREST AND STREAM for Nov. 4, is truly great—one of the brightest extravaganzas I ever read, and all delicious fooling. Besides the wild fun I got out of it, I picked up a bit of information that is worth the price of the paper for a year, namely, that Javanese cocoa will cure canker in the ear. Why did you keep this back from me so long? I am fond of cocoa myself, and while treating my setter this summer I could have had him in the dining-room at the breakfast table, and could have sipped half a cup of cocoa into his ear just as easily as not. You ought to tell 'Ashmont' about this for his new book.

"It is a pity Katie foundered on bum-bum candy, or we might have borrowed him for our trip South. She had fed so miscellaneous on Ottomans, Amazons, and wild men from Borneo, however, that I fear he would have found our Christian fare too tame for her oriental appetite, and she might have died on our hands, as Mollie O'Brien did on Mr. Hough's. By the way, remembering Fidos Achatas, it is a wonder Mr. Hough didn't say that Katie's other name was Fido. Katie, however, was good enough for a dog like him (I mean like Achatas, not Mr. Hough), for aside from her unspeakable cannibalism, the human mind revolts at his drinking seventeen cups of heathen coffee, clear, without cream or sugar, all in a single night. After making such a spectacle of herself, he deserved to be carried out by her hindlegs at the end of the play. I see I have got the sex of this classic animal a little mixed, but I haven't been able to make up my mind whether it was male or female.

"Was Katie's life insured? After his experience with Mollie O'Brien I should think Mr. Hough would have taken this precaution, and yet, if you had suggested it to him he would have rejected the proposition with disdain."

Mr. Dubois is away off. Everybody is away off. To ascribe the wild and vaporizing imaginings of a shorthand writer to two such men as Mr. Waters and myself is to lay a charge which needs no refutation. I trust our dignity and elegance of diction is too well known to permit even the momentary existence of a suspicion to the effect that such is our usual style of conversation, or our manner of conduct. Is it then always to be proven true that to be great is to be maligned?

#### An Echo of the Fair.

Mr. F. A. Whitman, of Macomb, Ill., writes and says he wants his name pasted in the FOREST AND STREAM register, wherever that now may be, for that in July he tried to register and couldn't, because the lady attendant was so busy talking to her best young man. It is written and it shall be posted. Names there have good company.

#### The Carlin Party Rescue.

Dec. 2.—In regard to the rescue of the Carlin hunting party, who were snowed in in the Bitter Root country, a special to the Omaha Bee had the following details:

The lost party consisted of W. E. Carlin, J. H. Pierce, A. H. Himmelwright and M. Spencer, guide. They were in bad shape when found, being out of provisions, nearly starved and barefoot, and with scarcely any clothing. They were slowly making their way down the river. George Colgate, the cook of the party, gave out a few days before the rescue and had to be left, and it is feared may have died. All possible will be done to find him dead or alive. The rescue and the rescuers are expected here on Tuesday, and General Carlin will meet the party here.

The story of suffering, desperation and hardship told by the lost hunters was frightful. Ever since the heavy snows set in in the Bitter Root Mountains, they told Lieut. Elliott, they had been making an effort to return to Kendrick. For many days they had battled with the mountain blasts and driving snow, slowly beating their way down the Clear Water in an effort to reach civilization. Their progress was impeded by the swollen river, which was often blocked with floating ice, rendering passage exceedingly difficult and dangerous. They managed to cross the Clear Water in several places at great risk to their lives, being compelled to wade the icy current up to their necks or swim amid the floating blocks of ice and snow. Nearly all the horses died of cold and starvation.

The men were put on half rations of bacon and bread. Their shoes had become worn out from constant tramping over the mountain rocks and their clothing was torn into shreds. At last the struggle became too great for George Colgate, the cook of the party. He became utterly exhausted and was unable to proceed further. Colgate realized the situation fully and advised his companions to attempt to save themselves.

When Lieut. Elliott and his snowshoers came upon the exhausted men in the Middle Fork of the Clear Water they were bravely fighting their way through the snow. The reception they gave the gallant officer and his men was more than a welcome.

909 SECURITY BUILDING, Chicago.

E. HOUGH.

#### Pennsylvania Game.

MUNCY, Pa., Nov. 31.—A flock of about twenty wild turkeys was seen just across the river from this place the first of this week. The boys are after them. The 9:39 on the P. & R. the other morning scared up a large flock of quail. We made for the spot where we marked them down, when lo and behold! there it was, "No trespassing," etc., and the quail were safe. Numerous reports reach us concerning the deer hunting. A party of Williamsporters bring in five from the vicinity of Trout Run. Hon. C. W. Williamson and son have killed six on the headwaters of Larry's Creek. Some successful ones are reported from English Centre. A man by the name of Zach Clark killed a large bear near Brookside. More deer have been killed in the northern part of the county for the last three or four falls than before for years. There is little or no hounding done, and they increased immediately when this work was no longer continued. J. M. E.

#### DEER IN MICHIGAN.

LANSING, Mich., Nov. 28.—The deer season is closed. The woods have been full of hunters who came from all sections of the country, and it has been positively dangerous for a man to go into the woods. I have not learned of any serious accidents occurring, but it has been remarked often by those who have been in the great north woods and have returned home that it was a wonder that half of the hunters were not killed by careless shooting.

A couple of years ago Mr. F. D. Simonds, of Columbus, Ohio, came to Lansing and invested in real estate. He has a beautiful piece of woodland covering nearly forty acres. He has platted the entire property and, as Englewood Park, it is known the State over as one of the finest additions to our city. Mr. Simonds has made a handsome fortune out of his Lansing venture, and as he accumulates valuable real estate, his love for the gun and his enjoyment of a life in the woods quite overcome him. Early in November he got out his Winchester .45-70-405, and packing his grip the morning of the 5th, he started for the woods. He first put up at the Ingleside Hotel, Charlevoix, where he spent a couple of days in talking with the people who came into the village, and trying to find a favorable point to spend a few days with a fair prospect of getting a shot at a deer. His investigation led him to East Jordan, and from East Jordan he went to a little four-corner place in Antrim county called Chestonia. Here he put up with a settler, Mr. S. C. Wilcox, and from this place he started out each morning on his hunt. This section of country is partly settled up, but there is an immense body of hard wood timber, and in the woods at several places he found hunting camps.

For three days he ranged the woods for miles around and did not even get sight of a deer, although deer was said to be fairly plenty. Getting discouraged he started for home, but the night he reached Charlevoix it began to snow, and in the morning the snow lay on the ground about three inches deep. This condition of things encouraged him somewhat so he went back to Chestonia. The next morning early he started out, and he had hardly reached the woods before a big buck bore down upon him, and, passing about twenty rods to one side, he exposed his whole side, giving Mr. Simonds an opportunity to send a 405-grain ball through his left hip high up. The big fellow tumbled to the ground with his leg smashed to pieces, but he very soon got up and started off on three legs and made good time for the Jordan River, about eight miles away. Mr. Simonds followed him to the river, and supposing that the buck had crossed the river he plunged into water and made the other shore, but as he was not able to strike the trail he re-crossed the river and, after searching for a short time, he again found the trail, and after going about half a mile he found the buck taking a rest in a little clump of bushes. The buck by this time had bled a great deal and had got so stiff that he could hardly rise, but as the hunter came up he again attempted to make off, when he received a 405-bullet through the neck, which finished the hunt. Mr. Simonds found his way out by the aid of a couple of hunters who heard his shot, and being short of meat the hunters were glad to assist him for a portion of the carcass. Mr. Simonds brought home the skin, which he has sent to Columbus to have tanned for a rug, and the head, with the big five-prong horns, he is having set up for his library. He is well pleased with his hunt, but thinks deer are too scarce in the section where he was to make it an object to go there at any great expense, thinking to get many deer. The hunters in that section use the .40-60 mostly; but one whom he met had any other, and that was a .38. Mr. Simonds got lost the first day out, and but for coming across a straggling hunter, like himself, he would have had quite an experience of a night in the woods. There is a trail in the woods which is widely known as the Simonds trail, and as he struck the big buck while on this trail he quite naturally thinks that the Simonds trail is quite a famous place. JULIAN.

WEST BRANCH, Mich., Dec. 1.—Deer were very plentiful this fall, and still there were very few shot. There was one crew of thirteen hunters who came here from Ohio who did not get a deer, and they are not the only hunters that went home empty-handed. Our local hunters had the best luck. One gentleman in this town shot six deer the past week. He shot two deer with one bullet. The number of hunters is increasing each year. Forty-three were camped on a lake near here and it is lucky that no one was killed. Rabbits are very thick but partridges are few. O. N. B.

CENTRAL LAKE, Nov. 28.—Last Saturday closed the lawful deer hunting in this State, and as far as I have learned the hunters in this region have had pretty good success. There was a good tracking snow toward the last of the season, which has seldom been the case for several years past. In fact it fell in Otsego county to a depth of three and a half feet, which was not only unusual, but decidedly too much of a good thing.

Some deer have been shot in the Jordan and intermediate swamps, but the most I think were found in the great forests of our eastern counties.

One party of eight who went somewhere in the direction of Alpena killed sixteen. They saw bear signs but had no shots at bruin.

Here the snow is a few inches deep, the lake not frozen as yet. The "boys" have planned a "side-hunt" for Thanksgiving day, but there is little game here now worth shooting. I am glad to be able to say that I never took part in one of those "side-hunts." I regard them as an abomination. KELPIE.

#### New York State Association.

BUFFALO, Dec. 1.—To all Members of the New York State Association for the Protection of Fish and Game: The annual meeting of this Association will occur on Jan. 11. Your attention is thus early called to the fact that you may have ample time to prepare for it. Full and strong delegations should be selected for this meeting, for its proceedings will be important. The work of the Association becomes more and more important as the years go by, and the people of the State are looking to it for good service in its sphere of duty.

The Association now has the favor and confidence of State officials whose creation was a direct result of the agitation of the subject of protection. Those officers and the Association are now in happy accord, and with such

forces combined a great power can be exercised in the work of saving fish, game and the forests from annihilation, and cheapening fish-food for the masses.

Let us rally in large numbers and with fixed determination at this annual meeting to be held at the Hotel Yates, in Syracuse, beginning at 10 A.M., Thursday, Jan. 11. It is expected that the Commissioners of Fisheries, the Forestry Commission, Chief Protector Pond and his deputies, the representatives of all the hatcheries, and men both in and out of the State who are prominently interested in the work will be present. The attendance should be very large and representative, such as to command the attention and respect of the good people of the entire State.

We feel certain that you will see to it that your organization is fully represented by earnest men.

JOHN B. SAGE, Secretary-Treasurer.

#### TEXAS HAS ATTRACTIONS.

VICTORIA, Texas, Nov. 24.—We have had a protracted drought in Texas during the past summer and fall, and in consequence the grass is short and the cover for quail so poor that they do not lie well for the dogs, although we have a goodly number of them, perhaps as many as we usually have.

The best shooting is along the rose hedges inclosing the pastures, where the quail gather for protection from hawks. Several fair bags have been made by our hunters during the past few weeks. Two gentlemen went fifteen miles to the hedges and returned to our little city by 4 o'clock with sixty-seven quail. A friend and I made the same trip and returned with forty-four birds. We found them very wild and frequently had to follow them a quarter to half a mile before we got in shooting distance of them, after they left the hedges. We found the best shooting along the hedges. One of us would take one side and one the other, and thus get shots when the birds flew out no matter which side they flew. We found numbers of empty shells along the hedges which showed conclusively that a great deal of shooting had been done along there.

Besides quail there have been several deer killed in the wooded bottoms of the river near town. A party of four who went about thirty miles south from here into the O'Connor Pasture on the west side of the San Antonio River, killed four deer and report having seen more than 200. Not having any way to save the meat, they did not try to kill more, as they found ducks and geese abundant and killed a number of them.

We are short on fish however, which have died in large numbers owing to the drying up of streams and lakes during the drought, and the prospect is poor for good fishing in the near future.

With our mild winters when snow is almost unknown, I know of no place where the conditions are more favorable for winter hunting than South and Southwest Texas. In almost any one of the coast counties from the Sabine River to the Nueces, first-rate sport can be had and ducks and geese and quail are abundant. GUY.

#### MAINE BIG GAME STATISTICS.

BANGOR, ME., Nov. 26.—Editor *Forest and Stream*: In your issue of Nov. 7, we notice "Special" states, that "there was never anything like the exaggeration of the amount of game being killed this fall." Now as he has made several misstatements, we take up our pen to correct some of them. In the first place he quotes J. G. Rich as stating that fully "100 deer are being killed daily. If he will take the trouble to look up Mr. Rich's article under the date of Nov. 4, he will find that it reads "100 deer weekly."

As we are in the best position to know about the quantity of big game that is killed in Maine, we will state that 100 deer a week is a rather low estimate of the number. We have counted between 300 and 500 carcasses of deer, caribou and moose that have come into or through Bangor alone thus far this fall; and they constitute only a part of what are killed in the whole State. We think that there will have been at least 1,800 deer, caribou and moose killed in the three months open season this year.

Now a word in regard to heads. Up to Nov. 7, we received for mounting at our Bangor establishment alone 16 moose, 13 caribou and 91 deer heads, instead of 10 moose, 5 caribou and 86 deer heads, as "Special" has it. The gentleman who informed him either had not been in our place, or if he had must have made a very poor guess. Why, for the week from Nov. 18 to Nov. 25, we have received 25 deer and one caribou head, and with good snow storms for the next month, we estimate that the total number of heads which we will receive from our two establishments, Bangor and Rangeley, will reach surely 250. Now as there are several other taxidermists in Maine who each get a few (John Clayton of Lincoln will probably get nearly 100), we estimate that there will have been fully 500 heads mounted in Maine this season, and of course quite a number of heads are carried home by sportsmen from out the State to be mounted by local taxidermists; and furthermore, certainly not more than one-fourth of the animals killed have heads that people think worth saving, so many of them are does and fawns. So you can see that 1,800 is a very good estimate. We have received heads from a great many of the people whom "Special" mentions as having killed big game. We are not writing this article as an advertisement but as a perfectly correct statement of the facts of the matter.

The weather is very cold, ponds are freezing and there is snow in northern Maine. S. L. CROSBY & CO.

INDIAN ROCK, Me., Nov. 27.—Deer are very plenty, as you already know, but from the best information I can get through guides and hunters not more than one hundred have been killed in this section, comprising Oxford, Franklin and Somerset counties. I have been in the woods a few hours (since snow came) and find tracks as plenty, or more so, than I have ever seen before. Bears are frequently found on beech ridges gathering beech nuts to prepare themselves for winter. Billy Soule killed one a short time ago and three more were seen near where it was shot. There have been but two days of good still-hunting this fall. A crust formed soon after snow fell and deer were on the alert.

C. J. RICHARDSON.

Delaware Game is Going.

REHOBOTH, Del., Nov. 19.—The ducking so far has been very poor this fall. There are a good many small ducks, teal, or what they call them here, "butterballs," being the most numerous. A party came down here from Philadelphia last week and spent three days down Rehoboth Bay at a gunning shanty; they only got two geese and about half a dozen black ducks and teal. I have only shot about fifty teal this whole fall, but I only go to a pond a short distance from my office, and only stay an hour or so. There are so many gunners that the game is very wild. Nearly every farmer and his hands have guns, and as they have nothing else to do they go and scare the game up. Rabbits and squirrels they have been shooting at ever since last August, and they are about exterminated now. I did raise two coveys of partridges early in October, but as I have not seen anything of them lately I think they are all killed. Although the game law of this State does not allow killing them at all for three years, the people here claim and take the right to do as they please on their own land, and as no one seems to care they kill off everything. C.

West Virginia Game Scare.

CENTRAL CITY, W. Va.—At the beginning of the shooting season, which began Nov. 1, our sportsmen soon ascertained that the severe winter had been destructive to the quail, and they did not pursue their sport with characteristic enthusiasm. This is the first season since my residence in West Virginia that I did not take up my gun and start for the fields on the opening day. Others seemed to feel as I do—that with the scarcity of the birds there should be little shooting. A few days ago I went out without a dog and started three coveys, in all perhaps 25 birds. I saw more than I expected to see. But the strangest part of the hunt was that I didn't see a single rabbit, though I beat the best of ground. Got but 3 quail, leaving, you see, a good lot for seed.

Ducks were plentiful during their migration a week or so ago, and the reverberation of gun reports told the story of effort more than of success, considering the amount of game brought in. I think our fowlers do not know the stratagem necessary in duck shooting on the Ohio—at least didn't practice it. \* \*

California Shooting.

LOS ANGELES, Nov. 21.—The ducks are with us. Canvasbacks are reported as being plentiful at Bear Valley Lake, about sixty miles from here, and large bags are being made by those who have the time for the trip. A well known sportsman of this city bagged one day this week sixty-three ducks in eighty-seven shots, all single birds, and he only shot from daylight till 9 A. M. His bag included eight mallards and one canvasback. I was out yesterday and killed a brace of those choice birds. I presume that the recent cold weather and high winds drove the flight down from the north. The majority of the birds bagged so far have been widgeon and green-wing teal. Quail shooting in the immediate vicinity is not what it might be, and one has to go about thirty miles to get really good shooting. CULPEPPER.

Loyalty and Disloyalty.

CENTRAL CITY, W. Va.—We have pot-hunters and law-breakers here just as other places have them. Some boast of their disregard of the laws. To such I have put the question, "Isn't it dishonest to violate the game laws?" "Well, no, we can't see it that way," they answer. "But, see here, don't you defraud the honest, law-abiding citizen when you kill game before the season opens and thus take the game that was his as much as yours?" A veteran, who talked loudly of loyalty, exhibited his inconsistency in declaring his disregard of the game laws. I reproved him by telling him that disobedience to any reasonable law, especially, is disloyalty. In principle, if not in degree, unlawful shooting of game is rebellion as well as secession. XX.

Nebraska Game of 1893.

SUTTON, Neb., Nov. 29.—Quail are reported as being remarkably plentiful in this vicinity this fall and good bags are still being found within a few miles of town. Other game is scarce and no chickens at all this year, and owing to the ponds being mostly dry no ducks have been seen. Cottontail rabbits are, however, quite plentiful and this morning's light snow insures plenty of sport for those who are able to go out. Being unable to go, I have to content myself with wishing good luck to the fortunate ones. W. R. H.

In the Adirondacks.

KEENE VALLEY, N. Y., Nov. 20.—O. M. Crawford caught a small bear in a deadfall a few days ago. Bear are reported to be very plenty this fall. Deer are very plenty where we hunted now. I hope they will change the law and have it later. That is what every good hunter says. I went to North Hudson hunting partridges the other day; did not have any luck; they are very scarce and wild this fall. E. W. B.

Feathers for Bonnets.

THE veteran trapper and white egret hunter Smith left for Mexico via San Francisco Wednesday. Mr. Smith went as far south as Tepic on his last trip. He received a little over \$3,500 for his skins and bird plumes, which he gathered in eighteen months.—*Yuma (Arizona) Sentinel*, Nov. 25.

Massachusetts Sportsmen in South Carolina.

BLACKSBURG, S. C., Nov. 25.—Messrs. J. H. Wesson and O. E. Hodskins, of Springfield, Mass., are registered at the Cherokee Inn, and will spend some time hunting in this section.

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

MODERN SPORTING GUNPOWDERS

In the Light of the Public Powder and Primer Tests Carried out at Chicago and Carney's Point, New Jersey.

BY ARMIN TENNER,

Expert in Gunpowder, Guns and Ammunition.

[Continued from page 473.]

The Chronograph and its Connections.

The electric current *A* passes through a fine copper wire stretched across and immediately in front of the muzzle of the gun, as shown in Fig. B, and the electro-magnet *a* on Fig. A; the electric current *B* passes through the electro-magnet *b* and the target placed at a certain distance, for taking the velocities of shot charges, preferably at 40 yards, from the gun. The figure "30 m." appearing on Fig. B stands for 80 meters, equal to about 100 feet.

The target is so arranged as to rest against a metallic contact *z* and is pressed against this by means of the spiral spring *s*.

The electro-magnets *a* and *b* on Fig. A, carry, as long as the current remains closed, the cylindrical-shaped weights *α* and *β*. When the two currents are opened, *a* and *b* lose their magnetism, and thus the weights are caused to drop.

In quitting the muzzle of the gun the shot charge tears the wires and thereby opens the current *A*, causing the weight *α* to drop, a certain time thereafter the pellets reach and strike the target and by their force press the latter away from the contact *z*, opening thus the current *B* and forcing the weight *β* to drop. In falling the latter strikes on a round plate *g*, releasing a knife *m* held up to this time by the hook *h*. The knife *m* is actuated by a spring which causes it to move quickly and with considerable force in the direction of the falling weight *α*, nicking the zinc-sheath of this at a certain point.

If the shot cloud in traveling from the muzzle to the target has required comparatively a short time this mark made by the knife will be found near the middle of the weight, but if more time is consumed by the traveling shot, the mark will appear further up on the rod. The distance of this mark from a certain zero point on the weight shows and represents the time consumed by the shot charge in breaking the two currents, and with the aid of a graduated rule the time actually required by the shot charge in reaching the target can now easily be determined in accordance with the rules and on the basis of the laws of gravity.

A shot-cloud at 40 yards from the muzzle measures, according to the size of the pellets, from 12 to 20 feet lengthwise, and the bulk of the charge reaches the target somewhat later than the foremost or leading pellets.

It is therefore necessary to impart to the target sufficient resistance to prevent the first arriving pellets from breaking the current, and this is accomplished by means of the spring *s* in the rear of the target, which holds the latter in its place until the bulk of the pellets have reached it and exercises their force:

Velocity, 845.0 ft. equal 257 meters.	259 "	
914.9 "	277 "	
Average, 879 ft.		Average, 243 pellets.

Now let us compare the figures found in Table D with the best values contained in Table C. What do we find? We find the surprising and instructive fact that in nearly all cases a decrease in velocity and in pattern, or at least, in the last instance, such a small increase that it practically amounts to nothing.

Schultze powder has lost 77ft. in velocity and gained only 4 pellets in pattern. E. C. powder shows a loss in velocity of 76ft. and a decrease in pattern of 6 pellets. Walsrode powder lost 45ft. in velocity and gained 57 pellets. Wood powder lost fully 130ft. in velocity and gained 67 pellets in pattern. S. S. powder shows a decrease in velocity of 138ft. and a loss in pattern of 12 pellets. DuPont's black powder lost fully 190ft. in velocity and 2 pellets in pattern. DuPont's smokeless powder shows a decrease in velocity of 50ft. and a gain in pattern of 9 pellets. In point of pattern only Walsrode and wood powder show slight gains, but in the last case this gain is more than counter-balanced by the accompanying loss in velocity, because a velocity of 757ft., as the wood powder produced, hardly represents a sufficient killing force.

Among the properties excepted from a reliable propelling agent is the non-susceptibility to moisture; since all highly hygroscopic powders will be affected detrimentally through the influence of moisture in the air, whereby they will cease to produce a sufficient penetrative force for a killing effect. A powder easily affected by moisture will, as a rule, not stand storing, unless kept in a very dry place.

The so-called waterproof shells afford very little protection against the influence of moisture.

In testing and judging powders it is, therefore, necessary to establish if, and to what extent, a particular powder is hygroscopic, and at what percentage of moisture the effect of the latter begins to be felt, inasmuch as one powder may still do good service with a certain percentage of moisture, while another containing the same percentage may cease to give satisfaction. A quantity of each of the several powders was filled in open dishes and these placed in a refrigerator, showing 75 per cent. of moisture, and there kept and subjected to the influence of the humidity for 18 hours. They were then loaded in the regular manner and fired.

Table E.

Chicago, Watson's Park, Sept. 27, 1893.

MOISTURE TEST.

DuPont black powder FFF, 3drs., 1 1/4oz. shot No. 7:		Velocity.

7,088.1 lbs. equal 523 atm.	852.00 "	258 "
7,791.0 "	530 "	
DuPont smokeless powder, 3drs., 1 1/4oz. shot No. 7:		Velocity.
Bursting strain.	891.8 ft. equal 270 meters.	
11,657.1 lbs. equal 793 atm.	852.00 "	258 "
13,127.8 "	876 "	

To ascertain to what an extent the several powders were affected by the moisture, the values quoted in Table E must be compared with the corresponding values given in Table A. It will thus be found that the bursting strain of the DuPont's black powder did not change, while the velocities show a slight increase. E. C. powder shows a small increase in bursting strain, with a loss in velocity. Wood powder lost 2,000lbs. in pressure and 120ft. in velocity. Schultze powder shows a decrease in the bursting strain of about 1,500lbs., and a loss in velocity of 70ft. Schultze powder—Pompton—lost 3,000lbs. in bursting strain and 69ft. in velocity. S. S. powder shows a loss in gas pressure of about 1,000lbs. and in velocity of 133ft. Walsrode, 31grs., winter load, shows a slight increase in gas pressure and a loss in velocity of 4ft. Walsrode 29grs.—standard charge—lost 500lbs. in gas pressure and in velocity 18ft. DuPont's smokeless powder shows an increase in bursting strain with velocities about the same as before. This test was by no means a severe one. In actual service the powders are frequently put to a much more trying treatment. This theme will again be touched in the report pertaining to the Wilmington trial.

In about the same degree as some powders are susceptible to the influence of moisture, others are again affected

by dry heat. A reliable propelling agent should likewise be non-susceptible to this last-named influence.

To ascertain if and in what degree the various powders are affected by dry heat, the powders were put in a closed oven showing a temperature of 205° F., equal to 80° C., and kept there for one hour. After being taken out and given time to cool, they were loaded in the usual manner and fired.

A powder not affected by heat should show only slight increases in both bursting strain and velocity.

Table F.

Chicago, Watson's Park, Sept. 23, 1893.

DuPont's powder FFF, 3drs., 1 1/4oz. shot No. 7:		Velocity.
Bursting strain.	951.00 ft. equal 288 meters.	
7,908.3 lbs. equal 538 atm.	974.3 "	295 "
7,718.2 "	526 "	

For the purpose of comparing the figures in Table F, the corresponding figures in Table A must again be consulted. This done we find that the Walsrode powder shows an increase in gas pressure of 958lbs., in velocity 27ft. Schultze powder (Pompton) gained 1,541lbs. in bursting strain, and 140ft. in velocity. E. C. powder shows an increase in gas pressure of 300lbs., in velocity of 29ft. Schultze powder gained 133lbs. in bursting strain and 168ft. in velocity. American wood powder increased its bursting strain by 321lbs., its velocity by 12ft. S. S. powder shows an increase in bursting strain of 1,449lbs., in velocity of 91ft. DuPont's black powder gained 610lbs. gas pressure and 72ft. in velocity. DuPont's smokeless powder shows an increase in gas pressure of 4,969lbs., in velocity of 29ft.

An increase of bursting strain up to 1,000lbs. may still be considered natural and permissible, and an increase of velocity of 50ft. may be regarded as of no importance.

To ascertain how far the several powders differ in the way of heating the gun barrels by rapid and continued firing, equal rounds of shots were fired in quick succession from each powder, and in every case the temperature measured in the middle of the gun barrel. DuPont's smokeless and Walsrode powders showed the lowest and same degree of heat; then followed Schultze powder with increased heat, and then, with the same values, E. C. and wood powder, then Schultze (Pompton), then S. S. powder, and then, with the highest degree of heat, DuPont's black powder.

The recoil test produced the following result: Least recoil, of even value, DuPont's smokeless and Walsrode; then followed, with increased recoil, E. C., Schultze, Schultze (Pompton) and American wood powder; then S. S. powder, and then, with the heaviest recoil, DuPont's black powder.

In regard to the development of smoke, the several powders are governed by the following rotation: DuPont's and Walsrode developed the least smoke, of even value; next came Schultze, Schultze-Pompton, E. C. and S. S. powder; then wood, and as last, of course, DuPont's black powder.

The barrel fouling test resulted for the several powders as follows: The least fouling of the gun barrel was found with the DuPont's and Walsrode smokeless powders; next came Schultze, Schultze-Pompton, and S. S. powders; then wood and E. C. powder. The residue of the E. C. powder proved, occasionally, to be of a quite solid form and tending to clog the locking device of the gun.

Among the black powder, Laffin & Rand's "Orange Extra" produced a remarkable small residue, much less than generally found with black powders.

With this last test, the Chicago powder trials were considered finished. It was understood and agreed, however, that a repetition on a smaller scale, and in conjunction with a primer test, should take place on some future day, and in another section of the country.

For this second test, to which all interested parties were again invited, Messrs. E. I. DuPont de Nemours Co. kindly placed their shooting ground and some of their instruments at their gun cotton factory located at Carney's Point, New Jersey, near Wilmington, Delaware, at our disposal.

Schultze powder—Pompton—reached Chicago after the test there had commenced, and I was further requested to test a new Leaf powder recently brought out by Messrs. Wolf & Co., Walsrode. Both of these powders were subjected to an exhaustive test at Carney's Point. So that the result of this trial will afford the same basis for judging these powders as the basis established for the others.

The experiments at Carney's Point commenced with the primer test. The experiments were conducted with a view to ascertain to what extent the qualities of the several powders, as far as bursting strain and velocities are concerned, are affected by the primer, and especially to determine, if, and to what degree, the stronger primer will increase the violence of the nitro powders; that is, render them more or less dangerous; and further, which primer will, as a rule, secure the most regular ignition.

It has been further determined, how much faster the stronger primer will bring about an ignition and combustion of the powder charge than the common or black powder primer.

Table G.

Carney's Point, N. J., Oct. 26, 1893.

PRIMER TEST.

DuPont's smokeless powder, 3/4drs., 1 1/4oz. shot in Eley shells:		Velocity.
Bursting strain.	841.9 ft. equal 255 meters.	
8,507.2 lbs. equal 576 atm.	828.9 "	251 "
9,261.0 "	630 "	
10,143.0 "	990 "	246 "
10,922.1 "	743 "	245 "
9,318.8 "	634 "	243 "

The same load in Smokeless shells:		858.0 ft. equal 260 meters.
10,936.8 lbs. equal 744 atm.	838.9 "	251 "
7,839.3 "	669 "	258 "
9,834.8 "	669 "	258 "
9,437.4 "	642 "	260 "
6,350.4 "	432 "	241 "

The same load in Rival shells:		829.9 ft. equal 251 meters.
8,517.9 lbs. equal 579 atm.	822.0 "	249 "
8,114.4 "	552 "	249 "
5,909.4 "	402 "	232 "
8,055.4 "	582 "	250 "
6,394.5 "	435 "	246 "

The same load in U. S. Rapid shells:		812.0 ft. equal 246 meters.
6,415.0 lbs. equal 450 atm.	779.3 "	236 "
5,909.4 "	402 "	236 "
7,673.4 "	522 "	239 "
7,938.0 "	540 "	242 "
8,096.4 "	612 "	242 "

The same load in Bischoff shells:		829.0 ft. equal 249 meters.
9,162.8 lbs. equal 624 atm.	842.2 "	255 "
13,891.5 "	945 "	281 "
8,070.8 "	549 "	281 "
11,234.8 "	840 "	260 "
10,101.7 "	681 "	251 "

The same load in Bachmann shells:		829.0 ft. equal 249 meters.
10,759.4 lbs. equal 732 atm.	842.2 "	255 "
10,495.8 "	714 "	255 "
6,770.7 "	471 "	241 "
7,938.0 "	540 "	242 "
10,407.6 "	708 "	254 "

The same load in Winchester shells, No. 3 primer:		756.5 ft. equal 241 meters.
8,349.6 lbs. equal 468 atm.	755.10 "	238 "
6,492.7 "	441 "	246 "
7,849.8 "	534 "	246 "
6,041.7 "	411 "	227 "
6,570.9 "	447 "	237 "

The same load in Nitro Club shells:		832.3 ft. equal 252 meters.
8,996.4 lbs. equal 612 atm.	795.5 "	241 "
6,174.0 "	430 "	248 "
7,364.7 "	501 "	248 "
7,082.1 "	543 "	251 "
5,953.5 "	405 "	238 "

The same load in Creedmoor shells, Winchester No. 2 primer:		756.2 ft. equal 229 meters.
6,894.5 lbs. equal 435 atm.	743.0 "	225 "
5,907.6 "	408 "	237 "
6,120.9 "	417 "	237 "
7,100.1 "	483 "	237 "
7,011.9 "	477 "	237 "

The same load in Kynoch's Grouse shells:		766.0 ft. equal 233 meters.
5,071.5 lbs. equal 345 atm.	812.0 "	246 "
7,364.7 "	501 "	244 "
7,364.7 "	501 "	244 "
6,526.8 "	444 "	233 "

The same load in Climax shells, common:		704.4 ft. equal 214 meters.
4,851.0 lbs. equal 330 atm.	733.7 "	222 "
4,938.2 "	336 "	222 "
4,630.5 "	315 "	222 "
4,762.8 "	324 "	222 "
5,247.9 "	357 "	222 "

The same load in Sporting Life shells:		782.6 ft. equal 237 meters.
6,392.2 lbs. equal 436 atm.	772.7 "	234 "
6,391.5 "	435 "	234 "
7,364.7 "	501 "	244 "
6,749.3 "	459 "	270 "
7,673.4 "	522 "	249 "

Oct. 27—Continuation of the Primer Test.

Thermometer 69° F., equal to 20.5° C.; hygrometer, 90%.

Walsrode leaf powder, 31grs., equal 2.1 grams; 1 1/4oz. shot No. 7, in Smokeless shells:

Bursting Strain.		Velocity.
6,009.4 lbs. equal 402 atm.	792.5 ft. equal 240 meters.	
8,055.6 "	549 "	255 "
7,717.5 "	525 "	250 "
6,641.6 "	447 "	244 "
6,659.8 "	453 "	244 "
Mean bursting strain, 7,002 lbs.		Mean velocity, 812 ft.
Variation, 2,046 lbs.		Variation, 49 ft.

The same load in Vienna shells:		Velocity.
Bursting strain.	848.4 ft. equal 258 meters.	
6,958.0 lbs. equal 478 atm.	818.7 "	248 "
9,966.6 "	678 "	258 "
10,054.6 "	684 "	258 "
9,966.6 "	678 "	258 "
8,853.3 "	612 "	268 "
Mean bursting strain, 9,156 lbs.		Mean velocity, 845 ft.
Variation, 3,101 lbs.		Variation, 77 ft.

Walsrode leaf powder, winter load, 32 grs., equal to 2.2 grams, 1 1/4oz. shot No. 7, in Vienna shells:		Velocity.
Bursting strain.	868.7 ft. equal 263 meters.	
10,407.6 lbs. equal 708 atm.	875.3 "	265 "
11,466.0 "	780 "	258 "
9,790.0 "	606 "	258 "
10,231.0 "	696 "	263 "
10,201.4 "	762 "	263 "
Mean bursting strain, 10,419 lbs.		Mean velocity, 871 ft.
Variation, 1,676 lbs.		Variation, 23 ft.

DuPont's smokeless powder, 3drs., 1 1/4oz. shot No. 7 in Rival shells, common:		Velocity.
Bursting strain.	709.3 ft. equal 211 meters.	
6,438.6 lbs. equal 438 atm.	832.1 "	258 "
7,893.9 "	537 "	258 "
9,939.3 "	630 "	263 "
8,555.4 "	582 "	253 "
7,805.7 "	531 "	212 "

The same load in Smokeless shells:		861.0 ft. equal 261 meters.
9,393.3 lbs. equal 639 atm.	885.1 "	268 "
11,025.0 "	750 "	268 "
8,158.5 "	555 "	268 "
9,702.0 "	660 "	270 "
10,672.2 "	696 "	250 "

Schultze powder (Pompton), 3drs., 1 1/4oz. shot No. 7 in Eley shells:		Velocity.
Bursting strain.	838.10 ft. equal 254 meters.	
9,953.3 lbs. equal 669 atm.	829.9 "	251 "
9,304.1 "	633 "	251 "
8,320.0 "	600 "	238 "
9,929.5 "	675 "	253 "
8,952.3 "	609 "	254 "

The same load in Smokeless shells:		858.8 ft. equal 260 meters.
9,348.2 lbs. equal 636 atm.	875.2 "	2

## The same load in Winchester Rival, No. 3 primer:

10,759.4 lbs. equal 732 atm.	883.9 ft. equal 231 meters.

## Sea and River Fishing.

## ANGLING NOTES.

## Forest and Stream as an Educator.

ONLY a few weeks ago I pointed out in these columns that boards of supervisors had it in their power to protect black bass during the month of June; protection that the State law denies them, although they spawn through the entire month. The note was copied into a Warren county paper and the supervisors of the county were urged to take action upon the suggestion at their meeting then near at hand. One of the first things they did when they assembled was to introduce a resolution making a close season for black bass in all the waters of Warren county from January first to July tenth. The extra ten days beyond what was advocated in FOREST AND STREAM, namely, January first to July first, will benefit the fish undoubtedly, but it will cause some confusion, doubtless, as other counties, so far as they have shortened the season, have fixed upon July first as the opening day for black bass fishing. I suggested this to one of the supervisors and he adopted the suggestion.

## Catching versus Stocking.

DURING the past few years occasional notices may have been seen in the country papers that such and such lakes have been restocked with black bass by the planting of a certain number of bass weighing from one-quarter to one-half pound each. I have in mind one such lake that was restocked with 200 bass, and this is a big plant as they average. For a year or two the bass furnished by the State have run in numbers to each applicant from 60 to 300 and formerly the number was much smaller. Of course the waters are improved by just so many fish, but they will not restock the lakes if June fishing is permitted.

There is another view of the case besides the June fishing. Last week I went into the smoking car of a railway train to smoke a cigar and found a lawyer distinguished all over the State and who is as fond of fishing as he is versed in law. When our cigars were lighted the conversation turned to fish and fishing and among other things he told me that one day last season while fishing with a friend in the same boat on the St. Lawrence they caught together 235 black bass. At night there was a question as to who caught the greater number of the fish and it was decided to try it again the next day, each man in a separate boat. My friend caught 163 black bass that weighed 207 lbs. and his friend caught 183, weight not given, or a total of 346 bass in one day and 581 in two days, or about, judging from weight given of one lot, 725 pounds of fish. As he told how he caught all his fish on a single hook, and that hook as good as new after two days' fishing; and how his friend took an unfair advantage, considering that it was a fishing match, and used a bait hook with minnows and above it a fly on the leader, and in this way made 21 double catches, I became so interested in this recital that I forgot to ask what he did with so many fish. As I look back now I realize that I neglected to put a very important question to him. If he owned a fish market I could understand what became of the fish, but as he is a lawyer I am still in the dark concerning the disposal of over a quarter of a ton of black bass. However, another question arises: Will 200 black bass per annum do more toward stocking a lake 36 miles long, than 581 much larger black bass taken in two days from the St. Lawrence will do toward unstocking that stream.

## A Story About Two Mascalonge.

While my lawyer friend was yet telling us of his black bass fishing he incidentally mentioned that after years of fishing in the St. Lawrence he never had captured a mascalonge. I considered it a pertinent question to ask how it came about then that not long ago two mascalonge were exhibited in the city where he lives, and duly chronicled in the newspapers as being the fruit of his skill as an angler. That did not phase him in the least; he only laughed and said: "I only claimed that I 'hooked' them, and now I will tell you the truth. I stole them. I found a net set contrary to law, where I had previously found others and destroyed them, and in it were two mascalonge of about twenty-five pounds each. I hooked out the two big fish, cut the net in pieces, and let the other fish in the pound escape." A. N. CHENEY.

## FROZEN FISH THAWED OUT.

BOSTON, Mass., Nov. 19.—Some years ago a friend made up a party for a day at ice-fishing in Laconia, N. H. Procuring a good supply of bait at the Quincy Market (I am not certain whether they were "mummychugs" or shiners) he took a late train and spent the night at a hotel. Next morning was a perfect fishing day with the single exception of the thermometer being 28° below zero. As there was no wind and they were ardent lovers of this winter sport they soon found themselves on the ice, notwithstanding the cold. Having cut a few holes through several feet of ice they decided to bait up, but met with a disappointing obstacle in finding that the contents of their bait can had become tired of waiting and had frozen solid. As nothing was to be gained by standing on the ice they returned to the hotel, and, for experiment, put the can on the stove to thaw, which it soon did. To their surprise a large number of the fish were swimming around as if nothing out of the way had happened. All the fish were then put into a tank with running water in it where all that had been doubtful of recovery were soon as well as the others. I wish I were sure that the fish were not "mummies" as, if they were, the above would not be at all strange.

The other case was when a jar of fish was sent to the house in which my mother was staying while in France. As it was too late to cook them when they arrived, the cook left them outside the window thinking that they needed plenty of air. During the night the thermometer dropped to several degrees below freezing, and, very naturally, the contents of the can were a chunk of ice in the morning. This the cook reported with great consternation, but was told to put the can on the stove and see how it worked. This he did, and left it until almost entirely free from ice, when he took it off and found the fish in perfect health.

As regards leaving fish out of water until they freeze solid and then thawing them, I have tried it many times myself and they have never lived. This is, I believe, due to the fact that their lungs are devoid of water at the time, although I am not at all certain. J. H. B.

SILVER BAY, Lake George, N. Y., Nov. 28.—In the latter part of October I went out for a day's fishing with Capt. Harris of the steamer Ticonderoga. Early in the forenoon we caught a few perch, which froze almost as soon as we got them in the boat. About 3 o'clock in the afternoon Capt. Harris suggested putting on one of our perch and trolling. This we did, spinning him on an ordinary gang. After trolling about half an hour we took in the line and found that the perch had revived and was flopping quite vigorously. H. S. PAINE.

WALTHAM, Mass.—Last winter while catching chubs for live bait I caught a small salt water perch or cunner. He was kept alive for over two months in a cold outhouse. Every night the water, fish and all, would freeze to a solid cake, every day he would be melted out, and in a short while be as lively as ever. He must have been frozen and thawed out at least forty times without the slightest injury to him. FORTNALIS.

## Croton Oil and Bullheads.

## Editor Forest and Stream:

I noticed with deep interest an item in your journal on the remarkable catch of two fishes on one hook at one time.

I have had an experience in this direction, only a little more so. It was back in the early seventies that good old Deacon William H. Phillips of Chagrin Falls, O., and the writer, went one balmy evening in May to the head of Adams & Co.'s pond to angle for the festive bullhead.

## SALE OF TROUT IN CLOSE SEASON.

THE Massachusetts trout law, Public Statutes, Chap. 91, Sec. 53, provides: "Whoever sells, or offers or exposes for sale, or has in his possession a trout, land-locked salmon or lake trout, except alive, between the first day of September and the first day of April shall forfeit for every such fish taken in this Commonwealth between said dates, ten dollars." [A subsequent enactment changes the dates].

Mr. Wm. L. Gilbert, a trout culturist, having caused himself to be prosecuted for the sale of a trout reared by him, carried his case up to the Supreme Court to determine whether the statute quoted applied to trout artificially reared, and to test its constitutionality. The full text of the decision is here given:

## COMMONWEALTH OF MASSACHUSETTS.

BOSTON, Dec. 4, 1893.

I certify the annexed to be a true copy of the opinion of the Supreme Judicial Court in the case of Commonwealth vs. Gilbert, decided on the 28th day of November, 1893.

GEO. F. TUCKER, Reporter of Decisions.

ALLEN, J.—There are two questions in this case, namely, whether the defendant's act was within the true meaning of the statute forbidding the sale of trout; and, if so, whether the statute is constitutional.

1. The defendant contends that the penalty imposed by Public Statutes, Chap. 91, Sec. 53, for selling trout does not extend to the sale of trout which have been artificially propagated and maintained. Whatever force this contention might have if Sec. 53 stood alone, a reference to other sections of the same chapter and to the history of this legislation makes it clear that such trout are not exempted. The chapter contains many provisions for the protection of trout and other useful fishes, and amongst them are those for the encouragement of their artificial propagation and maintenance. No question is made that Sec. 53 is applicable to all other protected trout except such as have been artificially propagated or maintained; as, for example, to trout found in such small or great ponds and such streams as are specially protected by the provisions of Secs. 10, 12, 14, 23, 24, 27. By Sec. 26 it is provided that "fishes artificially propagated or maintained shall be the property of the person propagating or maintaining them; and a person legally engaged in their culture and maintenance may take them in his own waters at pleasure, and may have them in his possession for purposes properly connected with said culture and maintenance, and may at all times sell them for these purposes, but shall not sell them for food at seasons when their capture is prohibited by law." A close season for trout was fixed by Sec. 51, which has since been changed by Statutes 1884, Chap. 171. Sec. 53 by its terms imposes a penalty upon every person who "sells or offers or exposes for sale, or has in his possession a trout" except alive, during the close season. Statutes have long existed restricting the modes of taking trout, but the first provision making their sale punishable is found in Sts. 1869, Chap. 384, Sec. 28. This, after modifications in Sts. 1874, Chap. 186, and 1876, Chap. 231, Sec. 1, was re-enacted in Pub. Sts. Chap. 91, Sec. 53. The object of all these statutes was to protect and preserve the trout. The same statute which first forbade their sale also contained the provisions upon which the present statute is founded, to encourage their artificial propagation and maintenance. In order to make the protection of the trout more effectual, it was deemed necessary by the Legislature to punish [prohibited] the sale, during the close season, of all trout except those which are alive. This was probably on account of the difficulty in distinguishing between trout which had been artificially propagated or maintained and other trout. On the construction contended for by the defendant the law could not be so well enforced. In view of the provisions of Sec. 26, it seems to us plain that the penalty imposed by Sec. 53 extends to artificially propagated trout.

2. Nor have we any doubt that the statute is constitutional. The importance of preserving from extinction or undue depletion the trout and other useful fishes in the waters of the Commonwealth has been recognized and illustrated in many familiar statutes and decisions from an early time. Such protection has always been deemed to be for "the good and welfare of this Commonwealth," and the Legislature may pass reasonable laws to promote it. Such laws are not to be held unreasonable because owners of property may thereby to some extent be restricted in its use. It has often been declared that all property is acquired and held under the tacit condition that it shall not be so used as to destroy or greatly impair the public rights and interests of the community. Many illustrations might be cited where such restrictions on the use of property have been held valid. But the cases are familiar. The limitation is that the restrictions must not be unreasonable. The Legislature may "make, ordain and establish all manner of wholesome and reasonable orders, laws, statutes and ordinances, directions and instructions, either with penalties or without; so as the same be not repugnant to this constitution, as they shall judge to be for the good and welfare of this Commonwealth." Constitution Massachusetts, Chap. I, Sec. 1, Art. 4. The Legislature may forbid the catching or selling of useful fishes during reasonable close seasons established for them; and to extend the prohibition so as to include such as have been artificially propagated or maintained is not different in principle from legislation forbidding persons from catching fish in streams running through their own lands. The statute under consideration falls within this power. Commonwealth v. Look, 108 Mass., 452; Commonwealth v. Alger, 7 Cush., 53, 84, 85; Commonwealth v. Tewksbury, 11 Met., 55, 57; Cole v. Eastham, 133 Mass., 65; Rideout v. Knox, 148 Mass., 368; Blair v. Forehand, 100 Mass., 136; Phelps v. Racey, 60 N. Y., 10.

Verdict to stand.

## The Little Star-Gazer.

Editor Forest and Stream:

At this date I fancy I shall hear no more of this curious, rather rare and pretty little fish in consequence of the publication of my letter in FOREST AND STREAM Nov. 18.

A very intelligent correspondent, Mr. H. Allender, of Greystone, Conn., writes that this fish was quite abundant in a brook in Cedar Hill Cemetery in Hartford county sixteen years ago; that he had it in an aquarium for six months, that these fish by their pectorals would sustain themselves at times almost vertically on rock work, and that they fed on animalculæ and scraped beef.

It is evident that the alimentation is peculiar, as they are so quiescent, do not notice bait, or very seldom take the hook. They lie still until touched, when they dart very quickly. Sometimes they move about slowly. They must feed naturally on minute organisms.

Mr. Allender mentions that Fred. Mather has published in a pamphlet issued by FOREST AND STREAM the fact that the *Tranidea quiescens*, as testified by Dr. C. Hart Merriam, occurs in various streams of the Adirondacks.

Two other correspondents seeing my letter in FOREST AND STREAM have written to me about this fish. Mr. Geo. S. Holmes, of Pawling, Dutchess county, N. Y., says the fish is in several streams thereabout. Also Mr. J. M. English, of Muncy, Lycoming county, Penn., has frequently caught it in his minnow net.

Altogether, therefore, we know of two localities in this county, one in Connecticut, one in Hamilton county, another in the more northern Adirondacks and one in northern-central Pennsylvania. Is this all?

BANGALL, N. Y.

JAMES HYATT.

## The Record Sawfish.

I BEG to offer the inclosed photograph of a sawfish

caught by myself in Florida waters during April, 1893, which is said to be the largest yet landed with rod and reel, having been gaffed in deep water in the manner known to tarpon fishermen as permitting a record. The fish weighed over 500lbs., and was 14ft. in length, the saw being 3ft. long, on which were 48 teeth, all in perfect condition after landing. The manner of catch was as follows: While I was lunching at midday in a row-boat three miles above Fort Myers, the bait was taken, quietly at first, but after a run of 20ft. the reel sang merrily until over 500ft. of No. 18 line had gone out, when the chase was in progress that kept up for six hours and a half, when the boat had been towed six miles from anchorage. A stout tarpon gaff was used in 7ft. of water, with which he was towed ashore after much hard

pulling and cautious handling. The rapid movements of the saw were at times uncomfortably close to the boat, but no damage was done, and the claim is made for a record for landing with rod and reel the largest fish in Florida waters.

E. H. TOMLINSON.

## A Fly-Casting Challenge.

NEW YORK, Dec. 4.—Editor Forest and Stream: In reading over an article in the Chicago Tribune, I see that Mr. R. C. Leonard of New York is designated as being the champion fly-caster of the world. I am prepared to make a match with him for any reasonable sum that may be agreed upon, in salmon fly-casting. Rods limited to 20ft. Length of casts, accuracy and delivery to count. Shooting the line is prohibited, as that is considered not a fair cast. The competition to take place on still water, which is the only way to facilitate accurate judging on each individual cast.

JAS. KRESS.

## Protector Northrup's Net Haul.

ALEXANDRIA BAY, N. Y., Aug. 29.—Protector J. Northrup has just returned from a trip up Black River Bay and Sacketts Harbor, with a capture of eighteen hoop and gill nets. The weather was boisterous all the time he was away or he would have gotten many more. They set at night and draw by daylight. We find that the netters are getting afraid of the law and dodge every point possible.

W. H. THOMPSON,

Sec'y Anglers' Association of the St. Lawrence River.

## Fishculture.

## Spawning of Rainbow Trout.

GRAND RAPIDS, Mich.—In issue of Sept. 2 I see Mr. H. Stewart, of Highlands, N. C., speaks of the rainbow trout crossing with the fontinalis. Now, with us the rainbow (*Salvelinus trideus*) commences to spawn about March 7 and the fontinalis not till Oct. 10. (These dates are from the Paris State hatchery). Do the fish change their times of spawning in different parts of the country? I can readily see how the brown trout (*farlo*) and the fontinalis may cross as they spawn here at nearly the same time; but the crossing of the *irideus* and fontinalis is a sticker to me. Please give me what information you can on the subject.

Although the rainbow are said to commence spawning here in March they certainly are not all through by the first of May, for May 1, 1892, I took a rainbow in the Pere Marquette River, a male fish that contained quite a quantity of milt. He weighed 3lbs. 7oz. dressed. The largest I have known taken there weighed 5lbs. 6oz. dressed, and was 21½ in. in length, 5½ in. in depth. We have the best success as we do in the brown trout fishing, at night, either with fly or bait.

If we can only stop the dynamites, spears, etc. (and we have just convicted some of them), I think the Pere Marquette River and branches will be the finest fishing waters in the country, with its game fish—brook, rainbow and brown trout and the grayling.

HENRY PERKINS.

In reply to a Michigan correspondent who asks about the spawning time of the rainbow trout, I have to say that the second year after these fish were introduced into the waters of western North Carolina, I noticed the males on the spawning beds with the common brook trout in the month of January, which is the end of the season for the spawning of the latter fish, who are on the beds from November until a few days after the new year. The next year I saw them again together still earlier, and the next year I and one of my friends both took some fish that were evidently hybrids, having distinct marks of both kinds.

I mentioned this to Colonel McDonald, the United States Fish Commissioner, who thought I was mistaken. As the rainbow trout have left the upper part of my stream and have gone below a perpendicular fall of 90 feet, above which, of course, they cannot return, I have seen no more of them in this part of my waters, and consequently have had no further opportunity of investigating this matter.

But in the more recent reports it has been stated, just now from memory I cannot state precisely where it has been said that the rainbow trout have changed their spawning season in the East and go on the beds about the same time as the common brook trout do, and thus the question of the mixing of the two species seems to have become simplified and made quite possible.

As environment has very much to do with the habits of all kinds of animals, and especially in regard to the season of propagation, I think there can be little doubt that in such a climate as that of North Carolina the hastening of the spawning season of fish may very likely be accomplished, just as with our fruits, the winter apples of the North are fall apples here and cannot be kept in good condition nearly as long during the winter as in the North.

Every student of natural history will have discovered, if it has not occurred to him as a necessary corollary of the vital functions of both animals and plants, as regards their reproductive methods, that what may happen to one may equally happen with the other, and thus, while our fruits mature earlier than those of the North, so do our animals, not only fish but birds, and I have noticed the same with sheep, whose lambs arrive often before the end of the year and may be seen skipping about the pastures on Christmas day, when in the North the ewes have all they can do to keep themselves alive without burdening themselves with the support of precocious progeny. It will also occur to the minds of your scientific reader that even the human race partake of this precocity in warm climates and are prepared for marriage some years earlier than in northern climates.

HENRY STEWART.

## For Central New York Waters.

SYRACUSE, N. Y., Dec. 4.—Mr. Henry Loftie has placed orders for fish fry in lakes and streams of this vicinity as follows: For Oneida Lake, 50,000 muskallonge. Onondaga Lake, 25,000 muskallonge. Otisco Lake, 25,000 muskallonge. Otisco Lake, 50,000 pike. Seneca River, 50,000 pike. Seneca River, 25,000 black bass. Onondaga Creek, 25,000 California trout. Oneida River, 25,000 black bass. Peck Brook, Onondaga Valley, 15,000 brook trout. Mr. M. J. French has placed orders for the Tully Lakes as follows: 50,000 pike, 25,000 muskallonge, 1,000 black bass. All these are for waters in Onondaga county.

## NEWARK DOG SHOW.

Nov. 28 to Dec. 1.

THERE are several men in Newark to-day who look back upon a week such as they never experienced before, and if asked the question if they liked it would scarcely know what to answer. That the first show given by the New Jersey Kennel League was a success they know and feel pleased thereover, but whether the game is worth the candle is another thing. It means much mental tear and wear for a few heads, but we must say the Newark men stood up well, and had a due appreciation of their position. The New Jersey Kennel League is a club of workers as the way they went about with determination proves.

The show that opened Nov. 28 was a good one; we won't say it was the best ever held in Newark so far as quality of dogs was concerned, but in management, and up to date regulations, and results it was far ahead of any previous efforts when the old New Jersey Kennel League held the helm of dogdom in New Jersey.

In spite of cold water thrown liberally by some who should have known better, it was well proved last week that Newark must take rank as a show town, and the Germans a good lot of fanciers. There was during afternoons and evenings a capital attendance, and they were good people, too, the sort of people that give an *éclat* to any gathering. The first three days the weather was all that could be desired, but Friday was a wet day, most of it, though in the afternoon and evening it cleared and the crowds came back again. The rain did not trouble the management a great deal, for by that time they were on the safe side, though of course they wanted all the "velvet" they could get. But when all was over they looked happy—about \$500 worth the president surmised.

The Industrial Hall is a poor building for the purpose; the middle part where you cannot put any dogs is all right, but the sides where most of the benching was is dark, and towards 4 P.M. it was almost impossible to see the dogs. Why not light the lamps? one would say at once, but unfortunately the hall is situated outside the day circuit of the electric lighting system, and nothing could be done till the night current flowed. The benching of course was done by Spratts Co. in their usually efficient manner, and, contrary to previous experience in Newark, there was lots of straw and plenty of food. It was a bad hall to disinfect as there was no "lift" for the vitiated air, but Buchanan's carbolic disinfectant did its part well and did not make itself offensive in doing it, as is too often the case at shows.

There is one thing we must grumble about and that is the benching of the dogs. The numbers were terribly mixed and created great confusion. It is time this custom became obsolete. It annoys every one, except the owners of dogs who should give way in their selfish desire to make things easy for themselves. The public demand an alteration. In taking our notes we were often asked by visitors which was the winner in a kennel grouped all together, without regard to their proper numbers even there. This system, or rather lack of system, delays the judging. We say nothing of the trouble it gives the reporters; they are never considered in

the question. Mr. John Read superintended with his accustomed ability. He is a host in himself, and a show cannot go far wrong when he is about, and, besides, he always helps the poor reporter in every possible way; still, he should put his foot down for rotation of numbers.

The quality of the dogs was on the whole excellent, but this part is treated more fully in our critical report. We cannot refrain from saying a word about the catalogue; it was well and completely arranged and printed in attractive style; there were, of course, some errors in entering, in fact, rather too many, but this is accounted for by not going to press till the Thursday before the show. The catalogues furnished the press were the best we have ever seen; between each printed page were two blank sheets securely fastened in and not, as is too often the case, just gummed in to fall out at the first turn. A number of the A. K. C. pictures of noted dogs adorned the pages.

The members of the executive committee, President, Edward H. Radel; Vice-Presidents, Edwin Field, M.D., Charles Heath, W. O. Kuebler; Secretary, W. F. Seidler, M.D.; Treasurer, R. R. Moore; Edward R. Christopher, Chairman; Wm. Brown, A. Eisele, August Hahne, M. A. Hanchett, Frank Linck, E. H. Morris, Dr. L. R. Sattler and W. J. Whelan, were entering in their efforts to make everyone satisfied. There is such a thing as killing one with kindness, and the president came very near committing murder in this respect. Luncheons, dinners, etc., were enjoyed by nearly every visitor at one time or another during the show; in fact these men could not do enough for the "regulars." A pleasing feature of the first day was a luncheon given by the following ladies' committee to Mrs. Whitney and her friend; Mrs. A. Hahne in the chair, Mrs. M. Hanchett, Mrs. A. A. Eisele, Mrs. E. H. Radel and Mrs. W. O. Kuebler.

The regular judging was all completed by the first day, and considering there were only three rings this was pretty good. The big dogs were bunched on the ground floor and smaller ones upstairs. Judging gave in most cases satisfaction, though in one or two instances that we allude to in the proper place there was some little kicking.

Who was there? Well, pretty nearly all the fanciers round New York. Among the best known we saw James Mortimer, R. L. Banks, Jr., Dr. Lougest, R. P. Keasby, A. C. Wilmerding, E. M. Oldham, C. H. Mason, Ed. Booth, A. M. Hughes, E. W. Fiske, Fred. Schmitt, John Finlayson, W. H. Thomas, Dr. Arbery, A. H. Heppner, C. D. Bernheimer, H. W. Huntington, H. S. Pitkin, A. L. Page, Joseph Lewis, H. M. Nelson, W. Tallman, Major J. M. Taylor, C. J. Peshall, A. D. Lewis, H. D. Cromwell, A. C. Pickhardt, Mr. Hooper, Geo. W. La Rue, C. A. Bradbury, German Hopkins, Gus. W. Lovell, F. S. Webster, George H. Thompson, J. Phelan, R. C. Lyons, R. A. De Rusey, H. L. Krueder, Dr. Krantz, Dr. Guenther, G. W. Whelan, George S. Thomas, Ben Lewis, J. R. Gilmore, F. F. Dole, Henry Jarrett, F. Stern, George W. Runtow, H. C. Graf, W. Turner, Dr. Foote, H. G. Trevor, James Bowden, H. Mann, W. G. Hobbie, Mrs. Smyth, Mrs. Meacham, Mrs. Van Wagener, Mrs. Jones, Mrs. Lewis, Mrs. Gilmore, Mrs. Buckle, etc.

**MASTIFFS** (H. Mead, Judge).—With the exception of Dr. Lougest's entries there was little quality shown, and the entry was therefore poor, all things considered, the Mastiff Club members not coming to the front, as they should do when their secretary judges. There were no challenge dogs and Ethel was not in shape, and as she is not really up to challenge form Mr. Mead cannot be blamed for withholding first. The dog class (6) had two good ones, improving all the time, Emperors William and Maximilian, that were fully described at Providence; third went to Duke IV., whose faults are straight stifles, poor body, faulty ears, but head fairly well shaped. Jefferson needs depth of body, has good legs, head well shaped, but a bit long. Open bitches (4) saw a repetition of Providence, and the winner, Lady Diana, is coming along all the time. Her hindlegs are her worst feature, too straight. There were no puppies. The specials all fell to Dr. Lougest's kennel.

**ST. BERNARDS** (Miss A. H. Whitney, Judge).—There was quite a gathering of these handsome dogs, and of course with our best kennels represented there was lots of quality, but on the other hand some of the classes were made up of rather poor stuff. Several of the best dogs were not in good condition as to coat and flesh, and should really have been kept in their kennels. The challenge roughs were represented by Otos and Princess Florence in their respective classes. Otos looked in full bloom, but the Princess was dead out of coat, with a tail like a rat. It is not justice to the bitch to show her at a disadvantage in this way, and she clearly lost the other half of the special for best in the show through this. Excepting coat she looked as well as hands could make her, and Mr. Hughes has now a chance to keep the curls down. In open dogs (19) Marvel and Roland, Jr., held their New York positions, but Marvel was dead out of shape and should not have been shown. This dog requires to be shown in full coat or not at all. His genuine St. Bernard quality, bone and head pulled him through. Roland, Jr., an improving dog, looked well, but is not in the same class when quality or type is considered. Lord Walbeck, third, has a very pleasing head—deep and square and well marked; good bone, body dips a bit, and was shown light. Ashland Jumbo is light in body, should be stronger in pasterns, have more blaze, but has improved in head on his spring form. That typical good little dog, Lohario, I think might have been higher up, and no mistake would have been made if he had been second or at least third.

Of others I liked Royal B.; had he more stop his head would be a very good one, excellent bone, nice body, coat and hindlegs; he is a big dog, too, and will do to watch. Ben Butler is another typical dog and well deserved his letters, muzzle a bit narrow, skull good and in other parts and condition he is above the average; he is a bit narrow behind. The others call for no particular mention. Open bitches (12) were not so good on the whole. Between Miss Anna and Sunray there is little to choose, for though the former excels in quality Sunray beats her in size, bone, depth and massiveness of head, body and legs, and had she shadings would be near the top, having improved in head considerably. Lady Bountiful is plain in head and out of coat and faulty behind, otherwise well shown. Surprise needs more stop, has a plain, houndy head and was out of coat, very good bone. Miss Jerome I like better in head, good legs and bone, and all things considered, can beat her kennel mate. Countess Madge, vhc., well deserved her letters; and should have been third, for Lady Bountiful has too little white and not nearly so good a head. Madge has the best shaped head in the class, in fact a splendid head, but her almost white face is very much against her, markings must be considered. Glenisla deserved another letter. Novices were a big turnout and bad to judge, nothing very striking. Imperator's size and quality, bone and coat offset his faulty hindlegs and flat rib. Lausanne has a very poor long, houndy head, no blaze and was out of coat. Ashland Jumbo should have beaten her, better type all round. Sir Plinlimmon is quite a fair dog, nice head, but eye too deeply set, and is light in rib and body. Wieland is a very taking dog, rich color, head well shaped, though a trifle short, and is a bit faulty behind, was in good coat and well deserved his letters; he is a better dog than Lausanne. Vindex II, must depend on a good head, deep and massive, for his hind parts and body show his strain too much. Space will not permit of an extended notice of all mentioned dogs, but we may say Tonzo's excellent front and coat offset his faulty hindlegs and rather plain head. There were four vhc. and five hc. cards in this class. The winning dog puppies were fairly good. In bitches I liked Miss Amanda, lots of quality and a nicely formed head, with well boned legs, she was easily first.

The smooths were a mixed lot. In challenge dogs champion Scottish Leader, looking as he generally does, fit and well, seemed a rather subdued dog this show and consequently improved in expression. Empress of Contocook gets deeper and deeper in body, but is still the same old sweetness. In open dogs (8) I hardly agree with the placings. Major Plon Plon is faulty in front, only a fair head, but shows more character than second; his worst fault is that he is not a smooth, too much coat by far. Chester, second, is a smooth, but is not at all straight in front, washy in coloring, a fair head, but houndy, no shadings, is straight behind; his tail has been shortened and it curls over. There was only one in it—Belisarius, a smooth and worth two of either of the others; his head and front alone, to say nothing of coat, entitled him to a more prominent position; though faulty behind, he is better than either of the others. Ray is straight in stifle and a light eye spoils an otherwise fair head, he is small, too. Caesar V. was second at New York last spring as a puppy and has improved. Nemo II. is faulty at both ends, but of fair type. Rome has little to commend but markings. In bitches (6) the houndy Bellegarde won easily and was well shown. Sunol lacks markings and her muzzle needs squaring, nice skull, coat and legs. The well-known Charmion came third; she has a nice type of head, but her hindparts are not as they should be, tail and legs faulty. In novices (5) Chester won, the other not described yet, Duke of Jersey, is wretched behind and Leader of Essex I failed to find. The puppies (3) were only moderate, with the exception of Hellgate Keeper, whose rather houndy head shows, nevertheless, some character; he is not above reproach in hindlegs. The specials will be found in their proper place and the judge had evidently changed her mind about Ashland Jumbo, for I see that when judged again for special for best owned in New Jersey he beat Lausanne.

**BLOODHOUNDS** (James Mortimer, Judge).—There were only two, but good ones. Our old friend Belhus, of course, was to the front and a son of Jack the Ripper, ten months old, showing excellent wrinkle, leather and length of head, but of course not furnished yet behind that, came second.

**NEWFOUNDLANDS** (Miss A. H. Whitney, Judge).—Only two and had Leo had a brush on him and coat straightened out, he could not have lost to Carlo, well known, but small and out of coat.

**GREAT DANES** (A. H. Heppner, Judge).—Quite a number of them were bunched, but on the whole, quality was deficient. Many of the dogs were coarse and heavy; they were well judged. No challenge entries. In open dogs, (12) a strapping big dog in Yarrum took the blue from Heppburn Hero, better in front and shoulders but not so good in body and head, a bit coarse. Schult Hero is faulty in front and muzzle, a bit too broad in skull and has a curled tail, other wise fair; his color is peculiar. Some well known dogs got letters deservedly. Open bitches (3) had nothing to come near Heppburn Flora Belle, a well made one all round and very typical, does not carry tail just right and her toes turn in slightly. Malta is rather a nice sort too and beats Flora in front and condition, the latter seemingly in whelp and quite fat. A fair puppy was shown in Thor.

**RUSSIAN WOLFHOUNDS** (John Brett, Judge).—A charming lot of these handsome hounds were bunched, and it is very evident that America is making rapid strides in breeding specimens that, according to acceptable theories, should hold their own in almost any competition. Judged on the lines of the older importations they are immensely superior, if we are to judge them as of greyhound breed. The challenge class had Argoss, Zerry, Princess Irma and Vinga, a quartette of quality very pleasing to see. Argoss and Zerry were rightly at the head of affairs and were well shown. In fact the way John Stokes put this kennel down was a reminder of the old days when Duke of Leeds led in condition. In open dogs (5) the handsome Leekboi, full of quality and a type all his own, though not in his Providence form, won nicely over Peter the Great, who is rather coarse, comparatively, he in turn beating Nagradai in head, chest and ribs, but losing in bone. Alexis was outclassed among these. The bitch class (2) was poor and first was rightly withheld. This judge wants good legs on a bound. Veatka is better in forelegs than Raskeda, who has grown badly there, but from the shoulder back I think she beats the second winner, especially as the latter has such shockingly pricked ears, though this may not have shown in the ring. The two puppies, about a year old, Irmia and Riga, black and white and as like as two peas, are charming animals, well grown, in excellent shape and very sweet in quality. They are a credit to their breeding.

**DEERHOUNDS** (John Brett, Judge).—Entries here were small. In open dogs (2) a dog we spoke of recently as a coming winner, bore out his promise, for Lochiel is a well-built hound, excellent coat, legs and loin and good strong head; he won well over Douglas. Minna was alone in bitches and deserved her win.

**GREYHOUNDS** (John Brett, Judge).—A capital lot as a whole and competition keen, but they were well judged in most instances on practical lines. Maud Torrington is showing age and looked a bit soft and had to give way to Bestwood Daisy in all round quality; champion Spinaway was absent. In open dogs (11), a nice lot walked in and a capital dog, Norway Cross a brother of the noted coursing bitch Buenrita, was placed ahead of the well known Cheeky, who has now tacked Charlie to his name and lost some of his flesh, and is cleaner in shoulders but was not in condition, here Cross excelled him, a bit faulty in feet and head, but a well put up greyhound. Snowball has grown up well too, but he is bad in feet and shoulders not oblique enough. Beeswing is a nicely made dog, weak in muzzle, but his good body and legs deserved his recognition. Dallas loses in quarters and loin and head is poor. Dakota will take a higher place when developed, he is a Greentick pup. The bitch class had three good ones, Wild Rose winning, and nicely shown, over Miss Dollar III. and Drytime, both fresh from their work on the Western plains. Nellie's Girl has also been out before, but was a little outclassed here and so was Maid, third, who should give way to Drytime, reserve, as the latter excels her in size, feet and ribs. Some nice whippets were shown, five in all and contrary to custom, they were of correct size. Newark is a center for this breed.

**POINTERS** (J. H. Winslow, Judge).—[SPECIAL REPORT].—The pointer classes had a large entry and the quality was above average. In heavy weight challenge class for dogs, Pontiac had a walk over, Temper being absent, and old Graphic, looking very well, not being in competition. Pontiac, the winner, was in fine shape and in him Mr. Thompson, who has but lately purchased him, has got a treasure. Breeders should not neglect this dog too long, he cannot last forever. His blood is of the very best, and barring one or two faults he is as good as the best.

In challenge heavy weight bitches Woolton Game was the only entry, and she having met with an accident in being conditioned was absent.

In the open class (7) for dogs—55 pounds and over—the Springside Kennels' Hylas of Naso rightly proved the winner; he has a good head, muzzle might be cleaner, fair neck, ears nicely carried, a bit heavy in leather, shoulders heavy, loin and hind parts good, stands rather wide in front and not always true; a dog showing much pointer character, but hardly quality enough. The same kennels' Ridgeview Panie, Mr. Winslow placed second here; I differ with him; I liked Mr. Heath's Roswell for second; Panie is too wide in skull, muzzle too short and not clean enough, eyes light, neck good, slightly throaty, shoulders loaded, legs want more bone, stands back on his pasterns, feet not the best, chest good depth, ribs should be better sprung, loin and hind parts good; in these parts he has improved over his last year's form, but as a whole I don't think he is looking better. Roswell, third, by Pontiac out of Bloom, is a new liver and

white with a good head, which would be improved with more length in muzzle, ears good and well carried, eyes a trifle light, expression good, neck a bit throaty, but nice length and well set on shoulders, which are hardly clean enough, legs and feet good, chest might be deeper, ribs well sprung, loin fair, stifles well bent, a trifle light in second thighs; this, however, will be improved with age and more muscle; stern fine, but too long and abominably carried. Does not handle his hindparts as well as I should like; this, however, is due, I believe, to his overgrowth for his age, he being but 12 months old. He is a dog showing good pointer character, lots of quality and is certainly a nice puppy, unless he grows coarse will make his mark some day. Dave took the reserve card; he has not got a good head, skull too broad, muzzle short, not clean enough, ears poorly hung, neck throaty, is out at elbows, feet poor, good middle piece, and hindparts good, stern carried a bit gaily. Vhc. went to Heather and Signal W. Heather I prefer to Dave in head, legs and feet, eyes light, ears not properly carried, muzzle rather snipy and not clean enough, neck good, well set on shoulders, feet fair, good legs, bone, middle piece and hindparts; too straight in stifles, stern fair. Signal W. is plain in head, ears thick in leather and not well hung, good neck and shoulders, rather leggy, feet poor, stern coarse, too long and not properly carried. Mark Anthony, hc., a liver and white, not nicely marked, and liver not dark enough, skull broad, ears thick, heavy in shoulders, wide in front, barrel too round, back on pasterns; feet poor, slack in loin, stern fair.

In open bitches, 50lbs. and over, Lady Tammany had a walkover. Bloomo II. and Westminster Ina of the Rinada Pointer Kennels being absent. Lady Tammany is too broad in skull, is cheeky, nice muzzle, fair eye, ears too heavy, shoulders fair, legs and feet good, ribs nicely sprung, long in loin, nicely bent stifles, light in second thighs, good stern—a rather nice bitch.

Duke of Hessen, looking splendidly, and Rock II., met in challenge light-weight class for dogs; the decision never was in doubt; Rock II. is hardly in the same class with Duke. Rock is too broad in skull, cheeky, eyes stary, muzzle not clean enough, neck too short and throaty, heavy in shoulders, does not stand quite true in front, back on his pasterns and not the best of feet; too long in body; if he stood higher on his legs he would be much improved in general contour. In the same class for bitches Fan N. had a walkover. She has a nice skull; with more length of muzzle she would be improved; neck short and heavy, legs good but too short for length of her body, shoulders should be cleaner, feet fair.

In open class for dogs, under 55lbs., I differ with Mr. Winslow considerably. Hempstead Luck, whom he placed first, I like for third place and Ridgeview Tenny, the reserve, I should have placed first. I however understand that at the time of judging Tenny showed up very badly. Bang I should have left second and Ridgeview Faust, third, would have been the reserve. Hempstead Luck is a good fronted dog. His skull is too wide, and his frontal bone too prominent, muzzle might be longer and cleaner, ears should hang better, eyes a trifle too light, has a nice neck, shoulders could be cleaner, legs and feet good, nice chest and ribs, hind parts good, but stern if finer would be improved, however, it is well made, but carried a bit gaily. A dog showing good pointer character, was in excellent condition, as were in fact all the entries of Hempstead Farm. Bang took second. A good-fronted dog, with good skull, muzzle might be cleaner and squarer, ears heavy in leather and not extra well carried, a good length of neck a bit throaty, has excellent shoulders, legs and feet, might be deeper in chest, loin long but strong, hind parts good, stifles straight, stern good. A dog showing character, but not enough quality, undoubtedly of good breeding were his pedigree known. Ridgeview Faust, third, should have had the reserve. He is too cobby in build, neck short and heavy, shoulders poor, back on his pasterns and not true in front, although better there than last year, loin and hind parts good. Advance, reserve, I do not like, too wide in front, skull broad, cheeky, muzzle not clean, eyes light, plain headed, nice neck, shoulders poor, back on his pasterns, feet fair, behind his shoulders nicely made. Ridgeview Tenny, vhc, impressed me as being the best one in his class. He is by no means, though, the good one he has been cracked up to be, good skull, cheeky, muzzle clean, hardly deep enough, ears not well carried, excellent neck, heavy in shoulders, might be closer at the elbows, does not stand true in front, back on his pasterns, feet only fair, nice body, loin and hind parts, stern well made, but carried too high. Speculation, hc, is not the right kind and Mr. Winslow treated him kindly. He has a nice ear, fair legs and feet and a well-made stern, otherwise there is not much to his credit. Chancellor, of the Rinada Pointer Kennels, was the only absentee.

Open bitches under 50lbs. (11), two absentees, Rinada Pointer Kennels' Ridgeview Lass and Brackette. Here again I differ with Mr. Winslow; Hempstead Kit given the reserve, should undoubtedly have been first. She is by far the best in the class, and I like her as well as any bitch in the show. Wild Lily who took first I should have liked for second place. Springside Nell, third, suited me. Fan Fan II. the bitch that took second I liked for the reserve. I have been told that at time of judging, Hempstead Kit would not show herself to advantage. Wild Lily is well known, she is now in the challenge class and Mr. Lovell is to be congratulated. She is not my style of a bitch and some whom she has beaten I prefer. I think when bred that she should make an excellent brood bitch. Fan Fan II., second, nice head, ears good, eyes light, muzzle would be improved with more length, neck good, shoulders, legs and feet good, barrel too round, hind parts fair. Springside Nell, third, barring a rather long body and a trifle of legginess, suits me. She has a nice head, good neck and shoulders, legs and feet excellent, wonderful bone, chest might be deeper; with more age she will let down a bit I think, and it will take a good one to beat her. Hempstead Kit, reserve, a good bitch, with a nice head, eyes a bit light, nice neck, shoulders, legs and feet, good depth of chest, splendid loin and hind parts, a bitch showing much character and quality. She beats the winner in head, shoulders, feet and loin. Vhc. Bloom, Miss Lancashire and Hempstead Duchess. Bloom, a bitch showing quality and character, is well known; Miss Lancashire, skull broad, cheeky, nice muzzle, ear poorly hung, good neck, shoulders poor, barrel too round, front legs badly turned out, back on her pasterns, feet only fair, loin and hind parts good; rightly placed. Hempstead Duchess is a bitch much the same type in body as Miss Lancashire, but has good forelegs and feet, is straight in stifle, skull too broad, muzzle not clean enough. Sally Kent, hc, not good in head, eye light and stary, nice stern, too long in body, shoulders fair, legs and feet good, stern fair, should stand higher on her legs. In puppies, dogs, Count of Kent, a rather promising puppy, won first. Talisman, outside his well made head, has not much to recommend him. In bitch puppies Countess Kent, a sister to the winning dog puppy, properly won. She should have been in better shape. The specials: American Field cup for best pointer dog or bitch, rightly won by Duke of Hessen; \$30 for the best dog in open classes, owned by member of Pointer Club, was won by Chas. Heath's Roswell; the same for best bitch was won by Wild Lily; the kennel prize was won by Springside Kennels. I prefer Hempstead Farm. Mr. Arnold's special was won by Hylas of Naso.

**ENGLISH SETTERS** (John Brett, Judge).—Considering the time of year when the English setter man's fancy turns to field trials and the pursuit of Bob White there was a good lot of this breed bunched. Old champion Paul Gladstone was N. F. C., unfortunately, or he would have booked another win to his count. In challenge bitches the pretty Spectre beats

Victress Lewellyn in quality, head and forepart only. In open dogs (15) the well-known Glendon scored again, beats Netherwood in hind parts, where he is plain, but head and forepart generally are very good, though he's a bit throaty. Robin Goch looking better than yet seen, in nice coat and feather, is beaten in front by the others; they are three handsome dogs. Deceive, well known, was reserve; he loses in forelegs, and his head marks make him look a bit dishd: it's a good head though. The Earl and Viscount are both good dogs, but scarcely show the quality of the others; they have been out before many a time. Drake Lewellyn is faulty in stop and droops in quarters a bit; otherwise a nicely formed dog. Kent's Rex has a rather coarse head, but should have been noticed for legs and body. Open bitches (9) saw Dominum a winner again; she was out of coat, should have more stop and she looks a bit wide in front; otherwise a well made bitch, though she moves a bit close behind. Monk's Nun, second, should have a little deeper muzzle, shows lots of quality, and with a little more time in body will beat the winner; she is shy yet, too. Prima Donna, third, well known as a good one, is getting a bit throaty, but was shown in excellent shape. Lullie, reserve, I would like better if she were truer in front, is a bit out before eye, but excellent in body and hindparts; out of coat. Lady Hope is faulty in pasterns and feet, nice head, expression and body, would do with more stop, out of coat. A nice class, well judged. A remarkable thing about these classes was the fact that the lately deceased Rockingham and Donna were responsible for the winners in each class; truly a remarkable record.

**IRISH SETTERS (John Brett, Judge).**—Take out Oak Grove Kennels and quality was not very strong here. The kennel named showed five challenge dogs, and to Kildare and Dick Swiveller fell the prizes in dogs, and of course Queen Vic beat Norna in the bitch class; both looked, though, short of coat. Queen Vic followed this up by winning the Ashmont Trophy and dividing special for best in show. In open dogs (7) the best was the well-known Erin's Lad, but the Judge could do no better than second, withholding first, this seems a trifle hard, but holding the challenge dogs in his eye perhaps it was excusable, as Erin's head is plain, and he is none too good behind; Denny third has a big, coarse head. Bitches (6) were much better, the well-known Lady Cleveland winning, though I liked Kate quite as well, had she a little more stop, she is nicely made all round; Rosamond is a bit dish-faced and ears don't hang well, good front and color; Lucy M. is not true in front, and muzzle not square enough.

**GORDON SETTERS (John Brett, Judge).**—There was little new here, and classes were not as large as they seemed, as a good many entries were N.F.C. Remont won in challenge dogs and the well-known Ladies, Gordon and Waverly, have often been seen before. Then Duke of Wellington had no competition in the dog class. In bitches (3) first went to the well-known Katherine, who beats Bessie in front and stern, but not in head by any means, in fact it is the best head seen on a Gordon for some time, excellent expression and if a trifle larger would be almost perfect, but she is plain otherwise; Beauty is but a moderate sample. Mont Gordon Setter Kennels had nine entries N.F.C. on account of their owner being on the executive committee. Quite right Mr. Morris.

**BEAGLES (Jos. Lewis, Judge).**—We are surprised that with a good club judge and liberal classification, there was not a larger entry, but suppose the field trials had something to do with it. In challenge dogs, Doctor and Roy K. met and their placing is quite a matter of opinion, but I think Roy is the more typical beagle, neither are good in head but Roy has the better forelegs and shorter, more cobby head but loses a little behind. Challenge bitches did not fill. Open dogs over thirteen inches, (3) was a win for Lee II, who with more stop and squarer muzzle would be a good beagle, he won pretty easily from Mr. Winkle who never did impress us as favorably as does his owner. Trifle II, I thought, though he lacks quality and is coarse in shoulders and skull, could have come in second, as he is only beaten in head by Mr. Winkle and excels in other parts.

In bitches (2) wrongly entered in under thirteen inch class, Lady of Denmark is light in body, feet come together and muzzle should be shorter, other parts good. Lucy S. is a weedy rather leggy specimen, her skull and ears are her best points. Under thirteen inches challenge dogs had the veteran, Frank Forest, looking a trifle light but in good health. Champion Lou was absent. In open dogs (2) (small size), it was not difficult to put Laddie first, he shows lots of quality and expression, he could be improved with a cobbier body and stronger muzzle. Harper fails behind, very weak, and is coarse in skull. In corresponding bitch class, Baby Deane won once more; she is a nice beagle and with a better muzzle would be a very good one. Princess K. is spoiled by a weak, poor head, but is good behind this, excepting coat, which is too soft, forelegs good.

**FOXHOUNDS (Jos. Lewis, Judge).**—With Commodore winning no fault can be found, for he excelled the others in every point but ribs, and he was well shown, much better than at Mt. Holly. Buckshot, second, has a rather plain head, but is well formed in body, legs and shoulders. Glenwood Belle loses very much to the others in loin and quarters, but has an excellent, straight front, head needs more stop and coat is too fine for a foxhound.

**DACHSHUNDS (James Mortimer, Judge).**—Newark is a German stronghold and we were not surprised to see a lot of dachshunds, but the terrier type prevailed and there was nothing to touch champion Janet, who had the challenge class to herself and never looked better. Ichysaurus's capital long head and body and good forepart sufficed to beat Faustus, though I should like to see less wrinkle. Faustus is too coarse in skull and has too much stop, but beats the others in bone and body and looseness of skin. Fitz has scarcely crook enough, is light in bone, is a little too prominent in brow, but shows a lot of quality. Nig, Jr., reserve, is short-eared and short-headed, but is a nice specimen of his type. Pautus, vhc., I like better in length of body and head, but is rather weak at the knees and ears are not set on so well, and Pishman could well have had another letter. It was a good class all round. Bitches (4) had Cherry for winner, she is too full in eye and a bit faulty in muzzle, and ears are flat and short, but her body is of good length and has plenty of skin, Nellie is light in bone and knuckles over feet open and flat and faulty in tail. Dachs, third, has poor ears and is too flat in loin. Nellie, h.c., carries her tail too high and has too much stop.

**SPANIELS (James Mortimer, Judge).**—The entries were not numerous, but there was a lot of quality. The cockers especially were good, and little fault can be found with the placing. The Irish water spaniel, so-called, is something of a spaniel and that's all. He didn't get anything. The only Clumber has a pretty good head and nice body. In field spaniels Newton Abbott had here to succumb to Brantford Mohawk, who beats him in head a good deal and front, but loses in body and condition. Ir open black dogs (5) the well-known Warwick again beats Echo in front and body, with Sorry Jake coming between, all have been out several times before. The bitch class was drawn blank, and in livers two turned up. Ilfracombe, the winner, had a sore on eye and is throaty, nicely formed head, good body, but is not quite high enough on leg. The Shrew loses in bone and muzzle.

**COCKERS.**—Those two excellent cockers Middy and Miss Waggles furnished the challenge winners, and with the exception of Middy being shown a little light were in their customary form. Open black dogs had four entries, and first fell to King Raven, Jr., from the same kennel, shown a bit fat his body looked dumpy, but is well formed, and with a little more stop his head would be a good one. The well-

known Jay Kay came second. Woodland Count, third, is too coarse in head, though its formation is good, nice coat and feather. Wildfire, vhc., is also coarse in head, otherwise he will do. There were five in the bitch class; and the well-known Miss Phyllis, nicely formed all round, beats Rideau Rhea in head, which should have more stop, but is well formed from the head back, but not yet quite in the Swiss Mountain bloom, though she shows feather and coat. Woodland Kitty is too full in eye and has a low, crooked front. In other than black dogs (4) the good looking Othello was at the head, with Brantford Rufus, the red, second, faulty before eye and muzzle, and losing in forelegs. Denver, third, is a bit coarse in head, coat should be flatter, has a good set of legs though. In the bitch class Ruth S., faulty in head, won from Red Niobe, but it is a near go, there is little between them. Fan is too round in skull, in fact her head is plain, her good body and legs will, however, always command attention. There is little to choose between these three. Swiss Mountain Kennels took the kennel prize without any trouble.

**COLLIES (Martin Dennis, Judge).**—There was not a very strong showing here and the judging was not such as one can commend. There is not much trouble in picking the winner when Wellesbourne Charlie and Ormskirk Sheep meet in the challenge class and Charlie won. He was not in such good coat as at Toronto, but had enough of it to carry him over everything here. We were pleased to see old champion Luella once more on the bench. Mr. Jarrett must have quite a company of old stars to draw upon; Luella looked well, too, and can down lots of them yet. In open dogs (4) the judge was not quite so happy. There were only two in it, Prince Wilkes and Yorkshire Surprise, and they should have been just the other way. Prince's head is coarse compared to the other. Both are well made collies, but neither have much under-coat, and Surprise gets his tail up too gaily, but his head and ears should have pulled him through. Cawdor Dan is very coarse in head. Bitches (3), Deepdale Madge, first; should be a little stronger in muzzle; carries his ears well and is nicely made, but soft in coat. Scottish Girl is scarcely

is not as good in formation of head, but was in better condition, is more truly a curly, is a regular dandy in deportment and is without such a fault of conformation as seen in Rajah.

In the open class for curly bitches, Mrs. Van Wageningen had Rosa on exhibition, but as she did not consider the dog in prime condition, criticism may be out of place. Dinah, first, is a cobby, well coated specimen, bright, stylish and good in his proportions. Victoria, second, has greatly improved since the pet dog show, but is not equal to Dinah in curl, nor is she as stylish and elegant, she was shown too fat, but in splendid condition otherwise. Listelle, third, is a very pretty little dog, cobby, well coated and has a gay carriage, and pressed Victoria very closely. Black Maria, reserve, is of this same order, and scored over Jeanne vhc., for gay carriage, both being about equal in other respects. Juno, h.c., was only inferior in build, therefore deserving his letters.

In curly dog pups Mrs. Van Wageningen again met the Meadowmere Kennels and had it not been for the fact that the classification was again disregarded and her pups appeared in coats of a woolly nature, rather long for curls, she might have done better. Jumbo, first, is a bright, well-made pup, with a coat that showed evidence of care. Ami, second, was selected as the best of the fair exhibitor's team, and though about the poorest shown in the class, being very shy, he is really a pup of much merit, beating even Jumbo in shape and length of head, as well as in eye; in body he was not as well matured, and this, with his coat, prevented his taking the blue. Nigger, third, is also inferior in these same respects, yet he is a capital little poodle, with many good points, and though more developed than Ami, and more correct in coat, still the other deserved second on head and eye alone. Solo and Fidele, both V. H. C., also have good head and are very promising. Jabot and Paris, both H. C., were the poorest of their respective kennels, but neither was unworthy of notice.

Of the bitch curly pups Jeanne and Black Maria were about on an equality, and Juno but a little inferior in conformation.

CHAMPION PONTIAC.

First Challenge Class, Newark Show, 1893. Owned by Mr. G. H. Thompson, New York.

up to Chestnut Hill form; should be longer in head, fair coat and stands on good legs. Cawdor Mayflower has prick ears, but a nice head, good length, shape and expression; short, open coat. In puppies a most miserable and barefaced attempt at dropping the ears of a very good bitch was very apparent, and after getting the vet's opinion that the ears had been cut the judge should have withheld the prize. The bitch was afterward protested and disqualified. Can't Tell, second, is a rather plain sort; skull faulty, forelegs not the best, though plenty of bone; good coat. She afterward stepped into first place. Chestnut Hill Kennels took the kennel prize. But how Prince Wilkes came to beat Wellesbourne Charlie for best in show is a puzzle—we give it up.

**POODLES (Edwin H. Morris, Judge) [SPECIAL REPORT BY THE JUDGE].**—In respect to both quality and quantity these classes surpassed any previous exhibition in America. One entry more and there would have been forty. In the challenge class Lion and Berri met, and were placed thus. Lion was in capital form, although less dirt and oil on his coat would have been better. Berri was not in good condition, was low in flesh, which made his length of loin and other faults conspicuous. It is here, in a more cobby build, in closeness of cords, in squareness, but not in length of muzzle, in a dignity of bearing, and in ear and eye, that Lion beats Berri, and as condition on this occasion was also in his favor, the win was an easy one. Berri's coat was more clean, he has a longer muzzle, better skull, and were it not for a certain staleness, might in arch of neck and style make good the other deficiencies. Champion Dexter was for exhibition only.

In the open class for cordeds Bismark was the only one in competition, and was given first. This dog is cobby and stylish, but in bone, muscle, topknot and head he is not a model.

In the open dog class for curls there was not a poor specimen, and Tabor, h.c. is a bright, stylish, fair coated dog. Nigger, vhc., is rather better in loin and conformation generally. Jumbo, reserve, is also good in these respects, and his curls are fairly close and thick. Max III. has that great desideratum, brightness, activity and proudness of carriage, but unfortunately on the end of his tail were cords; on his body during the judging was a fluffy, straplike coat, and his expression and disposition were not in his favor; when I took notes this dog appeared in excellent curl, and his fair owner said, "Why did you not say you wanted curls, for a bucket of water was all that was needed." He also needs more bone, which cannot be supplied in this manner. Rajah II. is the dog the judge put over Milo at the Pet Dog Show, and in reversing his decision he was quite aware of this. The classification at the former show said "other than corded," and he appeared in the newest Parisian style with coat combed. On this occasion he had a close curly coat like that of a curly retriever rather than of a poodle. It was a clever piece of work on the part of the manager of the kennel in order to get the dog to fit the classification, but the Frenchman who owned and exhibited him at the Pet Dog show was more clever in one respect; he trimmed his dog and kept him in motion so that the faulty formation of the bone just above the hock could not be detected. The short curls make this fault apparent and do not suit his build; besides, the dog was evidently recovering from some skin disease. Rajah though is an excellent poodle, large, yet cobby, strong in limb, stout in frame, yet active and bright, if not elegant in his new coat. He is very good in muzzle, skull, expression and texture of coat. Milo, first, on the other hand, has too prominent an eye,

In the other than black curly class three excellent red specimens were entered. Diamont, first, being unusually good, with capital curly coat, good in texture, thickness and closeness, in build and elegance, as well as shape of head, beating Poo Bah, second, in proportions, coat, style, head and expression. Vivette, third, is inferior to Poo Bah in mouth and expression; in build she has a slight advantage, and there is but little to choose between them. These dogs were shown in splendid form, as were most of the curls.

Diamont took the special for the best red and Lisette the special for the smallest, in the judging of which age had to be considered, it being the intention to bring out the small order now favored in Paris.

**BULLDOGS (James Mortimer, Judge).**—There was a pretty fair showing here and a new one made his bow. Leonidas, looking well, took care of the challenge class dogs, no bitches entered. In open dogs (5) a good one in Reve Royal, by Rustic Swell, was easily first; good head, especially in skull and ear, shoulders well out, lots of bone and a nice tapering body, with good swing, and is dark brindle in color. Romance, shown at Providence, was second and Governor, probably better known to all the "boys" than any other bulldog in America, came in for third; we admire him for his winning ways and not his good looks entirely—he has a long head—has Governor. Bathos was on exhibition only and looked well. Dolly Tester and Queen Mab furnished the winners in the bitch class; Dolly loses the other in head, body and bone. A promising pup in Daisy Belle took first in puppies.

**BULL-TERRIERS (James Mortimer, Judge).**—There was a mixed lot here, some of the best and a lot of others. Champion Attraction, looking well, was the only challenge entry. In dogs Cordonna upheld his Providence form, beating another good one in White King, whose broad skull, cheekiness and long pasterns spoil an otherwise well-made dog; he is also a bit faulty in hocks. Lord Blandford, third, was at the Pet Dog show. Diamond King arrived too late for judging. In bitches (3) Kit won again; she beats Edgewood Fancy II. in muzzle, feet and loin, and is also better behind. British Queen is not true in front, faulty in head, nice body and condition. These were all heavy-weights. In light-weight dogs (3) Ted Pritchard and Tarquin were placed as named; Ted beats in head and front. In bitches (3) Newy, coarse in head, was second at the Pet Dog show; she won, but the others were too poor to count. F. F. Dole won the kennel prize.

There were no Boston terriers, although the club gave a special.

**FOX-TERRIERS (James Mortimer, Judge).**—These classes filled well, but the prizes went to old faces. Blemton Victor II. furnished the only challenge dog, he was fairly well shown. In open dogs (16) first and second went to Blemtons, Stickler and Rasper, the same as at Providence; they were better in heads, cleaner in shoulders and had a little more quality than the other winner, Tip Top, who was well shown. Warren Layman was also at Providence. Blemton Rattler, vhc., is also an old face; he showed too much daylight under him and is full in skull. Raby Palissy, vhc., I thought a better dog, his ears are big but head good and shoulders might be cleaner, but he's a terrier all over. Raby Domino could do no better than h.c. in this company; plain head, soft coat. In open bitches (9) the Rutherford Kennels had their revenge with Warren Captions, and but for weak muzzle and soft coat she is a nice terrier; the well-known Blemton Vindex coming next, she struck me as a bit light all round. Warren Dorothy next, faulty before the eye, good houlders,

body and forelegs, but coat very soft. Richmond Jesmine reserve, I would like better were she shorter in pasterns and harder in coat. Arrandale Sybil is full in brow, light in pasterns, and muzzle should be stronger, nice stamp outside of this. Dame Primrose should have a stronger and longer muzzle, her coat is also not hard enough. Seacroft Empress is a nice little pup, feet could be better, and skull is round and full yet.

Wire hairs were few but choice. Oakleigh Bruiser was the only dog shown, short of coat and light, but he is a nice stamp of terrier with a good long head. Suffolk Tassel beats Sister Grit in head and body, but is beaten in texture of coat by Sister. The latter was the only pup shown and won. Blemton Kennels took the kennel prize.

**IRISH TERRIERS** (*James Mortimer, Judge*).—Only a fair lot all round. Gaitees was the challenge winner. Open dogs (4) saw Crib the winner again. I don't agree with his forelegs, but his head, body and coat are good. Killarney is broad in skull and muzzle not strong enough, forelegs not just straight, a nice stamp of terrier though behind the head. Daddy Murry is leggy and droops in quarters, good long head. Paderih Rhu is a nice type of terrier but has too much stop. Bitches (5) and a daughter of Jackanapes came to the front, her muzzle is too sharp and coat not wiry enough. Ballylisbreen is too thick in skull, good coat. Erin has too much brow and coat should be harder. A poor puppy was shown and given third. There were no Dandies and but one Bedlington, the Toronto winner Tibbie.

**SCOTTISH TERRIERS** (*James Mortimer, Judge*).—Challenge dogs had three, not in as good coat as I have seen him, and only Scotch Hot in open dogs. In bitches, Bella II's badly crooked front, knocking over too, was I suppose the cause of the weedy Glenshea being placed over her, as Bella is a far better terrier otherwise.

**SKYE TERRIERS** (*James Mortimer, Judge*).—Sir Stafford and Endcliffe Maggie were the challenge aspirants and the judge could not separate them. Sir Stafford looked light in loin and out of coat; here Maggie beat him, but length and head and front and bone were much in Sir Stafford's favor. Sir Thomas easily vanquished Prince Charlie in bitches, that is almost black in color and had a short, snipy, foxy head. Nellie, the Gloversville winner, was the only bitch shown. The black and tan terriers are all well known and properly placed. Broomfield Sultan for a wonder failed to show up, and so near home, too. Some so-called Clydesdales were shown but were not up to the stamp that were shown some years back.

**YORKSHIRE TERRIERS** (*E. H. Morris, Judge*).—Many of these have been seen, and this year Young Ted in good coat was alone in the challenge class. In open dogs (5) Duke, rather light in body color but in excellent coat, won nicely from Ben, who is bigger and not so true in tan. Prince, third, is quite big enough and light in coloring. Bennie is smutty in tan. Bitches had two; Lady Nell, the winner, has been seen before, a rather nice sort, bright tan. Baby Belle is beaten in color, length of coat and ears.

**TOY TERRIERS** (*E. H. Morris, Judge*).—I did not agree with the decision that put Sport first over Prince, as the latter has a much better head and tan markings, the others are poor. Dot, not entered in time, would have beaten the lot, weighs 1½ lbs., and is well marked and coated.

**TOY SPANIELS** (*E. H. Morris, Judge*).—In King Charles spaniels Romeo, well shown, was the only challenge entry, and a son of his in open dogs, Romeo's Own, had no competitors, has a capital head, nice tan and when let down a bit in body will hold his own with any of them. A ruby spael, Dorothy, was judged later on in the week, and I did not see her. Mrs. Senn showed a nice Jap in her Tokio, in excellent condition.

**ITALIAN GREYHOUNDS** furnished no surprise, as the winners are all well known.

The Shipperke Mickie took a turn once more, his mustache in grey now. In Mexican Hairless Jewell, the Pet Dog Show winner, was alone and in excellent show condition.

**PUGS** (*Miss A. H. Whitney, Judge*).—All the entries are well-known winners, though their previous order was changed in one or two instances. Lady Bonsor beat Bess this time and rightly, better head and body.

**MISCELLANEOUS** (*Mrs. Mortimer, Judge*).—A motley crew, and no wonder a boy on the outside asked when the performance commenced. Chimo, an Esquimo, was short of coat, perhaps some of our critics will say we don't know anything about coat in this breed, but it's a cold fact that in the lang syne Tuctoo, a noted winner in England, hailed for several years from the Hebben Bridge Kennels; Little Bill, a Welsh terrier, got second, but I liked the smooth collie, though it had a little too much coat, for the top position—true bred and something we all know about—Sheffield Lad; the "Pom" was all out of coat and should not have been shown.

In selling class Blue Belle won. H. W. Lacy.

#### LIST OF AWARDS.

**MASTIFFS**.—**CHALLENGE**.—Bitches: 1st withheld; 2d, B. F. Lewis's Ethel. **OPEN**.—Dogs: 1st and 2d, Dr. C. A. Lougest's Emperor William and Emperor Maximilian; 3d, Mrs. A. G. Winter's Duke IV. Very high com. W. Arnot's Jefferson. Com. G. Osborne's Rover. Bitches: 1st and 2d, Dr. C. A. Lougest's Lady Diana and Gerda II.; 3d, H. Schierloh's Torrida.

**ST. BERNARDS**.—**ROUGH-COATED**.—**CHALLENGE**.—Dogs: 1st, Fred Schmitt's Otos. Bitches: 1st, New York St. Bernard Kennels' Princess Florence. **OPEN**.—Dogs: 1st, New York St. Bernard Kennels' Marvel; 2d, F. Schmitt's Roland, Jr.; 3d, S. Miller's Lord Walbeck. Reserve, F. Schmitt's Ashland Jumbo. Very high com. C. Kirschner's Ben Butler and E. Booth's Lothario. High com. G. Schmitt's Major Hector, C. C. Brandt's Roland and E. W. Fiske's Hamlet. Com. A. Habne's Lord Essex. J. F. Lutz's Gladie and J. C. Dillon's Kilmenny. Bitches: 1st and very high com. Duchess Kennels' Miss Anna and Countess Madge; 2d, Swiss Mountain Kennels' Sun Ray; 3d, F. Smith's Lady Bountiful. Reserve, and high com. New York St. Bernard Kennels' Reserve, and Miss Jerome's Coyne. **SMOOTH-COATED**.—**CHALLENGE**.—Dogs: 1st, W. J. Whelan's Miss Nellie. **NOVICE**.—1st, Dr. C. A. Lougest's Imperator; 2d, E. Wagner's Lausanne; 3d, F. Link's Ashland Jumbo. Reserve, F. Wiemann's Sir Pinlimmon. Very high com. Grace Decker's Tonzo, E. H. Rade's Wieland, E. W. Fiske's Hamlet and H. F. Mager's Vindex II. High com. L. D. Ward's Pluto, A. Habne's Lord Essex, Leon Rose's Duke and F. Link's Beda of Essex. Com. J. Rayser's Caro R. and Barbara Schmitt's Colonel Major. **PUPPIES**.—Dogs: 1st and 2d, F. A. Reiker's Bruce and Rector. Reserve, F. F. Flanagan's Sir Noble. Very high com. F. Schmitt's Guido. Bitches: 1st, Duchess Kennels' Miss Amanda; 2d, F. Waldmann's Cleopatra; 3d, W. V. Ruckelshaus's Daisy. Reserve, F. F. Flanagan's Lady Esther.

**ST. BERNARDS**.—**SMOOTH-COATED**.—**CHALLENGE**.—Dogs: 1st, Swiss Mountain Kennels' champion Scottish Leader. Bitches: 1st, Duchess Kennels' Empress of Cotooncock. **OPEN**.—Dogs: 1st, Louis Faur's Major Flon Flon. Reserve, Rivermount Kennels' Ray. Very high com. Rivermount Kennels' Nemo II. and Guido Hunneschagen's Cassar V. High com. J. W. Luscher's Rome. Bitches: 1st, Duchess Kennels' Bellegarde; 2d, Swiss Mountain Kennels' Sunol; 3d, Henry Schierloh's Charnion. Reserve, Fred Schmitt's Guess Noble. Very high com. Chas. H. Baker's Lady Leeds. Com. S. M. Baker's Susan M. **NOVICE**.—1st, M. H. Thimann's Duke. 2d and 3d, Rivermount Kennels' Ray and Nemo II. Reserve, L. D. C. Wood, Jr.'s, Duke of Jersey. High com. Frank Linck's Leader of Essex. **PUPPIES**.—1st, Fred Schmitt's Helgate Keeper; 2d and very high com. Duchess Kennels' Franciscan and Heroic.

**BLOODHOUNDS**.—1st and 2d, Dr. C. A. Lougest's Belhus and Vigilant.

**NEWFOUNDLANDS**.—1st, Phil. J. Walsh's Carlo; 2d, Warren L. Hoagland, Jr.'s Leo.

**GREAT DANES**.—Dogs: 1st, Fritz Von Bernuth, Jr.'s, Yarrum; 2d, Hepburn Kennels' Hepburn Hero; 3d, M. Schult's Schult Nero. Reserve, Martin Hahnle's Pasha. Very high com. Mr. Freckenthaler's Leo, New York Pug Kennels' Duke Ernst, Hahnle's Hanes II. and Dr. J. Hahn's Tyras. High com. Fritz Von Bernuth, Jr.'s, Yeno and Dr. Arberg's Bismarck D. Bitches: 1st, Hepburn Kennels' Hepburn Flora Belle; 2d, Chas. Busch's Maiza; 3d, Martin Hahnle's Flora. **PUPPIES**.—1st, New York Pug Kennels' Thor.

**RUSSIAN WOLFHOUSES**.—**CHALLENGE**.—1st and 2d, H. W. Huntington's champion Argoss and Zerry. **OPEN**.—Dogs: 1st and 2d, Chas.

Stedman Hanks's Leukhol and Peter the Great; 3d, H. W. Huntington's Nagradaj. Very high com. Frances B. Jennings's Alexis. Bitches: 1st withheld; 2d, Lenox Kennels' Veatka. Very high com. Chas. Stedman Hanks's Raskeda. **PUPPIES**.—1st and 2d, H. W. Huntington's Irimina and Riga.

**DERHOUNDS**.—Dogs: 1st, Albion L. Page's Lochiel; 2d, Frank F. Dole's Douglass. Bitches: Albion L. Page's Minna.

**GREYHOUNDS**.—**CHALLENGE**.—1st, A. W. Purbeck's Bestwood Daisy; 2d, Albion L. Page's Maud Torrington. **OPEN**.—Dogs: 1st, Walter S. Gibson's Norway Star; 2d, Phil. J. Walsh's Cheeky Charlie; 3d, Woodhaven Kennels' Snowball. Reserve, S. Wellman Clark's Beeswing. Very high com. Berlia Kennels' Dallas. High com. Maybrook Kennels' Dakota. Bitches: 1st, Joe Lewis' Wild Rose; 2d and reserve, Maybrook Kennels' Miss Dollar II. and Drytime. 3d, W. Tallman's Maid. Very high com. Rudolph H. Wolf's Nellie's Girl. High com. Miss M. Travers's Beulah.

**WHIPPETS**.—Dogs: 1st, D. E. Douglas's Peeping Tom; 2d, Frank Farrow's Prince; or Robert the Devil. Bitches: 1st, James E. Douglas's Firenze; 2d, Richard Thompson's Bess; 3d, Fred Thompson's Young Peggy.

**POINTERS**.—**CHALLENGE**.—Dogs (50 lbs. and over): 1st, George H. Thompson's Pontiac Pioneer; 2d, Spradley and Ridgeway Pania; 3d, Charles Heath's Roswell. Reserve, A. S. Hoffman's Dave. Very high com. Stanton W. Pentz's Heather and Netherwood Kennels' Signal W. High com. James J. Faye's Mark Anthony. Bitches (50 lbs. and over): 1st, Springside Kennels' Lady Tammany. **CHALLENGE**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Duke of Hessen; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. Pan N. **OPEN**.—Dogs (under 50 lbs.): 1st, Hempstead Farm's Hempstead Luck; 2d, G. T. Hollister's Bang; 3d, Victoria Kennels' Ridgeway Faust. Reserve, George W. La Rue's Advance. Very high com. Netherwood Kennels' Ridgeway Tenny. High com. Red House Farm Pointer Kennels' Speculation. Bitches (under 50 lbs.): 1st, George W. Lovell's Wild Lily; 2d, Charles E. Connel's Rock II. Bitches (under 50 lbs.): 1st, Red House Farm Pointer Kennels' Ch. ## THE BULLDOG.

WITH the single exception of the fox-terrier, it can confidently be asserted that the old English bulldog is the popular dog of the world, notwithstanding the fact that it has for very many years past been the most maligned animal of the *genus canis*. Having been unfairly stigmatized as a ferocious dog and "incapable of any education" whatsoever, the bad name has stuck to the bulldog like glue, and even in these enlightened days people are to be found who entertain the most absurd notions respecting a bulldog's character and disposition, and which, needless to relate, are quite the reverse of the real truth.

Whatever degree of ferocity the dog which was employed for baiting the bull may have possessed, its savage fierceness does not appear to us to have been directed against mankind, but against its foe, the bull, and we find very serious fault with the historians of the past for not having made this perfectly clear. From the language employed by most of the old writers on bulldogs the student is left with the strong impression that the bulldog was akin to a man-eating tiger, and this solely in consequence of the dog's valiant deeds of daring when engaged in combat with a mad bull. According to the *Sportsman's Cabinet*, the first well authenticated bull-baiting took place during the reign of King John in 1209 at Stamford, in Lincolnshire, and originated in the following circumstance: "William, Earl Warren, Lord of Stamford, standing upon the walls of the castle, saw two bulls fighting for a cow in the castle meadow, till the butcher's dogs pursued one of the bulls entirely through the town. This sight so pleased the Earl that he gave the castle meadow, where the bulls' combat began, for a common to the butchers of the town, after the first grass was mowed, on condition that they should find 'a mad bull' the day six weeks before Christmas for the continuance of 'that sport for ever.'"

Bull-baiting seems to have flourished at Tutbury, in Staffordshire, from 1374 to 1773, while it went on very extensively in London, Birmingham, Stafford, York, Sheffield and Crediton down to the passing of the act for the prevention of cruelty to animals in 1835.

The bulldog appears to have been in favor all over the world long before the present century, and the "furriner" seems to have been as keen in the year 1800 to acquire specimens of the English bulldog as he is in the year of grace 1893, for a writer of the former period says of the bulldog: "The breed is not so numerous in consequence of the great number purchased and transported to other countries, for which the most enormous prices have been given."

The same writer, in describing the characteristic attributes of the breed, says: "It is a distinguishing and invariable trait in the true bred bulldog to attack the animal in front, and never to make a cowardly attempt at the extremities. The dog whose breed has been preserved genuine and uncontaminated aims at, and makes most ferociously for, the face of the bull, and, sinking to the ground the nearer he approaches, makes a desperate effort to seize upon the lip, as the most tender seat of irritability and excruciating pain, if he succeeds in the attempt; failing in which he relaxes not in his efforts, but with the most incredible and determined fury fastens upon the tongue, the eye, the underjaw, the throat, or some part about the head or face (never degrading his character by making a pusillanimous attempt behind), where, having secured his hold, he retains it beyond the power of description, in opposition to every energetic and desperate effort of the bull to get himself disengaged."

Although very few of the present day bulldogs have been permitted by their owners to try their luck with a bull, there can be no manner of doubt that a large number of our best show specimens would sustain the reputation of their ancestors if encouraged to attack a bull. The heart is still in them, but as a good bulldog is now worth on the average about three or four sovereigns per pound weight (the sum paid for Dockleaf was equivalent to six sovereigns for every sixteen ounces), the value acts as a deterrent to sport of any kind with them for fear of their receiving a disfigurement which would operate to their detriment in the show ring. But, as we said before, some bulldog men know that the heart is still in the breed, for they have tried their dogs at big game. Not so very long ago we were strongly of opinion that the breed had lost its proverbial pluck, but experiences (which for obvious reasons cannot be made public) have disabused the erroneous impressions we had formed, and we now are strongly of opinion that several of the best show specimens of to-day would, if required, emulate the prowess of the old bull-baiters from whom they are descended. A large number of the dogs on view this week at the Aquarium can claim as their ancestor the dog whose owner was wicked enough to make a wager "that he would, at four distinct intervals, deprive the animal of one of his feet by amputation; and that after every individual deprivation he should attack the bull with his previous ferocity; and that last he should continue so to do upon his raw stumps."

The recorder of the above fact says, "The experiment was made and the result sufficiently demonstrated the truth of the prediction." Strange to say, the scene of this shocking experiment was the site where the Royal Aquarium now stands, i. e., Old Tothill Fields, Westminster. Doubtless owing to the fact that the old writers failed to properly express their meaning when writing of the bulldog, the breed fell somewhat into disrepute, and we are bound to confess that about thirty or forty years ago the bulldog was not associated with—well, let us say—the aristocracy of this country, whose companion it is our pleasing duty to record the national dog of England to-day. Somewhere about the year 1875 a body of gentlemen, of whom the prime movers were (*inter alia*) Messrs. J. A. Berrie, Vero Shaw, C. F. W. Crafer, J. Sandell and others, formed a club for furthering the interests of the bulldog, and since that date the breed has steadily grown in popular estimation until it occupies the proud position in the kennel world that it does at the present time. The Bulldog Club has spent large sums of money in bringing the virtues of the bulldog prominently before the public, and by dint of a plucky perseverance and holding of a grand exhibition of the breed at frequent intervals in the principal public resorts, one of the quaintest and most amiable species of the canine race has been rescued from sinking into oblivion, and the true nature and character of the bulldog have been firmly implanted upon the minds of those who, through the shortcomings of past historians, were wont to regard this ancient breed as one of the most repulsive and dangerous animals in the whole of the animal creation. The bulldog is admirably adapted as a townsman's dog, as it does not need galloping exercise like most dogs do, and a daily walk with its master is sufficient to keep a bulldog in form. As a playmate for children we can positively assert from experience of many years' duration no dog can excel the bulldog. Kind and gentle in its every action, it enjoys a romp on the carpet or grass as much as would the greatest tomboy that ever lived. There can be no doubt whatever that, as a protector of life and property, our friend the bulldog will take some beating. Few if any strangers but what have a wholesome dread of a bulldog, and therefore it is quite easy to believe the old Staffordshire farmer who, writing to the newspapers, said that "he had found from long experience that two good bulldogs loose in his yard did much more toward making his neighbors honest than did all the parson's preaching." That acknowledged authority on dogs, "Stonehenge," paid the bulldog a high compliment when he wrote "that not only was it the most courageous dog, but the most courageous animal in the world," and when to this character it is added that the bulldog is at the same time gentle, amiable, devoted to its master, and never known to snap or snarl unless urged by it

master or mistress so to do, it will readily be realized that the bulldog is indeed a staunch and useful friend to man.

The following rhyme, which appeared in the *Stock-Keeper* so long ago as the year 1885, very cleverly and correctly describes the bulldog's character, and that, combined with its humorous and pathetic tone, entitles the poem to the highest place in the bulldog man's memory:

## EPIGRAPH ON OLD CHARLEY,

A BRINDLE AND WHITE BULLDOG, BY HIS OWNER, THE REV. JAMES ADCOCK, SEPT. 1, 1889.

This lowly spot, inscribed with Charley's name,  
Acquires fresh interest from his well-earned fame.  
For while he lived no sturdy rogue or thief  
Approached the house to suplicate relief,  
And many a time has laughter made me weep  
To view his horror of an unwashed sweep.  
Yet had he not the shadow of a fear,  
Nor heeded odds when other dogs were near;  
Venus and Mars held o'er him equal sway,  
And either call he scorned to disobey.  
His knotted shoulder and his vise-like jaw  
Served well to keep the mongrel curs in awe;  
But when some worthier rival grac'd the stage,  
Full of high mettle, void of needless rage,  
He'd dare the onset, nor would seek retreat  
Till prostrate lay that rival at his feet.  
His pluck and bottom were above all praise,  
And scars the prowess told of bygone days;  
Yet was he ever faithful, ever true—  
Gentle and playful as a kitten too.  
Curious in food, how fond was he of cake!  
And every sort of biscuit one could bake!  
Whilst with a nut to see him was a treat—  
He'd crack the shell and then the kernel eat.  
But now at length invidious disease,  
In league with time, has wrought his health's decease,  
And chemistry, in shape of prussic acid,  
Hath stopped his breath, and rendered him quite placid.  
Charley, farewell! and as thy looks no more  
Shall scare the beggar from thy master's door,  
So all who knew thee best shall fondly tell  
How kind a heart did in thy bosom dwell.  
Peace, then, to his remains! Here Charley lies,  
And if his race can claim a Paradise,  
May he the best of kennels there obtain,  
And live to bark and play and fight again.

The bulldog which was used for baiting the bull had the unsightly habit of invariably showing its teeth, in consequence of the lower jaw protruding to so great an extent that the lips could not cover them. We are rather inclined to think that

this natural "showing of the teeth" came to be regarded by the uninitiated as indicative of rage and anger, and it assisted in keeping up the bad name which the bulldog has been most unfairly given for ferocity. The Bulldog Club, therefore, when it drew up a standard description of a perfectly formed pure-bred old English bulldog, made it essential "the teeth should not be seen when the mouth is closed." The bulldog, as described in the standard drawn up by the club, portrays a dog beautiful in outline of body and with head and facial details of surprising quaintness and interest. It was soon found that the task of breeding bulldogs to accord with the standard was a very, very difficult one, and not so many years ago it became the practice of a few men who could not breed a perfect bulldog to endeavor to manufacture one, and to this "art" the term "faking" was applied. Thanks to the Kennel Club, "faking" of dogs is now almost extinct, for the severity of the penalty for the practice of the "art" is so great that it has acted as a complete deterrent to those who were not above the commission of the crime of faking. It may possibly interest not a few readers if we recapitulate a few of the faking dodges which used to be practiced on the unfortunate bulldog in order to make him capable of winning a prize.

The chief dodges employed by the "fakers" consisted of beating or punching the top lips of the dog a day prior to the show in order to make the flesh swell and so improve the size of the muzzle, an alternative method for this being the application of an irritant medicament which would similarly cause a swollen state of the lips. Plugs were employed for fitting up the dog's nostrils—the size of the nostril being a point of importance in the breed; one nostril was "plugged" one day and the other the next. The muscles of the ears were cut in pickered specimens in order to obtain the correct "rose" shaped ear. The most fiendish act of all, though, was the process of shortening the nose, for which purpose an instrument of torture called "jacks" was employed. This consisted of a perforated plate of metal which was shaped so as to fit the whole of the nose; this plate had two strong cords attached to it, which passed to a specially constructed collar. The metal plate being applied to the nose, was tightened up each day until the cartilage of the nose was squashed up close to the forehead. This inhuman practice started when the victim was about five months old, and the process of shortening the face generally lasted for several months. Huge pads were employed for putting under the pup's shoulders for the purpose of causing them to stand well away from the ribs in the orthodox manner, and the way of getting the low-to-the-ground appearance consisted in compelling the pup to sit in a pen in which, from its height, it was impossible for the dog to sit upright, and by this means the pup's legs were given a bowed appearance, and consequently the adult did not have too much daylight under him.

The faking of the tail was probably the most frequent torture the bulldog had to endure. According to the club's standard the tail of a bulldog should not from its shape be capable of being raised over its back. Now, for some years cock-tails were the rule rather than the exception, and in order to drop the tail one method was to cut the muscles of the tail close up to the rump, and then scar the incision with a hot iron, while another was to disjoint the tail and pull it every day for months, until it was impossible for it to ever get into union again.—*Licensed Victuallers' Gazette*.

## The English Kennel Club Show.

It is always interesting to hear what the judges say of the dogs they pass upon, and in the case of the show recently held by the E. K. C. at the Crystal Palace it is especially so, as in a majority of the breeds it was a show of England's best.

Bloodhounds, Mr. William Foster, the judge, avers in the *English Kennel Gazette*, were the largest entry and the best lot ever exhibited. The well known Burgundy, owned by Mr. Brough, was beaten by Bowne's Statesman, a grand young hound, though the judge in seeing Burgundy on the bench afterward thought him hardly used, and from this Burgundy's owner derives his sole consolation in defeat.

"Mastiffs, taken as a whole," says W. Norman Higgs, "I thought a great deal better than what we have seen lately at our large shows, and cripples were conspicuous, I am pleased to say, by their absence, although in one or two cases some did not move so well as I could have liked." Open dogs were the principal class here, and the fight lay between the old champion, Mr. Taunton's Beaufort and Dr. Turner's Ayrshire, the winner in "limit" dogs. Mr. Higgs writes: "Considering that Beaufort is now in his tenth year, I think it is simply wonderful to see how well the old dog looks. He certainly moved a little faulty in the ring, but I put this down to, in a great measure, a nasty running kennel sore. With this exception and his age, I could not find much the matter with him, and I consider him to be the most perfect mastiff I ever saw." Beaufort, it will be remembered, spent a year or two of his career in this country in Mr. Winchell's kennel, and although he was not used by breeders as freely as he should have been, it will scarcely be gainsaid that his influence on the breed in this country, though unfortunately not so extensively used as Minton or Ilford Caution, has been very great, an influence that is now being carried on by his son, Beaufort's Black Prince. Osburg II. won in the corresponding bitch class and also the O. E. M. C. Breeders' Challenge Prize. Beaufort took the Dog Championship medal, but not being eligible for the O. E. M. C. Dog Forty-Guinea Challenge Cup, having already won it six times, this fell to Ayrshire.

Irish wolfhounds do not interest fanciers on this side so we pass them over.

In deerhounds the winner in the novice class, Rossie Byron, was also first in limit class, but the best in the breed is W. H. Singer's champion Swift, who had a gala day. Of him Mr. R. Hood Wright says: "He is built on grand lines, shows himself full of dash and fire and it will take a good one to lower his colors." Of the best bitch, E. W. Bell's Rossie Blue Bonnet, the judge remarks, "She is just about perfection. When younger she was too narrow, but since she has been bred from she has altered in this respect, and may divide the honors with Swift as being one of the two best of the present time."

In Russian wolfhounds the Duchess of Newcastle's Golub and Milka were the bright particular stars of the competition. Golub was in grand form and showing his beautiful neck. This dog has been accused of being wanting in that point owing to the heavy covering of hair. Of the winning bitch Milka Mr. Wright says: "The lovely and large Milka was alone. She has such a perfect formation both in body, head and feet that one forgets her want of coat, and what I do like is a big one, full of quality, and she comes up to this standard, and to her I awarded the champion medal." A new one appeared here in open bitches, "the beautiful Sudarka," whom Mr. Dobbelsmann brought over from Rotterdam, Holland. She is only beaten by Milka in skull formation and the least bit in outline.

Evidently it is about time the English fanciers founded a chow-chow club and arranged a standard. There were a dozen specimens shown here and the judge acknowledges that he did not feel at home with the Chinese. There are as yet no rules laid down as to the best color or nothing to guide one in other points. In the foreign dog class, always a puzzler to judges, Mr. Wright bunched the prize winners, divided the dogs into four groups and picked the best from each. Yezo, the exponent of the new breed, that Mr. Raper gave first to at Edinburgh, was soon picked out for repetition.

Greyhounds. Here the same judge felt more at home, and Mr. Raper's Real Jam seems to have been aptly named, for she took the cake; in fact, all of them nearly—limit, open class and the champion medal. She is described as a "simply lovely bitch, covering a lot of ground, with grand neck and shoulders, perfect feet, and shown in the pink of condition."

Beagles, also judged by Mr. Hood-Wright, do not seem to have called for much enthusiasm. Mr. E. B. Joachim's Reader appears to have been the best, taking the championship. He is full of quality, with lovely ears, good body and feet. There were some rough-coated ones shown, too. Mr. Nutt's Pulborough Trusty proving the best here, "nice and level, with good ears and expression." We should like to have given more particulars in this breed, but the judge devotes little space to them, and his descriptions are not very instructive. He judged them by gaslight, and acknowledges he did not satisfy either himself or the exhibitors in this breed and in whippets. He gets in a good grumble on the stewards, and as it is applicable to some extent in some of our shows, we quote him: "Not a single committeeman or ring steward came near me after lunch, and I had to do both ring steward's and judge's work. Now, if one is judging breeds not perhaps so popular as some, it is not courteous to leave a judge at the far end of the Palace entirely to his own devices, while in the, well, say most popular class, half a dozen ring stewards and committeemen assisted, not only in their own legitimate work, but were so anxious lest the judge should reverse, that they told what this particular exhibit had done in the previous class or classes. Now, I call that real kindness."

Pointers were an average collection. About a dozen new faces appeared. There was, however, nothing among them with sufficient merit to lower the colors of previous winners. Sanford Bang and Sanford Graphic, old winners, were on hand.

The judge, Mr. E. C. Norrish, gives a very good report from which one can gather an excellent idea of the more prominent dog's good points and faults. The winner in the winner's class for bitches, Mr. Chapman's Heather Bee, had to give way in the open class to R. S. Bryan's Molton Bronte, of whom Mr. Norrish writes: "Looked at as a show bitch, Bronte is very nearly perfect, although her neck would have a more stylish appearance if a trifle longer and cleaner in the throat." She captured the champion prize for best pointer of all classes, and also with Molton Belle divided with Mr. Brough's pair of bloodhounds the honor of being the best brace of sporting dogs in the show.

The judge of Irish setters, Mr. Charles Austin, delivers himself of some opinions relative to this breed that are interesting in view of the marked improvement the Irish setters have made in this country. Mr. Austin says: "The most noticeable point in the Irish setters seems to be the great variety of types one sees, and the variety is more marked in the heads than in anything. In spite of the Irish setter description, one does not see many heads with stops or deep square muzzles, etc. In fact, one of the prevailing types seems to be a head in which the top of the skull and the end of the nose were in the same plane as it were, making a long, flat head without any sort of stop. And as this sort of head is usually tapered off to the muzzle the general effect is that the animal has a sort of sheep-dog-like look. Then there are Roman noses and very much-cut-away underjaws. All these points are most objectionable in any setter, but I regret to say I saw several of them in the ring. The majority of dogs I had before me were good in coat, body and color, but in several instances the feet and legs were not all that could be wished."

## RECORD OF FIELD TRIALS OF 1893.

## Bexar Field Trials, at Floresville, Tex., Jan. 16 to 17.

## PUPPY STAKE—2 STARTERS.

Prize.	Name of Dog.	Owner.	Color	Breed.	Sire.	Dam.	Amount.	Handler.
First.	Rod's Deuce.	West End Kennels.		Eng. setter dog.				C. M. Rounds.
Second.	Rod's Clip.	West End Kennels.						C. M. Rounds.

## THE DERBY—7 STARTERS.

First.	Modoc.	F. F. Myles.		Eng. setter dog.				
Second.	Waif.	Mrs. C. M. Rounds.		Eng. setter dog.				C. M. Rounds.
Third.	Argentine.	A. J. Ross.		Eng. setter dog.				

## ALL-AGE STAKE—9 STARTERS.

First.	Manitoba Frisk.	West End Kennels.		Eng. setter dog.				C. M. Rounds.
Second.	Duchess of Kent.	West End Kennels.		Pointer bitch.				C. M. Rounds.
Third.	Jesse James.	F. F. Myles.		Eng. setter dog.				

(Judges' and handlers' names, breeding, etc., were not given in report.)

## Pacific Coast Field Trials, at Bakersfield, Cal., Jan. 16 to 21.

Judges—R. T. Vandevort, Pasadena; D. M. Pytle, Bakersfield; W. Dormer, San Francisco.

## THE DERBY—18 STARTERS.

First.	George P.	Jas. E. Watson.	Black.	Pointer dog.	Old Black Joe II.	Black Bess.		D. M. Walters.
Second.	Countess Noble.	H. T. Payne.	Black, white and tan.	Eng. setter bitch.	Stanford.	Lilly C.		Owner.
Third.	Jim P.	Jas. E. Watson.	Black.	Pointer dog.	Old Black Joe II.	Black Bess.		D. M. Walters.
	Doctor P.	Jas. E. Watson.	Black.	Pointer dog.	Old Black Joe II.	Black Bess.		D. M. Walters.
	Johanna.	California Kennels.	Black, white and tan.	Eng. setter bitch.	Gladstone II.	Janet.		R. M. Dodge.

## ALL-AGE STAKE—9 STARTERS.

First.	Starlight.	T. J. Watson.	Black, white and tan.	Eng. setter dog.	Dan Gladstone.	Miss Alice.		M. De Motte.
Second.	Old Joe II.	Jas. E. Watson.	Black.	Pointer dog.				Mr. Allender.
Third.	Pelham.	California Kennels.	Black, white and tan.	Eng. setter dog.	Harold.	Sunlit.		R. M. Dodge.

## Southern Field Trials, at New Albany, Miss., Feb. 6 to 10.

## THE DERBY—21 STARTERS.

Judges—F. I. Stone, Chattanooga, Tenn.; P. H. Bryson, Memphis, Tenn.; Dr. M. F. Rogers, New Albany, Miss.

First.	Sport.	Manchester Kennel Co.	Liver and white.	Pointer dog.	Vanguard.	Georgia Belle.	\$400	A. P. Gilliam.
Second.	Dick Fox.	Blue Ridge Kennels.	Black, white and tan.	Eng. setter dog.	Chance.	Countess Rush.	\$250	D. E. Rose.
Third.	Lochinvar.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter dog.	Chance.	Bessie Avent.	\$66.66	J. M. Avent.
	Chevalier.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter dog.	Jean Val Jean.	Lucy Avent.	\$66.66	J. M. Avent.
	Lillian Russell.	Jackson-Denmark Kennels.	Black, white and tan.	Eng. setter bitch.	Philip Gladstone.	Lark.	\$66.66	Thos. Bond.

## ALL-AGE STAKE—19 STARTERS.

Judges—Dr. M. F. Rogers, F. I. Stone, A. M. Young, Manchester, Tenn.

First.	Whyte B.	H. S. Bevan.	Black, white and tan.	Eng. setter dog.	Roderigo.	Florence Gladstone.	\$300	Owner.
Second.	Antevolo.	Pierre Lorillard, Jr.	White and lemon.	Eng. setter bitch.	Count Noble.	Gladstone's Girl.	\$200	C. Tucker.
Third.	Novelist.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter bitch.	Roderigo.	Bo-Peep.	\$150	J. M. Avent.

(Major J. R. Purcell's Flockfinder III. awarded Pointer Club's special of \$100 for best pointer in the Trials.)

## United States Field Trials, at New Albany, Miss., Feb. 13 to 18.

Judges—Col. A. G. Sloo, Vincennes, Ind.; P. H. Bryson, Memphis, Tenn.; B. M. Stephenson, LaGrange, Tenn.

## THE SETTER DERBY—18 STARTERS.

First.	Lillian Russell.	Jackson-Denmark Kennels.	Black, white and tan.	Eng. setter bitch.	Philip Gladstone.	Lou K.	\$250	Thos. Bond.
Second.	Lochinvar.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter dog.	Chance.	Bessie Avent.	\$200	J. M. Avent.
Third.	Sport.	Manchester Kennel Co.	Black, white and tan.	Eng. setter dog.	Vanguard.	Georgia Belle.	\$150	A. P. Gilliam.

Absolute Winner—Lillian Russell; \$200 additional.

## ALL-AGE POINTER STAKE—13 STARTERS.

First.	Lad of Rush.	J. L. Adams.	Liver and white.	Pointer dog.	Rush of Lad.	Topsy L.	\$200	L. W. Blankenbaker.
Second.	Ben A.	Dr. D. W. Randall.	Black and white.	Pointer dog.	Stoddard.	Jet II.	\$175	Ed. Garr.
Third.	Ridgeview Beppo.	Graphic Kennel.	Liver and white.	Pointer dog.	Beppo III.	Revelation.	\$41.66	H. M. Short.
	Rex.	G. A. Castleman.	Liver and white.	Pointer dog.	Mainspring.	Dell.	\$41.66	W. B. Stafford.
	Bounce.	G. W. Amory.	Liver and white.	Pointer dog.	Bob.	Sal.	\$41.66	T. H. Poindexter.

## ALL-AGE SETTER STAKE.

First.	Novelist.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter bitch.	Woodhill Bruce.	Novelty.	\$200	J. M. Avent.
Second.	Bettye S.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter bitch.	Roderigo.	Bob-Peep.	\$175	J. M. Avent.
Third.	Eugene T.	A. P. Gilliam.	Black, white and tan.	Eng. setter dog.	Count Noble.	Ruby's Girl.	\$72.50	Owner.
	Zulu M.	Whyte Bedford.	Lemon and white.	Eng. setter bitch.	Toledo Blade.		\$72.50	A. P. Gilliam.

Absolute Winner—Novelist; \$200 additional.

## Northwestern Field Trials, at Morris, Man., Sept. 4 to 6.

Judges—W. Hamilton Spencer, Grand Forks, Dak.; John Davidson, Monroe, Mich.

## THE DERBY—12 STARTERS.

First.	Ightfield Dogwood.	A. P. Heywood-Lonsdale.	Liver and white.	Pointer dog.	Ightfield Dick.	Cowslips.		Sefton Hallam.
Second.	Dolly Shaw.	R. W. Shaw.	Black and white.	Pointer bitch.	Ightfield Upton.	Genevieve.		Sefton Hallam.
Third.	Selah.	Charlotteville F. T. Kennels.	Liver and white.	Pointer bitch.	Rip Rap.	Dolly Dexter.		Capt. C. E. McMurdo.

## ALL-AGE STAKE—15 STARTERS.

First.	Dick Bondhu II.	John Wootton.	Black and white.	Eng. setter dog.	Dick Bondhue.	Manitoba Belle.		Owner.
Second.	Brighton Tobe.	T. G. Davey.	Black and white.	Eng. setter dog.	Locksley.	Leddersdale.		Thos. Hallam.
Third.	Cleopatra.	W. B. Wells.	Black, white and tan.	Eng. setter bitch.	Mingo II.	Cambriana.		Joseph Spracklin.

## CHAMPION CUP—5 STARTERS.

First.	Manitoba Shot.	Thos. Johnson.	Black and white.	Pointer dog.	Ightfield Coton.	Ightfield Psyche.		Thos. Johnson.
--------	----------------	----------------	------------------	--------------	------------------	-------------------	--	----------------

## Manitoba Field Trials, at Souris, Man., Sept. 12 to 14.

Judge—W. Tallman, Plainfield, N. J.

## THE DERBY—13 STARTERS.

First.	Topsey's Rod.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter dog.	Roderigo.	Topsey Avent.	\$160	J. M. Avent.
Second.	Tate.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter dog.	Jean Val Jean.	Mamie Avent.	\$115	J. M. Avent.
Third.	Thalid.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter bitch.	Jean Val Jean.	Lucy Avent.	\$37.50	J. M. Avent.
	Hoodoo.	W. T. Ellis.	Black, white and tan.	Eng. setter dog.	Duke of Manitoba.	Cora.	\$37.50	Owner.

## ALL-AGE STAKE—17 STARTERS.

First.	Count Gladstone IV.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter dog.	Count Noble.	Ruby's Girl.	\$225	J. M. Avent.
Second.	Chevalier.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter dog.	Jean Val Jean.	Lucy Avent.	\$125	J. M. Avent.
Third.	Bettye S.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter bitch.	Roderigo.	Bo-Peep.	\$100	J. M. Avent.

## AMATEUR STAKE—8 STARTERS.

First.	Zero.	J. B. Roberts.	Red.	Irish setter dog.	Rover.	Rose.	Owner.	
Second.	Joe.	J. B. Roberts.	Orange and white.	Eng. setter dog.	Cabel.	Fan.	Owner.	
Third.	Zuleika.	W. F. Ellis.	Liver and white.	Eng. setter bitch.	Duke of Manitoba.	Cora.	Owner.	

[\*] First prize, \$50 silver cup. Second prize, doublebarreled shotgun. Third prize, pair of slips.

## United States Field Trials, at Bicknell, Ind., Nov. 6 to 11.

Judges—John Bolus, Wooster, O.; Royal Robinson, Indianapolis, Ind.; John Barker, Racine, Wis. In All-Age, Capt. C. E. McMurdo judged in place of Mr. Robinson.

## THE POINTER DERBY—13 STARTERS.

First.	Strideaway.	Geo. E. Gray.	Liver and white.	Pointer dog.	King of Kent.	Pearl's Dot.	\$250	Owner.
Second.	Little Ned.	W. N. Kerr.	Liver and white.	Pointer dog.	Ridgeview Dazzler.	Kate Claxton.	\$200	F. Richards.
Third.	Selah.	Charlotteville F. T. Kennels.	White and liver ticked.	Pointer bitch.	Rip Rap.	Dolly Dexter.	\$150	C. E. McMurdo.

## THE SETTER DERBY—18 STARTERS.

First.	Topsey's Rod.	Avent & Thayer Kennels.	Black, white and tan.	Eng. setter dog.	Roderigo.	Topsey Avent.	\$250	J. M. Avent.
Second.	Daisy Hunter II.	J. H. & J. A. Hunter.	Orange and white.	Eng. setter bitch.	Antonio.	Daisy Hunter.	\$250	J. H. Johnson.
Third.	Roderigo.	J. T. Mayfield.	Black, white and tan.	Eng. setter dog.	Antonio.	Lady Hope.	\$50	Owner.
	Callie White.	Manchester Kennel Co.	Black and white.	Eng. setter bitch.	Gath's Mark.	Georgia Belle.	\$50	A. P. Gilliam.
	Flying Jib.	B. W. Butterfield.	Black and white.	Eng. setter dog.	Max Noble.	Daisy Belton.	\$50	Owner.

Absolute Winner.

.....	Strideaway.	Geo. E. Gray.	Liver and white.	Pointer dog.	King of Kent.	Pearl's Dot.	\$100	Owner.
-------	-------------	---------------	------------------	--------------	---------------	--------------	-------	--------

## ALL-AGE POINTER STAKE—20 STARTERS.

First.	Franklin.	A. P. Houston.	Liver and white.	Pointer bitch.	Robin Adair.	Blossom.	\$200	L. W. Blankenbaker.
Second.	Kent Elgin.	T. T. Ashford.	Black and white.	Pointer dog.	King of Kent.	Vera Bang.	\$175	J. M. Avent.
Third.	Little Ned.	W. N. Kerr.	Liver and white.	Pointer dog.	Ridgeview Dazzle.	Kate Claxton.	\$125	F. Richard.

## ALL-AGE SETTER STAKE—20 STARTERS.

Third....	Antevelo.....	Pierre Lorillard, Jr. ....	Liver and white.....	Eng. setter bitch.....	Count Noble.....	Trinket II.....	[*]	C. Tucker.	

[\*] Prizes were equally divided between first, second and third.

PHILADELPHIA KENNEL CLUB'S TRIALS.

THE trials of the club began on Tuesday, immediately after the Irish Setter Club's trials were concluded, and on the same grounds.

Mr. Bell was to have judged these trials in addition to the Irish Setter Club's. His sudden recall home on account of illness in his family has already been mentioned. Mr. S. C. Bradley was invited to judge. He performed his duties admirably, and gave satisfaction.

The Derby.

There were but four starters, and of these three were owned by Mr. P. Lorillard, Jr.

— pointer bitch Zoe, handled by John Lewis, with P. Lorillard, Jr.'s, black, white and tan setter dog Almonta, handled by C. Tucker.

P. Lorillard, Jr.'s, black, white and tan bitch Antoinette, with his orange and white bitch Ightfield Rosalie, both handled by C. Tucker.

ALMONTA AND ZOE showed but ordinary range. The former pointed a bevy in the open, then intentionally flushed it. Sent on. Almonta was roading slowly on a bevy when Zoe came in and made a point on it. On the scattered birds the dogs and handlers made a jumble of it. Almonta flushed an outlying bird of a bevy and chased. Up at 3:34. Down 31m. The heat was a poor one.

ANTOINETTE AND IGTFIELD ROSALIE started at 3:45. Antoinette made a stylish point in a roadway in woods, and Rosa backed quite as stylishly. They were steady to shot. Rosa pointed on footscent and was backed. At 4:15 the heat ended. Antoinette had decidedly the best of the heat.

IGTFIELD ROSALIE AND ZOE were started, after a few minutes' rest, at 4:22. Rosa false pointed. Going down wind, she flushed a single, then pointed the bevy. Zoe backed. Save a point of Rosalie, the work on the scattered birds was ragged, both scoring flushes.

The winners were announced as follows: First, Antoinette; second, Ightfield Rosalie; third, Zoe.

The All-Age Stake.

This stake was begun and finished on Wednesday. The weather was uncomfortably warm. The grounds were most unfavorable and difficult to work. Dense thickets, steep hills, rough cover and bare fields were the prevalent conditions. Birds were scarce.

There were ten starters, Mr. P. Lorillard, Jr., took all the prizes, first, second and third. As in the Derby, this stake was a sweepstakes, 50, 30 and 20 per cent. Following is the order of drawing:

Dr. G. G. Davis's Irish setter bitch Currer Belle IV. (Tim—Currer Belle III.), C. Cassidy, handler, with P. Lorillard, Jr.'s liver and white bitch Antevelo (Count Noble—Trinket II.), C. Tucker, handler.

P. Lorillard, Jr.'s black, white and tan dog Eugene T. (Count Noble—Ruby's Girl), C. Tucker, handler, with F. R. Hitchcock's black, white and tan setter dog Roi d'Or (Roderigo—Bo Peep), F. Cassidy, handler.

P. Lorillard, Jr.'s orange and white bitch Miss Ruby (Gladstone's Boy—Ruby D.), C. Tucker, handler, with Murray Mitchell's orange and white dog Sandy Gladstone (Breeze Gladstone—Belle of Delaware), W. P. McClure, handler.

F. L. Hitchcock's black and white bitch Annie F. (Roder-

igo—Juno A.), J. Cassidy, handler, with Francis G. Taylor's lemon and white bitch Belle of Delaware, W. P. McClure, handler.

F. G. Taylor's Katie Noble (Breeze Gladstone—Katie Noble), with P. Lorillard, Jr.'s Dot Rogers (Roderigo—Gladstone's Girl).

CURRER BELLE IV. AND ANTEVELO started at 9:06. Belle soon made a good point on a bevy. Antevelo was lost during some minutes. Brought together, they were sent on. Antevelo flushed two birds, then pointed the bevy. On scattered birds Antevelo pointed, then roaded the birds up. Bell pointed twice on singles. Antevelo made a point and a flush. She next pointed, nothing found. Antevelo pointed a single. Antevelo was speedier, but her range was faulty, though she ran wide. She was lacking in judgment in beating out her ground. Up at 9:50.

EUGENE T. AND ROI D'OR started at 10:02 and ran till 10:34. Roi ran a bit heavy. On a bevy he made a flush. Eugene got three points on the scattered birds. He was the better in speed and range.

MISS RUBY AND SANDY GLADSTONE ran 59m. without finding, and then they were ordered up. Both worked diligently. Sandy carried too much flesh, yet he made a good showing. Had he been properly prepared there is little doubt but what he would have been in the money.

ANNIE F. AND BELLE OF DELAWARE were started at 11:58 and up at expiration of 30m. They ran a poor heat. Annie pointed a bevy and one single, and each flushed.

KATIE NOBLE II. AND DOT ROGERS started at 1:38 and ran 44m. Katie made a false point, then passed close by a bevy which the handler afterward flushed. She flushed on the scattered birds and chased, and Dot made a point or two, he having a decided advantage in the heat.

Sandy Gladstone in the heat with Miss Ruby showed the effects of his previous long heat and was not working so well. Ruby pointed a bevy and was nicely backed by Sandy, though the latter was a bit unsteady to wing. Each got a point on the scattered birds. Miss was the better in speed, range and bird work.

ANTEVELO AND MISS RUBY were cast off at 3:18 and ran 11m. Antevelo flushed two outlying birds of a bevy, then pointed and Ruby backed. Antevelo flushed a remaining bird. Ruby made three good points on single birds, one of which was quite a distance above ground in a tree.

CURRER BELLE AND DOT ROGERS ran 10m., beginning at 3:35. Dot pointed a bevy and flushed a single. Dot was the speedier and wider ranger, and showed greater skill in locating. Belle was faulty in pointing on footscent.

SANDY GLADSTONE AND EUGENE T. ran 13m. without finding.

Miss Ruby, easily the best dog in the stake, won first, Dot Rogers second and Antevelo third, the latter two not showing specially good work.

B. WATERS.

The movement to which we alluded a couple of weeks since is a petition signed by the prominent dog-furnishing and dog-medicine firms of the country, asking kennel clubs not to bind themselves to exclude all exhibits in this line but those of the firm doing the benching, etc. Some ten or twelve clubs have already signed the agreement. It is not right that any one person or firm should monopolize all the privileges of a show to the exclusion of all others engaged in a similar business. Competition is the life of trade.

IRISH SETTER CLUB'S TRIALS.

THERE was a light attendance, and, as the record will show, the stakes had meagre support. The diligent efforts of the secretary, Dr. G. G. Davis, should have met with better appreciation and better encouragement. His unceasing efforts in promoting the success of the trials during many months past, with no reward other than advancing the interests of his favorite breed and the cause of sportsmanship. With such a competent and indefatigable worker in establishing a healthy competition of Irish setters, it is strange that owners are so apathetic to their own interests.

It is certainly true that the advancement of the Irish setter as a field dog can never be attained on such lines of neglect and indifference as obtain at present. And granting that owners have an active interest in promoting competition, it is not every day that such an earnest and competent secretary can be engaged.

The Derby.

MONDAY.

As a competition it was not keen nor high in its grade. Following is the list of starters, the drawing taking place on Monday morning.

Mr. W. S. Bell of Pittsburgh judged on the first day and won much praise by his skillful managing and judging. A message received in the evening informing him of the severe illness of his wife caused his immediate return to his home.

Mr. Pierre Lorillard accepted an invitation to judge in Mr. Bell's place. He concluded all the competition save the heat between the two winners for the special prize.

First prize was \$75, second \$50, third \$25.

Geo. C. Nutting's dog Irish Boy (Blue Rock—Romaine), H. Smith, handler, with Geo. H. Thomson's bitch Gem (Shaun—Nora), F. M. Beall, handler.

Jas. B. Blossom's bitch Nugget II. (Finglas—Betsy Crafts), H. Smith, handler, with J. J. Mannion's dog Patricius (Duke Elcho—Red Rose), J. Lewis, handler.

C. B. Rutan's bitch Hattie (Redstone—Lady Alice), a bye, J. Lewis, handler.

The morning was cloudy, with an uncomfortably rawness and dampness. A start was made about four miles from town at the Melbourne place. The grounds were rough, narrow hills, ridges and small valleys and draws, with frequent ditches and small water courses. Birds were not found in abundance. About noon, a light drizzle of rain began to fall, which gradually thickened to a heavy downpour.

IRISH BOY AND GEM were cast off at 9:31. Boy soon flushed a bevy in woods. On the scattered birds, Gem roaded but crossed up wind of them. Boy coming in closer and up wind of them got a point. Gem pointed a single, and Boy refused to back. Next Gem pointed a bevy in the open and on scattered birds in woods got a point nicely on a single. Boy backed when cautioned. Gem made another point on a single and soon thereafter the heat ended. Time 10:10. Gem was much the better in every particular.

NUGGET II. AND PATRICIUS were started at 10:24 and ran till 11:15 without finding birds. Their range was narrow, although they showed some speed and sometimes took a moderately good range, which was not maintained long at one time.

HATTIE ran a bye, beginning at 11:16 and running till 11:58. She pointed a bevy well. Her range was narrow and her manner puppyish.

GEM AND NUGGET were started at 12 and ran 9 minutes. Nugget flushed a bevy. Gem made two good points on scattered birds and Nugget made one. Gem had the better range.

Patricius was run a few minutes without finding. In the evening Mr. Bell announced the winners as follows: Gem first, Currer Bell second, and Patricius third.

#### The All-Age Stake.

After lunch the All-Age Stake was drawn. It had six starters.

Dr. Wm. Jarvis's dog Romaine (Duke Elcho—Romaine), John Cassidy, handler, with Perry & Hamilton's dog Claremont Patsy (Frisco—Nellie IV.), G. W. Hamilton, handler. Perry & Hamilton's dog Teddy O'Bourke (Claremont Patsy—Nora of Claremont), G. W. Hamilton, handler, with J. B. Blossom's bitch Lady Alice (Redstone—Lady Noreen), H. Smith, handler.

J. B. Blossom's bitch Nugget II. (Finglas—Betsy Crafts), H. Smith, handler, with Dr. G. G. Davis's bitch Currer Bell IV. (Tim—Currer Bell III.).

The prizes in this stake were \$170, divided in 50, 30 and 20 per cent., first, second and third respectively. The cup presented by Mr. Fitzgerald was also for the winner of first.

The grounds were difficult to work and birds were scarce. ROMAYNE and CLAREMONT PATSY started at 1:45, and ran about a half hour, when in woods Patsy was lost. Nearly a half hour was unsuccessfully devoted to searching for him. Rain was falling steadily. The judge decided to end the trials for the day. Patsy was found next day.

#### TUESDAY.

The morning opened clear and balmy. The day was mild, with a gentle breeze. The conditions were favorable for good work in every way.

TEDDY O'BOURKE and LADY ALICE were cast off at 9:55. Both dogs were near a bevy when it flushed. On scattered birds of the bevy marked down in woods they lost several opportunities to point. On other scattered birds of a bevy flushed by a cur dog, Teddy made three good points and one flush. His range was not wide, though better than that of Lady.

NUGGET II. and CURRER BELL IV., at 10:37, began their heat. Bell pointed, Nugget backed, and nothing was found. Bell flushed a bird, and next she found and pointed a bevy, and Nugget backed the point. Both were steady to shot. Nugget pointed twice on singles, showing some unsteadiness. Bell pointed three times. Each had speed and good range, Bell the better. Up at 11:12.

ROMAYNE had a bye. He was started at 11:35, and worked over some rough ground, finding and pointing a bevy. He beat out his ground systematically, though his range was narrow. Up at 12:23.

Four dogs were kept in the competition, and were run in the order given below.

NUGGET II. and TEDDY O'BOURKE ran 14m., beginning at 12:35. In weeds Teddy made a good point on a bevy and was well backed. On the scattered birds Teddy made two flushes and one chase. Nugget made a flush and soon afterward the heat ended. Teddy had a wider range, though he was irregular in his casts.

ROMAYNE and CURRER BELL IV. began at 12:56 and ran 14m. Some scattered birds afforded good opportunities for point work, which were not taken advantage of. Their range was near alike, though Bell had more dash in her way of going, and the advantage was with her.

After lunch Mr. Lorillard announced that Currer Bell IV. was first, Romaine second and Teddy O'Bourke third. Nugget had done work quite up to the grade of Teddy's and was more obedient. A division of third would have been more correct.

This concluded the stake. As Mr. Lorillard had not seen the work in the Derby, he objected to judging the heat between the winner of the Derby and the winner of the All-Age for the best setter in the trial. Major J. M. Taylor and B. Waters were invited to judge the heat, and they accepted.

GEM and CURRER BELL IV. were started at 1:53, after lunch. They were worked in some dense weeds down a valley, then into a broad stubblefield. Both showed speed and ranged wide, Gem covering more ground and beating out her range with judgment. On a bevy she located and pointed it accurately, Belle about 20yds. behind pointing on the trail. Gem maintained a better pace. An effort was made to find the scattered birds, but as a young man informed the party that they were trespassing the dogs were ordered up. The heat and prize was awarded to Gem. This ended the trials. Up at 2:34. B. WATERS.

#### The McLin Case.

VINCENNES, Ind., Nov. 23.—As stated earlier by wire, the McLin dog fiend case came up for hearing in the District Court at this place, Tuesday morning, Nov. 21.

The statistics of the case as follows: McLin starved the dogs left in his charge, which fact was discovered by John Mayfield, whose quarters at Mr. Phillips's farm house in the edge of the village of Bicknell, were not far from the so-called kennel run by Mr. McLin. Some of the dogs were starved to death, only so weak it could not cross the step at the door. McLin was needlessly careless and cruel. At one time he had a good reputation as a trainer and handler, and always started plenty of dogs. His future seemed assured, and had he been of a normal moral nature he would not now be where he is. The excuse of drunkenness does not seem available to explain his conduct, and it is hard to understand why he neglected the dogs as he did, for in training his dogs he was never known to be very severe. At any rate, he did neglect and starve them, and when he saw himself detected he burned down the kennel in which the dogs were confined and destroyed dead and alive alike. Then he fled the town, going to the timber country of the bottoms to live for awhile.

McLin was first arrested on the charge of cruelty to animals, but the information on which he was brought before the justice's court was proved too specifically, alleging that McLin did such and such acts on one certain date. McLin sent for a bright criminal lawyer of Vincennes, Charles Pritchett, promising to pay him his fee, but never paying it all. Pritchett went through the information, held the prosecution to it literally, proved that the charge did not hold for the date named, and then, by the beauties of the law cleared his man, McLin testifying that he had not committed the acts charged.

At the meeting of the Grand Jury McLin was informed against again, and it was sought to have him indicted for cruelty, for arson and for perjury. Mr. Pritchett, never having been paid by McLin, or even thanked by him for his services, now in resentment went over to the other side and was instrumental in getting his ex-client handsomely in limbo, with an excellent chance for a trip over the road. Although the cruelty charge could not come up, and although the crime of arson could not lie, since the value of the building was not proved to be sufficient thereto, McLin was indicted for perjury, and failing to secure bonds went to jail, where he has lain for a long time.

It is legally difficult, in most cases, to make the charge of perjury stick, and although the popular belief was that McLin deserved some sort of punishment, the lawyers admitted that there was a good chance for him to escape again from justice. The case attracted much local attention as it was set forward on the docket from day to day, and John Mayfield, to whose patience and persistence the

final success is very largely due, was constantly besieged by inquiries as to when the trial day would come. On last Sunday no one knew this, and Mr. John Balmer and myself spent much of the afternoon among the court officials endeavoring to learn when Indiana vs. George McLin would be called. We found out, after being persistent for an hour at a Salvation Army prayer and song service in the county jail (in which service McLin took a prominent part, and lifted his voice joyfully and fervently) that the case was set for Monday at 1 P. M. We then telegraphed Mr. P. T. Madison, secretary of the U. S. Field Trials Club, at Indianapolis, and Mr. Mayfield at Bicknell, to be on hand, and with him were twenty-eight witnesses from in and around Bicknell, all for the prosecution. Defense had seventeen witnesses. Bicknell was about deserted, about the only man left being Riley Gillmore, the justice before whom McLin was originally tried. Riley had a cold and didn't want to come till later, but as he and his records were necessary, Mr. Pritchett asked that the case be continued on till the first thing Tuesday morning, meantime asking an attachment for Mr. Gillmore and one or two other witnesses who were not on hand.

On Tuesday morning the witnesses were all on hand, and the selection of a jury was completed with less than its usual delay. McLin was seen, to be nervous and concerned, making marks on a bit of paper with a pencil, and not as cheerful as he was during the Salvation Army meeting at the jail. He is a smallish, wrinkled, old sort of appearing bony man, not prepossessing and not handsome, though much bleached by long confinement in jail. His father, brothers, and friends were with him. He called in his defense many of the witnesses used by the State.

Tuesday closed with only a portion of the witnesses examined, and the record of Wednesday was the same, a red hot neighborhood interest meantime developing. The toils seemed gradually to tighten, and it appeared that McLin was about to get punishment for his moral unfitness as a citizen, if not in one way then in another, for though the charge of cruelty was covered up by the charge of perjury,

the sentiment was strongly against him, and the testimony confirmed the popular hope that he would receive a heavy sentence.

On Thursday the examination of witnesses closed, and by evening of that day both prosecution and defense had practically closed.

Chicago, Nov. 25.—On Thursday night I was obliged to return from Vincennes. This morning I have a telegram from John Balmer, of that city, which says briefly: "McLin gets three years in penitentiary. Perjury proved."

There are not many men like McLin, but every owner of a dog may feel safer after reading of this verdict. Whether motion for new trial will be made does not appear, but this is not likely, and in any case the result would probably come in the nature of a severe rebuke to McLin and all of his like who are of the mind that because a dog cannot talk it is safe to be inhumane and monstrous with it. Certainly all sports men should be congratulated on this verdict. In turn also they should thank the gentlemen who have contributed to the fund for this prosecution, and especially should they acknowledge indebtedness to the men like John Mayfield and Mr. Freeman, who took time and trouble and risked neighborhood animosities, doing the work and sticking to the thing until the fit and proper end. E. HOUGH.

909 SECURITY BUILDING, Chicago.

## DOG CHAT.

#### American Kennel Club Meeting.

The regular quarterly meeting of the executive committee of the American Kennel Club will be held on Thursday, Dec. 21, at 3:30 P. M., at the office of the club, No. 44 Broadway, New York city. This being the last meeting of the year a full attendance is earnestly requested.

#### The Columbus Fanciers' Club Show.

The Columbus Fanciers' Club will hold their dog show Feb. 23 to March 3. The premium list will be ready for distribution not later than Jan. 15. They have provided the usual classes for all breeds and prizes will in the aggregate amount to more than \$1,000 exclusive of liberal kennel and numerous special prizes. They will also offer a handler's prize of \$75 on the usual conditions.

The club have secured a commodious ground floor room on the most prominent block in the city and can conveniently bench 400 dogs. Judges have not been selected as yet, but as Mr. Geo. F. Money, the secretary writes us, they will endeavor to choose those who will be acceptable to the greatest number and "keeping in mind that harmony and contentment among exhibitors is the para amount question, we will hope to receive their liberal patronage." Secretary's address is 276 N. High street, Columbus, O.

#### New Irish Terrier.

A new Irish terrier makes his advent this week from the other side. This is Hazard, who was purchased by Mr. Geo. M. Weld from Mr. R. Walker. Hazard is said to be a good one and a winner of numerous prizes. He is by Master of Arts out of Miss Jenny.

There are several important features in our kennel business columns this week. We draw attention to the Hempstead Farm Kennels' array of good things, and their high reputation in the fancy is a guarantee that the best of blood can be obtained from them. Anyone who wants a collie that has beaten the hitherto invincible Wellesbourne Charlie should look at Mr. Jarrett's announcement. Then Geo. S. Thomas is well known in the fancy as a smart handler and conditioner of show dogs; the Maybrook Kennels are also ready to condition dogs for the coming shows. C. T. Brownell offers Gordon setters for sale; C. D. Roberts, partridge and woodcock dogs; S. A. Pearle, English setters;

C. F. Kent, foxhounds; J. H. Miller, foxhounds; H. Bisby, pointer bitch; King Don Pointer Kennels, pointer pup and brood bitches; M. H. Ranlett, greyhounds; J. M. Schaffer, coon dogs. Exchange: Setter dog for setter bitch broken.

We draw attention to the fact that we have several copies of "Bulldog Pedigrees," by Cyril W. Jackson and E. H. Bowers. Every bulldog breeder should have one. Rawdon Lee's work on "Modern Dogs (Sporting Division) of Great Britain" is receiving a good deal of attention just now. Every setter or pointer man should read it. It's useful. We can supply it.

"Listening to the Argument" and "Thinking it Over" are the titles of two pretty artotypes received. The former represents six Irish setter puppies in various attitudes of attention, and the latter is certainly a happy delineation of the wise look a puppy puts on when his "thinker" is working. The puppy at the end of the group looking as if he was whispering in the other one's ear is very cute. The size is 23x28 and are published by W. T. Higbee, Cleveland, Ohio.

#### Pointer Club Meeting.

At a meeting of the executive committee of the Pointer Club of America, held Nov. 27, at 2 P. M., in the office of John S. Wise, the following gentlemen were elected members: E. O. Damon, Northampton, Mass.; Wm. Hawkins, Monterey, Mass.; James Mortimer, Hempstead, L. I. and I. Bijl, New York. Mr. A. A. Savage, Newtonville, Mass., was dropped from the roll of membership. Mr. C. L. Wright of New York, was proposed for membership but was not elected.

#### Douglas Will Try the Wolves.

Frank Dole did not care to take a big dog like the deerhound Douglas, second to Lochiel, home again, so Mr. Jarrett stepped in as a friend and some more money and dog changed hands. The Chestnut Hill man broke for the telegraph office and now Mr. Mitchell Harrison owns Douglas and will take him to Colorado Springs in a week or two, where he goes to recuperate from the illness that succeeded his recent accident in the hunting field. We are pleased to hear he is almost himself again.

There is one man who is glad there was a dog show in Newark. This is Mr. Charles Bassini, the well-known horse owner. There is another man who is sorry he entered a dog at that show. This is Mr. Frank X. Ammann, also of Newark. He entered No. 21, Courage, but it didn't get anything, still it was the dearest to the heart of Mrs. Bassini than any of the champions when she discovered that it was her long lost Zero. Zero showed his affection warmly, and compelled Mrs. Bassini to come and look at him while standing aimlessly near the St. Bernards' benches waiting for her husband. Then she found it was her Zero. The pseudo owner was hunted up and he, appreciating Zero's feelings in the matter, released his claim, although he had paid \$30 for the dog to a horse dealer, who will be dealt with later. Mr. Ammann thinks it a cold snap all round for him.

#### Field Trial Record.

Recognizing the importance to breeders and field trial men generally in having a concise record of the field trials, we publish in this issue the record for 1893. The foxhound and beagle trial record will appear next week.

#### Great Danes Change Hands.

Mr. Glynn did not have to wait long for his advertisement in FOREST AND STREAM to give him good results. He has sold to Mr. J. A. Lawrence of Columbus, O., the great Danes Lord Wolverton and Sentas, winners at Toronto last September. Mr. Lawrence has also purchased from Mr. Bernheimer, who has ordered a pair from Germany, the noted great Danes Heppburn Hero and Heppburn Flora Belle; with these he has a strong kennel indeed. Flora Belle is in whelp to Hero.

Sales were slack at Newark to outsiders, so the fancy did a little bargaining among themselves. Mr. Henry Jarrett, proprietor of Chestnut Hill Kennels, sold his collie dog Can't Tell to the great Dane enthusiast, Mr. A. H. Hepener, of New Brunswick, N. J. Can't Tell took second to Lassie Gowrie but can now claim a first, as Lassie had to step down.

When Mr. Charles Heath buys a collie it is a subject for wonder as we generally associate him with the pointer section. He took a fancy to Yorkshire Surprise, however, second at Newark, and recently imported by Mr. John Ellice, and the chains changed hands. Mr. Ellice had to take something home, so "Billy" Tallman parted with the greyhound Maid third in open bitches. There were several offers for the Maid.

The noted bulldog King Lud is now owned by Mr. James E. Condon, of Providence, R. I., who is likely to own some more cracks shortly.

Mr. E. H. Morris sold the Gordon setter Fairmont to Mr. E. H. Johnston, ex-secretary of the N. J. K. L. Fairmont has won firsts at New York, Washington, Elmira and Boston this year as a puppy.

Paddy Doolan waited anxiously for that badger. Was it sick? We believe that this is the first engagement he has missed.

During Newark show the noted Irish setter Lady Cleve land visited champion Kildare, and such a union of quality should be productive of good results.

#### A Rare Accident.

While exercising in the ring at Newark the third-prize winning Gordon bitch Beauty was run into by a St. Bernard puppy and her hindleg broken. Dr. Glover was, fortunately, near at hand and set the limb.

Mr. W. J. Owen is a recent acquisition to the bull-terrier fancy. He came from Birmingham recently, bringing with him White King, by Gull the Great, that took second to Col. donna. Others are to follow. White King is brother to the noted White Queen.

#### Reprehensible Practices.

There was a good joke on the "Vet." at Newark. Before the fox-terrier judging he approached the judge and in the confidential, impressive manner that judges sometimes meet with inferred how good his terriers were and the recognition he expected they should receive. The judge calmly took the numbers down on his sleeve, and the "Vet." went away happy. Of course they were the first ones fired when they came into the ring. Then the "Vet." showed the other side of his character, and grossly insulted the judge by imitation. This same man, Dr. Sattler, afterward was guilty of a most reprehensible action. During Thursday night the show he stole a service of Blemton Rasper, and this action was reported by the watchman to the committee. The act promptly in the matter, and compelled a payment of the stud fee to Mr. Belmont's representative. This man should feel the hand of the A. K. C. for awhile. As an official of the show, his action should meet with some official punishment.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

JULIAN.—We cannot find any mention of the Irish setter Forest Corinne in any of the stud books.

If "Young Sport" will send his name and address we shall be pleased to answer his questions about a dog license.

YOUNG SPORT.—My rabbit hound dog vomits nearly every day; otherwise in good health. What treatment would you advise? Ans. Give a dose of castor oil and afterward the following powders:

B. Bismuth sub nit. . . . . 3 i.  
Div. in pulv. . . . . 3 i.  
Give one three times a day.

H. L. B., New York City.—I have a small spaniel bitch about 18 months old, which until recently has been perfectly healthy. Now, however, she whines when touched roughly, and, though usually playful, she now lies still all day. Ans. Give an aperient and then the following mixture:

B. Sodii salicylas. . . . . 3 i.  
Aq. ad. . . . . 5 ii.  
Mix. Give one dessertspoonful three times a day.

W. A. B., Wautoma, Wis.—I have a valuable three-year-old English setter dog that has had fits at irregular intervals of about six weeks ever since I owned him (two years). Acts exactly as though he had been poisoned with strychnia, but stands the heat well and does not show it in any other way. Don't think he has been poisoned but don't know. Fits last from ten to forty minutes. Ans. Give two compound colocynth pills and follow with this mixture:

Pot. brom. . . . . 3 ii.  
Chloral hydr. . . . . grs. xxxvii.  
Liq. arsenicis. . . . . 3 i.  
Aq. ad. . . . . 5 vi.  
Mix. Give one tablespoonful twice a day.

J. H., Hoboken, N. J.—I have an Irish terrier eight months old; it had mange recently and lost all its coat. Skin is quite dry and rough, also she passes blood and white slimy stuff, and I cannot get her into condition. I would like to know what to do for her. Ans. Treat for worms. Apply the following, castor oil 1 part, sperm oil 2 parts, kerosene 1 part, all over the dog every other day for two weeks, then wash off and repeat if necessary. Also give this mixture:

Bismuth sub nit. . . . . 3 i.  
Tr. cinchon co. . . . . 3 ii.  
Tr. spir. . . . . 3 ii.  
Aq. ad. . . . . 5 vi.  
Mix. Give one dessertspoonful three times a day.

J. W. E., Baltimore, Md.—I have a setter bitch, three years old, which has been in the country since last spring and hunted all year on woodcock. She was returned to me in September in very poor condition, being very thin and mangy. I have tried everything I know, with good treatment, food and exercise to get her back in condition, but while she appears to be perfectly well and her stools appear to be healthy, she is thin and mangy as when she came home. Ans. Treat for worms. Apply the following: Sublimed sulphur 2lbs., oil of tar 10oz., cottonseed oil 1gal. Mix together. To be well rubbed all over the dog every other day for two or three weeks, then wash off and repeat if necessary. Also give two grains of citrate of iron and strychnine twice a day.

A. J. B., Ballston Spa, N. Y.—What is the trouble with my Gordon setter bitch and what can I do for her? She has got over her heat and appeared to be sick. She was all drawn up with back humped up, and I doctored her for inflammation of the bowels. I cured her of that but she cannot hold her water and there are little spots like brick dust mixed with it, but she seems to have a cold nose about all the while and is getting as thin as a rail. Ans. Try the following mixture:

Pot. citrat. . . . . 3 ii.  
Tr. bellad. . . . . 3 i.  
Tr. nux. vom. . . . . aa 3 i.  
Aq. ad. . . . . 5 vi.  
Mix. Give one tablespoonful three times a day.

F. C., New York City.—You need not feed a St. Bernard eight months old more than twice a day. In the morning two or three dog biscuits—Spratts or Excelsior—meat dog cakes are both good. For supper, the principal meal, if you have not sufficient table scraps for him, boil beef trimmings or some mutton and some vegetables, and then pour the broth over stale bread or cooked rice, cornmeal or oatmeal. Then chop up the meat fine and mix thoroughly with the soup and bread or rice, etc. On the ingredients mentioned you can change the dog's diet every day and so keep his bowels in good condition. A handy way of feeding is to pour hot soup or hot water on crushed dog biscuits, of course feeding cold.

## Hunting and Coursing.

### FIXTURES.

Jan. 15.—Brunswick Fur Club's winter trials. Bradford S. Turpin, Sec'y.

#### Buenarita vs. Buster.

DENVER, Col., Nov. 26.—The match between the above two named dogs, for \$50 a side, best two courses out of three, on Nov. 26, had the effect of stirring up the coursing blood of about 200 enthusiasts. Had the weather been at all desirable, undoubtedly a much larger number would have been present. The evening previous a rain set in and continued about two hours; turning cold it froze, leaving the ground very smooth and slippery. Then an inch or two of snow fell.

At 8:30 Sunday morning, the Cherry Creek road was lined with buggies, carriages and vehicles of all descriptions, all vying their way to Guiley's Farm, twelve miles east of Denver, which had been designated as the tryst.

The business preliminaries having been adjusted the evening before, there was no occasion for delay and everything went with promptness and dispatch. Mr. Lighthall failed to bring his dog Buster, as he claimed he was not in condition and asked the privilege of substituting Lady Goldstun, which privilege was accorded him by the Bartels Bros., who were backing Buenarita.

At 10 o'clock the dogs were put in the slips, when a black tail was found in its "form." Lady not having been in slips before, refused to leave them, but struggling and pulling back she succeeded in getting both dogs and slipper tangled up, while the jack made for other parts. The dogs and slipper having got untangled, another start was made and in a few minutes a second jack was put up, only to have Lady repeat her performance. The dogs were then put in single slips. To a long slip both dogs apparently sighted, but Buena losing sight, Lady quickly shot to the front for a short time. Buena re-sighting quickly, closed up the gap between her and Lady and soon passed her, taking the first turn. She served herself twice, then placed Lady several times, each time racing past her easily. As the jack went under the wire fence, Buena fell behind. Lady, however, was unable to take advantage of it, as the jack was out-footing both dogs and soon made his escape by taking to earth. Buena won hands down.

After a half hour's rest, the dogs were again put in the slips. A good sized white tail was put up, who simply romped away from both. Buena sighted and made the run up, but was not allowed to score, as Lady had not sighted. Beyond taking a few wrenches by Buena, before Lady got in, no work was done. The judge very properly called it a no-course.

The third and final course was the best of the day. To a long slip, Buena at once shot to the front and led as she pleased, turned and placed Lady, raced past and then worked her jack nicely, simply smothering Lady in the earlier part of the race. Lady, however, was not to be denied and warming up, closed up on Buena, passed her and wrenched a few times, when a third dog from a house near-by joined in the course. The rabbit escaped in the next field, Buena won course and match.

The match over, the Messrs. Bartels then treated the visiting coursers, who had arrived too late to see the match, to several courses between their Dingwall—Miss Kitten

puppies. The rabbits treated these dogs precisely as they had Buena and Lady. After allowing the dogs to make a turn or two and a few wrenches, they seemed to let out another link and bid good-bye to the dogs. This finished the coursing and every one wheeled about for home. Just as we started, that genial fellow Chas. Barrow, commonly known among the boys as "Uncle Charlie," invited judge, slipper, the visiting coursers from Goodland and Colo. Springs, and a few of the local boys to dine with him. Arriving at his house we found everything in readiness for us and a right good dinner it was that we sat down to. Toasts were drunk to the hostess and host, to the judge and slipper, to Buenarita and her owner, to the St. Patrick kennels and their proprietors, and last but not least to Mr. A. C. Lighthall and his lady. The evening was spent in rehashing the courses and recounting experiences, etc. Messrs. Vidler, Taylor, Barley and L. F. Bartels entertained the boys with songs, which were greatly enjoyed. A real treat was the song specially written for the occasion by Mr. Barley and sung by him, with guitar accompaniment.

Another match between Buena and Buster has already been made on same conditions as the above. Dr. Norman, who gave complete satisfaction in the former match as judge, will officiate in the same capacity between Buster and Buena, and John Jones, who handled the slips, will again try his hand at it. The date of the match has not yet been agreed upon.

A number of other matches are being talked of, but whether anything will come of them remains to be seen.

Secretary Vidler and President Bartels, of the Altcar Coursing Club, who were both present, did not lose an opportunity to talk up Altcar and the spring meeting, and succeeded in getting a number of the boys interested. In talking up Altcar Club, they were ably assisted by Messrs. M. T. Grier and Frank Robinson of Goodland, who came up to see the match.

### Coursing at St. Louis.

THE inclosed coursing meeting held at Brentwood Park, St. Louis, Mo., Nov. 30, under the auspices of the St. Louis Coursing Association, drew a large audience. Four courses were carded to be run as finals for the \$100 stakes offered at the tournament held Nov. 11.

#### First Round.

John Bambrick's fawn dog Topper, by Jim K.—Folio, and John Egan's white bitch Ponto II., by Spring—Ponto I. The fleet-footed Jack beat both bounds, the score showing Ponto 11 points, Topper 7.

T. O'Keefe's fawn bitch Nellie K., by Jim K.—Folio, and Charles A. Robinson's fawn bitch Flirt, by Spring—Speed. Both ran neck and neck, turning the rabbit midway of the course, Flirt making a beautiful kill. Nellie K. was given the verdict on points, however, much to the dislike of the crowd. Score, 8 to 6.

Edward Burgess's blue dog Sarsfield, by Spring—Antrim, and Geo. W. Wilson's fawn bitch Nettie, by Spring—Speed. Sarsfield won by score of 12 to 7.

Thomas Young's fawn bitch Tessa, by Spring—Speed, and R. S. McDonald's blue bitch Cora, by Essex—Maid of Ennis. After undecideds Tessa won by a score of 7 to 2.

#### Second Round.

Nellie K. and Ponto II.—Won by Nellie K.; score, 6 to 2½. Sarsfield and Tessa—Won by Sarsfield; score, 6 to 5.

#### Deciding Course.

Nellie K. and Sarsfield—Won easily by Nellie K. making a good kill in a short distance from the slip; score, 3 to 0.

### Brunswick Fur Club.

DORCHESTER, Mass., Dec. 2.—The sixth annual winter meet of the Brunswick Fur Club will be held at some point in Maine during the week of Jan. 15, '94. The exact location will be announced later. BRADFORD S. TURPIN, Sec'y.

## HUNTING AND COURSING NOTES.

A warm little incident, says the San Francisco Call, occurred early in the week past between the two well-known coursing men John Egan and Jerry Shea as to the use of the promising hound Moondyne, and were it not for the timely arrival of D. J. Healey on the scene the probability is that one or two widows would be in the city by this time. Healy was generally supposed to be the real owner of the dog Moondyne, and as the latter is a near relative of the great English Waterloo winner he is much prized by the lovers of the leash for breeding purposes, hence the anxiety of Mr. Egan to obtain the services of the dog and the equal determination of Shea that the dog should be jealously reserved for his own and Healy's kennels. The real ownership of the dog then came into the dispute, but by the persuasive eloquence of Healy the question was finally settled without arbitration. Healy has announced to all California that the dog is the joint property of himself and Shea.

The Portsmouth (N. H.) Hunt Club pack, composed of July's and Walker's, ran a fox to a fair kill last week. The run lasted five and one-half hours and the death took place in an open field several miles from the jump.

Mr. H. A. P. Smith, Digby, Nova Scotia, has challenged Mr. F. W. Chapman to run Gypsy A. against Lumin Fitz Lee for \$200 a side. This challenge grows out of the dissatisfaction over the awards in the 15in. All-Age class at the N. E. B. C. trials.

Major, one of the best hounds of the well-known Kinney & White pack of Worcester, Mass., was drowned last week. He broke through the ice while driving a fox.

## New Publications.

### Travel and Adventure in Africa.

\* Travel and Adventure in Southeast Africa. Being the narrative of the last eleven years spent by the author on the Zambesi and its tributaries, with an account of the colonization of Mashunaland and the progress of the gold industry in that country. By Frederick Courtenay Selous, C.M.Z.S., Gold Medalist of the Royal Geographical Society. Author of "A Hunter's Wanderings in Africa." With numerous illustrations and map. London: Rowland Ward & Co., Limited, New York: Chas. Scribner's Sons.

By a curious coincidence which can hardly be other than accident, Messrs. Rowland Ward & Co., of London, have chosen a most opportune time to publish Mr. F. C. Selous's book on "Travel and Adventure in Southeast Africa." Since it made its appearance, the papers have been full of accounts of fighting in Matabilland, and in this fighting Mr. Selous himself has taken a prominent part, having only a short time ago been wounded in a battle with the tribesmen of Lo Bengula. Mashunaland, Matabilland and the names of Forbes, Ross, Jameson and Rhodes and of the chiefs Khama and Lo Bengula have lately become words familiar to all our eyes, and this lends a special interest to the book in question, which tells us, and very fully, about the places and the people of that little known country and about hunting and explorations in it, at a time when but few white men had penetrated its borders and the products of the white men were almost unknown.

Africa has always been a country of great game. Its beasts are

great in size, great in their numbers and many of them great in their ferocity. Through the southeast portion of this continent and the practically unknown country which lies between the Limpopo River and the territory north of the Zambesi, Mr. Selous has traveled for many years, and the volume gives the story of what he has done during the last eleven. His occupation was that of hunter, natural history collector and trader, and these occupations naturally led him into parts of the country where game was plentiful and so the book abounds in simply told and interesting tales of the hunting of lions, elephants, rhinoceroses, and in fact of all forms of South African game. The first nine chapters of the book deal with his experiences from the beginning of 1883 to the end of 1887, during which years nature and history collecting occupied most of his time, but mingled with the hunting stories will be found a great deal that is interesting touching the character of the country, his personal experiences among the South African boers, accounts of natives and their modes of war, as well as some ethnological material which is most interesting. Later chapters treat of journeys to the north of the Zambesi, where the author very nearly lost his life among the fierce tribes which inhabit that country. Although the title of this volume is "Travel and Adventure in South Africa," the book is much more than this. It is in large part—that is to say, from Chapter XIV. to Chapter XXIV. inclusive—history, and a history of absorbing interest, which gives the story of the past and the present of that Mashunaland which the British are now occupying. The author relates with a great deal of detail the sequence of events which led up to the occupation of this territory by the British, and many of the details of the early history of the country, the early history of the colonization of that country, his narrative carrying us into the present year, and he tells us that "Before this work is through the press, the first section of the railway from the east coast of Mashunaland will be completed through the district invested by the deadly 'tse-tse' fly, and will, it is hoped, be carried on from there into the heart of the country without delay. Mining will then be poured into the gold-bearing districts, and it is not too much to hope that before the end of this century large mining towns will have sprung up in each of the gold-bearing districts. Each of these mining centers will support a large farming population, so that as the mining towns grow so will the land be occupied and cultivated until at no distant date the homesteads of British and South African settlers will have been scattered throughout the length and breadth of the breezy downs of Mashunaland." How important a part has been played by the author in the occupation of this new country is shown in the present volume, and the story is told in a most simple, modest and attractive style.

It is impossible in the space of a review to give any just idea of the contents of this large volume of over 500 pages, but the book is full of interest to the general reader, as well as to the ethnologist and the sportsman. One point of great interest to the big-game hunter is especially in thick book, but before the end of this century large mining towns will have sprung up in each of the gold-bearing districts. Each of these mining centers will support a large farming population, so that as the mining towns grow so will the land be occupied and cultivated until at no distant date the homesteads of British and South African settlers will have been scattered throughout the length and breadth of the breezy downs of Mashunaland." How important a part has been played by the author in the occupation of this new country is shown in the present volume, and the story is told in a most simple, modest and attractive style.

One point of great interest to the big-game hunter is especially in thick book, but before the end of this century large mining towns will have sprung up in each of the gold-bearing districts. Each of these mining centers will support a large farming population, so that as the mining towns grow so will the land be occupied and cultivated until at no distant date the homesteads of British and South African settlers will have been scattered throughout the length and breadth of the breezy downs of Mashunaland." How important a part has been played by the author in the occupation of this new country is shown in the present volume, and the story is told in a most simple, modest and attractive style.

It is an open secret that Mr. Selous is the original of the Allen Quartermain, whose name has been made familiar to many thousands of people by the stories of H. Ryder Haggard. The adventures given in this book are some of them strange enough to deserve a place in fiction, yet the whole story is so simply and honestly told that it bears the unmistakable impress of truth. Not since the publication of Gordon Cumming's book, we think, has there appeared a volume on African hunting which is at all comparable for interest to this one. The volume is handsomely illustrated by more than twenty full page engravings and there are more than thirty large and handsome cuts in the text. Many of the head and tail pieces and the cuts in illustrations are devoted to wild animals and shooting scenes, but many others are of great interest because they give forms of houses, tents, modes of dressing hair and other things, which have bearing on the habits of the strange people who occupy the region through which the author passed.

All that pertains to the mechanical part of the book has been well done. The volume is issued on this side the Atlantic by Messrs. Chas. Scribner's Sons.

## Canoeing.

In commenting on the changes of the A. C. A. rules the *Field* points out that a man is now at liberty to select one of several sailing canoes for the trophy race, according to the weather. While such a literal interpretation of the rule may be possible, no such construction has been contemplated, the idea being to allow a man to use one canoe, in each of the various classes. We doubt very much whether any regatta committee would recognize a construction of the rule by which a man might bring two or more canoes for the unlimited, club and trophy races, sailing either at will, and no fear of such treatment need deter British canoeists from challenging for American cups.

### American and British Rules.

THE American Canoe Association executive meeting was held in New York on Nov. 4, and the rules for racing and the date of the annual meet were settled for 1894. Several minor points of administration, such as fines for unsuccessful protests, were discussed at considerable length, and more or less decided upon; but strange to say, the growing unsatisfactory state of sailing racing in canoes, which was clearly demonstrated at the divisional as well as the principal meets of the year, was not touched upon by any motion or alteration of existing legislation. A pleasant sensation of balmy drift, hopeful of brightness for the coming season, and not burdened with unpleasant twisting of the neck in looking back upon the past, is the only frame in which the picture can be set and exhibited.

In this state of legislation, the American canoe racing will go forward for another year of tight-laced racing; and with the experience of English racing as well as of past American racing, we should say with a high probability of a further considerable decrease in the sport of canoe sailing, and of the comparative exodus of canoe yaws sailing. One very peculiar point appears to have been passed as a law in American racing, namely, that a man can enter as many canoes as he likes for any race; therefore, unless there is some further wording left out of the report, it would seem such a man could before the starting time pick such canoe of his plural entry as he considers best suited to the circumstances then supervening. This, of course, would be a shocker to international racing, as the visitor would probably have but his one canoe and rig, and therefore no choice of weapons to meet his antagonist with.

The American annual meet is fixed for July 13 to 27, and will probably be on the Hudson river near Sing Sing.

With the Royal Canoe Club's general meeting coming off as late as Thursday night, we are, of course, at the time of going to press, unable to say whether English canoeing in the general club will remain for next season in the same old groove, as the Americans have determined to glide in; we trust, however, that, if not all, at least a sufficient amount of the proposed reforms will be passed at the general meeting, and new life infused in the sport.—*Field*.

### Summer Homes.

A BEAUTIFULLY illustrated book: list of over 3,000 summer hotels and boarding houses in Catskill Mountains and central New York. Send six cents in stamps to H. B. Jague, Gen'l Eastern Passenger Agent, West Shore R. R., 363 Broadway, New York, or free upon application.—*Adv.*

## Yachting.

There is always a satisfaction in having an antagonist who will fight until one side is defeated, and then, if he proves the loser, will own up squarely that he is in the wrong. How this applies to our controversy with the *Marine Journal* may be seen by the latter's brief and evasive reply to our criticism of last week: "Our esteemed contemporary, FOREST AND STREAM, has seen fit to admit the validity of our referring to the Valkyrie as a sloop. It says: 'The old issue of sloop and cutter, with its clearly marked line of separation over vital points of design, has entirely disappeared, and the two contestants of 1893 have very many points of design in common.'" Such a perversion of our words is neither a bold defense against our criticisms, nor a frank admission that no such defense is possible.

The winter crop of paper challenges and new boats promises to be quite up to the usual standard, but thus far, outside of the racing between Valkyrie, Jubilee, Vigilant and Colonia, there is no sign of building in any racing classes, and, to judge from the statement in *The Yachtsman*, the prospect is as bad on the other side.

Of the various rumors afloat concerning the future of the Vigilant the only one which is at all probable is that the Emperor William has made an offer for her, with the intention of racing her in British waters next year. It is certain that the Emperor is looking for a new yacht, and the purchase of the Vigilant is perhaps the surest and cheapest way of procuring one. The reports that any of her present owners will take her to England next year, or that any challenges will be sent from this side for the Victoria or Cape May cups are without confirmation, and lack probability.

### Some Useful Definitions.

New York, Nov. 29.—*Editor Forest and Stream:* Apropos of the comments in your issue of December 2 on the yachting news in the New York  *Herald*, will you kindly define in intelligible English what the metacenter of a vessel is? The writer was appealed to the other day and in the effort to define it found on examination that what he believed to be the metacenter was in reality the metacentric height. A reference to the dictionary left him with a rather hazy idea as to what it was, unless it be as stated in the *Herald*, the center of gravity of the volume of water displaced. The question is asked for information solely, and in the belief that the majority of yachtsmen are equally ignorant of this question and would be glad to have a clear definition of the matter.

A clear and full answer to our correspondent's question, the second one of the kind which we have received within three weeks, cannot be given in a few words, but necessitates the definition of several other terms used by naval architects, and the construction of a diagram similar to that published two weeks since. The subject, however, is likely to be of interest to a great many of our readers whose ideas of the metacenter are as hazy as those of our correspondent or of the *Herald* writers, and as the term, a very important one to the naval architect, is likely to be much used in connection with the new warships, we shall try to give a clear explanation of it.

The question of the stability of a vessel, always a most important one, as shown in the historic capsize of the war vessels Captain and Eurycles and the merchant steamer Austral, as well as of thousands of other missing craft, involves the consideration of two vital attributes—the center of buoyancy and the center of gravity. The first of these, commonly designated as "C. B.," may be defined as the center of gravity of the volume of water displaced by a vessel, whether upright or inclined, the displacement being the same in any position. Let us imagine a ship caught in the ice and frozen fast, then lifted bodily out, leaving a cavity in the ice. If this cavity be filled with water and this water frozen in turn and lifted out, the piece of ice would be an exact counterpart in form of the ship's bottom below water, but would differ from it in that the ice would be solid and homogeneous throughout, while the ship's bottom would be hollow inside, and of different density in its various parts. The center of gravity of the piece of ice would be the center of buoyancy of the vessel, and its position would depend solely on the form. It will be understood that it is different from the center of gravity of the whole vessel, and also from the center of gravity of the actual bottom of the vessel, as both of these depend, not on the form, but on the construction and the weight of the various parts, the bottom planking or plating, armor, engines or lead keel. The center of buoyancy may be located exactly by a comparatively simple calculation, always lying in the vertical fore-and-aft plane of the vessel, and of course below the water line, and being the same for any given model, whether the ship be built of wood or steel. It is the point through which the buoyancy of the vessel acts to right the ship and prevent a capsize, and as the leeward side is immersed and the windward side emerged, the center of buoyancy shifts to leeward.

The center of gravity of a vessel, commonly indicated by G. G., is the common center of all the weights of hull, ballast, spars, sails, the equipment and crew; the point on which the ship would balance if lifted out of water and suspended by a line. While the center of buoyancy shifts to leeward with regard to the vessel as she heels, the center of gravity does not move in relation to the vessel, but is fixed as long as all of the weights remain in their normal positions. In the diagram the center of buoyancy in the upright position is indicated by B, and its new position for a heel of 15° by B<sub>1</sub>; the center of gravity being at G, in the middle vertical plane of the vessel and at a constant distance from the waterline.

In order that the vessel may be in a state of equilibrium, G must be in the same vertical as B, and when it is in this vertical the vessel will remain in a state of rest, with no tendency to move from it. As soon, however, as a vessel feels the wind in her canvas and begins to heel, the centers move to leeward, but the center of buoyancy moves much faster than the center of gravity. With a heel of 15°, the C. B. will have moved perhaps to the position B<sub>1</sub>, while the C. G. has moved but a few inches from its first position.

When in an upright position, the upward pressure of the water acts through B, coincident with the middle vertical longitudinal plane, but as the vessel heels, this middle plane becomes inclined, and the C. B. at the same time shifts away from it to the position B<sub>1</sub>. The upward pressure now acts vertically through B<sub>1</sub>, on the line B, M, and the point in which this line cuts the vertical plane, at M, is the metacenter for that given angle of heel. It is a matter of fact that the vertical through each successive position of the C. B. as the vessel is gradually heeled will not cut the plane in the same point; but for all angles of inclination up to 10 or 15°, the intersections will practically coincide, and the point of common intersections is called the metacenter.

To frame the definition in few words the metacenters of a floating body are the points in which the verticals through the various positions of the center of buoyancy as the body is inclined, intersect the middle vertical longitudinal plane. There are really an infinite number of these metacenters, but as already explained, those for all inclinations between 0 and 10 to 15° are so closely coincident that in practice it is assumed that the vessel has but one metacenter, that at some given angle of heel within 15°, commonly denoted by M.

The metacenter, like the center of buoyancy, depends solely on the form of the vessel, and in no way on the construction or ballasting,

and its height above the C. B., the distance B. M. in the diagram, may be easily calculated, and this calculation is commonly made for a new vessel. Of itself, however, it is of little value and in order to reach any useful results it is necessary to know the "metacentric height," the distance G. M., and from it the position of the center of gravity. The center of gravity may be located by two methods, first, directly, by calculating the weight and the distance from certain assumed planes of every component part of the vessel, each timber, plank, spar, etc.; and second indirectly, by practical experiment, heeling the ship by known weights, and then calculating the metacentric height.

This latter process is employed in the case of most war vessels, and has just been completed on the new Machias, with the very unsatisfactory result of a metacentric height of but 4 in. The vessel, with her bilges pumped dry and everything on board stowed, is moored carefully in smooth water, often in a drydock, and two equal weights, such as ballast, guns or shot, are placed on the extreme sides of the deck, as at W. W. Sometimes four equal weights are used, two on each side. A plumb line and bob are suspended from a deck beam alongside, and the position marked when the vessel is upright, with the ballast equally distributed on each side. One pile of ballast is then shifted from starboard to port side, inclining the vessel, and the angle is measured by the plumb line. The second pile of ballast is then moved across to the other three, and the new angle marked. Now the two piles are replaced and the plumb line compared with its original position; then the two port piles are successively moved to starboard, and the angles noted. From the mean of these four readings the angle of heel is determined, and the metacentric height is calculated, and from this angle by another calculation the metacentric height is obtained, and the position of the center of gravity located permanently as a basis for all further calculations of the effects of varying weights of coal, guns, ammunition, water, etc. The Amsler integrator, described in the *FOREST AND STREAM* of April 14, 1893, has proved of great service in these calculations.

Should the vessel be heeled a little more than the 15° shown, the vertical through the new center of buoyancy will cut the line B. M. continued a little above and to the left of M, and other verticals for further additions to the angle of heel will intersect each other in succession in a series of points to the left and above M. The curved line through these points is called the "metacentric," and is used in the study of stability, but it is not a straight line, having nothing to do with the ordinary metacenter and metacentric height; and we only mention it in order that the term "metacentric" may not be confused with "metacentric height."

The nature and importance of the metacenter was first pointed out by a noted French scientist, Bouguer, in his "Traité du Navire," published in 1740; to him we owe the name and the many original investigations which have since been elaborated by others. It is supposed that the name is derived from the Greek words *meta*, change; and *keutron*, center; signifying a changing center, or as some interpret it, the limit of change of the center of gravity. To understand the exact relations between the metacenter and the center of gravity, let us look at the operation of the two forces of gravity, and buoyancy as shown in the diagram.

The position of the center of buoyancy is fixed as soon as the lines of the vessel are completed, but the position of the center of gravity may be anywhere in the vertical plane, above or below the center of buoyancy, according to the construction, weight of spars and rigging, and the material and disposition of the ballast, inside iron or stone, outside iron or outside lead. The righting power of the yacht is always measured by the horizontal distance between the lines of action of the two forces, the weight of the yacht acting downward through G to right her; and the buoyant pressure of the water acting upward through B, and forming a fulcrum.

This horizontal distance, G. Z., is known as the "righting lever" and the longer it is the greater the vessel's stability. With wide decks, a lofty, heavy rig, and inside ballast, the center of gravity may be high above the center of buoyancy; and with a light construction, a moderate form, a light rig, and all ballast in a deep lead keel or a bulb fin, the center of gravity may be brought well below the center of buoyancy, giving great reserve stability and an immunity from capsize.

In any given vessel, then, the center of gravity can be brought by means of improved construction and ballasting; the longer the righting lever G. Z., the greater the stability; while the heavier construction, which raises the center of gravity, must necessarily shorten G. Z. As the center of gravity approaches the metacenter, the metacentric height being lessened in proportion, the righting lever G. Z. also decreases, disappearing entirely when the center of gravity coincides with the metacenter and the metacentric height becomes 0. In this position the righting power has vanished, and the vessel is in a dangerous condition, and the center of gravity comes to the surface, the distance Z, suddenly lowered through an added angle of inclination caused by a heavy sea, a new lever then is created, but this time on the wrong side of the center of buoyancy; the weight of the vessel now acting through the center of gravity to capsize instead of righting the vessel.

It will thus appear that the metacentric height is a most important element of a vessel, and one which the designer must have in mind from the commencement of a design. In the modern yacht, with low lead ballast, there is, in all ordinary forms, an assurance from the start of ample stability; but in a war vessel, with excessive top weight in the form of armor and armament, and with the possibility of empty bunkers, water tanks, storerooms and magazines at the top of the hull, the center of gravity becomes a vital one. At the present time we are sorry to say, probably, that the Machias, that several of the new vessels are no better off than the Machias whose recent test, as already stated, showed a metacentric height, as reported, of but four inches.

We have at hand no figures relating to modern yachts, in fact, we are not aware of any experimental determination of the metacentric height of a modern yacht, but the following figures give a rough idea of the metacentric heights of various types of vessels: The monitor Miantonomah, as rebuilt, is credited with a height of 15 ft., the ill-fated British warship Captain had but 2.6 ft., another warship, the Warrior, had 4 ft., the Iron Duke had 3 ft., and in the larger warships the metacentric height may vary from 2 to 14 ft.

As to yachts, Mr. Dixon Kemp gives the metacentric height of the old schooner Sappho as 7.3 ft., of Miranda, with six tons on keel, as 3.5 ft., of the old cutter Ross of Devon, the same length as Puritan, 2 ft. narrower and some 2 ft. deeper, with all ballast inside, as 4 ft., of Florida as 3 ft., and the famous yawl Julianar as 3 ft.

Thus far we have dealt only with an inclination of a vessel at right angles to her length, but as it is possible to incline her in any direction it follows that there must be a metacenter for each of such inclinations. In practice, however, only two positions are considered, the transverse inclination, and that in the direction of the length of the ship, depressing the bow or the stern. The metacenter already described is known as the "transverse," the other as the "longitudinal" metacenter. It is found in the same way, but the longitudinal metacentric height is much greater, approaching the length of the vessel instead of but two or three feet. In common use the term is applied to the transverse metacenter only.

While a certain amount of metacentric height is absolutely essential to safety, too much is very undesirable, as the vessel, though very stiff, is correspondingly unsteady and subject to violent and abrupt motions both in rolling and in pitching and heaving. In a yacht this is merely a matter of comfort, but in a war vessel it is of great importance as affecting the aim of the guns. The stability which attends a large metacentric height is essential in racing, as it is the practice in fitting out for cruising to retain the lofty racing mast and also to raise the inside ballast on cork or by other means, thus increasing the height of the center of gravity and decreasing the metacentric height.

It will be seen that the *Herald's* definition applied to the center of buoyancy, and not the metacenter, is quite a second attempt to make a subject of the metacenter, but with little more success. The whole subject of stability, including the metacentric height and the motions of a vessel under sail or in a sea is a most important and interesting one and well worth further discussion, but for the present we must rest with the attempt to answer the questions of our correspondent, and hope in a manner which will prove intelligible to the lay reader. Should we have been in any way we will gladly endeavor to explain those points which have not been made clear.

### YACHT NEWS NOTES.

The 10-rater recently ordered from the Herreshoffs is presumably for Henry Allen, owner of Wenonah. That noted racer has been sold, and sent to Germany, her new owner being Prince Henry of Prussia.

The coming Christmas number of *The Yachtsman* promises to excel all previous special numbers, and to be of interest to American as well as British yachtsmen, as it contains excellent pictures of Navahoe, with a design for an imaginary challenger for the America's Cup. It is advertised on another page.

The outlook for the forthcoming season is very far from encouraging. So far as racing yachts are concerned, there are practically no boats on the stocks, and no orders forthcoming. Almost all our celebrated yachts are in state of disrepair, and a winter cruise with a banner is wont to be painfully heard. The order for a 40-rater recently given to Messrs. Fife has been countermanded, and Admiral Montague has also rescinded his order for a vessel of the same class to be designed by Mr. Watson. Mrs. Schenley has withdrawn her order for a new 5-rater. No new tens, no new twenties, no new forties, no new first-class racers—a sorry report at the end of November.—*The Yachtsman*.

### A Florida Cruise.

DURING the summer of 1892 a scheme was devised at Okoboji Lake, Ia., by a few members of the Okoboji Yacht Club, to take a cruise down the coast of Florida during the following winter.

Starting from Sutherland, Fla., a winter resort situated on Clear Water Bay, and "crabbing" along the west coast, taking in the bays and bayous as far as Cape Romano, where we were to leave the mainland and steer across the Gulf for Key West, the objective point of the cruise.

It is seldom that a plan devised so far ahead is carried out; but our party carried out our scheme to the end thereof, and the following is a faithful log of what occurred:

We chartered the oyster schooner *Blanche* for the term of thirty days, the owner was to furnish craft, captain and cook, while we were to furnish provisions, wood and water and help run the schooner, the hire, craft, captain and cook, being \$300 for thirty days.

After the bargain was made it was arranged that the captain should have five days to make one more trip to Cedar Keys for oysters. He returned in four days and was much surprised to find an order (from the owner) to deliver his cargo at St. Petersburg, which would take five days more time, and as we were unwilling to extend the time on the contract, he hauled the *Blanche* out into six feet of water and dumped seventy barrels of fine, fresh oysters into the bay.

The good news few from house to house, and everybody, old and young, came ashore to catch the oysters in baskets, barrels and boats and "toted" off oysters until the supply was exhausted. The oyster was a barrel of these oysters and found them as fat, sweet, and as fine in flavor as any that we had eaten further north.

We made Ocala a rendezvous to fit out the *Blanche* for the cruise, and while some of the party stopped at the San Marino, the scribe and two others stopped at the Eavey House at Ocala.

Of our party were the Commodore, the Caterer and the "Distinguished Landsman," were from Omaha, Neb., and the "Chief Marine" and "Scribe" were from Iowa.

It was arranged that the commodore and the distinguished landsman, should occupy the two bunks in the little stuffy cabin, while the rest of the boys had "state rooms" fitted up in the hold of the schooner.

Feb. 11, 1893.—Large delegations came down to the dock from the San Marino and Eavey House to see us off. A bevy of young ladies from the San Marino presented one of our boys with a rich fruit cake and with cheers, and much waving of handkerchiefs, we sailed out into the gulf. After sailing a few miles, a black cloud came up from the south, and the captain ran back under the lee of Anclote Light House, where we anchored for the night.

We turned into our bunks with a strange and uncomfortable feeling, as if we had suddenly lost our liberty.

There were the strange noises that one always hears on board of a vessel at sea; the bilge water swashing about under the floor of the hold, the never ceasing roll and pitch of the vessel as it heaves on the long, lead swells of the gulf, the creaking of blocks, the groaning of booms and gaffs as they swing back and forth on the masts, the flapping of halyards and running rigging, the thumping of the rudder post and the peculiar cracking sound of the barnacles on the bottom of the schooner, were disconcerting noises that kept us more or less awake the first night out; but, after a few days, we became so accustomed to these sounds, that we could sleep right through the whole night, as if in our own beds at home.

Long before daylight our captain got under way and proceeded on our course, (S. by W.), which would bring us to Egmont Light House, situated at the pass into Tampa Bay.

After sailing about fifteen miles, we hove to over a rocky reef and commenced to catch fish; taking them in as fast as we could bait our hooks. Within twenty minutes we had caught more groupers, red snappers, Spanish mackerel, and grunters, than we could possibly use. We bore away on our course, throwing nearly all the fish overboard, as fish do not keep long in that latitude.

The commodore caught the largest fish; it was a red snapper that weighed 12 lbs. Our cook made a chowder of the 13-pounder, which, together with sweet potatoes, hoe-cake and coffee, made up a dinner that made the boys wild with delight.

We left the schooner on her course until sundown, when the wind came out dead ahead and soon kicked up a nasty sea. We made tack for tack, and fought our way into the teeth of the wind, the little 40-foot schooner jumping over the seas and wetting the decks with the briny spray. We secured the hatches, reefed the sails and prepared generally for a very wild night; and kept her headed into the wind for an hour longer, when we made the Egmont Key Light, and ran by it.

The wind was now blowing a gale from the south. And the *Blanche* being a flat-bottomed craft, built for "crabbing" around the bays and bayous inside, pounded the great seas, every stroke of which made her tremble from stem to stern; and we fresh-water sailors thought she would knock the plank from her bottom.

The captain held on, and for three mortal hours we fought the unequal fight. The fire was getting low, the din and distant, clearly showing that we were not holding our own; then came a squall, with heavy rain, shutting out the distant light. We hauled down the foresail and jib, thus heaving her to.

We rode the squall out, again set sail and bucked into the wind and great seas for one hour more, when the captain said that we could not make the lee of Boca Egg Shoals, which we did, and came to anchor.

We all ate a hearty supper (except the Distinguished Landsman, who not only lost his dinner, but missed his supper), and, although the *Blanche* pounded the heavy rollers and tugged at the two anchors all night, we Okoboji yachtsmen turned in and slept the sleep of the just.

Feb. 13.—The late gale blew out long before daylight, and after a breakfast of ham, eggs, sweet potatoes and coffee, we got under way and very soon made Egmont Light, around which we sailed into Tampa Bay, which is about sixty miles long and from fifteen to twenty miles wide. We laid our course S. by E., which took us into the mouth of the Manatee River, which runs through a belt of land that produces fruit and garden truck in great abundance. Here we came to anchor and had a fine luncheon on the beach, and found by treading with our toes that we were over a clam bed. We secured a fine lot of clams, which we soon made into a chowder that was highly appreciated by all hands.

Feb. 14.—Early in the morning we left the Manatee River and sailed N. E. by N. for the city of Tampa, which we reached at 2:30 P. M. We made fast to one of the city docks, and all hands put on their boiled shirts and went ashore to take a look at the town. Tampa contains about 15,000 inhabitants, 6,000 of whom are Spanish, who largely work at cigar making. The north end of the city is given up to these people and is called Spanishtown. Many of them are of the African race, but all speak Spanish. From the gray-headed old man of eighty down to the toddling little babies; and even the parrots talk and swear in Spanish, making us think we were in some foreign city.

We did not smoke cigars until nearly all evening, but by the employer daily with enough fillers to make up said cigars, which he can smoke or sell as he may elect. The people were well dressed and seemed contented and happy.

The Tampa Bay Hotel is the largest hotel in the South. The main building is 700 ft. long and 200 ft. wide. The hotel and grounds take in four acres and every foot of the ground is covered with buildings artistically laid out in drives, walks and gardens, the latter containing a great variety of tropical trees, plants and flowers, the scent of which filled the air, go where you would.

The dining-room is a vast dome built of iron and glass, with beautiful pictures in the base panels. The inclosed courts of the hotel are covered with iron and glass roofs, and floored with mosaic tiling. These courts are adorned with tropical plants and flowers, with here and there fountains made in grotesque form, and when these courts are lighted up at night with hundreds of many-colored electric lights the effect is extremely dazzling and beautiful.

Outside of the big hotel there are no fine buildings in the city. Feb. 15.—We were up bright and early to catch the flood tide and sail for Yachatsville, which is about thirty miles long.

We had a free shore, a fine whole sail breeze, and made a quick run to Palmsota Pass, the entrance from Tampa Bay into Palmsota Bay, where we anchored for the night, having clam soup and fried clams for supper.

Feb. 16.—After an early breakfast we commenced beating up Palmsota Bay. We overhauled and passed a schooner, the *Nelly Bly*, with a load of Yachatsville oysters. We finally came to anchor off the captain's home, which is situated near the Pass into Sarasota Bay, where we remained one day for the captain to repair our dinghy.

We went ashore and dug some clams that our cook made into a chowder that was fit food for the gods. The captain's wife sent us some native wine and one of those plala cakes that our grandmothers used to make. We can eat as bread and not dream that you see said grandmother by so eating.

About one hour before supper we took our sea bath, which was simply delightful and luxurious. Indeed, whoever comes South and returns without taking a sea bath has lost no small part of the pleasure of a winter outing on Florida's coast.

In surf bathing it is better to bathe when the tide is coming in, as then the tide and waves are in harmony, and it is impossible for the seas to carry you out; but with the tide running out there is an undertow that has a strong tendency to carry you out to sea, and many have thus lost their lives. There is no danger from sharks in surf-bathing, if people do not swim outside of the breakers, for sharks always keep outside of the breakers. When at anchor in shallow water we kept one man to watch for sharks while we bathed, but

## Rifle Range and Gallery.

### Jersey Men at the Targets.

The weekly outing of the Greenville Rifle Club, in Armbruster's Shooting Park, Greenville, N. J., on Dec. 2, brought together only four members in the fifty shot handicap sweep. The result of the contest was a surprise to at least one of the four. Plaisted, in his experiments of late with nitro, combined with black powder, led him deeper into the fields of experiment, and on this occasion he came on to the range with his cartridges loaded with another brand of nitro. This time the combination did not pan out a success and the result was that two of the three competitors buried him under such a total, that he has not been able to reach the surface as yet.

Collins and Chavaut are highly elevated over their victory over the old man and propose that at the next competition they will bury that other old veteran, M. Dorrier, in the same hole. Michael says he will try to be there to participate in the ceremony.

Chavaut's third and fourth scores, 221 and 220, show that he is capable of expert work when the conditions are favorable.

Collins has a habit of changing his sight, that is not conducive to reliable work under match conditions in off hand shooting.

Many old and expert riflemen make it a rule never to move their sights after once starting out in a match, but follow the variations in their rifle by holding for it. The scores in the Saturday's competition are appended: 50 shots, off hand, 200 yards:

W C C Hils.....	20 23 17 19 24 20 14 23 21 14—195
C H Chavaut.....	20 21 19 17 16 21 24 18 24—199
G W Plaisted.....	16 20 23 20 19 20 19 22 25 21—205
C Boag.....	13 17 21 18 17 18 23 24 23 18—201
	20 18 25 20 12 20 24 21 20 19—203
	20 22 19 12 19 21 18 22 18—191
	23 16 22 21 24 21 16 21 23 23—208
	24 24 21 20 20 23 22 23 22 21—220
	21 23 18 23 25 24 22 23 20 21—220
	18 23 17 21 20 20 12 25 20 21—197
	20 16 24 25 20 20 19 18 24 12—198

	20 15 23 18 25 10 21 18 22 19—200

### Port Chester Scorers.

PORT CHESTER, N. Y., Dec. 1.—The Port Chester Rifle Club had a shoot on Thanksgiving at its range "just for fun." Last year we had a turkey shoot and voted it a nuisance and a bother and made no money by it. So this year we decided upon a quiet time by ourselves and we had it. While waiting for the members to arrive we started an individual ten-shot score to pass away the time. This was shot out in due time and then having ten persons on hand we appointed the two lowest men in the individual score as captains and they picked out a team of five each and we shot a team match of five shots, which resulted in a surprise for all hands, as it was expected a different result would be the outcome. We then had another five-shot race, in which the other side squared accounts. Below are the scores: 200yds., off-hand, German (25) ring target:

Bachmann.....	19 20 19 17 20 24 25 15 22 18—199
Rudd.....	22 23 18 13 16 19 17 19 23 18—189
Horn.....	13 14 17 17 18 21 23 24 18 19—183
Smith.....	25 22 20 15 23 14 22 21 0—167
Townsend.....	13 18 9 9 18 23 22 12 03—164
Hess.....	9 17 21 22 17 20 19 18 15 0—158
Merritt.....	9 0 11 19 0 18 17 9 15 12—110
McNeil.....	12 0 12 12 12 12 9 10 12 0—91
McQuiken.....	0 13 0 9 13 16 0 13 0 0—64

#### First match.

Team No. 1.....	18 16 21 24—95
Bachmann.....	18 16 21 24—95
Rudd.....	20 13 12 21—84
G Rudd.....	20 13 20 13—84
Townsend.....	17 17 0 17—72
McNeil.....	0 20 23 16—11—70—415

#### Second match.

McNeil.....	22 22 23 17—103
Rudd.....	14 16 21 21—91
Bachmann.....	18 19 9 20—87
Townsend.....	0 18 25 14—79
G Rudd.....	18 0 14 14—4—396

#### Dec. 2—Scores to-day, 200yds., off hand, German ring target:

McNeil.....	23 24 17 25 23 17 14 24—212
Rudd.....	21 23 24 19 15 17 22 23 19—202
Smith.....	19 23 19 21 23 19 23 19 19—188

### Hoboken Riflemen Shoot.

The annual prize and turkey shoot of the Gen. Herzog Co. No. 3, Washington Rifles of New Jersey, which was held at the Dierken's Hall, Hoboken, on Thanksgiving Day, was a most successful one. The members came out in force, hoping that the fates would land the boss turkey in their individual possession, and the resident riflemen in and about Hoboken turned out in large numbers, hoping to get a chance in the final division of the cash programme which was hung up for visiting shooters.

Fred. Brandt, the shooting master of the company, and under whose management the shoot was left, was an ever present factor in the success of the day's sport.

Captain Ernest Fisher, of the Miller Club, was present and participated in the competition on the public target. The Our Own Club and other local clubs were prominently represented by their best shooting talent. Captain Wm. Yorkel, of the Ernest August Company, while in the list of winners, was way up in the esteem of his fellow competitors as a promoter of the day's pleasure.

David Miller, head of the Miller Club, was on hand, and landed with the winners. David knows a trick or two with the rifle yet.

In the medal shoot, open for members only, the winners proved to be Otto Schmidt, first, with 69, 69—138, and Charles Lersch, second, with 69, 65—137.

In the competition for the turkeys, among the members, 3 shots per man, possible 75, there was exhibited a deal of good-natured chaffing, and when Fred. Brandt succeeded in putting up a score of 70 points the members and visiting shooters accorded him their heartiest wishes over his success.

Public prize target, cash prizes:	
Capt E. Fisher.....	74 74—148
Fred. Brandt.....	74 74—148
Wm. Diller.....	70 74—144
L. Schmidt.....	71 73—143
J. H. Kruse.....	71 71—142
David Miller.....	70 72—142
John Meyer.....	70 71—141
Capt Wm. Yorkel.....	70—139
Otto Schmidt.....	66 68—134

### New York City Schuetzen Corps.

Tex members assembled in the gallery of the Zettler Bros. Dec. 1 for gallery practice. The men were divided into two teams of five men each under the leadership of Capt. A. Range upon the one side and Capt. H. Kuhlman on the other. The evening was devoted to the shooting of two team matches. In the first contest Capt. Kuhlman's team was the victor, and the second match was won by Capt. Range's team. Scores:

Capt H. Kuhlman.....	218
R. Busse.....	243
A. Keller.....	228
M. Maltzer.....	221
A. Lutwig.....	227—1187
Capt A. Range.....	231
C. G. Zettler.....	232
H. Radloff.....	237
M. Munz.....	233
M. Maltzer.....	221—1144

#### Second Match.

Capt H. Kuhlman.....	215
R. Busse.....	236
Ch. Rehm.....	211
A. Keller.....	230
M. Radel.....	197—1088

### Greenville Rifle Club.

The weekly gallery shoot on Dec. 1 brought together twelve members in competition for the class prizes. W. C. Collins and M. Dorrier divided the honors for high scores, each making 241. Scores: W. C. Collins 241, M. Dorrier 241, C. H. Chavaut 239, W. H. Robidoux 230, Agneau 211, Hill 205, J. Boag 239, Purkess 238, C. Boag 236, Hy. Gotthardt 225, Daniels 211, Maug 202.

### Hartford Rifle Club.

The Hartford Rifle Club held their regular bi-monthly shoot at Union Grove on Thanksgiving morning, standard target, 200yds., off-hand, light good, wind unsteady from 9 o'clock, varying from one to two points. Medal match, single entry:

H. A. Pope.....	8 9 10 8 9 9 9 7 10 10—89
F. K. Rand.....	6 10 7 9 9 8 8 5 7 7—76
W. J. Dunbar.....	6 9 9 10 5 7 7 5 4 9—71
F. B. Covel.....	8 5 5 6 9 9 7 5 6 7—67

#### Re-entry match:

Pope (100 consecutive shots).....	10 7 10 6 9 9 6 8 7—80
	9 10 10 9 10 9 6 8 8—89
	10 9 10 7 9 9 10 7 8—89
	10 8 8 10 9 9 10 7 8—89
	10 6 9 10 7 9 9 9 10—88
	10 9 7 8 10 7 9 8 9—86
	10 7 9 7 7 7 7 8 10—80
	8 9 10 8 9 9 9 7 10—89

Tyler.....	5 6 4 10 5 6 7 6 8 9—63

H. A. POPE, Sec'y.

### Pronunciamento Not Made in Vain.

ZETTLER RIFLE CLUB, New York, Dec. 4.—In FOREST AND STREAM of last and this week, we read a great deal about matches, especially from Greenville, N. J. We hope that the Greenvilles and Excelsiors do not think that we are to do the challenging; we are to be challenged, and at any time we wish to have a match or matches on the same conditions as the championship was won, and on such conditions as have been mentioned by our spokesmen at Cypress Hills, L. I., on Nov. 7, they can be accommodated at any time and for any amount. We don't throw down our gauntlet so soon.

### Miller Rifle Club.

The Millers held an informal shoot on Thanksgiving Night. David Miller, notwithstanding the fact that he has only a few hours' previous labored long and ardently in efforts to subjugate the old enemy, turkey, whose presence is abroad in the land at this season of the year, had nervous force enough left in him to shoot himself into first position.

Ex-Captain Dewey also seemed to have added new power to his center after his day's experience, and retired with a creditable score.

The scores are appended: D. Miller 240, Aug. Meyns 237, M. Meyer 236, F. Sehl 231, F. Lehl 231, J. Bach 230, M. Willis 232, A. W. Dewey 231, Murphy 219, Vanderheyden 219, Kummel 201.

### Empire Rifle Club.

The weekly gallery shoot, Nov. 23, was not up to the usual attendance, only three members participating. The scores are appended: Wm. Rosenbaum 244, B. Zahn 240, W. Bass 232.

### RIFLE NOTES.

In last week's issue, under the heading of Rifle Notes, we mentioned the fact of our experience in shooting nitro priming (8grs.) in our rifle shells (.38-50 everlasting) with the new Winchester (No. 3 W.) primer, and the balance of the shell filled with F. G. powder. We risked the experiment in a 50-shot match and the result was a total of 1,075 points on the German ring target, or an average of 21.5 per shot. The results of this shooting were such that we had a desire to try the rifle with the same load from the machine rest and shoot a series of shots without cleaning. The opportunity for such a trial came last week, and with the aid of our expert, Mr. F. C. Ross, we proceeded to carry out the trial. The location selected was on the range (200yds.) in the string of ten shots, using the rectangle to find a common center, and then a new cardboard was put up as a background to catch the total shots as well as one over it to catch each ten-shot string. A total of fifty shots were made in ten-shot strings without cleaning, seating the bullet in the barrel with a seater. The result of the fifty shots was a group that could be covered by a rectangle 4x3½ in. The first string of ten shots, using the rectangle to find a common center, measured 12½ in., the second string 13½ in., the third string 14 in., the fourth string 17½ in., the fifth string 12½ in., aggregating a total for the fifty shots of 64½ in., or an average variation of each shot from a common center of about 1.28 in. Now the question comes up, how would this target be considered from a standard of (non-cleaning) shooting based on the lubricated bullet. We would like to hear from some of the present quietest of rifle men, who do not clean their target to be based upon their experience with the lubricated bullet without cleaning. There is one feature about this target that has surprised us much, and that is that there was not a greater perpendicular variation than 4½ in. in the flight of the bullets, for the shells were faulty from the fact that they were a lot of old shells, 38-55, picked up promiscuously and cut down to the length of the old 38-50 everlasting (old style), for which the rifle was originally chambered.

A number of well-known exponents of rifle shooting being assembled together a few nights since in one of our New York rifle resorts, and the ever present subject peculiar to such cranks being uppermost in the minds of all, the question of team shooting was launched by one of them probably with a desire to create a ripple upon the surface of the present quiet sea of rifle matters. One individual expressed his belief that New Jersey could produce a half-dozen men who could hold their own at 200yds. against any that could be produced in New York and Brooklyn. The New Yorker took exception to the New Jersey man's remarks and requested him to name a similar number of Jersey shooters who could successfully compete against a team of New Yorkers, made up as follows: F. C. Ross, H. Holmes, Louis Flach, J. A. Boyken and Chas. Hutch. The Jerseyman was prompt with his candidates and trotted out his selection as follows: William Hayes, M. Dorrier, Geo. Schlacht, Geo. W. Plaisted and L. P. Hansen. "There," says the Jerseyman, "is a team that can do up your New Yorkers!" Then the engagement became warm and the patriotic spirit of the representatives of the two States was wrought up to a high tension. It reminded one of the days when the champions of the present Association at Walnut Hill have been the pioneers in keeping up rifle practice throughout the winter season. The Zettler Club of New York is another of the older societies who have in the past devoted regular days through winter for out-door shooting. Chas. C. Wissel always keeps the Cyprus Hills range shooting house in condition to be made comfortable for the shooters at all seasons of the year. This winter Wm. Armbruster, proprietor of the Greenville (N. J.) Park, will have his range open every Saturday afternoon during the winter for the accommodation of the Greenville and Jersey City riflemen. With Wissel's park open on Sundays for those shooters who have no time to devote to the rifle during the week and the Greenville Park open on Saturdays the fraternity in and about New York will have plenty of opportunities to indulge in their favorite sport. We learn, also, that Newark has, or is soon to have, a new shooting range where riflemen will find accommodations for shooting seven days in the week at all seasons of the year.

We note with pleasure that the fraternity in Cincinnati keep on in their practice even though the cold season is advancing upon us. The present quietness of the Association at Walnut Hill have been the pioneers in keeping up rifle practice throughout the winter season. The Zettler Club of New York is another of the older societies who have in the past devoted regular days through winter for out-door shooting. Chas. C. Wissel always keeps the Cyprus Hills range shooting house in condition to be made comfortable for the shooters at all seasons of the year. This winter Wm. Armbruster, proprietor of the Greenville (N. J.) Park, will have his range open every Saturday afternoon during the winter for the accommodation of the Greenville and Jersey City riflemen. With Wissel's park open on Sundays for those shooters who have no time to devote to the rifle during the week and the Greenville Park open on Saturdays the fraternity in and about New York will have plenty of opportunities to indulge in their favorite sport. We learn, also, that Newark has, or is soon to have, a new shooting range where riflemen will find accommodations for shooting seven days in the week at all seasons of the year.

The Greenville Rifle Club would like to know what the boast of the Hudson Rifle Club, made in the columns of FOREST AND STREAM many weeks since saying it was always ready to fulfill its obligations, and that it was never at a loss for (best) members to fill up its team. In the light of past events the Greenville Club queries: What does it amount to?

The atmosphere about New York is full of rumors of challenges floating around trying to find lodgment among some of our rifle experts. We trust that none of our experts, through an imperfect understanding of the etiquette governing rifle shooting matters, will undertake to prevent these little germs from finding lodgment.

The ideal "Perfection" mould, which can be supplied for most of the popular calibres, is designed to meet the wants of riflemen who like to vary their loads for hunting, target shooting, short range work and other purposes. This mould is so arranged as to cast bullets of great variety in weight. For instance, the 32-40 M. will cast eight different bullets, varying from 105 to 210grs. The ideal tools have given satisfaction to thousands of rifle cranks and are eminently practical and useful.

### Excelsior Rifle Club.

Ten weekly shoot on Nov. 21 brought together twelve members in the handicap race for club medals. The good work of J. Binns in the gallery is bringing him into prominence as one of the experts of the club. Scores: J. Binns 240, L. P. Hansen 238, C. L. Pinney 238, Wm. Duff 225, James Hughes 224, J. Ryer 212, Thomas Hughes 207, William Hughes 202.

The competition on Tuesday night, Nov. 23, brought together only seven members. Again Binns showed his good form by making the fine score of 240. Scores: J. Binns 240, W. J. Hennessey 240, O. C. Boyce 237, C. L. Pinney 237, R. N. Duff 235, C. Bauchle 230, C. G. Reers 230.

## Trap-Shooting.

All ties divided unless otherwise reported.

### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 10-12.—West End Gun Club tournament, at Davenport, Ia.  
Dec. 25.—Union Gun Club tournament, at Springfield, N. J.; 9 A. M. to 1 P. M. live birds; 1 P. M. until dark, targets. Open to all.  
Dec. 25.—Open sweep at live birds, on Erb's grounds, Bloomfield avenue, Newark, N. J.

1894.

Jan. 1.—South Side Gun Club's thirteenth New Year's annual, at Newark, N. J.

Jan. 9.—New Jersey vs. Kings county, team shoot, on Al. Heritage's grounds, Marion, N. J.

Feb. —Reading Shooting Association tournament; two days targets, one day live birds, at Three-Mile House, Shillington, Pa.

April 4-6.—Interstate Manufacturers' and Dealers' Association's grand American handicap at Dexter Park, Long Island.

April 24-27.—Central City Gun Club's tournament, Central City, Neb.

May 1-6.—Arkansas State Sportsmen's Association's tournament, at Fort Smith, Arkansas.

May 17-18.—West Newburg (N. Y.) Gun and Rifle Association's spring tournament.

May 22-25.—Knoxville (Tenn.) Gun Club thirteenth annual tournament: first days, target, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.

June 5-7.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.

June 11-17.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-third annual tournament, at Utica, N. Y., under auspices of Oneida County Sportsmen's Association.

June 19-21.—Chamberlain Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.

June (third week).—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Griscom, Sec'y, Atlantic City, N. J.

Oct. 4-5.—West Newburg (N. Y.) Gun and Rifle Association's fall tournament.

### Boiling Springs vs. Passaic City.

PASSAIC, N. J., Nov. 30.—The fourth contest between the Boiling Springs Fishing and Gun Club and the Passaic City Gun Club for a silver cup of the value of \$50 was held on the fine grounds of the first-mentioned club at Boiling Springs on Monday last and resulted in a victory for the Passaic boys. This club has won three of the four shoots and becomes the possessor of the prize. The afternoon was dark and cloudy and the targets were thrown very swiftly, and these two things made the shooting hard and accounts for the low scores made all around. Mr. Gardiner, of the Passaic team, was suffering greatly with neuralgia, which explains his low score. As Mr. Palmer fired at his seventeenth target his gun burst, about six inches from his right barrel being blown asunder and the two barrels torn apart for about 18 in. One peculiarity of the accident was that he broke his target. The event rather unsettled his nerves, I judge, although finishing his shoot with another and heavier gun may have had something to do with it.

B. All the above sweeps were at ten birds each, except No. 6, which was at fifteen birds.

### Hell Gate Gun Club.

TWENTY-SEVEN members of the Hell Gate Gun Club, of New York city, assembled in Dexter Park, Long Island, on Tuesday, Nov. 23, for the final shoot of the season of 1898. The club event called for 10 birds per man, club handicap rules, 5 traps. The prizes consisted of four merchandise prizes put up by the club to be

The Toronto Tournament.

TORONTO, Ont., Dec. 1.—Mr. George Briggs's tournament at the Woodbine Park, Toronto, Nov. 28, 29 and 30, was not as great a success in the way of attendance as could have been desired, but, to use the expression of one of the spectators, "it was a very good day for good shooting and seemed to enjoy themselves thoroughly; and as Mr. B. is a good loser, and paid out the guarantee without even a frown, we will conclude that the affair was a success all around. The universal prevalence of the grip kept a good many Canadian enthusiasts away and the last day of the tournament falling on your Thanksgiving Day, when about every gun club in the States held a local shoot, which kept a good many Canadians from coming over whom we would otherwise have been here."

The birds were far above the average in quality. Mr. Briggs had gone to considerable expense to provide good roomy lofts in which to keep them and as a consequence a duffer was a rare exception, and generally when the trap was pulled there was a crack of wings and a streak through the atmosphere, that required a very quick shot and a hold just right to secure the desired mark on the score sheet. The weather was fair and it was very bad, the first and third days were clear, but a very strong wind blew across the traps, assisting many a bird over the boundary that on a quiet day would have been scored dead. The second day's shooting was started with the snow falling heavily, but before noon it turned into rain, and it rained so persistently and hard that though the shooting knew it made the birds slower in starting from the traps and slower in flight, yet it also made the traps and the birds themselves so uncomfortable that about 3 o'clock they asked for a postponement, which was accordingly had till the next day.

Mr. C. W. Miller, of the Union Gun Club, Victoria, British Columbia, won first one in the guarantee with the only straight score made. He has made himself very popular among the boys in Toronto, and no one begrudged him his success. He shoots a 7/4 lbs. Greener with E. C. Peck in both barrels. Following are the scores:

No. 1, 20 pigeons, entry \$50, \$600 guarantee.

Thanksgiving Day at Dexter Park.

TRUE to his custom, Louis Miller this season again sent out his invitations to the patrons of this popular trap-shooting resort to come out on Thanksgiving Day, partake of Mrs. Miller's turkey dinner, and withal try their hands at bluebirds and live birds. Louis' programme of 10 events, 7 at bluebirds and 3 at live birds, was of a nature to draw the average Dexter Park devotee, provided he was within driving distance. This season many of Miller's patrons are taking advantage of their opportunities to get away to the shooting resorts of the South and along the Atlantic coast too far away to be within reach of their favorite pigeon ground, and as a consequence the assemblage at Dexter Park on this day was not up to that of years gone by. Those who were able to be on hand during the day were amply repaid for their pilgrimage. Newcomers, however, who were within easy reach of the place, were glad to participate in the day's sport. The day was one to be long remembered as the mildest and most pleasant for a long line of years. From early morn until evening an overcoat was a superfluous appendage. The day's sport opened with a 10 target sweep at bluebirds. In this event G. Wood landed first on the list with nine breaks to his credit.

It was after the fifth event that Miss Host Miller said, "Gentlemen, Mrs. Miller desires your presence down at the house" (hotel). A request of this nature upon such an occasion required no repetition on the part of Brother Miller, and in short order the hungry shooters had their legs under the tables in Mrs. Miller's dining room, where all soon engaged in the discussion of the ever returning (annual) subject—outs and ins of turkey. An hour devoted to this question had the effect of putting each and all in the best of humor with himself and his surroundings. With the return to the shooting house came a resumption of hostilities with the bluebirds.

With the opening of the live bird events came the most interesting part of the day's sport to the lover of shotgun shooting. Mr. Miller had on the grounds a fine lot of selected birds that once liberated from the trap tarried not, but made haste to reach the next county. Many got away from the traps in safety, but some few escaped the general fusillade and will no doubt be returned to pass through the same experience again at some future date.

Lack of space will not permit us to go into the details of the many interesting incidents connected with the three live bird events, but we leave to our readers who have seen good birds and handy shooters combined at the traps to supply the missing link in the chain of events. The weather was so good that many will live over again the events of a most interesting Thanksgiving Day's sport of the traps. Scores:

No. 1, 10 bluebirds:	
G. Wood, 9, W. Thompson, 8, L. Schortemeier, 7, W. Kattenstroth, 2, T. Short, 7, J. Ferris, 6, G. Osterhout, 6, S. Lyons, 6, S. Charles, 4, J. Frank, 0.

Chicago Traps.

CHICAGO, Dec. 1.—The Chicago Shooting Club will hold its first contest for the new club trophy at Watson's Park, Tuesday, Dec. 5, at 1 P. M. Future contests will be on the first Tuesday of each month. The conditions are 15 live birds per man, the shooter winning the medal the greatest number of times during the year to become absolute owner of same.

TOO COLD.

Watson's shoot Thanksgiving Day did not amount to a great deal, a cold and heavy snow practically killing all sport. Capt. Anson, now released from baseball duties and again pestering some in trap matters, was on hand, and so was Geo. Kleinman. The rest of the crowd was John Ruble, and Capt. Anson relates gleefully that he and George skun the rest of the crowd both at birds and traps.

The Garfield Club issues a neat season card, showing the percentages of the members in each of its three recognized classes, A, B and C. F. E. Copperrnoll wins the Class A medal, Dr. J. W. Meek the Class B medal and R. S. Mott that for Class C. The full percentages of leading records follow, and may serve to give other clubs a pointer on a neat and stimulating club system.

DECATUR.

Decatur, Ill., Gun Club held a Thanksgiving shoot, and that live young city furnished a good turnout.

STOLE IT.

The other day I happened to look at the "rod and gun" department of the Cincinnati Commercial Gazette, and saw a paragraph which seemed familiar. It was a description of the World's Fair championship medal which John Watson had made for Charlie Grim of Clear Lake, Iowa, who won it so handsomely here. The paragraph was taken bodily from Forest and Stream, and no credit was given. I then the gentlemanly thief for this and other thefts, there being a silent admission that I can write a lot better than he can. FOREST AND STREAM is liberally stolen from, but can afford it. E. Hough.

Union and Maplewood Tie.

ORANGE, N. J., Dec. 2.—Inclosed find scores of the shoot of the Maplewood Gun Club held on Election Day. The team shoot between the Union Gun Club of Springfield and the Maplewoods was very close and exciting from start to finish and resulted in a tie. The tie will be shot off at Springfield on Christmas afternoon. On Christmas morning the same teams will shoot a live bird race, five men teams at ten live pigeons per man. Manager Miller says he will have a good supply of birds on hand for targets.

Team match, Union vs. Maplewood, at 25 targets per man:	
Appar, 01111111111101101111—22	Sigler, 01010111110110111111—19

Hartner's Thanksgiving Day Shoot.	
ORANGEVILLE, Md., Dec. 1.—Inclosed find scores made yesterday at the holiday shoot given by John A. Hartner. The shooting was at standard Keystone targets. The best shooting of the day was by Mr. Hartner, who used a 7 lbs. Greener and American wood powder. Wm. Field also did some good work. The results:	
Event No. 1, 10 targets, 5 traps, entrance \$1:

Forest City Gun Club Tournament.

PHILADELPHIA, Nov. 30.—The Forest Gun Club Tournament of to-day was not the success anticipated, what with football matches and other games going on all around us made the attendance very slim at this shoot. Not more than three squads of six in any event in the whole day. Such old reliables as H. Landis, E. David, J. A. Mills, John W. Treadway and H. Thurman were on hand of course, and our old friends from Delaware, John Evans and John Cleaver were also there and shooting in great form. The programme called for 10 events, five at known angles, and five at unknown angles, and a surplus shoot. The club charged three cents for each target thrown and allowed one cent each for a surplus shoot, all the shooters that shot through the programme being entitled to enter, paying only the price of the targets. This event was shot off at 15 targets, known angles.

The weather to day was a surprise to every one, more like a spring day in May than a winter day. In the middle of the day it was very warm.

The afternoon brought over some of our shooting friends from Frankford; among them being Jas. Wolstencroft, Wm. H. Wolstencroft, Isaac Wolstencroft, Capt. W. H. Peck and Nat Swope.

Mr. A. J. Rust, captain of the Keystone League, I am sorry to say is lying at his home very sick with pneumonia, but we are all in hopes, from reports received, that he will soon be on his feet again.

The principal workers deserve great credit for the way in which they managed to get the targets set out, to suit the shooters and make a pleasant day for every one. The shooting was started exactly at the time the programme said it would be, and the programme events were finished at 2:30 P. M., after which

DRIVERS AND TWISTERS.

There is a strong feeling among New Jersey trap-shooters in favor of forming a league of live bird clubs and arranging a series of team contests, one on the grounds of each club, a trophy to go to the club killing the highest aggregate number of birds in the series. The idea is a commendable one and should be at once brought to a successful issue. There are active clubs enough in the State to form a strong league, while as to the skill of the Jersey shooters little need be said. The most active of the live bird clubs of the State, leaving out a few of the "exclusive" organizations, are the Newark Gun Club, Paterson Gun Club, Boiling Springs Fish and Gun Club of Rutherford, Climax Gun Club of Plainfield, Union Hill Gun Club, Midway Gun Club of Matawan, Riverside Gun Club of Red Bank, and the Central Gun Club of Long Branch, a total of eight clubs. There are a number of organizations which hold occasional shoots, but the above are all that can be considered as doing regular work. If such a league were organized, Trenton would probably come in time with a club, and possibly the recently formed Cosmopolitan Gun Club and the Union Gun Club of Springfield might also enter the ranks. We should be pleased to see such a league formed and will do whatever lies in our power to hasten the formation, which cannot be effected at too early a date. The series of shoots should begin in January, in order to run out the full series before the season gets too far advanced. We understand that an effort to form a State League is to be made on the day of the shoot between New Jersey and Kings County, but see no reason why the scheme should not be started at once.

The Myrtle Park Gun Club of Irvington held a target shoot on Thanksgiving Day, and the results are as follows: No. 1: Compton 7, Smith 7, McCollum 4, Osborne 6. No. 2: Osborne 7, Smith 8, McCollum 8, Compton 10. No. 3: Compton 8 Smith 6, McCollum 6, Osborne 5. No. 4: Osborne 5, Smith 10, McCollum 5, Compton 8. No. 5: Wilson 5, Osborne 6, Cummings 6, English 6, Baldwin 2. No. 6: McCollum 8, T. Smith 8, M. Smith 4, Osborne 8, Fred. Compton 10, Cummings 6. No. 7: McCollum 5, T. Smith 8, W. Compton 4, English 7, Cummin 7. No. 8: McCollum 5, T. Smith 8, W. Compton 4, Osborne 6, Fred. Compton 5. No. 9: McCollum 5, T. Smith 7, W. Compton 4, Osborne 8, F. Compton 8, Cummings 7. No. 10: McCollum 9, T. Smith 9, W. Compton 6, Osborne 7, F. Compton 8, Cummin 7. No. 11: McCollum 6, T. Smith 8, W. Compton 8, Osborne 8, Fred. Compton 7, Cummin 8. No. 12: McCollum 6, Tracy 2, M. Smith 3, Osborne 8, English 9, Cummin 8.

We are informed by Mr. C. H. Finch of Syracuse, who furnished us the picture of Messrs. Wingard and Bradford of Detroit, published in our issue of Nov. 18, that the picture accompanying the article contained a number of errors and omissions. Mr. Finch, who has the most complete record of the New York State Conventions of any man in the State, says: "The first breech-loader seen at a State Convention were at Niagara Falls in 1865. Jas. Myer, Jr., having a Lafaucheux pin-fire and Dr. Mead of New York having a central-fire (I think a Scott). It was at the Letoy Convention in 1867 that the altered gun appeared, one being shown by Charles Bradford, one of the subjects of your illustration, and the other, a central-fire, by Daniel M. Lefever. At the same shoot was shown the first specimen of the chokebore, brought by C. M. Spencer (I think he was the rifle-maker). This choke was a queer-looking institution, and screwed on to the muzzle. This was a single-barrel gun and seemed to be effective."

The grounds of the Union Gun Club, at Springfield, N. J., will be the scene of some big shooting on Christmas Day, provided the weather be favorable. Enoch D. Miller informs us that there will be live bird shooting from 9 A. M. until 1 P. M., with a lot of pigeons that will make the boys hold their guns true in order to score straight. In the afternoon, beginning at 1 P. M., there will be shooting at artificial targets. The above events, both at live birds and targets, will be open to all and should attract a big crowd of contestants. During the afternoon there will also take place the second of the series of shoots between teams of five men each from the Union Gun Club and the Maplewood Gun Club, each man to shoot at ten live pigeons. Later on there will be a match between teams of ten men each from the same clubs as above, each man shooting at twenty-five targets. There will be plenty of Christmas lunch, hot coffee, etc., on hand.

The Rochester Gun Club team won the first of the series of three-cornered shoots between Auburn, Syracuse and Rochester, shot at Auburn. The scores of the teams follow: Rochester Team: Hayley 24, Norton 18, W. J. Mann 22, Hicks 20, Stewart 19, Rissinger 17, Meyer 21, C. Smith 18, Glover 23, Wolcott 15, Lane 21, Beyer 22; total, 240.

Auburn Team: Bridgdon 20, W. H. Stewart 19, Vanderloo 17, Garrett 21, Levitt 14, Stelle 14, Whyte 22, Tuttle 22, Goodrich 23, Whitney 21, Wagner 22, Carr 23; total, 233.

Syracuse Team: Le Fever 20, G. H. Mann 14, Dugard 23, C. Ayling 23, Ginty 17, Hays 16, Hudson 20, H. Ayling 13, Courtney 20, H. Ayling 17, McFarley 21, Mowry 18; total, 232.

The regular holiday shoot of the Empire Gun Club was held on Thanksgiving Day at the Flatlands shooting grounds, Dean street and Howard avenue, Brooklyn. Eleven marksmen, under the captaincy of Joseph Woolley, participated in the shoot at five birds each, twenty-five yards rise, Long Island rules. J. Woolley, J. Morgenbacher, Frank May and Joe Foster killed four each for first place; F. Bennison killed three and won second. The score: Joseph Woolley 4, John Morgenbacher 4, Frank May 4, John Foster 4, Samuel Bennison 3, Edward Gott 2, George Fassnacht 2, James Murray 2, Charles Kungert 1, Joseph Geary 1, Henry Gerken 1.

At the Thanksgiving Day shoot of the Perth Amboy (N. J.) Gun Club W. F. Watson killed all the birds he shot at.

The Delancy Gun Club, a new organization of Newark, N. J. held a shoot on Thanksgiving Day on Wheeler's Point Road, each member shooting at 10 live pigeons, for a medal. The scores: F. Maier.....1112212123-10 C. Haskard.....0100222201-6 F. Farley.....2230112111-9 E. Haskard.....0000112002-4 J. Fischer.....0121122112-9 C. Barnes.....2202120122-8 G. Smith.....211101220-8

The addition of a live-bird day to the programme of the Knoxville Gun Club is likely to increase their entry lists far beyond the numbers recorded at last May's shoot. Several Northern shooters have signified their intention of going down for the final day's sport, but the chances are that they will be on hand from start to finish. The \$1.00 to be given away on the first three days will be a strong incentive.

Harry Matz, the genial and popular president of the Reading Shooting Association, writes us that his association will hold an open to all tournament in February on the association grounds, at the Three-Mile House, Shillington. There will be two days' sport at targets and one day at live pigeons. Mr. Matz promises a lot of birds that will fool the talent.

Enoch D. Miller, of Springfield, N. J., writes us that he has just returned from a hunt in Pennsylvania and reports as a result of four days' work a bag of thirty-two partridge, three quail, four rabbits and one woodcock. Mr. Miller hunted alone during the entire time. We doubt if any better bag has been made this season by one gun.

We learn from Mr. W. S. French that the Oneida County Sportsmen's Association had decided upon June 11 to 17, inclusive, as the dates upon which shall be held the thirty-sixth annual convention and tournament of the New York State Sportsmen's Association for the Protection of Fish and Game, at Utica.

The West Orange Gun Club was recently organized with these officers: President, Charles Grosbun; vice-president, Frank Storms; financial secretary, S. Schwab; treasurer, P. J. Feeney. The club held its initial shoot on Thanksgiving Day and afterwards discussed a dinner given by Wm. P. Dunn at the Llewellyn Park Hotel.

At the last shoot of the West Jersey Gun Club, of Camden, the number of targets broke and missed were as follows: Griscom 35-14, Moore 32-18, Voorhees 43-15, Hanson 43-15, Thompson 47-7, Chalmers 33-14, Ridgeway 35-25, Huffy 29-31, Glits 39-10, Leaming 34-16.

The new catalogue combined with the programme for the 1894 tournament of the Chamberlin Cartridge and Target Company, of Cleveland, Ohio, will be ready for distribution about Jan. 1. It will be an elaborate affair and well worth procuring.

J. J. Blauvelt, manager of the Excelsior Gun Club of Pearl River, N. Y., notifies us that blue rock targets will be used at the club's open tournament on Dec. 14. Trains leave N. J. & N. Y. R. R. (Erie station) at 7.52 and 9.52 A. M. and 2 P. M.

We regret to state that A. J. Rust, captain of the Keystone Shooting League, is confined to his Philadelphia home suffering from an attack of pneumonia. We unite with his many friends in wishing him a speedy recovery.

Thomas W. Morley, of Paterson, and Charles F. Lenone, of Passaic, were to have shot at Paterson on Dec. 1, but sickness in the family of Mr. Lenone caused a postponement.

Next Thursday will be Newark Gun Club day at Erb's grounds and it is hoped that more than the usual half dozen shooters will appear.

The West Newburg Gun and Rifle Association claims May 17 and 18, and Oct. 4 and 5 for its 1894 tournaments.

Trap scores should reach us not later than Monday P. M. in order to insure insertion in the same week's issue.

There will be all day shoots at Erb's grounds on Christmas and New Year's Day. Live birds will be used.

C. H. TOWNSEND.

If you have a friend who is so attached to business that he cannot go shooting, but might at least like to read about it in "Forest and Stream," tell us his name and address and we'll send him one of the

"FOREST AND STREAM'S" SILVER BULLSEYES.

Thanksgiving Day at Erb's.

The fine weather of Thanksgiving Day drew about a half-dozen shooters to John Erb's "Oldstone House" grounds in Newark, and between 1 P. M. and dark 300 birds were trapped. The birds were of good quality. Among those present were W. S. Cannon, the one-armed expert; W. G. Hollis of Kearny, Dr. P. J. Zeglio of Warrenville and "Uncle Billy" Hughes of Jersey. During the day there were shot six sweeps at 10 birds each, \$5 entry, two moneys. The sport only stopped when darkness prevented the birds from being seen. The scores:

On the Morristown Grounds.

HALF a dozen experts visited the Morristown Driving Park on Nov. 30 and put in an hour shooting live birds. Among the party were M. F. Lindsey and J. A. R. Elliott, who came from Hoboken to arrange a match for Mr. Elliott against Mr. Class. They succeeded in doing this and yesterday were billed to settle the affair at Willard's Park, in Paterson.

The birds shot at Morristown were a good lot, as is shown by the absence of clean scores. Event No. 1 was at 8 live birds, \$7 entry, and No. 2 at 10 live birds, \$10 entry, and the results are here shown:

Answers to Correspondents.

No notice taken of anonymous communications

O. W. S.—We cannot give you the name of the dealer in Indian relics.

J. R. T., Norwich, Conn.—Can you tell me how to dress the skins of small fur-bearing animals—mink, muskrat and fox—and can you tell me where I can find any information on the subject? Ans.—The subject is too complex to answer here. Gibson's "Camp Life and Tricks of Trapping" gives full information on the subject. Price \$1 postpaid.

W. L. M., Pittsburgh, Pa.—Under the head "On a Stand in West Virginia," page 427, Nov. 18, you give us an interesting story of hunting deer with hounds. Is this not contrary to law of West Virginia or did this incident happen prior to code of 1884, which prohibits the use of hounds? My last copy of *Game Laws in Brief* does not show that this law was changed in West Virginia. Ans. It appears to have been a clear violation of the statute.

C. H., Yonkers, N. Y.—1. Where can I get a map and guide to Long Island, one giving the railways, roads, lakes, bays and rivers, and such other information as would be useful to a gunner? 2. Being very much interested in the article on "Deer Hunting on Long Island," I would like to know if a non-resident can shoot on the grounds mentioned, or if it is owned by private individuals or clubs? 3. Where on Long Island or the neighborhood of New York would I be likely to get some duck shooting about Christmas? 4. I shot a few ducks on the Hudson near Tarrytown, but they smelled and tasted so strongly of fish that they were almost worthless as food. I would like to know if there is any way to destroy the fishy taste and smell. What kind of duck it was I don't know. It was larger than a widgeon and not so large as a mallard (such as I knew them in the British Isles). It was evidently a diver of some kind. Ans. 1. We can send you road map of Long Island for either \$1 or \$2.50. 2. There are no restrictions against shooting on the grounds mentioned in the article. 3. Write O. B. Tutbill, E. Moriches, L. I., or Jacob De Waal, Sayville, L. I. 4. We cannot name the duck from your description, though it was very likely a coot. To destroy the fishy taste, parboil the ducks in water with an onion in it. After parboiling them discard the onion and lay the ducks in cold water for half an hour, after which they may be roasted, broiled, fried or stewed. This receipt is from "Hints and Points for sportsmen." Postpaid \$1.50.

"THE ART OF SHOOTING."

PRICE \$3.00. FOR SALE AT THIS OFFICE.

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 460 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeyboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksman; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeealand. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is a blithful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suave and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor *London Field*. Illustrated, 584 pages. Price, \$7. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/4. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

# FOREST AND STREAM BOOK LIST.

No. 318 BROADWAY, NEW YORK.

## Christmas Books.

This year we urge those who contemplate sending to us for their Christmas gifts to forward their orders at once, so that they may be sure to receive in time whatever it is that they desire. About Christmas time all business people are pushed to their utmost to fill their orders; the mails and express companies are overwhelmed with parcels; transportation is slower than at other times, and mistakes in the delivery are likely to occur. It will, therefore, be a real advantage to our customers as well as a great help to ourselves if orders can be sent in at once.

FOREST AND STREAM PUBLISHING CO.

### PORTRAITS IN INK.

#### III.—THE SHOEMAKER.

THE old shoemaker, grizzled, unkempt, slovenly clad, warped with many years over last and lapstone, is a figure in as strong a contrast to the Major as is his untidy shop to the orderly display of the other's.

But you will be more at your ease here among the clutter of leather scraps, worn footgear and lasts, with the battered old gun in the corner beside the worn rod whose term of service is still extended by many bonds of waxed ends.

Here you may sit at your ease or your peril on the rough little counter or on one of the half dozen rickety chairs, weak but hospitable even in the decrepitude of age.

Here you will find more genial companionship and get more useful information in an hour spent with this unassuming craftsman than in a day with the pretentious Major.

You discover that it is not altogether greed for fish and game that entices him abroad in the few days wherein are conjoined an allurement of propitious weather and slackness of work.

He admits with a laugh at himself, that he killed nothing in his last day's outing, but asserts that he had nevertheless a right good time. He got a fortnight's kinks out of his back and shoulders, a heartening smell of the woods, a feast of fresh air, and caught some of the wood folk at a new trick or uttering a heretofore unheard or unrecognized note, or he has seen some strange freak of nature. If you are interested, he imparts to you his small discoveries, a poor but hospitable host sharing his meager fare with a hungry wayfarer.

Or, you may find him just returned from a stolen half-day's excursion, rejoicing over a lucky shot, never claiming it to be more, and he relates with the particulars of circumstance and place, the finding of his grouse and how he brought it down, as it whirled and clattered almost unseen in the haze of brush.

When you desire a sight of the finest bird he ever killed, he bashfully confesses that he left it at a sick neighbor's on his way home (a mile out of it though), but as he knew the sick man would not care he stuck one of the tail feathers in his hat, and this he displays with great satisfaction. He sticks it up on the wall beside the dried head of a big bass and the plummy tail of a gray squirrel, and you know by the far away look in his eyes that it will need but a glance at these when the days of toil are long unbroken to conjure up the pleasant, restful loneliness of the woods, the glint of clear waters and the music of their voices.

He does not consort much with men in his outings, but of choice with boys, whom he delights to instruct in woodcraft and the mysteries of the gentle art. He baits the small boys' hooks with infinite care and unhooks the horned pouts and thorny-backed perch for them, untangles lines and recovers snagged hooks for them; he mends the big boys' tackle, is uncle to them all and rejoices in their luck as if it were his own.

As you listen to his kindly and interested discourse concerning the wild world and its sports that he so unaffectedly loves, and look at the homely, genial face in setting of grizzled hair and beard, beaming with genuine enthusiasm, you realize that it needs something more than an eminently respectable presence and learned talk of high-bred dogs, fine guns and fancy tackle, or even the possession of them, to make a true sportsman, for here is one in patched raiment and leather apron, who scarcely knows a pointer from a setter, nor over owned a high-priced gun or rod, and yet is a true sportsman in the best sense of that abused title.

For is he not an ardent lover of honest sport, appreci-

ating something in its achievements beyond skillful slaughter and the making of heavy scores? Is it not a privilege to have the confidence of this honest man and to associate with this simple and enthusiastic lover of nature?

### BEARS OF NORTH AMERICA.

MR. BROWN'S article on the different species of North American bears printed in another column will be read with equal interest by sportsmen and naturalists. Persons who have traveled much through the central Rocky Mountain region will not have failed to notice that, among the captive bears so frequently seen chained up at stations, saloons and ranch houses, there are but few which are black in color. At the same time these bears are almost always short-clawed animals and thus are not of the grizzly type. No doubt many of those who have noticed this preponderancy of pale, short-clawed bears have wondered why the brown form of *Ursus americanus* is so much more common than the black in this region, for all who have noted these facts have taken it for granted that these bears—though not black in color—were really black bears. At the same time the speculative traveler will have observed that many of these captives are red in color, as a red cow is red, or rather even paler still, almost the color of a yellow dog. He will have observed too, that some of them seem unusually flat-faced and have not the cast of countenance which is noticed in the dead bears which have fallen to his rifle, or in the living ones that he has seen in cages. Mr. Brown's discovery in the Rocky Mountains of a third species of bear which is red in color, would account for some of the puzzling facts that we have referred to.

The paper is in its own field one of the most important that we have published for a long time, but additional material is needed far the confirmation of some of Mr. Brown's conclusions and for the establishment of his hypothesis. It may well enough be within the power of some of our western readers to supply skins, skulls and observations which would be welcome to the author of this paper, and we are sure that he would be glad to receive communications on this subject.

### SNAP SHOTS.

THE decisions of the lower courts in the Moses Sunday fishing case have just been sustained by the New York Court of Appeals. Mr. Robert H. Moses, of this city, is a member of a club which controls the fishing of Clark's Lake, in Orange county. In the spring of 1892 the club caused the punishment of certain trespassers, and in return the trespassers instigated the prosecution of Mr. Moses for fishing in the club waters on Sunday. He was convicted, but on the ground that the statute did not apply to private waters carried the case to the highest court, only to have the conviction stand. It is unlikely that this finding will have any appreciable effect upon Sunday fishing in the State. The law will continue to be practically a dead letter, resorted to only at rare intervals as a spite measure for revenge, as it was in this case, and in the case of the net fishermen's prosecution of the Sunday fishermen at Jamaica Bay a year or two ago.

The circumstances attending the death of Wallace E. Blackford of Brooklyn, at the early age of 23 years, were pathetic in an unusual degree. It was only on the previous Monday that Mr. Blackford had been married; while returning from the church where the ceremony had taken place he was prostrated with illness, grew rapidly worse and died on Monday, Oct. 11. Wallace was the only son of ex-Fish Commissioner Eugene G. Blackford, and was associated with him in the responsible management of their establishment in Fulton Market of this city. He was a young man of proved business ability, esteemed for his sterling traits of character, and by his winning ways endeared to hosts of friends. In this sudden bereavement by the death of one in whose bright future a father's hopes were so fondly centered, ex-Commissioner Blackford will have the deepest sympathy.

Ex-Fish and Game Commissioner Elliott B. Hodge of Plymouth, N. H., who died last week, will long be remembered as one of the pioneer workers in the public interests of fish and game protection. When Commissioners Powers and Webber were exploring the State in 1877, in search of a suitable spot for a trout and salmon

hatchery, they discovered Mr. Hodge photographing at Plymouth, and he put them on track of the springs at Livermore Falls, where the first hatching house was started. He was of the greatest assistance to the Commission for several years, and when Mr. Powers resigned, from ill health, was selected to take his place, which he filled with great success for several years, until he was attacked with the insidious disease which has finally carried him off. A native of New Brunswick, his early life was spent in that province and Canada, among the salmon waters, and he was wonderfully familiar with all the habits and characteristics of the *Salmonidae*. He also proved an admirable game protector, and probably brought more men to justice for violating the laws than was ever done before in New Hampshire. After his retirement from the Fish and Game Commission he still retained the charge and direction of the hatcheries, which, now ten in number, were responsibility enough for any one man.

When Mr. Edmund Day, of the Salvini Company, who is known to FOREST AND STREAM readers as "The General," sent an invitation to the staff last week to spend an evening at the Star Theatre, he wrote: "As we are indebted to FOREST AND STREAM for locating the sections of the country where good shooting is obtainable, it will afford us no end of pleasure to unravel the mysteries of the romantic drama before the staff." It is interesting to note that of the players who unraveled the mysteries, two others besides Mr. Day are sportsmen. Alexander Salvini is very fond of quail shooting, and Miss Eleanor Moretti, his leading lady, devotes much enthusiasm to trout fishing. Sportsmen are to be found in all occupations and vocations of life, but the stage has produced one of the very finest brands. Members of this profession have unusual opportunities for observation, and are never loath to communicate what is of interest to brothers in the craft. May their writing long add charm to the pages of FOREST AND STREAM.

The wholesale destruction of eggs of wildfowl, on the breeding grounds north of the United States, is an abuse which has often been commented upon in these columns, and for the correction of which it appears difficult to devise a sufficient remedy. The Indians gather the eggs for food; and vast quantities also are collected for the white part, or albumen, which is used extensively in the arts. Under the present tariff, while eggs are taxed five cents per dozen, albumen is admitted free. The Wilson Bill will make the whole egg free. President W. R. Huntington of the Ohio Fish and Game Commission sends us a letter, in which he contends that this proposed change of duty will stimulate the destruction of wildfowl eggs for commercial purposes. Just how it is to have this effect we do not clearly understand; but every one will agree unreservedly with Mr. Huntington's proposition that the importation of game bird eggs should be prohibited, if a practicable measure can be devised for accomplishing that end.

Our game columns this week contain three news items which are full of suggestion. One reports the coming of European red deer to an American game park; a second records the importation of foreign game birds contemplated by the sportsmen of Maine; and a third chronicles a movement to bring to Pennsylvania quail from the West. These game stocking enterprises are as yet in large degree experimental and tentative; but as increasing attention shall be given to such work there will soon be abundant experience to furnish safe guidance. This is the day of small beginnings. Such movements grow with tremendous rapidity in America. It is certain that we shall make test of one expedient and another, until in one way or another an abundant game supply shall be assured.

Special interest will be taken in the projected importation of black game and capercaillie into Maine. A full account of the habits and game qualities of the species, from the pen of Hon. W. W. Thomas, Jr., our Minister to Sweden, has been printed in the FOREST AND STREAM. Many persons who are familiar with the home of these birds and with the northern portions of the United States, have testified that American covers are suitable for the game. Their introduction on an adequate scale is surely most desirable; we trust that the promoters of the Maine movement may have success.

## The Sportsman Tourist.

### FROM PENOBSCOT TO YELLOWSTONE IN TEN MINUTES.

WHEN I was a small boy I remember reading a story of a fortunate individual who possessed a pair of magic boots. "Seven-league boots," he called them, and when he wished to make a journey—there being no ocean greyhounds or limited express trains in those days—he pulled on the magic boots and strode away over hill and dale, across rivers and through lakes, covering seven leagues at each stride. Of course he had an advantage over his less fortunate townsmen, and while they were plodding around the circumscribed area of the village, he was visiting the most distant portions of the kingdom.

Seven-league boots are not common in these degenerate days. The magic of the old necromancers is obsolete and the customs of old do not obtain in the year of grace, 1893. But a new race of wizards—*fin de siècle* magicians—have appeared on the earth and things which would have been deemed impossible by our fathers are to the younger generations every day facts. The grand *chef d'œuvre* of these wise men—the White City, the Dream City, the Magic City—arose from the marsh on the shores of Lake Michigan.

This entrancing city, for six short months the acme of the world's art, knowledge and science, is now undergoing dissolution.

But during its short existence it made easy of accomplishment feats which would have taxed even the wonderful properties of the seven-league boots. The four corners of the earth were drawn together. The habitations and manners and customs of antipodal countries were brought into juxtaposition, while people of all races and complexions, jostled one another, uttered a babel of strange tongues and produced a kaleidoscopic exhibition of strange costumes and lack of costumes.

There were a hundred places in this White City where the magic of its builders was so potent that by merely entering a portal one was on the instant transported far away from the bustling, energetic metropolis of the great West to places far and near, where the rush and roar and excitement of the city were at once forgotten and one breathed the soft, languid atmosphere of the Orient, or the healthful, bracing air of our own pine-clad mountains, East or West. These illusions were so real that it was difficult to believe that outside the inclosing walls were the beautiful palaces of the Fair.

From the Penobscot to the Yellowstone is a far cry, and a journey from one to the other is a matter of days of constant traveling, even in this age of steam. That is, it is usually a matter of days, but this summer I found it only a question of a short walk, such as the owner of the seven-league boots might have taken. There was a little bit of everywhere at the Fair, and people from everywhere under the sun paid their respects to Uncle Sam, but two years ago when I said *adieu* (good bye) to Nick Sockbeson, Francis Sockalexis and Gabriel on the bank of the Penobscot River after our long canoe journey down the East Branch, I did not think that a portion of the Indian Island would drop down on the shore of the South Pond at Jackson Park.

Thousands of people visited the various Indian camps which formed part of Prof. Putnam's ethnological exhibit. A group of birchbark wigwams and a house with a frame of spruce poles and covered with bark, comprised the Penobscot camp.

The little house was closed to the public, but the wigwams were open during the day and many people entered the narrow doorways. They watched deft fingers weave ash splints and sweet grass into various shapes, bought the pretty baskets, miniature canoes, bows and arrows, and corn-husk dolls, and asked all sorts of questions of the handsome black-eyed women and dark-skinned men. They examined curiously the snowshoes and paddles, and the canoes drawn upon the shore of the pond. To most of the throng the camp was simply a part of the ethnological exhibit, and its inhabitants a strange people of a different race and color from their own. But to me it was the Indian Island and the Maine woods, and when I crossed the threshold of the bark-covered house or those of the wigwams I took a step which put to shame the longest stride ever made by the seven-league boots. It was the Indian Island because there was my friend (and a good friend, too) Nikola Sockbeson to bid me welcome, "*Pokweenokzeum ujia*." There was his wife Katetin, a much handsomer woman than most of those among the sightseers, and there was their pretty daughter Ada. There was young Sozap Sockalexis and his girl wife Sozou, who is shy and gentle as a fawn. There was Katetin's sister Mrs. Fransway and her daughter Josie, both fine-looking women. Then there were Noel and Azon Paris, and Michel Attean and Charlie Daylight, the last so-called because that is the literal translation of his family name, *Jayquaddis*.

It was the Maine woods, because there were the spruce poles and the birch bark, which had been brought all the way from the forests of the Penobscot. There were the skins of deer shot in localities where I have hunted with Nick and Francis. There was the immense hide of the big moose which Sozap Plaso shot last winter up back of Pamedomcook, near Meelapswagamac. In a corner of the camp were *ogamook* (snowshoes) and *nodahonga* (paddles). Through the half-open door I could see three canoes at the edge of the water. Louis Pielsock built one of the birch bark ones, Sebati Shai the other, and the canvas-covered one was constructed by Sozap Ranco. There was the fragrance of sweet grass and soft musical tones of the Wabenaki tongue.

Many pleasant evenings were spent at the camp after the labors of the day were over, and many pleasant meals were eaten when mine was the only white face at the table. What talks Nick and I had over our cigars of our wayfaring by flood and field, of our camps and tramps and long voyages in canoes. How many incidents were recalled, and how we laughed as we lived our adventures over again, and thought of the time when Andy Patterson almost broke his neck on Millinocket Carry by capsizing the sled with our outfit on it. And then of that day when I shot the buck near Lunxun Mountain and Francis got excited and put his right boot on his left foot; and the time when Gabriel made the potato soup in the rain and was ashamed to give it to us, but my wife got it and liked it so well she ate it all. We remembered how we were

caught in the rain on Mud Pond Carry; and how near we came once to being smashed in the drive near the rafting-out place on the Penobscot; how we had to hustle and tug to lift the canoes over the boom with nothing but the slippery logs to stand on. The big trout we caught were expatiated on, and the still bigger ones we lost were mourned over again.

Sometimes my wife would go with me, for she has been in the woods with Nick for her especial "guide, philosopher and friend." We told the old stories over again, the old legends of the Algonquin mythology which had been told so many times around the camp fire, but which seemed new again—the stories of Ktaadn and of Glooskombe, the first man, the man from nothing; the stories *n'karneeyeh alcedbeekunk* (of the old times).

We used to take the canoe on summer evenings, after the gondolas and electric launches were tied up for the night, and paddle through the tunnel into the grand court of honor, where we would float and gaze enraptured at the entrancing beauty of the great white palaces looming grandly against the dark, starlit sky. How the dusk softened their outlines, and how immaculate they seemed. It was sublime, and it is with no irreverence that I say it seemed as if we had drifted into the midst of the city whose streets are paved with gold.

How still it was with the people gone and no sound of voice of footfall. We would paddle around the shadowy, bosky shores of the wooded island, sometimes penetrating little coves where trees and thickets of shrubs hung over the water, shutting out all view of the buildings, so that we hardly realized that we were not sure of seeing a deer come out to drink. Then up into the North Pond, to the Art Palace and back to the camp, the canoe with those surroundings running like a wild bird in a cage. I never saw the Fair as I saw it those summer nights with Nick in the canoe. Sometimes I would sit in the stern and

PENOBSCOT INDIAN CAMP.  
Amateur photo by H. A. Brooks.

paddle; sometimes he; with the other in the bow, face to face, so that we could talk, and no one who saw the Exposition appreciated its beauties more than my friend, whose forefathers were paddling their birchen craft on New England rivers long before the great Genoese sailed from Palos.

I never will forget one June night when Nick left me at the landing at the Woman's Building and I stood on the pier and watched him as he crossed the lagoon and disappeared behind the island. His paddle made no sound in the water, but with swift, sure strokes the canoe glided like a specter out of sight. There was the past and the present as I stood there alone by the water—the fairy palaces representing the highest civilization the world has attained all around me, and an Indian in a bark canoe gliding past them. That is the way extremes met at the Fair, and art and nature went hand in hand.

I used to go very often from the Penobscot camp and walk across the bridge where the Spanish caravels were moored, around the Agricultural Building, across the plaza in front of the Administration Building down the way between the Mining and Electricity halls to the bridge leading to the smaller island. Then instead of crossing the other bridge to the large island, I would turn to the left into a path bordered with trees and bushes. A few steps and I entered another doorway, which must have had magic properties, for the Columbian Exposition had once more disappeared.

Where was I? A few moments ago I had said *adieu* to friends on the Indian Island, had taken a short walk and lo! I had crossed the continent. The Penobscot wigwams had vanished and I was in a hunter's log camp in the mountains of the Yellowstone. Would not the owner of the seven-league boots have been jealous of such a feat? Such a sudden translation from East to West might well daze one and make him doubt his senses, but I knew I was not dreaming, for there was the cabin and there was the prairie schooner outside the door; and instead of bidding good-bye to Nick Sockbeson was saying, "How do you do, Billy," to Elwood Hofer, who is called Billy by his friends for the good and sufficient Western reason that it isn't his name. Most exhibits were decorated with signs telling what they were, but though Billy Hofer would not have anything about his shack which detracted from its truthful appearance, he did pin up a sheet of paper (to save his own breath), which informed curious visitors what it was not:

THIS IS NOT DANIEL BOONE'S, NOR  
DAVY CROCKETT'S, NOR ABRAHAM  
LINCOLN'S, NOR UNCLE TOM'S CABIN,  
BUT A HUNTER'S CAMP, SUCH AS IS  
USED IN THE ROCKY MOUNTAINS.

And in fact, at night after the last belated caller had

disappeared down the path and we had shut the door and secured it with the wooden pin, we were to all intents and purposes in the mountains without a single incongruity to dispel the illusion. The cabin, solidly constructed of logs chinked with mud, stood on the island where nothing but a green mass of foliage met the eye through door or window. The old prairie schooner, dingy with long service, stood by the door, over which was the bleached skull of an elk surmounted by branching antlers. Inside, the shaggy head of a buffalo bull was the first object seen as it looked down from the half partition; at the back of the cabin was a big fire-place flanked on either side by a buffalo skull. On the mantle were two bear skulls and over them another pair of elk antlers. On the floor were the hides of elk, antelope, blacktail deer and moose. A bear skin thrown over a box formed a convenient seat by the table on which lay a six-shooter and a pair of field glasses.

Kit Carson's rifle stood in a corner, and Villalonga's hung on pins driven into the logs. Two other rifles were supported by the elk antlers over the mantel, and under them were crossed a pair of web snowshoes. A pair of long skees, or Norwegian snowshoes stood in another corner, and near the table were other skulls of bighorns and buffalo. There were saddles, pack saddles, bridles, lariats, shaps, buckskin hunting coats, sombreros and all the paraphernalia necessary for a trip after big game. A fly-rod hung on the wall.

Two bunks and a big 7ft. settle built of round wood with the bark on were very inviting with their piles of blankets. If one cared to read, *FOREST AND STREAM* lay on the table. A back door opened out to a thicket in the rear of the cabin, where a foot-path led down to the lagoon. Several large oak trees stood guard and rustled their leaves in a friendly fashion above the low roof.

I was the recipient of Billy Hofer's hospitality on several occasions and remember with especial pleasure several nights in October which I spent at the hunter's cabin.

Those were pleasant chats, long to be remembered, which we had, with the doors and windows closed to keep out the chill night air with its suspicion of winter, while a noble fire roared up the chimney. With the settle drawn up before the blaze and pipes alight, we told stories of the East and West, of the mountains and the woods, of expeditions in the saddle and afloat, of the pursuit of the beasts of the field, the fowls of the air and the finny denizens of many waters. Then, after throwing fresh sticks into the bed of glowing embers in front of the big back log, we would wrap our blankets about us and go to sleep.

One night I went to the cabin early in the evening; the rear door had been left ajar for me and I had three hours to myself before Billy came. I built a fire, drew the settle into place and sat there watching the blaze and the fantastic shadows which danced attendance. Through the open door the shimmer of water twinkled and sparkled through the foliage; a strain of distant music came softly to my ears like a memory, and now and then a swiftly-moving shadow flitted by on the lagoon, hardly distinguishable through the leaves, and vanishing as quickly as it came.

As I sat there the great World's Fair seemed like a dream; like something one has read of, or heard of, or experienced a long, long time ago. It seemed like other things I have thought of and dreamed about while sitting by many camp-fires, and the log cabin was, to me, at that moment miles away in the wilderness.

Some mornings we broiled our own steak over the fire and sometimes I went down to the other camp and had breakfast with my Wabenaki friends, thus making the return journey across the continent. To sleep in a log cabin on the Yellowstone with Billy Hofer and breakfast in a bark wigwam on the Penobscot with Nick Sockbeson the next morning was made possible to me by the power of the latter-day magician of 1893, and of the time I gave to the great show the hours I spent in those two camps were by no means the least profitable. W. A. BROOKS.

#### PINCHER.

THE drowsy hum of a big fly, darting to and fro amid the sunbeams which flood my room with their genial rays, almost makes me believe that summer is still with us, instead of brown November. Yet the bare branches of the trees that make a network against the cold sky, the flying leaves that now and then tap upon my window in their passage, and the small white clouds scudding across the sky recall the fact that the harvest of the year has come, and soon 'neath the white robe of winter the earth will take its long sleep.

Were it not for the huge fire of logs that crackle on the hearth in the wide old-fashioned fireplace, there would be a chilliness in the atmosphere of this room, despite the sunbeams, so I fill the brown bowl of my pipe with some "Old Virginia" and draw my arm-chair closer to the blaze.

This movement disturbs old Pincher, my English setter, who has been stretching out all morning on the deer-skin rug, but he is not a bit sulky over it, merely raps the floor gently once or twice with his tail, blinks his eyes drowsily and proceeds to go to sleep again with one eye open.

Pincher is over 15 years old now. Born in Orange county, New York State, of respectable parents, Pincher first made his appearance in our family, from father's great-coat pocket.

His puppy days were passed quietly in the comfortable old barn, in company with five or six foxhounds, a saucy terrier and a pair of pointers.

To old Isiah, my father's body servant, fell the task of breaking the puppy, and poor Pincher's life was made a burden for him. Not a meal went by but what he was compelled to stand in a very uncomfortable attitude before the tempting dish, while Isiah with uplifted finger held him in check, with "To ho, easy, doan yo move suh, To ho—easy boy"—until the word was given to "Go on."

I shall always remember the bright October morning when father and I, accompanied by Isiah, Stonewall the pointer, and Pincher, started out to give the pup his first real field experience.

Just such a day as this, full of sunlight, the air sharp and invigorating, and the earth just hard enough to make walking comfortable. Pincher at once evinced a disposition to range too widely, and of course the first break he made was to flush a big covey far outside of any possible range; but when we struck into the cornfield,

that ran along the rich bottomland of the James River, Stonewall came to a point, and the puppy wheeling suddenly behind him, stopped like a statue, his head just turned over his shoulder, and front paw raised, backing the old one up in as pretty a fashion as one would ever wish to see.

Father was to the right of me some little distance behind, and both dogs held the point patiently until he came up and gave the word. Then as they advanced into the stubble up jumped a big covey of quail with that loud rattle and whir, and Pincher tumbled over backward with such a comical expression of surprise on his face that I missed clean with both barrels through laughing at him. Father scored two birds, however, it would take a great deal to "phase" him, and we marked the birds as they scattered to the lower field. Isiah held Stonewall and allowed the puppy to retrieve, which he did very prettily; in fact, from his earliest days up to the present time I never knew Pincher to chew a bird.

On our way to the lower field Pincher came to a point on a clump of cornstalks, and as I walked up flushed a single bird, which I dropped with my second barrel.

The covey had scattered in close to the little patch of woodland that bordered the cornfield, and although we hunted all over the ground we only found one bird, which father bagged, but as we were passing through the woods on our way to the field beyond both dogs came to a stand about ten feet apart and flushed two birds; we both scored and then for the next five minutes we were kept busy. It seems that the birds had taken refuge under the leaves in the wood and we secured eight in less than five minutes.

Pincher acted like an old-timer all through it and Isiah was loud in his praises, when suddenly a big brown swamp rabbit jumped up under the puppy's nose and with an excited yelp he started after it.

Isiah almost cried with mortification. "Come yeah yo' daim fool dorg, come back yeah; wha' fo' yo' dun chase dat old no 'count rabbit? Come yeah, now, ain' you 'shamed; doan' you lick my hand, you all dun gwine to ketch dis yeah switch, yeah me? Lor', Marse General, I dun think I broke dat dorg from chasin' rabbits, 'deed I did, suh, but he's jus' like a common yaller houn', ain' got no mo' sense dan a woodchuck. Come yeah, you low down trash! Ain' you 'shamed?"

Well, Pincher was in disgrace, until, in the next field, he held a point at the fence corner for nearly two minutes, until we could climb over and get to him.

But since that day he has pointed many a covey, his hearing has been destroyed and age has crept slowly upon him, and now who better deserves his position upon the hearth?

But if I take the old gun down to rub up its brown barrels, the fire of other days will brighten his eye, and he runs to the door, anxious to revisit the scenes of his youthful exploits.

His old trainer dozes by the kitchen fireplace, his shining bald head circled by a scant growth of white wool, and sometimes in the evening I go in to smoke a pipe with him, and as he fills and refills his capacious "cohn cob" with my best tobacco we live over again those happy days when "Dat daim fool pup dun chase de swamp rabbit."

THE GENERAL.

## DANVIS FOLKS.—XVII.

### A Raising Bee.

BECAUSE of the greater inter-dependence of the people, "bees" had been much more common in the days of Uncle Lisha's youth than in these of his old age, but he had not lost his fondness for attending them. So one May morning, when Sam and his father came into the shop and told him of a raisin' at Jonathan Young's, he needed no urging to drop his tools and toss aside a boot from which he had but half ripped the worn sole, slough his apron, don his coat and hat, and declare his readiness to accompany them.

"I can't do no gret, onny help du the settin' raound, an' mebbly hol' the foot of a posy, er du the spy runnin' raoun'," he said as he plied his short legs to keep up with his long-limbed comrades, carrying his hat in his hand to fan his face at every swing of his arm.

There were tufts of blue violets in the mixed dun and green of the meadows, and, like stars in the evening sky, the first dandelions shone far apart in the greening pastures which the newly turned-out sheep were overrunning, too eager for the fresh grass to heed the passing strangers.

A new-come bobolink sang before and above them, now atill on a fence stake, now alight on vibrant wings. Robins were flying to and fro busy nest-building, and a plover's wailing call drifted down on the breeze from a distant field. The haze on the woods was thickening with gray-green mist of opening buds, with here and there the yellow tower of a leafing poplar shining out of it.

Whatever subtle impression the changing season may have made on them, they made no sign but to say, "It's an airy spring and a fine growin' time," and after a while came to where their neighbors were gathering about the recumbent bents of Jonathan's prospective barn, and the chips of hewing and chiseling that exhaled the fine fragrance of fresh cut wood. The carpenter, as redolent of the same odor as if he were born of a tree, was hustling about with a square and scratch-awl, while the people lounged about, watching his movements with curiosity or gossiping of neighborhood or town affairs. Jonathan Young, nervously expectant, went from group to group, discouraging of the barn that was to be.

"Goin' to hev bay on the west side o' the barn floor an' a scaffold on the east, wi' a stable 'nunder it, high 'nough 'tween jints so 's 't a man o' my hayth won't knock his head off in 't," and Jonathan was 5ft. 4in. in his stockings.

"Haint ye 'fraid o' bein' dizzy-headed when we git 'way up on that scaffold?" John Dart inquired, anxiously.

"Hes the pathmaster warn'd ye aout to work on the rhud in our deestic?" one inquired of a distant neighbor.

"No, ner won't tech to till arter plantin'."

"Wal, aoun he's, the 'tarnal critter, an' the rhuds haint no more settled 'n my rhud tax is," the first speaker remarked, and then directed his remarks against the fathers of the town. "Ef the s'lec'men don't spunk up an' du suthin' about the bridge tu the village, the taown 'll hev a lawsuit on its han's fust it knows. One o' the bupments is all cove in, an' the stringers is so rotten you c'd spit through 'em. 'Taint safe fer a dawg to cross. Darn sech s'lec'men—slackmen, that's what I call 'em."

Uncle Lisha found a seat with others, exempted by age from an active part in the labors of the bee, on a pile of rafters where they might sit to comment and criticize undisturbed till toward the end of the raising.

Their attention was divided between the active movements of the carpenter, a group of the athletes of the company endeavoring to get up a wrestling match and a party of boys playing an old-fashioned game of ball.

"You'd better save yer stren'th fer liftin'," was Granther Hill's hoarsely whispered advice to the wrestlers. "Ye'll need all ye got, fer the' haint none tew many men. Them boys a-straddin' an' a-yawpin' raound haint no 'caout. It's a heavy frame considerin' the way trees hes dwindled sen' I was on airth. It's lucky they hev, fer ye couldn't raise an ol'-fashioned buildin' wi' the men they've got nowadays. Ye'd better keep yer wastlin' till arter raisin'."

Solon Briggs slid himself on to the rafter close beside Uncle Lisha, and began speaking in a voice that could not be overheard. "That narrowtyve you was relatin' of was turrible interstin', Uncle Lisher. Du you s'pose you could designate the spot where the ol' gentleman climb, or thought he climb the tree?"

The old shoemaker looked a moment at Solon and then sent a roving glance along the towering mountain wall, its lower steps rising like a mist of tender green to the bristling firs that climbed in dark array up the rugged steps to the bald, gray peak.

"Good airth and seas, Solon," he said at last, turning his face again to his interlocutor. "Ef ye knowed within a mild, ye might as well hunt fer a needle in a hay mow. It must ha' been east o' aour ol' place. Ye know where that is?"

"An' properly," said Solon, "he was persecutin' his sarch in the same direction er p'int o' compasses?"

"Wal, I s'pose so, more towards the top. Why, you haint a goin' huntin' arter the money be ye, Solon?"

"Good land o' massy, no," cried Solon nervously.

BOONE AND CROCKETT CLUE'S CABIN.  
Amateur photo by J. H. A. Brooks

"Cause if ye be, I've hearn him say 'at he barried it by a big yaller birch, an' that's consid'able of a guide, bein' there haint mor'n fifty yaller birches tu the acre up that way."

"Neow then, men," the carpenter shouted in an authoritative voice, "come right this way," and there was a general movement toward the place indicated.

"Take a holt o' this aire bent."

The men swarmed upon the sills and sleepers and laid hold of the section of frame.

"Be ye ready? Then up with it. All togeth'r. Hang tu the foot o' them pos's you men wi' the crowbars. Up she goes."

The parallelogram of heavy timbers rose at first almost with a jerk, then more slowly, as it was reared beyond the reach of some.

"Put in your pike-poles there," cried the carpenter, and these being set and manned, it started upward again more rapidly, then more slowly as it reached the perpendicular. The carpenter was off one side squinting at it.

"Up wid her more! Don't be afeared. Put in some pike-poles 't'other side. Up a leetle more. A leetle more. There, whoa up. All right. She's up an' daown as a clever cat's tail. Naow, stay lath it."

The bent was temporarily fastened in place with boards nailed diagonally upon it and the sills, and so in turn the others were raised and the girts entered and pinned. Then the long plates were uplifted by strong hands and pike-poles and shoved along the beams, to which the surest-footed of the company mounted and raised them to their place on top of the posts and fastened them.

All the while a running fire of jokes was kept up, not a few of which were directed against the carpenter, whose orders nevertheless were implicitly obeyed.

Now, the corps of exempts and invalids were dislodged from their comfortable post on the pile of rafters. These were sent aloft, joined in pairs and raised. Then Jonathan Young, standing apart, drawn to his fullest height and with arms akimbo and puffing out his cheeks with a long exhalation of satisfaction, looked with pride upon the gaunt, yellow skeleton of his barn and prospectively clothed it with boards and shingles and filled it to repletion with hay and grain and heard the swallows twittering under the eaves or saw them darting with unerring flight in and out of the gable swallow holes, which reminded him to call to the carpenter:

"Don't forgit to make some swaller-holes fer luck, Simeon, an' cut 'em in the shape of a heart," and he glanced back to the house door, where his wife's ood with her daughters, gazing at the gaunt structure that already dominated the premises, quite overbearing the humble log house. They wished it was the frame of a new house.

Jonathan's half-grown son came along the path newly worn from the house, but henceforth to be an established way, bearing a great tin-pail of cider, bending away from

his burden, with free arm outstretched, with head bent low, staggering and bracing against the weight, which he stopped often to shift from hand to hand. A tin cup voyaging to and fro on the foamy surface touched the shores with hospitable clinks, till it was swamped and went down to the shining bottom. The pail came first to John Dart, who eyed the sunken cup for a moment and declaring, "There's more'n one way to skin a cat," lifted the pail to his lips. Then some one rescued the cup with a hooked stick and drafts were more easily obtainable if less copious. The company, comfortably and conveniently seated on the sills of the barn, were now served with cakes, pie and cheese.

"When I was on airth first," said Granther Hill, dipping up a second cupful, "the' want no cider to speak on, it was rum tu bees, New England rum er Jamaiky sperits fer high duck duins. Cider 'll du, but it haint so sartin as rum an' it's bulkier. I don't call'te a man c'd du much fightin' wi' two three quarts o' cid'r a swashin' raound inside on him. Rum was what we useter du it on. When John Stark was a raisin' men fer Bennin'ton he was in more of a pucker fer rum 'an he was fer paowder an' lead. But he got both an' the Hessians tew, er lastways, we did," and he comforted himself with another draught, pronouncing it "good for the time o' year."

Eunice Young felt flattered by the returning empty pans and plats. She was sure the supply had been bountiful, now she knew its quality was approved.

The boys rushed back to their unfinished game of two old cats." The wrestlers, refreshed in strength and spirits, tussled in "back holt," "side holt" and "arm's length" in the center of an interested ring of spectators. The oldest and most sedate kept their seats, smoking and boasting of their youthful deeds.

As the afternoon waned and the barn's new shadow crawled on its first journey toward the house thoughts of the evening chores fell upon the conviviality of the company, and they began to depart, till there were none left on the late busy scene only Jonathan, still viewing with pride his new possession, and the carpenter picking up his scattered tools and planning work for the morrow.

As Solon and Antoine plodded across the fields in company the first said: "Wal, Antoine, I've got the p'int o' compasses from Uncle Lisher nigh 'nough so's we can make 'em corroborate wi' the place where that aire money's hid. Your useter the woods 'an what I be an' I want you tu du the engineerin' an' I'll work the divin'in' rod. I've got me a superguborous one 'at I cut from the north side of a witch hazel bush."

"Bah gosh," cried Antoine. "Ah'll can injin near an' injin far. Ah'll was be prefick injin in de hwood, me. We'll go to-morra mawnin', ant it?"

"Wal, yes, I guess we'd better, an' we'll get an' airy start an' meet up back o' the ol' Peggs place. You fetch a spide an' I'll bring a crowbar an' a bit o' suthin tu eat."

"All raight, M'sieu Brigg."

"Bone swear, Antwine," and each went his separate way home.

ROWLAND E. ROBINSON.

## SOUNDING THE ALARM.

DURING the past fall while hunting with rifle for squirrels in the heavy timber, I have at different times noticed that both birds and mammals seem to have several ways of warning others not only of their own kinds, but also of different species of the presence of a supposed common enemy. In fact, the practice might be called the warning system of animated nature.

As an illustration, suppose the hunter to be going stealthily through the woods, or quietly seated upon a stump or fallen tree, and while there to be seen, as he is almost sure to be, by some of the sharp-eyed little wood folks. Now suppose the little thing has before been giving out some notes or sounds peculiar to its species; all at once those sounds will be changed to others having a different cadence from those at first given; or as soon as the hunter is discovered the sounds may quickly cease, or even if the little thing was quiet before, some sharp note of danger will often take the place of its stillness; and other mammals and birds in the immediate vicinity will understand the warning, and take up the signals until nearly every animated thing for quite a distance around will be apprised of the danger. Then for a while they will act with the utmost discretion until confidence is restored when the wood life will resume its normal ways until some movement of the hunter again produces the same phenomenon. How far beyond the commencing point those danger signals are kept up or extended, one may be unable to discover, but I should judge by what I have observed that they extend in all directions beyond gunshot distance.

Should any one either with or without a gun while in the woods where wild life is plenty, take note of this system of cautionary cries, he would find it very interesting and instructive.

Among the causes that lead to the detection by animals of a person when still-hunting there is one that he seldom or ever thinks about, which is the effect of the sight of his shadow has upon them, especially when the sun is low. No matter how stealthily one may be going along, or how carefully he may be concealed behind a tree, or even be seated, his long tell-tale shadow when slightly moving may be a greater cause of the non-appearance of game than he is aware of.

Still another cause, which, of course, cannot be obviated much, is the appearance of the face and hands in contrast with the clothes of the gunner or with surrounding objects. That often attracts the attention of animals, but more especially is their attention attracted by the movements of the hands while manipulating the gun. One cannot help but notice, should he occasionally take a look behind him when quiet in the woods, how near squirrels and other animals will come up to him from that direction, while in front he will see none of them, thus showing conclusively that the contrast made by the face and hands with surrounding objects has more to do with making the hunt other than a successful one than many gunners are aware of; consequently, we might suppose that, so far as complexion is concerned, since his color more nearly corresponds to surrounding woodland objects, an Indian would be more successful as a still-hunter than would one of us, his pale-faced brothers.

Sometimes while gunning the taking advantage of the knowledge of a few points of little consequence seemingly like these may make a marked difference in the contents of one's game bag.

A. L. L.

## Natural History.

### SPECIES OF NORTH AMERICAN BEARS.

FOR three-quarters of a century the question of how many species of bears are peculiar to North America has been a problem to zoologists and a puzzle to all others interested in the pursuit of these noble objects of the hunter's ambition. Leaving out of consideration any questions but those affecting the relationship of our bears, among themselves, the disputed points are really three in number: First, is the large grizzly of the Pacific coast to be separated from those of the Rocky Mountains? second, what is the "cinnamon" bear? and third, what is the "barren ground bear"? The uncertainty as to the third point is easily explained by the meager description given by Richardson in the "Fauna Boreali Americana." Nor is it a long chase from condition to cause, through the confusion which has surrounded the first and second, in view of the great variability of these animals in size and color. It is comparatively of late years only that naturalists have gone beyond external appearance for their specific characters, and during the period since anatomical structure began to be considered, it has hardly been felt safe, by cautious systematists, to base generalizations on the fragmentary collections of our natural history museums, unattended, as a large part of the specimens are, by any exact data as to the accompanying conditions of claw, coat, skeleton and locality.

Within a few months specimens have come into my hands and, by a coincidence, about the same time similar material has come into the possession of Prof. E. D. Cope, which seems to settle the identity of the "cinnamon," at least. As to the grizzly—what I shall say here expresses only my own judgment for future examination of larger series of specimens, in connection with all desirable information regarding them, may possibly cause a revision of this species, but I venture the belief that the views here set down will not be materially changed.

In searching among bears for the most reliable specific characters, it has been found best to rely on certain features presented by the skull. In a general way, these are the proportion borne by the extreme breadth, across the zygomatic arches, to the extreme length from the pre-maxillaries to the posterior end of the occipital condyle, measured along the under surface; the proportion of the length of the hinder molar in the upper jaw to the length of the skull; and the contour line of the upper surface of the cranium from front to back—whether it is convex over the forehead, when looked at from one side, or what degree of concavity it presents. There are also more or less variable arrangements of the cusps of the teeth, but these are highly technical and it is not necessary to take them into consideration here.

Now, first as to the grizzly. The earliest description of this bear, accompanied by a scientific name, was that of Ord in 1815, as *Ursus horribilis*, based upon the specimens collected by the Lewis and Clarke expedition in 1804-6 on the upper Missouri River above the mouth of the Yellowstone. He was followed in 1823 by Say, who adopted Ord's name for the bears collected by Long's expedition in 1820 near the head of the Arkansas River in Colorado. In 1831 Richardson based the name *Ursus ferox* on these two descriptions and on a young male killed on the Saskatchewan by the Franklin expedition, of which he was naturalist. With one exception, which will be again referred to, all the designations which were subsequently applied to the grizzly were founded on these earlier descriptions; they contain nothing new and have no title to consideration. What we have, therefore, to do is to compare our specimens with Ord's account and with each other, in the light of such facts as have been learned since his time, to find out whether there is one or more species of grizzly.

The measurements which will be given here for the purpose of comparison, are taken from a small number of skulls in my own possession, but do not differ much from the average of a much larger series. These show the skull of the Rocky Mountain grizzly to have an average length of 13.44 in., with a breadth of 7.67 in., or taking the length as 1,000 the proportion of breadth is .570. The grizzly is a narrow-headed bear, with the profile of forehead slightly concave—a slight "stop," as it were, in front of the eye. The teeth in this bear are very large, the hinder upper molar being especially so, when compared with the black bear, or with the brown species (*Ursus arctos*) of Europe and Asia, the proportion of its length to that of the skull being about .107.

Throughout the Rocky Mountains the so-called "silver-tip" and the "cinnamon" of hunters are regarded as different species, and the great grizzlies of the Pacific Coast are commonly looked on as still another. With reference to the two former, it will help clear the matter to say here that the bear called "cinnamon" by hunters, whether or not it be distinct, is of the grizzly type and is a very different animal from that to which naturalists give the same name; this bear is externally, much more like the black and will be taken up further on.

I have before me now the skulls of two grizzlies, with whose obsequies I was somewhat associated, which serve admirably for comparison, each having been an excellent specimen of the supposed form which it represents; the one being an old male "cinnamon," killed on one of the heads of the White River in Colorado; the other being an adult female "silver tip" killed some years later, 50 miles or so to the northward. These skulls do not show a single character separating the two forms. The cinnamon is 13.75 in. long and 7.75 in. wide, a proportion of .564; with a hinder upper molar 1.4 in. long, or a proportion of .108 of the length of skull. The female is 13 in. long and 7.75 in. wide, a proportion of .597; the hinder molar being 1.5 in., a proportion of .109. A skull of an old male from California, in the collection of the Academy of Natural Sciences, gives: length 14.25 in., breadth 8.33 in., proportion .584; length of hinder molar 1.5 in., proportion .105. The range of variation in the proportions of five other skulls taken at random, being from a maximum of .610 to a minimum of .510, it will be seen how insignificant the variation is in these three skulls, representing silver-tip, cinnamon and California bears.

In 1859, in the reports of the Mexican Boundary Survey, Baird described specimens collected in Arizona, under the name of *Ursus horribilis* var. *horricus*. I do not see any distinction whatever between these bears and the most common form of the grizzly found in that

southern region, and in fact they are not now regarded as distinct.

It has again, been said that the bears found in the region where the Lewis and Clarke specimens were procured, bear a resemblance to those from the Pacific Coast mountains. This may well be true; matter in motion, whether it be in the form of water or of grizzly bears, finds out the lines of least resistance, and a species from the west of the mountains, working its way eastward, would find its natural path up the valley of the Columbia and the Snake rivers into Idaho and Montana, but personally I do not believe that any of these skulls will show peculiarities which are constant and not dependent upon size and powerful development. Size, however, unaccompanied by other fixed points of difference, is not a sound specific character, and in any event, while it is probably true that the average size of bears from the Sierra Nevada is greater than that of those from the Rockies, it is also certain that in the latter they sometimes reach enormous bulk. I have now in memory, days and nights spent in watching for a grizzly whose well known track covered quite as much of his native soil as would that of any California specimen which I have ever seen, and that was in a Rocky Mountain region which shall be nameless, for while as yet I have never seen this bear in the flesh, he is still alive, and in hopeful moments I have imaginings of a time when my eye may rest upon him—through the sights of my .45-125.

Size is, furthermore, quite as variable with these animals as any character can be, and thereon I am about to state conclusions, which will certainly be scorned by those fortunate followers of Nimrod who slay 1,500 or 1,000 lbs. grizzlies. It is a curious fact in the geographical distribution of animals—for which an explanation might be sought among ethical rather than physical causes—that 1,000 lbs. bears are not found inhabiting the same range of country as Fairbank's scales. I have seen but one grizzly actually weighed, and that was a male which died in the Philadelphia Zoological Garden in 1881; a larger and finer specimen than the average, and which weighed a trifle under 500 lbs.

By far the largest of these bears that I have seen were one from the Sierra Nevada, known as "Sampson," who with his owner, old "Grizzly Adams," was the delight of my schoolboy holidays, thirty years ago, in Barnum's Museum at Broadway and Ann street, New York, and the male of a pair now in the Cincinnati Zoological Garden, which, I am informed by Mr. Stephan, the superintendent, were captured in San Joaquin county, California, in 1871. Quite recently this bear was under discussion between Mr. F. J. Thompson, the former superintendent of the Cincinnati Garden, and myself, and we independently estimated his weight at 800 lbs. I am disposed to believe that he is quite as large as "Sampson." Not infrequently bears are offered to me for sale, by parties in the West, weighing 1,200 or more pounds. In such cases I always offer a sliding scale of prices, so much a pound up to 600 lbs. and an increased rate for each 100 additional. It always happens that the weight finally comes down to the lower limit, and the owner acknowledges that the one first given was estimated. I confess myself profoundly skeptical as to the present existence of a bear weighing 1,000 lbs., anywhere between the Gulf of California and—say the Mackenzie River.

Color, in the grizzly, is even more uncertain than size, and ranges from a deep blackish-brown to pale yellowish-brown, the last being more unusual than the first. In most cases the hairs are paler at the tip than at the base. Therefore, leaving out of consideration the differences between individuals when compared with each other, it may be easily seen that a rough-coated animal with each hair of two or more colors, or shades of color, will present a very different appearance in full winter pelage from that offered by his more or less worn and faded coat at other seasons. The hunters' "cinnamon" is a reddish-brown grizzly with little or no paler shade on the ends of the hairs; the "silver-tip" is a darker grizzly with the tips a light gray, making a striking contrast to the black-brown bases of the hairs, which plainly show where the hair is shorter—on the legs and feet. The most common form is a mixture of light and dark, giving a truly grizzled appearance to what the *voyageurs*, in their daring excursions, knew as *l'ours gris* or *cedré*; but almost any dozen of skins collected in any one locality will contain specimens which it is hard to assign definitely to either form. Color, then, falls to the ground, as well as size and skull characters, within the limits of this species.

One point there is to consider, in which all these bears agree and in which they differ from all others in America; that is, the long foreclaw. This character has sometimes been undervalued, as possessing less stability than I believe exists. During the past twenty years I have been on terms of more or less amicable acquaintance with a great many bears of this species, both dead and alive, in captivity and in their native mountains, and the large foreclaw, generally blunt at the tip, has been present and conspicuous in all colors, sizes and ages, from the cradle to the grave, which I have ever seen, and could never be mistaken for the short, curved, pointed claw of the rest of the family on this continent.

There has been less confusion surrounding the black bear, although he, too, has had his troubles. The species was first described by Pallas in 1780, under the name of *Ursus americanus*, and the black form has been so known ever since. This bear is characterized by a moderately broad skull, the width averaging a little more than .600 of the length; a profile which forms a gentle, continuous convexity from the occipital suture to the nasal orifice, although an occasional specimen shows a slight concavity of the forehead. The teeth are comparatively small, the hinder upper molar in three specimens averaging .092 of the length of skull. The foreclaw is short, curved and pointed, much as in the cat. In the Mexican Boundary Survey in 1859, Baird placed under Audubon's name of *Ursus americanus* var. *cinnamomeus* three brown bears, collected in Arizona. There is nothing in his description to warrant a separation of these specimens from the black form; as the supposed differences in the skull are trivial, and it is a well known fact that cubs of both colors are sometimes found in the same litter. Coues and Yarrow mention such a case on the authority of Mr. H. W. Henshaw in the Zoology of the Wheeler Survey.

These brown bears seem to be common in the Southwest, and judging from their tracks they reach a size quite up to the standard of large black specimens. I have not been fortunate enough to kill any of these bears, but

in December of last year, among the dense brush at the bottom of a deep cañon in the Chisos Mountains of southwestern Texas, I picked up a good-sized skull bearing all the characters of *americanus*, and scattered around, among the bones and debris of the carcass, were a few shreds of skin with brown hair still attached, showing what the color of the original owner of the skull had been.

In 1853 Audubon and Bachman, in the "Quadrupeds of North America," described *Ursus americanus* var. *cinnamomeus*, which I believe to be a wholly different animal from that of Baird, just referred to, and of other authors, and of this bear it is necessary to speak at some length.

In December, 1873, through the kindness of the late Gen. James S. Brisbin, U. S. A., a bear was received at the Zoological Garden, in company with other specimens which fixed it as a Rocky Mountain inhabitant. At that time Gen. Brisbin was stationed at Omaha, Neb., and it is a fair inference that these animals came from the region most easily reached by the Union Pacific R. R.—southwestern Wyoming or the contiguous portions of Colorado or Utah. When I first saw this bear I was impressed with its want of likeness to any I had ever seen; his color, contour of head and general appearance being most striking. This animal is still living in the garden.

While coming East, over the Union Pacific Railroad, in 1884, in the possession of a saloon keeper near the station at Green River, Wyoming, I saw another bear, precisely like the first, but was unable to purchase it. In reply to inquiry, the owner said it came from "up country," which, as applied to bears in that locality, would be very apt to indicate the Sweetwater or Wind River mountains. Several years later I had the good fortune to kill a third specimen on one of the heads of the White River in Colorado, but owing to heavy snows the spoils of this bear were not brought out. In 1891 Mr. James E. Cooper, the well-known showman, now dead, brought from the West and presented to the Zoological Society, a bear which a single glance showed to be also of this interesting form. Mr. Cooper said he bought it out on the Union Pacific, and as it was a very old animal and had been in captivity for a long time, I have little doubt that it is the same one I saw at Green River seven years previously. This bear was happily in poor health, and his skeleton has now come under observation. Finally, during the past summer, Prof. E. D. Cope procured a somewhat broken skull in a cave in the Ozark Mountains, Missouri, which in all essential characters agrees with that of the Cooper bear.

In this skull the differential characters are very strongly marked; its length is 11.25 in., with a breadth of 8 in., giving the very high proportion of .710. The posterior upper molar is 1.25 in. long, and is even larger relatively than in the grizzly, being .110 of the length of skull; and the concavity of the forehead is very great. All these points far exceed those of any other North American species, and are so striking that the veriest tyro in anatomy would need but a glance at the head of the one still living, to recognize that his skull must be, essentially, in proportion and contour, like the one just described. These bears are each about 5 ft. 4 in. long and have the claw of the black species.

The color of the specimen now living, is in autumn a rich reddish brown, almost bay; as his coat becomes worn and faded, he becomes pale yellowish brown, the color being generally uniform over the body. To illustrate how light he sometimes becomes, I may mention that some years ago the proprietor of a traveling menagerie was most desirous of purchasing him to fill a cage left vacant by the death of a polar bear. The skin of the Cooper bear is before me now, and is almost of a flaxen color, with traces of a darker shade on the nape. This bear being in bad health never had as rich or full a coat as the other one. The one which I met with in Colorado was killed in November, and was of similar color to the first, and I should say, parenthetically, that while no detailed examination was ever made of the skull of this specimen, its general character was that of the one just spoken of.

Audubon and Bachman's description relates only to external form, but in connection with the plate accompanying it, no doubt is left in my mind that it applies to these specimens as well. It cannot, however, be retained as a variety of *americanus*, the fact being that it is a strongly marked species, quite as much, if not more, unlike the black than it is even to the grizzly. From the black it differs in the greater width of the head, the greater size of the molar teeth, and the highly concave forehead while it departs from the grizzly in an even greater relative width of head; in a less degree in the two other characters, and in having a small claw on the forefoot. It must therefore be raised to full specific rank as *Ursus cinnamomeus* (Aud. and Bach), and we have at last a "cinnamon" bear with a distinct and decided personality.

Unfortunately, nothing authoritative can be said regarding the bear spoken of by Richardson in 1831, in the "Fauna Boreali-Americana," as the "barren-ground bear." He states that it ranges from north and east of the Great Slave Lake to the Arctic Sea, and that it differs from the black bear in "greater size, profile, physiognomy, longer soles and tail," and from the grizzly, "in color and comparative smallness of claws." His description of its color is not unlike that of *cinnamomeus*, as given above, and his reference to "profile and physiognomy" as compared with the black bear, is suggestive. In a general way he was disposed to regard his animal as resembling the brown bear of Europe and Northern Asia, and indeed, calls it *Ursus arctos* var. *americanus*. Now it is true that externally *cinnamomeus* is not unlike small light-colored examples of *arctos*; and Audubon and Bachman suggest, in fact, that their bear may perhaps be the same as Richardson's. It is worth considering also that *cinnamomeus* is certainly not common in the United States, otherwise its conspicuous characters could not so long have remained unobserved by zoologists; a fact which might be accounted for by supposing it to be an intrusion from a northern range. However, in the absence of further material from that region, no definite opinion can be ventured, but it would not be surprising if they turn out to be the same.

It is interesting, by the way, to note that Richardson speaks of a "Ranging Bear" found in the western districts of the United States and "said to have a longer body and legs than the black bear and to be more ferocious when wounded." As far as I know, this is the first literary mention of a name which still survives as "range bear" in portions of the Rockies, as applied to certain grizzlies, long-bodied and lank from individual tendency or lack of food.

Summing up now the conclusions reached here, we have as the three known species of bear peculiar to North America:

**Ursus horribilis** Ord. GRIZZLY BEAR.  
Characters: Foreclaws much longer than hinder ones. Skull narrow; breadth averaging about .570 of the length; forehead slightly concave; hinder molar in upper jaw very large, averaging about .107 of the length of skull.  
Color: From blackish brown to reddish brown, generally with paler tips to the hairs, giving a grizzled appearance, especially on the back and sides.  
Size: Large; from 400 to 800lbs.  
Range: The Rocky Mountain region from northern Mexico into the British possessions and Alaska; Sierra Nevada and Cascade Mountains of California. Known locally as "silver-tip," "cinnamon," "brown," "grizzly," "range bear" and "bald face."

**Ursus americanus** Pallas. BLACK BEAR.  
Characters: Foreclaws shorter than in the grizzly; curved and pointed. Skull moderately broad; averaging about .600 of the length; forehead generally convex (occasionally somewhat concave); teeth small; hinder upper molar averaging about .092 of length of skull.  
Color: Jet black, rusty black and reddish brown, or mahogany.  
Size: From 250 to 400lbs. (exceptionally larger).  
Range: The whole of the United States and Alaska; northern Mexico and British possessions. Known locally as "black bear," "brown bear," "cinnamon bear," "yellow bear," and "cranberry bear."

**Ursus cinnamomeus** (Aud. and Bach). CINNAMON BEAR.  
Characters: Foreclaws as in *americanus*. Skull very broad, about .710 of the total length; forehead very concave; teeth large, the hinder molar about .110 of the length of skull.  
Color: Rich reddish brown or bay, to pale yellowish brown (Isabella) the change to some extent being seasonal.  
Size: Moderately large, about 400lbs. in the specimens observed.  
Range: As far as known, the central Rocky Mountain region; perhaps much further north; the Ozark Mountains, Missouri.  
ARTHUR ERWIN BROWN.  
ZOOLOGICAL GARDEN, PHILADELPHIA, Nov. 30, 1893.

Bluebirds in December.

TAKOMA, D. C., Dec. 3.—Notwithstanding the fact that we have already experienced the present winter several very cold days and nights in this latitude, it has not had the effect of driving all the summer birds southward. To-day in a piece of timber adjoining my place, an unusual number of birds attracted my attention, and upon coming closer to them I found they were robins (*M. migratoria*); over a dozen bluebirds; besides juncos, sparrows, and two or three species of the smaller woodpeckers. The bluebirds were in fine plumage, and the sexes were about equally represented.

Horns of Female Caribou.

INDIAN ROST, Me., Nov. 27.—I notice what you say (in your issue of the 11th) in regard to hornless cow caribou. Since reading your remarks I have inquired of several of our most reliable guides and caribou hunters about cow caribou. Their estimate is that not more than one in twenty of the cows have horns. I knew of six cows killed from one drove, two of them had horns. I have heard of only one besides those.  
C. J. RICHARDSON.

Game Bag and Gun.

LAKE POYGAN DUCKS AND FISH.

BEING at Oshkosh, Wis., the first week in November, I asked my old friend Orson Cook if there was any duck shooting. "Why," said he, you're right in it. Get on the steamer John Lynch at 1:30 P. M. and go to Tustin, thirty miles up the river at the head of Poygan Lake. Never been there? Well, you want to go, for it is the place for ducks and fish. So much wild rice up there that the mallard's get so fat they can't fly, and the boys kill 'em with paddles. Bass, pickerel and perch so plentiful it's no fun to catch 'em." "Here, Cook," I interrupted, stop that now and tell the truth about the ducks." "So I will. The ducks are there. You can get guide, boat and decoys there, and will find an excellent hotel right on the edge of the shooting grounds. Go, and have a good time. I'd go with you but I sprained my knee launching my yacht to go on this very trip, and have had to lose all the fall shooting."

The next afternoon found me on the steamer, also there was an old trunk bearing on its outside the scars of six years' battle with the baggage men of thirty different States, its interior stuffed with an old corduroy suit, wading boots, flannel shirts and extra heavy underclothing; besides these there was a 12-gauge gun that has been carried by me hundreds of days and looks like a mighty old gun, but it's just as good as ever.

A few miles up the river the boat entered and steamed across Lake Butte Des Morts (pronounced Beauty More), some twelve miles long by two miles wide, with many thousand acres of bog and rush-grown marsh on either side. When I remarked to the captain that it looked good for mallards, he said it was, but there was a gun for nearly every bird. Asking if it were so at Tustin he said, "No, for there is no cover for shooters there. The rice is all down, and no ducks can be got without decoys, so it isn't much use for the natives to hunt up there. If you can get Charlie Laubenhammer to take you out you will be all right. He knows all about the ground and is reliable. He will get you the best shooting to be had."

At 4 P. M. we entered Lake Poygan, 12 miles long and miles wide, most of its shores marshy and a good deal of it shallow water. Darkness came on when we were

half-way through the lake, but before it came I was gladdened by the sight of acres of ducks on the water and thousands in the air. When within half a mile of Tustin the boat stuck on a bar, so it was 7 P. M. before the hotel was reached. The hotel was a surprise, in such a little hamlet. It was strictly clean, ablaze with light and thoroughly warm, and supper could be had, even if the boat was two hours late. The hostess asked if it was a hunting trip, and being told it was and that my trunk was on the boat, she said, "It must come to the house to-night," and started a porter for it at once. She then asked if I wanted breakfast early enough to get on the lake before daylight, and whether a boatman had been engaged. Telling her no, she said, "Charlie Laubenhammer is the best one. He lives a mile from here, but I'll send the boy to get him to-night."

Next morning when I came out from breakfast Charlie awaited me. Charlie is a young flaxen-haired German, modest as a girl, and not a bit of deceit or dishonesty in him, always paying strict attention to his work, and anxious to do all he could for me. His boat house was but a few steps from the hotel, and while he got boats and decoys ready I looked at the lake. It was fringed with a growth of wild rice, from a quarter to three-quarters of a mile wide, all of it now fallen down, but easily to be traced by the thin ice that covered most of it. Here and there in the open water were large flocks of widgeon, redheads, bluebills and a few mallards, but there were very few flying. Charlie said it would not be long till the shooters and fishing boats would stir them up. By this time he had put out two boats, or rather, wide canoes, 12ft. long, 3ft. wide, sharp at both ends, with about 4ft. decked over at each end. They run very easy, are steady enough to shoot from, and except that they will ship some water in a sea, are well-nigh perfect.

We took an observation trip of two or three miles before locating, which we finally did in an old blind fifty yards outside of the rice and less than half a mile from the hotel. Decoys out and myself snug in the blind, Charlie said, "Now I'll go round and stir them up." Wherever ducks were in sight he paddled toward them, pounding the decks of his boat with the paddle, and occasionally firing his gun he soon put everything to flight within a mile of us. It was evident too that other hunters were afield. Guns were beginning to roar and clouds of ducks took wing, till there were thousands in sight. For the first half hour no ducks decoyed. They were in large flocks and were very suspicious, but as they flew about in an aimless way the flocks got broken, and after exploring our end of the lake and finding no ducks but our decoys began to pay attention to them, none, however, coming near enough to shoot until two redheads alighted two hundred yards away and swam to the decoys. It was amusing to see those two ducks swimming among the decoys, examining them with evident curiosity and plainly suspicious. At last I concluded to verify their suspicions and rose up to shoot. Oh, what a scramble those ducks did make to get right away from there, but one of them was too late. He did not get ten feet before he fell dead into the water. The other one, by some unaccountable means, got off and is probably a good duck yet.

Some time after this a lone bluebill came in and got killed, next some widgeon offered a long shot and one got a shot in the head; more bluebills came and got away; a lone mallard came and was killed; two widgeon offered a nice double and both went scot free; next came a mallard, too high, but try him once, knocked out a feather anyway; and look, he is coming down and half alights, half falls, eighty rods away. Charlie sees it and gives chase, and it turns out a long chase, but the bird is bagged. A bluebill goes down with a broken wing, goes under the water and comes up no more. Charlie says they get tangled in the rice and can't get up, which is probably true, as they frequently dive and are never seen again, although there is nothing to prevent seeing them if they did come up. Matters go on this way till noon, sometimes several good shots are had in close succession and then we wait half an hour. There is no time lost picking up the dead ones, as they drift back to the edge of the ice and stay there. The wind has been blowing a rough cold gale all day and I am thoroughly chilled, my feet ache with cold and I call Charlie to keep the blind while I go to the house for a hot dinner. He collects the dead and we find thirteen that have fallen to my gun and Charlie has managed to get a few besides.

I was gone two hours at dinner, Charlie meantime doing considerable shooting. Going out to him I found he had bagged six, and was lamenting my absence, as there had been a nice flight soon after I left. The wind blew so cold that there was no comfort for us in the afternoon; so after bagging four more I came in, leaving Charlie to take up the decoys. Barring the cold, it was a very pleasant shoot. A first-class shot would have bagged about twenty-five ducks, but I consoled myself with the thought that seventeen ducks were enough for one man, and laid the missed shots to the water being very rough, and that I had but once in ten years fired a shot from a boat.

Next day the weather was better, and although fewer ducks were flying they decoyed better, and an average of two ducks to each three shots was made, though there was an unaccountable number of cripples, which Charlie had great fun chasing, and invariably got, if they did not stay under the water. Unfortunately for this day's sport, I had a bilious headache which soon made the shooting intolerable, and after eighteen had been bagged put an end to the sport.

Fourteen of the ducks killed were sent to a couple of friends, and the rest were given to Charlie. He charged \$2 per day for himself, two boats and decoys, but said he had sold the ducks (except a few given to some poor people) at ten cents each, and insisted on deducting the money from his wages. Those who have had much experience with hired guides and boatmen will agree with me that it is refreshing to find one with some manhood, and not wanting the earth. There may be places where more shooting can be had, but there was enough there, and it is seldom that a strictly good hotel right at the ground and such a boatman can be had. The shooting time is from Sept. 1 till Dec. 1.

Lake Poygan is abundantly stocked with bass, pickerel and perch, the latter of unusual size. One of the fishermen told me that he and his boy had caught, from Aug. 1 to Nov. 1 this year, 200 barrels. The captain of the steamer said, "During the month of Oct. I took to Oshkosh, on this boat, 400 barrels of fish from Poygan Lake,

and have this morning 21 barrels. The wonder is, that these waters are not depleted, but they are not. I've known this lake for many years, and they were never plentier than now." These figures do not sound very large, but when we consider that more than 90 per cent. of these are game fish, that more than 1,200 barrels are taken every year, and the fish do not decrease either in size or numbers, it shows that it is a good lake for fish, and a good place for the angler.

The best fishing with hook and line is right in front of Tustin. Take steamer John Lynch at Oshkosh, go to Tustin (fare 50 cents), stop with Mrs. Drummer at the Lake House (terms \$1.50 per day), and if your visit is seasonable, either for fish or ducks, you can be happy. Take your wife too, it is an entirely suitable place for ladies.  
O. H. HAMPTON.

LAKE CHAMPLAIN DUCKING.

NEW YORK, Nov. 6.—*Editor Forest and Stream:* Have just returned from a duck shooting trip on Lake Champlain. Found the shooting good, but, as I was told by the residents and my companions, not so good as it had been for several years back.

The best shooting is over stools and from points. The custom is to build a blind of the stones that abound along the shore and wait for the birds to stool. Thus we were comfortable, and the broadbills and whistlers, with occasionally a redhead, would come winging along and would get knocked over. But there was many a one that "Vainly the fowler's eye would mark its course to do it harm." Generally there was a fair brace hanging on the nails on the north side of the house.

It seemed to me that the ducks were altogether too wild for a region so remote, and on inquiring I was told that there were several steam yachts from Rouse's Point and other places on the lake that were constantly pursuing them as they rested in the middle of the lake, with rifles, and by this practice making them wild, eventually driving them from their feeding grounds, shortening their stay and preventing their return the next year.

The people who live along the Alburg and Isle of Mott shore complain of this, and say that these doings by steam yachts will surely drive all the ducks away, and spoil what would otherwise be a very fine shooting ground. I write you this that your voice may be raised to rebuke this unsportsmanlike method of killing, that drives away a thousand ducks to one it bags; for as near as I can ascertain they never have more than one or two ducks to show for a day's hunt. Two or three years ago there were a large number of wild geese here, but this banging at them with rifles has sent them on another route, and now a flock of geese over Alburg is an event to be talked of.

I trust this article will meet the eye of those who indulge in this reprehensible practice, and that they will cease chasing and will take their seats on some point and let the ducks fly up to them, and they will enjoy themselves, and while waiting for the game to come they can reflect on the satisfaction that a consciousness of doing right always brings with it. And when the evening comes they will be happier in conscience and have more birds than they would get in driving them all out of the country.  
J. R. LATEAM, M.D.

[As this pursuit with boats is directly against the law, why do not the aggrieved parties take steps to put the steam yacht shooters in jail?]

THE DUTY ON WILDFOWL EGGS.

CLEVELAND, O., Nov. 28.—*Editor Forest and Stream:* In the Wilson Bill, which has just been made public, you will notice that it proposes to make the yolk of eggs of birds free. The duty now on eggs is 5 cents per dozen and egg albumen is free. This bill if passed would make the entire egg free. Albumen is used very extensively in the manufacture of pepsin and other chemical preparations. It was formerly obtained from the eggs of common hens, but as albumen from the eggs of the migratory birds could be bought a great deal cheaper on account of its being admitted free of duty, it has resulted in the gathering of millions upon millions of these eggs, from which the white or albumen is taken, shipped in bulk or dried and sold in this country at about 25 cents per pound.

Egg albumen is used also as an adulteration for certain chemical preparations. The effect of this is to stimulate the gathering of eggs of all kinds of migratory birds from their hatching grounds all over the Northwest. Under the present duty of 5 cents per dozen on eggs and free albumen, the gathering and destruction has been going on at a rate ten thousand-fold more destructive than that of all the shooters in existence. Many eggs half-hatched are gathered, broken and thrown away.

It should be to the interest of all to have a prohibitory tariff put on everything of this kind, or to make it a criminal offense to gather or offer for sale in any shape or part thereof, the eggs of migratory birds.

Years ago ducks frequented our marshes by the millions. We can now say and could say for the past five or ten years, that they came here only by the thousands, which is the result of this promiscuous gathering of their eggs.

What can we do to bring this strongly before the Ways and Means Committee and our intelligent Congressmen? We must work well and fast. Will you be kind enough to enter into a correspondence with your several Representatives in Congress, showing them the importance of prohibiting the importation of these eggs. It is not a political question in the least, but one that is very important so far as the protection of migratory birds is concerned.

Trusting that you will use every effort in your power and use your influence in successfully bringing this before the public, I am with sincere regards,

W. R. HUNTINGTON,  
Ohio State Fish and Game Commissioner.

Nebraska Game Grounds.

COLUMBUS, Neb., Dec. 5.—Game is reported as being very plentiful along the Platte River Valley, and judging by the number of quail and jack rabbits I have seen hanging up for sale in all the towns from Kearney east, I think it true. Hunters, however, report birds of all kinds as being very wild. An acquaintance brought in the other day as the results of one day's shooting, 23 quail, 1 chicken, 2 jack rabbits and 4 cotton tails—pretty fair bag for one gun, wasn't it? Geese are very scarce on the river and flying wild.  
W. R. H.

## THE SQUIRE'S YALLER DOG.

"It's goin' to rain," croaked the Growler as he rolled out of bed and flattened his nose against the pane.

"Not a bit of it," said I, "when the fog clears off the flat the day will be glorious."

"Are we goin' to take that cussed yaller, composite, flea-bitten dog of the Squire's with us?" demanded the Growler.

"I guess so, the Squire says he's a daisy for grouse."

"Then mark my words sonny, we won't get a bird to-day."

The cheery voice of the Squire summoned us to breakfast, where a steaming pyramid of flap-jacks, fried as only they can be fried in Bluenose land, awaited our attack. The Growler alluded in dismal terms to the deadly effects in certain cases of buckwheat upon the human system, but he appeared to be stowing away his share.

The valley of the Nashwaak seemed like an enchanted land that morning as we climbed the hillside. Millions and millions of frosty diamonds and sapphires were flashing and blazing in the stubble and from every naked twig in the woodland. Jack Frost had robbed October of her gorgeous crazy quilt, but he had decked her in a garment still more beautiful.

Far to the north, the river, like a broad belt of silver, extended through ample intervals that were dotted with the white houses of the settlers and flanked by noble hills on either side. Some of the latter were cleared and offered pasture ground for a multitude of horses, sheep and cattle; others were clad to the summit in sombre firs relieved by an occasional patch of birch, beech or maple. Once over these hills we shall be out of the region of firs, and into the second growth of wood, in which are hurrying brooks, and alder swales, and sunny glades, and ancient grassy roads where lurk the furtive grouse.

There were just four of us, Flash and Jeff, the Growler and I. Flash was a pointer of peerless pedigree, valued by his former owner at a fabulous sum, but knocked down to the Growler as a special friend at a ruinous figure. Jeff was a wretched mongrel, owned by the Squire. He had a guilty, terrified aspect that suggested a career of crime and retribution, but what he had ever done or what anybody had ever done to him (barring the fox trap) was a mystery even to his intimate friends. He seemed to be especially depressed in spirits this morning and eyed our preparations for the chase in a mournful, hopeless manner.

"Don't you worry about him," said the Squire as the Growler surveyed the dog dubiously, "he'll root out more partridges 'n five minits 'n yer bilyun-dollar p'inter kin find 'n a month!"

The prophecy began to be fulfilled at once. As we left the farmhouse the spirits of the mongrel rose with a bound, he sneezed and shook himself at the prospect of the fun ahead, and darted into the first low-lying belt of firs like a flash. Not like the Growler's Flash, I grieve to say, for that stately animal had just come to a dead point on a squirrel that was perched upon the farmyard gate. We had no thought at all of finding game in these firs, but at that instant a sharp, musical yelp arose from Jeff, and out of the stubble a noble grouse went roaring up the hillside, followed by the mongrel at his topmost speed. The flight was fully 100 yds., but as the bird struck the ground the dog was on him again, and up he rose and thundered across the swale into the firs. There even Jeff could not find him; we tramped around for over half an hour, but failed to discover where the cunning rascal was hidden. Regretfully we gave him up and began to climb the slope.

Is there any sight, I wonder, in all the realm of forest and field more agreeable to the eye than that of a brace of dogs, with nose to ground and tail at work (be it ever so brief a tail), scurrying hither and thither hot upon the scent of grouse? The pointer could not begin to cover a fraction of the ground that the light and agile Jeff traversed, but he was honest in his efforts, and honesty in dog or man should be respected. We followed for a while an old wood road without starting a feather, when away to the left came the mongrel's warning note, a sound of whirring wings, and a bird flew over the path ahead and treed in a clump of cedars. I saw exactly where he lodged, and, as the ethics of grouse hunting in these parts do not compel a man to lift his hat and apologize to a bird that chooses to tree, nor yet to club him out of the tree for the purpose of missing or maiming him in the air, I dropped this one out of the cedar top instantaneously, and had the pleasure of seeing the mongrel retrieve him in the most scientific manner. The pointer meanwhile was justifying his right to exist by burrowing for a ground hog at the root of an old ramble.

We worked carefully but without further result through the scrub until we struck an old wagon road whose grassy bottom seemed to promise birds at every turn. Jeff crossed and recrossed the road in wide, sweeping circles, but gave no sign. Then we heard his music over in a bunch of tall spruces on the right. The Growler scanned them through without success. The mongrel insisted that the bird was there, nevertheless, and barked long and furiously. Then the pointer, whose knowledge of the matter must have been limited, rushed upon the scene and set up a vigorous howling. And then—Caesar's ghost! a big gray knot flew off the trunk of a tree within a yard of the Growler's head, and went sailing over the scrub with his trunk checked for Labrador. Startled though he was, the Growler let go at him with both barrels, and, as we emerged from the shadows a flurry of feathers fluttering down showed that the shot had told. For a quarter of a mile we waded through the brush and over the blow-downs, but caught no sight of him. We were retracing our steps sadly when the mongrel came running to us with the bird in his mouth, having found him at least 200 yds. from where the Growler had fired.

We regained the road and had progressed about a dozen yards when—heavens, what an explosion! One, two, three, four, five, six! Before we could recover our wits they were all gone, and only the mournful howling of the dogs told the dismal tale. "Hello," exclaimed the Growler, dropping the final vowel in his excitement, and sprang to the right after two of the birds, while I rushed into the cedar swamp across the road. Then the woodland fairly rang with the mad music of dog and gun. When we met again the Growler smiled freely. We had made a clean sweep.

Four birds more were added to our bag while yet the morning was young—one a tremendous old drummer that was routed five times and finally succumbed to the

Growler's deadly left, and another which the mongrel had actually captured unaided and quietly laid at our feet. We asked him how he did it, but he merely wagged his forlorn remnant of a tail and bounced into the bush as though nothing unusual had happened.

On a big mossy log, by the side of a clear, sparkling stream that ran across the road, we sat down for luncheon. The Growler insisted on boiling coffee in a kettle that he had laboriously carried with him, and never did choicest Mocha on sea or shore send forth more grateful odor.

In the afternoon the wind sprang up and the birds were wild; we had just three hard-wing shots during the next two hours and missed them all. The Growler grassed a belated woodcock up the brook, and a snipe on the edge of the clearing. About this time the pointer flushed a porcupine and came whining to us with his head full of quills, the extraction of which engaged our undivided effort for a season. We returned to the Squire's by way of Italy, as he facetiously termed the bush where he hunted his cows at nightfall, and here the composite treed a fine spruce cock which the Growler ventilated at once. The bird lodged in the tree and the Growler was forced to climb. He was up there so long that when he was working down the pointer regarded him as an enemy and seized him by the leg. I must have laughed immoderately, for the Growler maintained an awful silence the whole way out. He soon thawed, however, and when we took our leave of the Squire and his rosy-cheeked wife and boarded the evening train for home, the Growler was happy as a king full.

"What is your opinion of that 'cussed yaller composite' now?" I asked the Growler.

The Growler answered not, but just then I heard a rumble and jar like the collision of two heavily loaded trains. It was the collision of two trains of thought. It was the Growler changing his mind.

FREDERICTON, N. B.

PROWLER.

## SHORT vs. LONG BARRELS.

CHICAGO, Dec. 3.—*Editor Forest and Stream:* Mr. Armin Tenner's statement "that the length of the barrels above 24 in. does not exercise a great influence on the velocity or penetration, especially with the nitro powders which generally develop the bulk of gases before the shot charge has moved more than 1½ ft. in the barrel, and the maximum length of barrels is reached in 26 in.," is so astonishing that I hasten to give the facts, which are just the reverse of his statement:

The editor of the London *Field* in the fall of 1889, to settle what seemed to be a never-ending discussion among British sportsmen of long vs. short barrels, made the following test, using the Le Boulenger chronograph for obtaining velocities. The powders used were Schultze, E.C. and, if I remember correctly, J. B., all nitros. Also Curtis & Harvey's black and brown powder, the latter not a nitro. Two sportsmen sent their famous 26 in. guns, which were beaten by 30 in. guns with all powders, *i. e.*, for penetration.

Some correspondent then suggested that a cylinder bore gun be tried with a loose fitting bullet, which would touch the wire exactly the same with each trial and cut the gun off 2 in. at a time until reduced to 20 in. This suggestion was acted upon and the trial proved that for every inch of reduction a corresponding loss in penetration resulted with all powders. When the barrels were reduced to 20 in. the loss was 40 per cent. in penetration for the nitros, and 12½ per cent. for black. This was exactly the reverse of what sportsmen were prepared to hear in regard to the nitros, proving that its force was developed near the muzzle. Curtis & Harvey's "brown" powder was the best for short barrels.

I yet have these articles clipped from the *Field* in my possession.

In the book called "Shooting" (Badminton Library), published prior to these trials, that great sportsman Sir Ralph Payne-Gallwey says, "No sane man will claim that a 28 in. barrel shoots as hard as a 30 in."

Recoil is less with nitros than black for two reasons. First, the charge of nitro starts slower and burns more rapidly, and second, the absence of smoke gives less square feet of striking force or vacuum in the atmosphere, also producing less recoil for the same reason.

The recoil of nitros is a push, not the sudden kick of black.

I would not give the snap of a finger for Mr. Tenner's powder test if made with one gun only, unless a cylinder bore, as various forms of choke perform best with certain powders. I have two guns by the same maker, both light 30 in. 12-bore. The old one shoots most uniformly with E. C., while the new does best with Schultze.

I once owned a Harrington & Richardson full choke 12-bore that would, more than one-quarter of the time, when foul, ball No. 8 shot with the right barrel and black powder, but with other sizes the patterns of both barrels were alike. I believe it almost, if not quite, impossible to ball shot with any powder in a cylinder bore gun, and if I remember correctly there was less stringing of shot in the *Field* trial with cylinders than chokes.

I will not criticize Mr. Tenner's theory about testing guns with cardboard, as the late Mr. J. D. Dougall has said, "Such ideas would prove the weakest-shooting gun to be the hardest shooter."

I am in perfect accord with Mr. Tenner in regard to soft and chilled shot, and 12-bore charges. I have never yet found a charge for a properly bored, *i. e.*, true to gauge 12-bore, equal to 3 drs. and 1½ oz. if properly wadded. Any increase of powder and shot in my experience has been detrimental to the shooting qualities of the gun.

I strongly advise sportsmen to buy Charles Lancaster's "Art of Shooting," also "Shooting," first volume (Badminton Library).

Questions often discussed have been settled long ago, and these books give data, also much other very valuable information relating to guns and shooting. WANDERER.

The above having been referred to Mr. Tenner, he sends us the following comments:

*Editor Forest and Stream:*

"Wanderer" is astonished because I stated that the maximum length of shotgun barrels, especially in the case where nitro powders are employed, is reached with 26 in. He cites the results of some experiments carried out by the London *Field* over four years ago to prove that I am wrong. I am familiar with the results in question and all other experiments conducted by the *Field* in the premises since 1889, but my tests and those of others carried out more recently make a different showing and

warrant the statement made in my report. I have tried something like 300 guns with different lengths of barrels, and have found that, as I said, neither pattern nor penetration is improved with barrels longer than 26 in., compared with the results of barrels of this length and even shorter barrels.

"Wanderer" says that he would not give the snap of a finger for my tests if they had been made with one gun only. He has learned since that I used five different guns.

But if Mr. "Wanderer" would ever have occasion to see how such experiments are carried out by the London *Field* and what instruments are employed, as it has been my good fortune to witness, I fear that he would snap his fingers quite freely.

My gas pressure gun enables me to determine the bursting strain at three different points in the barrel, namely at the cartridge chamber, in the middle of the barrel and at a point near the muzzle of the gun. Nitro powders as a rule develop, as stated by me, the bulk of the gases of energy before the shot charge has reached the muzzle of the gun; they have therefore exercised their full propelling force at such a point; and it is to be presumed that when this is done the extra length of the barrel is superfluous and has no longer any bearing upon the effect of the shot, *i. e.*, the penetrative power of the pellets. In former time longer barrels were quite in place. The old and coarse-grained black powder develops the gases slower than the modern propelling agents, and to utilize the total effect of such a powder charge requires a long barrel.

I am pleased to know that "Wanderer" agrees with me on some points, and I venture to say if he had witnessed the Chicago tests he would not differ with me on any of the questions at issue.

ARMIN TENNER.

## BOSTON AND MAINE.

BOSTON, Dec. 2.—Up to Nov. 30, there had been two snowstorms in the big-game sections of Maine. The first snow gave pretty good hunting, and a great many deer were taken. One Boston hunter, who was fortunate enough to be in the vicinity of Moosehead Lake at the time, says that he never saw better hunting. It took only a few minutes the first morning after the snow to come upon deer tracks, and these tracks immediately led to others. "We tried to select a big track and to stick to it," he remarks, "but it was impossible. We gave up the attempt, being aware that we were in the immediate vicinity of a big herd of deer. The tracks went every way; the deer evidently browsing unalarmed. I called my guide in consultation, and we made up our minds to move very slowly. The woods were full of blown-down trees and patches of dense evergreens, and we determined to look each of these over thoroughly before attempting to pass them, or to make the least noise. It was rather tedious work, and we had crept up to and cautiously around a number of thickets and windfalls before we actually came to the deer. About 11 o'clock we came near to a windfall, nearly inclosed in a thicket of spruce and ground hemlocks. The tracks of deer—very fresh—seemed to go directly into the thicket. We were pretty certain that we were near the game. Creeping almost on our hands and knees in the wet snow, we slowly, and with the greatest caution, approached the thicket. 'Hut!' whispered my guide, pointing through the thick spruces. Peering in that direction I saw the eyes—all of the head of a deer. A second glance showed me that it was a buck. I was not excited! I took in the situation calmly. Another look showed me the heads and a part of the bodies of a couple of does. They were ruminating quietly the breakfast of browse. It seemed almost a pity to shoot. My guide intimated by signs that I should shoot the buck, and he would take one of the does. I signified to him, as well as I could, that the buck was all I wanted. Very carefully I took aim, resting my Winchester over a root of the upturned tree behind which we were hiding. I pressed the trigger. There was a loud report and the does were up and away, but the buck simply dropped his noble head, and was dead—shot through the brain. It was one of the most successful shots I ever made, but only one that any hunter ought to be capable of making. Such is still-hunting, followed carefully and patiently. I had all the deer I wanted, though the guide was in for getting one of the does. He felt sure that they had gone just over a little rise and stopped. I would not follow them. But the tug of getting the game out of the woods! That buck must have weighed 150 lbs., after disembowelling. But we reached the neighborhood of teams at last, and I have a fine head and antlers as trophies of that day."

The Harry Moore Party, told about in the *FOREST AND STREAM* last week, had a glorious hunt, on the same snow mentioned by the gentleman above. They were fifteen miles in from the Katahdin Iron Works, at Gerrish's Camp, it will be remembered. But all of the story was not told last week. There was not exactly a tenderfoot in the party, but one of those nicest of men, whom it is a pleasure to know—one that may be disturbed if his steak is not done to a turn, or if there happens to be a wrinkle in the sheets of his bed. He dearly loves to be with that party on their hunting and fishing trips, but oh the hardship, the roughing—it causes! It hurts him to the very core, and each time he calls himself a fool and vows he will never do so again. On this trip it took considerable urging to get him started, and even then he only grabbed on to the hand-rail of the last car of the train, as it were, with a thousand misgivings. But the railway ride was jolly and he felt quite cheerful till dinner had to be eaten at 10 A. M., before entering the fifteen miles of woods to the camp. "A pretty time for dinner!" he suggested. "Who can eat anything at this time of day?" But the party took hold, suggesting to the growler that it was the last opportunity for a meal till camp was reached. The buckboard was mounted, nervous man seeking the best seat. The progress was slow, and the jolting fearful. The unhappy one stood it for a number of miles, till his store of patience was exhausted. He was heard muttering to himself "Curse a fool!" On she went over logs, over stones and into mudholes. "Curse a fool! What am I here for anyway?" The end of the road where the team would be able to haul more than the provisions was reached and seven miles must now be made on foot. The growler could not walk; his shoes were too thin. But at last, thoroughly worn out by the tremendous jolting and twisting of the buckboard, he took to his legs with the others. They reached camp, but not before dark, and two hours ahead of the team on which was every scrap of provisions. A cold camp and no supper. Curse a fool!"

This from the man who is disturbed by trifles. At last the team arrived, and within three-quarters of an hour the cook had ready broiled steak, roast potatoes and such biscuits! The face of the over-particular man was wreathed in smiles once more, and he allowed that if he could have the best bunk in the camp, he should be happy again. He was told to take his choice and he did so, afterward wishing that he had taken any other bed of the lot. Not a man would change with him, however, and in a short time every man but the one who gave me this yarn, was asleep. Did they snore? Ask any nervous man who has ever slept in the camp with a lot of tired hunters and guides. The roof did not come off, but it might have, the snoring was loud enough, only that it was heavy logs. Alas, for the nervous man! His eyes would not close. He twisted and he turned. He twitched and he rolled over; all in vain. His eyes would not close. He thought the other boys were all asleep, but one lay with the blanket stuffed into his mouth to keep from bursting with laughter. The nervous man sat up in bed and looked at the boys to see if there was one awake that he could talk to. Every man but one actually snored, and that one made believe snore. No. All were asleep, and the nervous man lay down again. He went through the same maneuvers perhaps a dozen times. He twisted and he turned. At last he could endure it no longer. He jerked up in bed, he kicked off the blankets, and jumped for the floor. "This is a lot of fun!" he roared. Every man was awake in an instant, and such a laughter. It was worth a whole trip to Gerrish's Camp. Later the nervous man calmed down and drowsed a little. The hunt for deer the next day cheered him up, and he slept better the second night. Now he talks of the glorious sport, and wants to go again.

E. S. Dorr, A. D. Kidder and J. F. Desmond, of Boston, with W. F. Clark, of South Rumford, Me., have recently returned from a successful deer hunt at Clark's Pond in

have had no other wish than to get at the truth. To have read the Maine papers this season and many of the papers outside of Maine, a novice in hunting would have got the impression that all one would have to do would be to go to any part of that State and he would find moose, deer and caribou as thick as sparrows and to be had for the shooting. I must again add that these papers have only recorded the successes, while on the subject of the disappointments and weary days spent in hunting, only to go home empty-handed, they have been entirely silent.

SPECIAL.

#### FOREIGN GAME FOR MAINE.

BATH, Me., Dec. 9.—*Editor Forest and Stream:* In response to a circular letter (letter inclosed) which had been sent to all sportsmen of prominence in the State, the following gentlemen met at Hotel Rockingham, Lewiston, last Thursday: E. M. Blanding, editor of the *Maine Sportsman*, Wm. Ledyard and J. C. Higgins of Bath, E. L. Post of New York, Geo. E. Thompson of Bath, Edward E. Hardy and Fred Sutherland of Boston, and Dr. Crockett, Dr. Irish, Dr. R. H. Daintree, J. A. B. Farnham, T. R. Catland, H. E. Doten, A. F. Field, D. S. West, George Gifford, J. F. Moody, H. A. Bates, W. H. Collins, E. H. Gledhill and Frank Cain of Lewiston.

Mr. E. G. Gay introduced the vice-president of the Massachusetts Fish and Game Association, Mr. Edward E. Hardy. Mr. Hardy related the experiences of the Massachusetts association since 1874. He said that in that State sharp-tail grouse, prairie chicken and Rocky Mountain quail have been found the best birds. "Our greatest difficulty," said Mr. Hardy, "has been with the shipping. In many cases the birds were not properly packed. The boxes in which the game is shipped must have cloth tops or the birds will dash their brains out, the first impulse of a game bird being to jump in the air when frightened.

seventh part is worked. There is no doubt about our winged game being on the decrease. It is worth our while to put our hands in our pockets, but we require legislation to protect the birds. If we do introduce these birds we must not allow our birds to be shot too soon, as has been the case in Massachusetts.

"I think our Maine people, once they are alive to the fact that protection is necessary, will make the very best game wardens in the country. We are thoroughly alive to the necessity of fish protection, and the poaching of past years is never attempted now. It will be the same with game birds. Mr. Gay is deserving of our thanks for calling this meeting."

Mr. Edward M. Blanding said: "The subject is an important one and cannot be lightly considered. With wise laws better enforced Maine will, indeed, become a sportsman's paradise. But in importing game birds we must take good care not to injure our native game, than which none better exists in the world. I think Minister Thomas's opinion is particularly valuable, as he is a Maine man. I trust we shall see you all in Bangor on Jan. 2, when the Maine Sportsmen's Fish and Game Association will hold its first annual meeting."

Letters were then read from Col. E. C. Farrington, secretary Maine Sportsmen's Fish and Game Association; Hon. P. O. Vickery of Augusta, Hon. J. Manchester Haynes and others, expressing regret at not being able to be present at the meeting, and showing warm interest in the objects of the Association, promising their personal and financial assistance. On motion of Mr. Ledyard the meeting organized by electing E. G. Gay President and J. C. Higgins of Bath Secretary and Treasurer.

The constitution and by-laws of the Massachusetts Fish and Game Protective Association were adopted by the association. The meeting adopted as a name the Maine Game and Protective Association.

The following vice-presidents were elected: Eugene

CAPERCAILLIE—MALE AND FEMALE

Photo from Pair Imported in 1893 by Mr. D. F. Stillman, of Rhode Island.

Mexico, in that State. They killed a remarkably heavy buck deer, which the hunters took to Boston. It is said to have weighed nearly 300 lbs.

#### Megantic Fish and Game Club.

BOSTON, Dec. 9.—An important meeting of the directors of the Megantic Fish and Game Club was held in Boston the other day. President Alexander Taylor, Jr., was on from New York, and presided at the meeting. Superintendent York Phillips was just in from the preserve, and made suggestions in regard to improvements that can be made on the preserve this winter. He is to finish up the hatchery, begun this season, so as to make an experiment in the hatching of trout eggs this spring. Another important feature considered at the meeting was the advisability of reducing the price of some of the treasury stock. It was finally voted that a few shares of the treasury stock—sufficient to bring the membership up to 300—be sold at \$50 each with the assessments of 1893 remitted. A committee was appointed to make arrangements for the annual dinner of the club, to be held early in January. Superintendent Phillips brought from the preserve with him two beautiful specimens of caribou, and the members of the Megantic Club are pretty sure to eat caribou at their annual dinner. They are not obliged to "first catch their rabbit;" for the caribou, right from their own lands, are already caught.

I owe Mr. J. G. Rich, a correspondent of *FOREST AND STREAM* who is always interesting, an apology. The statement that he had claimed that 100 deer a day were being killed in Maine was an error. Mr. Rich actually wrote "100 deer weekly," and it was so published in the *FOREST AND STREAM*. So far as my friend Crosby, the taxidermist, is concerned, the figures he objects to in regard to the number of big game heads he has for mounting, or had had up to the date he mentions, were given to me by a gentleman who had visited Mr. Crosby's place, and I so stated in my account in the *FOREST AND STREAM*. My objections to the newspaper statements concerning the quantity of big game being killed in Maine this season have been founded on the complaints of sportsmen who have visited that State this season without success, and I

The boxes must be so low that the birds cannot jump high enough to hurt themselves.

"We feel that the sharp-tail is the best bird we can get for Massachusetts. It can stand any cold, and is not fond of the heavy timber, but prefers the edges of the woods. Great care must be taken to place the bird in suitable localities. We experimented with Rocky Mountain quail, California valley and mountain quail, and we found the Rocky Mountain quail to succeed the best. Last winter practically exterminated our native quail in Massachusetts, and our work this season will have to be repairing this disaster."

Mr. Gay said that quail was not being seriously thought of by Maine sportsmen, but the capercaillie and black game of Norway and Sweden were the birds most favorably talked of.

Mr. Thompson read the report of Minister Thomas relating to these birds; this has already been published in *FOREST AND STREAM*.

C. A. Brambe, of the Boston *Herald*, was called upon by Mr. Gay to speak on the black game of Sweden, where he has passed many seasons with the gun. He told interesting things about the food of the black game, showing that Maine has an abundance of birch, etc., that furnish food for the black game. He mentioned the fact that Sweden's forests were so like Maine's that the first time he visited this State he could have easily imagined he was in Sweden.

Dr. R. H. Daintree of Lewiston, who has shot the black game and capercaillie in Scotland, expressed his conviction that the birds would succeed in Maine, and went at some length into the methods to be followed in rearing the birds, which is similar to the course pursued in rearing pheasants.

Mr. E. F. Field said: "Our game birds are decreasing, and unless we do something to restock, we shall be without. Woodcock are getting scarcer each year, and partridge seem to me to be getting few and far between. If we could introduce capercaillie and black game it would be a great step."

Mr. J. L. Moody said: "Maine has thirty-five acres of land for every man, woman and child, and not over one-

M. Hersey, Dr. C. A. Packard, George Thompson, H. A. Bates, E. L. Post, E. F. Field, P. O. Vickery. William Ledyard and E. L. Merrill were appointed an executive committee.

In order to make the society as far reaching as possible, and that no sportsman should refuse to join on account of expense, the membership fee was placed at \$2, and the yearly dues at \$1. The meeting showed one thing; at least, very plainly—there is a singular unanimity among those who follow the gun upon the subject of game importation, and that the Maine sportsmen will stand shoulder to shoulder in this matter.

L.

President Gay has issued a circular letter dated Dec. 9, in which he suggests "that the buying of birds and liberating them promiscuously over the State, is not feasible, on account of a very heavy expense, and the innumerable dangers that all young birds are subject to.

"My plan of proceeding in this matter is to secure a suitable place, build suitable coops, yards and pens for hatching, which can be built at an estimated cost of about \$3.50. The birds can be secured at no great cost, and then you are ready to proceed to business. All game birds can be bred in captivity. The black game is bred extensively in this manner in Scotland and in England, and in my judgment it is the only plan where success can be assured. Year by year you can liberate all of the birds that you do not require for breeding purposes, and the birds thus released will help the cause along by breeding for themselves.

"I have already perfected plans for the procuring of black game, sharp-tail and pinated grouse, and if these plans meet with the approval of this association, in three months' time I will have the houses and pens completed, the birds procured, and will be raising the chicks this coming spring. I would estimate the cost of all work, including the building of coops and pens, for the coming year, from \$800 to \$1,000, and with this a grand good work would be commenced that would be as lasting as our Maine hill. I would also like to add in connection with this that in two years' time we can make this self-supporting.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## Arkansas.

CHICAGO, Ill., Dec. 1.—About the game supply in Arkansas, Mr. Jos. W. Irwin, of Little Rock, Ark., writes: "We have had the greatest flight of ducks this year that has ever been my lot to see, and every man in the State that could rustle up a gun seems to have done so and gone duck shooting with good success."

I have just returned from a day's quail shoot with a friend. We found the birds very plentiful. From 9 A. M. to 4 P. M. we put up no less than sixteen fine bevies of full-grown, strong-flying birds, and if our shooting had been first class we had chance enough to have made a very large bag. As it was we left plenty of them for a good many days of just such shooting. Young Mr. Du Bois, of Cincinnati, could find good quail shooting in that country and mallards too, unless the winter is much colder than usual.

## Spring Lake Preserve.

Lately I stated to an inquirer that, so far as known, the duck grounds of Spring Lake, Ill., remained open to the public. Last week I learned that a club or company has been organized to control these grounds also. Mr. A. H. Fahnestock, of Peoria, Ill., prominent in the Duck Island or Beebe Lake Club, is interested in the new move, and he or Mr. Chauncey M. Powers, of Decatur, Ill., could give information. I learn that a cabin boat will still furnish quarters to hunters, and there is talk of the sale of shooting permits, though on all this my information remains vague.

## Plenty of Rabbits.

If one liked to shoot cottontails, and there are worse sports, he would do well to stay away from Bicknell, Ind., for there the rabbits are too numerous for sport. Two guns could kill two hundred in a day. Parties have gone out there and killed a wagon box full in a day. In our quail shooting near that point we often saw several rabbits moving about at once, and they were fairly a nuisance, men and dogs tiring of them.

## Field Ethics.

Quail shooting, over good dogs, is the best and prettiest sport America affords, as one may have earlier recorded his belief. But quail shooting, even over good dogs, may be a pleasure or not, just as one has or has not a pleasant shooting companion, or rather one who observes the ethics of the field. The man who wants to make a big bag, the man who wants to beat somebody else, the man who is a "claimer," and the man who kicks—all of these should go into the sportsman's prayer book as things from which to be delivered by Providence. Any one of these can spoil the prettiest autumn day that ever shone.

My little quail shoot at Vincennes was very pleasant, and that to even the last degree, for we not only had plenty of birds and good dogs, but I had a pleasant companion, and one who appreciated the ethics of the field, and did not let go by the little courtesies which do so much to make or mar a day afield in company. When the dogs pointed he always found it my turn to take the shot, and when, as once in a while occurred on a bird that took a flight midway between us, we both fired into the same bird, his call was always quick, "Your bird, sir," though often I knew it was not my shot that killed, but his own far more regular work. Qualities like these one does not always find even among his best shooting friends, but when they are found, a day behind the dogs does not degenerate into a scramble or a hunt for count, but remains a pleasure unalloyed and a bit of dignified and gentlemanly sport. Wherefore I hope Mr. Balmer will forgive my saying anything about it.

By the way, my friend writes me to-day about the quail:

Yesterday I went out to the ground where Adam and you had your last day's hunt. Hitched at the Nigger's shanty, and found the first bevy just over the hill. (I had Duke and Gwen only). Got two birds, right and left, on the first rise, and following scattered birds, got two more. Here a change came over the scene. The farmer who occupies the house with the coat in place of a window, came out to greet me, carrying on his shoulder a 36in. double-barreled muzzleloading shotgun. He recognized the dogs and wanted to go hunting with me. That was enough; I was hoodooed. I don't know whether it was the fact that I was looking down those 36in. barrels all the time, or the fear that I could kill a bird on the wing once in a while; anyhow, from the time he joined me until the time he left I was completely paralyzed. In crossing a fence I would lose all control of myself and just roll over it any way. He took me a long cast away above the pond, where he reported "skads" of birds (that were not there), and after spending the best part of the day tramping we returned to the old grounds. Here he left me to refresh the inner man, and soon as his back was turned I found a bevy and immediately regained my accustomed form. I had good shooting for 15 or 20 minutes, when the fellow again returned and spoiled the remaining hour of the day.

I dared not count my birds in his presence, but waited until I got home, when I fished 19 quail out of the folds of my old hunting coat. These, with three or four rabbits that he fired from me made my bag for the day. I hunted from 10:30 till 4 o'clock. The day was perfect, but no man living could make a bag under the circumstances. I will not hunt in Illinois any more this season, and feel that there ought to be some birds left over.

P. S.—I don't think that long gun was loaded, for he made no attempt to shoot. If I had only been sure of this!

Mr. Balmer met the same "hoodoo" which his brother and I encountered at the same place a few days earlier, but he got off better than we did. There were two of the young farmers who followed us, and they were so kindly in trying to show us the birds that we could not think of leaving them. They kept close up with us, and had us so nervous that we went to pieces altogether in our shooting, and simply made an exhibition of ourselves, although our occasional kill of a bird highly pleased and astonished the spectators, to whom the knocking over of a rabbit on the run seemed a marvel of skill. With such an attendant our friend is to be congratulated on his bag, which was a good deal better than either of ours. Our main source of happiness was that we didn't lag one of the countrymen, they clung so consistently to the line of fire.

## Billy's Lounge.

Visitors at the Hunters' Cabin at the Fair will bear in mind the great seat of honor which stood before the fireplace within the cordon which barred back the too inquisitive public. This piece of furniture was made by "Billy" Hofer, the Rocky Mountain man who had the cabin in charge for the Boone and Crockett Club. The construction was of young pine trees for legs and frame, the seat being made of a full-size beef hide put on raw and dried on tight as a drum. This great lounge is far longer than any man, and wide proportionate. It has been couch, settee and divan in general for many a visitor

of note. Here Billy curled up and read papers when business was slack, and before it he sat on the skins by the fire and told stories betimes when business was good and the seat of honor had a fair occupant. The big rawhide lounge became a sort of landmark, and a good many persons wanted to buy it when the cabin effects were disposed of at the close of the Fair. It could only of natural right go to but one place, however, and there it has gone, namely, to the Western office of FOREST AND STREAM. Here it stands, as solid, as comfortable, as wide and welcoming as before, and will remain so after the White City itself has disappeared. Come up and sit on it. It won't cost you a cent, and all you have to do is to admit that Billy Hofer built on honor when he made the big rawhide settee. "I didn't want that thing to go just anywhere," said Billy, "and I did want it kept somewhere." It will stay a long time where it is, a fixture of FOREST AND STREAM, and I hope will come to be again a fixture of sportingdom as it was at the other cabin.

## Princess of China.

In some reminiscences of the Fair, comment was made on the vision which broke the record at the record-breaking FOREST AND STREAM corner, and in regard to this a writer in the "Society Chat" columns of the Lexington, Ky., *Daily Leader* has something to say. It seems a certainty that the vision lives somewhere around Lexington, and the *Leader* on the data afforded has instituted a search in behalf of the recorder of the record-breaker, stating among other things that it was probably the Princess of China whom the FOREST AND STREAM men saw illuminate the carpet sweeper, and to whom they gave a sample copy of the paper. I have been through Chinatown in San Francisco and other places.

While I don't know who or what this vision was, I allow it wasn't any Chinese. Thank you very much, and none the less, good friends in Kentucky, and if you locate the vision, as I hope you will, kindly learn if possible, whether any of the gentlemen of the family remain unsupplied with sample copies of the greatest paper on earth.

## A Great Season South.

Continuing the dive into the mail box I find the following from the FOREST AND STREAM correspondent "Arodonac," who writes from Welsh, Louisiana:

"Never in my days have I seen as much game as in the past two weeks. I arrived at this place yesterday evening and at the hotel met several kid drummers who wanted to go shooting ducks. We had but one mile walk to the rice field from the hotel, and arrived on the grounds at half after four and shot until dark. The result was my three dude drummers had exploded seventy-five shells and killed four mallard ducks. I shot thirty-seven shells and killed thirty-one ducks. The time we had to shoot was one hour and twenty minutes. I had agreed with them to kill only greenheads, as the ducks were so numerous one could pick and make a fine bag. I succeeded in making all drake mallards but two, which were pintails. Is there any place else that you know of where this could be done?"

"I am sure that any one, a fair shot, who would take the trouble to make a blind, and use decoys and be willing to wade in water 4in. deep, could kill 100 to 150 of a morning only a mile from the hotel. I shot in my Sunday clothes."

"Several years ago there never was known to be but very few ducks in this vicinity, but the cultivation of rice here has brought them in by the millions, not thousands. The shooting, unfortunately, does not last but until Dec. 10. As soon as all the loose and fallen rice is eaten up the ducks leave for the sea coast, about twenty-eight miles south of here, and there they are hard to get, yet numerous."

"Mallards can be bought almost anywhere at 8 cents apiece. They are cheaper than meat, in consequence of which the butchers suffer."

"The quail season will be good."

## Plaza Rod and Rifle Club.

The Plaza Rod and Rifle Club, of Alton, Ill., sends in a handsomely lithographed roster of the club membership, showing on one page the portraits of all its officers, and on another those of the remaining members. Gen. E. H. Lahee is president, and Mr. H. R. Wills vice-president, Mr. G. R. Hewitt filling the secretary's chair, and Mr. G. A. McMillen that of treasurer. Mr. Wills, from his portrait, one would not take to be a rifle shooter, but he is, as I have learned in many hard-fought matches here, involving the championship of Halstead street. He isn't near as innocent as he looks, and neither is Mr. Lahee.

## May Move.

Dr. O. Stewart Bamber of Rochester, N. Y., a lover of that noble animal, the dog, is in Chicago for a few days, and says that he may move West this far, as the shooting about Rochester doesn't altogether suit him. There is shooting of almost any sort, one way or the other, out of Chicago, if you go far enough after you start.

## Hard Year for Quail.

CHICAGO, Dec. 9.—The quail season in Illinois being now at an end, and the Indiana season being also practically closed, it is possible to review with accuracy the question of the supply of birds. There is no longer any question that the severity of last winter was almost ruinous to the quail in all of northern Indiana and Illinois. Around Warsaw and other points where last fall we had excellent shooting, there were this fall next to no birds at all, a party of three guns getting only 9 birds in a day over the choicest of the covers in an exceptionally good section of country. Such bevies as were found were small. Last year was the great quail year for this region, but this year is the reverse of that. It will take the best of nursing and years of good weather to bring the birds back in such abundance as that of the last two or three years. It is good counsel to all Chicago shooters and those who are accustomed to shoot in northern Indiana not to fire another gun this fall, and to go further South for the shooting next fall if the birds at that time continue scarce as now. The sportsmen of Warsaw intend to stock their country heavily with quail this coming year. Their preserves should be respected until the birds have again taken good hold, and the shooters of any locality could not do better than imitate so good an example, besides trying to feed and shelter such few bevies as may be left this fall.

It is probable that this will be another hard winter for quail in northern Illinois and Indiana. Very heavy snows have fallen and there has been much alternate melting and freezing, so that poor Bob White's daily bread must be hermetically sealed away from him by an impervious coating of ice. Unless there should be a general thaw and a passing away of this icy covering, we can hardly hope for less than a further slaughter of the innocents. You can hardly destroy the quail crop in thirty days of legitimate wing shooting, for the little fellows are wonderfully fit to take care of themselves; but when they are weak and starving there is no fun in the thought of trying to bag them. Therefore let us all leave the famine belt alone for a while in our shooting.

In the lower half of the two States mentioned the weather was not so severe last winter, and the birds were more abundant this season, but even there they were more scarce than is usually the case. Even so far south as Tennessee it was a "bad year." The worst enemy quail have is the weather. Let us hope the present winter will grow milder and not worse.

## Trip is Off.

Mr. Wilbur Dubois, of Cincinnati, writes that his shooting friend, Mr. Peabody, will be unable, on account of increased duties in business, due to his recent promotion in railroad work, to take the contemplated shooting trip to the South, and that therefore the dates are off all around. Mr. Dubois adds:

"I have not yet had my annual shooting trip, and want to run off somewhere for a shoot of ten or twelve days. I am uncertain where to go, and hardly know whether it would be advisable to try so far South as Louisiana, and avail myself of your courteous card of introduction to your New Orleans friend."

"I congratulate you on your courage in denouncing the slaughter of ducks, in FOREST AND STREAM of Nov. 25. Wise words bravely spoken."

Mr. Dubois will do well to get pretty well South for his shoot, though possibly he can get good enough country in Mississippi or Arkansas. It is a delightful change to leave the blizzard of the North and be out for a time in the pleasant strawberry weather, which in the South they dignify by the name of winter.

## For Fish Warden of Iowa.

Hon. J. G. Smith, the veteran shooter and long-time president of the Iowa Association, is out as candidate for State Fish Commissioner under the new regime. Mr. Smith is well versed in the way of legal work, is a rational and earnest sportsman, and his appointment would be a fine one. It would be finer yet if the State would give him a decent appropriation with which to work. Granted that, and the abused waters of Iowa might once again have a little of their old time supply of fish life. If Mr. Smith is appointed I hope he will, just for the sake of auld lang syne, place some fish in old Skunk River, where I used to fish when I was a boy, and where the netters and dynamiters have since made it impossible for anybody to catch a fish. That was once a glorious bass stream.

## Speaking of Bass.

Speaking of bass, a good one indeed was that taken this season by Mr. Frank Lawrence of Chicago—a fish taken in Green Lake, Wis., weighing 7lbs. 24oz. Mr. Lawrence is showing it, nicely mounted, at Spalding's store. If he had only laid his plans right he might be wearing diamonds in the Natchaug competition.

## She also Shoots.

Mrs. Kate F. Miller, the bright little newspaper woman who edits the *Industrial World*, Chicago, is not only a journalist but a shooter, and at chicken or even quail can kill a mess of birds all right. Mrs. Miller favored this section of FOREST AND STREAM with a very pleasant call this week, and we talked over many things, including the wanderings of the well acquainted "Saginaw Crowd," with most of whom the lady is well acquainted.

## Moved In.

The clean and gritty publication *Sports Afield* this week changed its place of publication from Denver to Chicago, and its bright young editor, Mr. Claude King, is now busily squaring himself around in his new and bigger home, first taking time to come and talk fraternally with the Western part of FOREST AND STREAM.

## Memoriam.

On Tuesday morning, Dec. 5, Mr. Vilroy Q. Paxton, since 1889 in the employ of Mr. E. S. Rice, general agent of the DuPont powder, this city, died after a brief illness. Mr. Paxton was, during the late war, a sergeant and first lieutenant in the 15th Infantry of Illinois. Since the war he was for twenty years in the service of the Adams and American express companies, later going in with Mr. Rice. In all capacities he was faithful, cheerful and efficient. He was a sportsman of the truest sort and leaves many friends.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## Stocking Methods.

MILFORD, Conn., Dec. 7.—There have been scarcely a half-dozen quail killed in this neighborhood since the opening on Oct. 1. This is in marked contrast with the experience of former years, and the better class of hunters have determined to take some steps to remedy the evil. It is proposed to begin by attempting to restock by buying West Virginia or Tennessee birds and in the late winter pairing them off as far as practicable in separate coops or inclosures and then turn out in March. An unique plan was tried last winter by a Long Island shooting club and resulted very successfully. It consisted in fixing a number of empty barrels with long axis pointing east and west about the stubble near cover. The open end is covered with large mesh wire netting, allowing the quail entrance and egress, but keeping the larger vermin out. By baiting up to these barrels the quail became used to them and in cold weather and snow use them for shelter. I am informed that during the very severe weather of last winter the superintendent of this club found a flock of quail in almost every barrel. The Hammonasset Club, in eastern Connecticut, have ordered this plan to be tried during the coming season in order to preserve if possible the large number of birds which will be left over. This club has stocked for two years past and as a consequence there are many birds there settled for the winter. Almost every patch of "died down" buckwheat within a mile or two of the club contains a large flock.

INCOG.

Game Near Asheville.

ASHEVILLE, N. C., Dec. 1.—The hunting season in Asheville has opened in great shape, and those who have been in the field say that quail are plentiful. They also report a large flight of woodcock, and in the lowlands just south of Asheville, on the French Broad River, woodcock and snipe shooting has already commenced. The largest individual bag yet made in one day was sixty-five birds by a well-known hunter here. Last week a party was organized for a deer hunt, in which the week was consumed. The party went out into the Smoky Mountain range within sight of Asheville. The result of the week's hunting was four bucks and three does. They had very little trouble in finding the deer, and besides this rather large bag, members of the party killed in all twenty-six wild turkeys, one wild hog and numerous pheasants and quail. The Battery Park Hotel has become headquarters for a lot of sportsmen and the Hunt Club is the feature of the day at present in Asheville. The section immediately surrounding Asheville is without doubt the best hunting section in North Carolina. Almost any sort of game can be found easily, and this is accounted for by the fact that nearly all of the land around Asheville is posted and the shooting privileges are in possession of some members of the Hunt Club. There is no difficulty for the visitors to secure shooting privileges.

The game preserve which is being completed by Mr. Geo. W. Vanderbilt, in connection with his magnificent mansion, will be the finest game preserve in the world. It comprises about 60,000 acres of magnificent forest and good vantage ground for game. It is said that he will import almost every kind of game that can flourish in this climate, and it is expected that within the next two or three years the extensive preserve will be completed. The preserve, of course, is within sight of Asheville, and will comprise a large portion of the Mt. Pisgah range of mountains.

Illinois Game.

NEPONSET, Ill., Dec. 3.—The game season has practically closed in this section of the State. For some unknown cause prairie chicken and quail, and even the cotton tail rabbit have been scarce. Owing to the scarcity of game, trap-shooting has been carried on to more than the usual extent. But to me the sport at the trap falls far short of a day in the stubble or in the marsh or the forest. Regardless of the favorable spring and summer, there was a great shortage in the prairie chicken crop. A bag of half a dozen birds for a man with his dog would have been considered an exceedingly good day's shoot. The quail season closed Nov. 30 with but little game bagged. We have as good a waterfowl marsh as can be found in this part of the State, but owing to the lack of fall rains haven't had the water to make shooting as good as usual. Thousands of ducks find their way into Chicago markets from the Winnebago and St. Peter marshes annually.

I have a letter from George S. Wells, an old friend of mine, of Lewiston, Mon., who, in company with another, had just returned from a deer hunting trip among the foot-hills of the Rockies. He says that heavy snows rendered it impossible for them to procure feed for their saddle horses and pack animals, and owing to this fact their trip was greatly shortened. But Wells did not return with empty pack saddles; that is not his nature. He will stay on the trail as long as any man I ever knew. On this trip Wells and his companion brought back for the result of a seven-day trip the carcasses of eight black tail deer, besides an abundance of small game. Mr. Wells reports a goodly quantity of both large and small game throughout the country they traversed. R. E. M.

Back from the Maine Woods.

DR. GEORGE MCALDER and friends have returned from their winter hunting trip. On their way from the headwaters of the Dead River to their camp in the Moose River Valley, which is only a blazed trail through the wilderness, two miles of which is along the summit of the boundary mountains, they encountered the fresh footprints of an enormous bear, which measured 7 by 8 in. It was decided to go in pursuit the next morning, but 6 in. of snow fell during the night and destroyed all chance of success, so this was abandoned. But what spoiled the bear hunt was just what was needed for still-hunting, and so the party turned its attention to other game. They saw forty-four deer while in camp and killed two does, four bucks and a very large bull caribou. They made several efforts to locate moose in the many mountain gorges and notches and over into Kibby Valley, but the trail picked up and followed one day would be entirely obliterated the next by the heavy snowfall that occurred every day while in camp, and so they were unable to get a shot. They speak in terms of highest praise of their cook, Herb Heal, and the extensive and elaborate menu prepared for their Thanksgiving dinner. When they left there was a depth of 15 in. of snow on a level, and they describe the forest in its heavy mantle of snow as a wealth of beauty and loveliness, and the glistening of the mountain tops in the rising and setting sun a marvel of richness and splendor worth making the journey to see.—*Worcester (Mass.) Spy.*

Deer in Connecticut.

WEST WINSTED, Conn., Dec. 4.—Thinking that it might interest you to know that we still have deer in Connecticut, I inclose slip taken from the *Winsted Citizen*, Nov. 29: "The first deer seen in this locality in years was seen between Winsted and New Hartford in the town of Barkhamsted this morning. A number of farmers and railroad hands witnessed the rare object, as it disappeared in the woods. Shortly after 9 o'clock this morning near the old dam of Barkhamsted, bordered by the highway and Philadelphia, Reading & New England tracks on one side and woods on the opposite side, the deer was discovered near the old wrecked shanty situated near the dam, by farm hands. Section Boss Heaney of Winsted was a witness and says the deer was a good sized one. The farmers immediately gave chase, but the deer was too fleet footed and escaped by taking to the woods. W. B. P.

[Connecticut farmers would do just as well not immediately to give chase, for the law protects deer in that State for ten years to come.]

Genesee Valley.

ROCHESTER, N. Y., Dec. 5.—The annual meeting of the Genesee Valley Fish and Game Protective and Propagating Association occurs on the evening of Jan. 10, at Rochester. F. J. AMSDEN.

MODERN SPORTING GUNPOWDERS

In the Light of the Public Powder and Primer Tests Carried out at Chicago and Carney's Point, New Jersey.

BY ARMIN TENNER,  
Expert in Gunpowder, Guns and Ammunition.

[Continued from page 438.]

With reference to the figures quoted in Table G attention must be called to the fact that the DuPont, the Walsrode leaf and Schultze powders (Pompton) were fired in the several shells while the weather was clear and comparatively dry, and that rain set in at the time when the ignition test had reached the Schultze powder, whereby the humidity in the air was considerably increased, the effect of which is noticeable with this and the other powders, which all show a decrease in bursting strain and velocities as compared with the corresponding figures obtained under normal conditions. The velocities dropped, even with the No. 3 primer, frequently below the limit representing a sufficient killing force, considering that a velocity below 750 can no longer be regarded an equivalent for a satisfactory penetration.

The effect of the moisture as here illustrated is very instructive for the gunner. By examining these figures, he will find the explanation for the question, why occasionally, in rainy weather, the birds appear to be more tough than in dry weather? Why he will not succeed in bringing them down in the usual style? It is because the hair of an animal or the feathers of a bird are wet that the pellets do not seem to do as effective work, the gunner is told. Not a bit of it. The wet hair or feathers are not responsible for such a phenomenon. It is the powder, as a rule, which, owing to its susceptibility to moisture, fails to develop a sufficient penetrative power.

It is claimed for the gun cotton powders that they are not susceptible to the influence of moisture, or at least in a less degree than other powders. To ascertain how far such a claim is justified, it was concluded, after the effect of moisture had been felt even with the E. C. powder, to settle this question at this point of the experiments. Consequently a number of shells were loaded with the standard charges of DuPont's and the two Walsrode smokeless powders and fired, and this experiment proved, as will be seen by the figures quoted, that indeed the gun cotton powders are very little affected by an ordinary degree of moisture in the air.

Resuming the theme at issue, it is shown by the figures that the best results for the DuPont's Smokeless powder were obtained with the Eley and Smokeless shell, which gave about the same values, and, if we take the bursting strain in consideration, that the Smokeless shell takes the first place. The Winchester Rival shell produced quite sufficient velocities, with comparative moderate bursting strains, but occasionally hang-fires were noticeable, which, by the way, were experienced with all common primers, and even in some cases with the Winchester No. 3 primer, a phenomenon explained by the result of the ignition test as shown in Table L. Even the Nitro Club shell did not quite hold its own in all cases, although the velocities obtained with this primer may still be regarded as satisfactory. The U. S. Rapid shell proved to be somewhat weak for the DuPont's Smokeless which, like all gun cotton powders, requires a strong primer. The Walsrode powder can only be used in special shells or exploded with a No. 3 primer such as that of the Smokeless shell, unless the ordinary shells are primed with black powder. The most difficult powder to ignite is the leaf powder, but even this was regularly and satisfactorily exploded by the Smokeless shell.

The primer test with Schultze powder—Pompton—proves that this powder ignites comparatively easy, a quality it possesses in common with the regular Schultze powder. The velocities obtained with the Eley, Smokeless, Nitro Club, Rival, Rival No. 3 and Kynoch shells are all satisfactory, but those obtained with the other common shells are hardly of sufficient height.

When the Schultze powder was reached, a heavy rain set in, and on this account the velocities are throughout lower than they would have been if taken in dry weather. They reach the requisite figures only with the Smokeless, Eley, Nitro Club, Rival No. 3 and Rapid shells. The highest mean velocity was obtained with the Smokeless shell.

The velocities obtained with the E. C. powder likewise show plainly the effect of moisture, only those produced by the Eley and Smokeless shells are up to the standard; the Smokeless shell gave the best velocities of the two.

Toward evening of Oct. 27 a few experiments were made for determining the question to what extent the several powders react to moderately increased charges, and the result of this test is embodied in the foregoing table. The primer test was postponed till the following day.

Although the rain had ceased on the next day and all powders which were kept under roof and in a dry place over night were loaded fresh from the cans, the effect of the humidity prevailing on the previous day was still plainly noticeable, as this will be seen from the velocity figures contained in Table G.

S. S. powder developed throughout very low figures, which in no instance reached the requisite limit. The primer test with this powder proves that it can only be regularly exploded with No. 3 primer unless the common shells are primed with black powder.

American wood showed a similar behavior; it developed comparatively low velocities. By comparing the bursting strains of the several powders with one another it will be seen that the No. 3 primer, as a rule, produces a higher mean gas pressure than the common primers. This phenomenon corresponds closely with the conditions under which, with the two primers, the ignition and combustion of the powder charges take place. The stronger primer simply causes a quicker ignition and combustion of the powder, and thus by it the gases are more suddenly developed than with the common primer, which produces a slower ignition and combustion. The strain upon the gun barrel therefore is higher from the No. 3 primer than from the common primer.

This increase of strain to the gun, however, is by no means alarming, and is hardly important enough to

induce the gunner to prefer on this account the weaker primer. As long as the nitro powders retain their present properties in the way of the requirements for a reliable and thorough ignition, the No. 3 primer cannot well be dispensed with.

The last-named explanation might be construed that the No. 3 primer, as such, used in conjunction with a nitro powder, constitutes an element of danger. In fact, it is frequently asserted that the common shells primed with black powder were much more safe, for nitro powders, would be less liable to bulge or burst guns, than No. 3 primers.

This assertion, like many others made every day in the year by persons believing or even claiming to have gone deep into the study of the theory of shot shooting, whereas they have, as a rule, barely touched its surface, is, of course, not based on facts. But to shed some light also on this particular sphere, tests at Carney's Point were likewise made in this direction, and the result of these experiments is shown in Table I. It has been said before that the moisture test at Chicago has been a comparatively mild one. The powders were in this case subjected to the influence of 75 per cent. humidity only. The strange behavior of some of the powders at Carney's Point during rainy weather induced us to subject all powders to a second moisture test under strictly similar conditions.

All powders were put in open earthen dishes and placed in a cellar in which the humidity measured 85 per cent., and having no ventilation whatsoever. After having remained there 24 hours they were taken out, loaded in the usual manner, and fired.

The result of this interesting test is laid down in Table H.

Table H.  
Carney's Point, Oct. 28, 1893.  
MOISTURE TEST.

Schultze powder, 3drs., 1½oz. shot No. 7:		Velocity.

5,027.4 " " " 334 "	334 "	772.7 " " 234 "
5,071.4 " " " 345 "	345 "	" "

As will be seen from the figures quoted in Table H the majority of powders will not stand the influence of a moisture in the air of 85% under the conditions before mentioned, and that even the DuPont's smokeless and the E. C. powders, which are less hygroscopic than some of the others, after having absorbed 2 and 2½ moisture respectively, lose considerably in propelling energy.

It was found that the several powders subjected to the influence of moisture had absorbed the latter in the following proportions:

DuPont's smokeless pdr..2%	Schultze powder.....3½%
Walsrode leaf powder...2%	Schultze (Pom.) powder.3.4%
Walsrode grain powder..2½%	S. S. powder.....4%
DuPont's black powder..2%	American wood powder.1%
E. C. powder, 2½%	

A portion of the Walsrode leaf powder was placed in an oven and there tried under a temperature of 205° F. =80° C., and then tested for bursting strain and velocity.

Walsrode leaf powder, 31grs., 1½oz. shot No. 7:		Velocity.
<i>Bursting strain.</i>		785.10 ft. equal 238 meters.
8,070.3 lbs. equal 549 atm.	549 "	858.3 " " 260 "

4,586.4 " " " 312 "	312 "	" "
Walsrode powder in grains, 20grs., 1½oz. shot No. 7, in special shells:		799.0 ft. equal 242 meters.
6,615.0 lbs. equal 450 atm.	450 "	" "
The same load in Climax shells with black powder priming:		783.6 ft. equal 237 meters.
4,497.0 lbs. equal 310 atm.	310 "	766.0 " " 232 "
7,408.8 " " " 504 "	504 "	" "
Schultze powder, 3drs., 1½oz. shot No. 7, in Smokeless shells:		825.5 ft. equal 250 meters.
7,893.0 lbs. equal 537 atm.	537 "	" "
The same load in Climax shells with black powder priming:		below 650 ft.
4,586.4 lbs. equal 312 atm.	312 "	below 650 "
4,586.4 " " " 312 "	" "	below 650 "
American wood powder, 3drs., 1½oz. shot No. 7, in Smokeless shells:		752.10 ft. equal 228 meters.
4,806.9 lbs. equal 327 atm.	327 "	" "
The same load in Climax shells with black powder priming:		below 650 ft.
4,851.0 lbs. equal 330 atm.	330 "	below 650 "
4,718.7 " " " 311 "	311 "	" "

S. S. powder, 3drs., 1½oz. shot No. 7, in Smokeless shells: <i>Bursting strain.</i>	Velocity.
7,895 ft. lbs. equal 531 atm.	818.10 ft. equal 248 meters.
The same load in Climax shells with black powder priming:	
6,366 ft. lbs. equal 429 atm.	789.2 ft. equal 239 meters.
7,011.9 " " 477 "	802.4 " " 243 "

The foregoing table shows that only four of the powders tested will stand black powder priming, and that the bursting strains of both the No. 3 primer and the common shell, primed with black powder, are about the same, whereas the velocities of the No. 3 primer are superior to those of the common primer.

The DuPont's S. S. and both Walsrode powders developed velocities sufficiently high to warrant a good killing power; they can therefore, if necessary, be used for live bird as well as for artificial target shooting, but the velocities obtained with both Schultze, E. C. and American wood powders only justify the use of these powders in common shells primed with black powder for artificial targets. To use them also for live birds would be equivalent with cruelty to animals.

All powders were again tested at Carney's Point for pattern. The gun and barrel used was a 12-bore choke. Distance between muzzle of gun and target 40yds. The shot charges—366 pellets No. 7, equal to 1½oz.—were loaded with the shot counter or trowel. All shots fired from muzzle rest. The figures quoted in the following table represent the number of pellets counted in each case within the 30in. select circle.

Table K.—Pattern Test.

3drs. E. C. powder, 1½oz. shot No. 7, in Smokeless shells: 187 243 214 217 192—1083 Average pellets 216; var. 57; cor. vel. 816ft.	
3drs. Schultze powder (Pompton), 1½oz. shot No. 7, in Smokeless shells: 176 111 175 205 207—874 Average pellets 175; var. 96; cor. vel. 865ft.	
3drs. Schultze powder, 1½oz. shot No. 7, in Smokeless shells: 203 229 187 211 200—1039 Average pellets 206; var. 42; cor. vel. 795ft.	
3drs. Walsrode leaf powder, 1½oz. shot No. 7, in Vienna shells: 169 159 176 197 171—872 Average pellets 174; var. 58; cor. vel. 871ft	
3drs. same powder, same shot and shells: 178 172 166 171 200—890 Average pellets 178; var. 34; cor. vel. 842ft.	
3drs. Walsrode powder, gran., 1½oz. shot No. 7, in Bismell shells: 170 188 172 194 183—907 Average pellets 181; var. 24; cor. vel. 812ft.	
3drs. American wood powder, 1½oz. shot No. 7, in Smokeless shells: 261 248 247 251 109—1119 Average pellets 221; var. 152; cor. vel. 747ft.	
3drs. S. S. powder, 1½oz. shot No. 7, in Smokeless shells: 169 158 189 221 206 953 Average pellets 189; var. 164; cor. vel. 734ft.	
3drs. DuPont's smokeless powder, 1½oz. shot No. 7, in Smokeless shells: 214 190 171 192 177—944 Average pellets 189; var. 43; cor. vel. 838ft.	

In view of the fact that low velocities generally produce highly satisfactory pattern, in judging and comparing the pattern the corresponding velocities must always be taken into consideration. Applying this rule to the results enumerated in Table K, E. C., DuPont's smokeless, Walsrode leaf powder (3drs.) and Schultze (Pompton) powder make, with about even values, the best showing. Schultze powder did well in point of pattern, but the velocities are somewhat low and the patterns are irregular. It takes, therefore, together with Walsrode grain powder, the second place. S. S. and American wood powder are out of competition, since the velocities of both are below the requisite limit. The next table shows the time required by the different powders between the moment of the pulling of the trigger and the moment the shot quits the muzzle of the gun, or in other words, how much quicker the ignition and combustion of the powder charge is brought about with the No. 3 primer than with the common primer.

Although these differences only move in fractions of a second, they are nevertheless of importance in shooting at fast moving game, especially if we bear in mind that the pellets of a shot charge never reach their destination simultaneously. The chances of hitting a moving object are influenced by the slower or quicker burning of the powder irrespective of the primer and by the irregular arrival of the pellets. If in addition to these two last named factors, the ignition and combustion of the powder is delayed on account of a weak primer, then, indeed, the gunner will find himself handicapped to a great extent, if he leads for instance, a quarring bird in the usual manner. For this reason, the strong primer causing a quick, sure and thorough transformation of the powder into life energy, is preferable to the common primer for the use of nitro powders.

Table L.—Primer Test.

The figures opposite the different makes of shells represent the time which elapsed in every case between pulling the trigger and the moment the shot charge left the muzzle of the gun:

Judging and comparing the result of the test as given in Table L, we must consider all points at issue through a ballistic glass and examine at the same time the figures of the powder test in Chicago and at Carney's Point, permitting a conclusion as regards the nature and qualities of the strong primer. If we do so, we come to the conclusion that the strong primer is decidedly preferable to the common primer for the use of nitro powders. We also learn that the Smokeless shell takes the first place among all the American shells and is unsurpassed by any imported shell. Both the U. S. Rapid and Winchester Rival No. 3 show meritorious points, and prove that but very little is required to make them suitable for all nitro powders; they are quite adapted for some nitro powders even in their present state.

## Corrections.

The figures pertaining to the test for bursting strain and quoted in Table G in our last issue, show errors in several instances. The table as corrected and revised is here repeated:

## Bursting strain test with slightly increased powder charges.

3½drs. DuPont smokeless powder, 1½oz. shot No. 7: 12,936.0 lbs. equal 880 atm.	
3½drs. Walsrode leaf powder, 1½oz. shot No. 7: 11,460.0 lbs. equal 780 atm.	
3½drs. Walsrode powder, granulated 1½oz. shot No. 7: 11,745.3 lbs. equal 799 atm.	
3½drs. Schultze powder, 1½oz. shot No. 7: 7,982.1 lbs. equal 543 atm.	
3½drs. Schultze powder (Pompton), 1½oz. shot No. 7: 11,510.0 lbs. equal 783 atm.	
3½drs. American wood powder, 1½oz. shot No. 7: 7,188.3 lbs. equal 489 atm.	
3½drs. S. S. powder, 1½oz. shot No. 7: 11,818.8 lbs. equal 804 atm.	
3½drs. E. C. powder, 1½oz. shot No. 7: 8,379.0 lbs. equal 570 atm.	
3½drs. Walsrode leaf powder in Smokeless shells, 1½oz. shot No. 7: 11,107.2 lbs. equal 760 atm.	

## Michigan Rabbits and Ferrets.

IRVING, Mich., Dec. 4.—*Editor Forest and Stream:* Is there a law in this State (Michigan) forbidding the use of ferrets in hunting rabbits? Some say there is, some not. I looked out of my sitting room window Sunday and saw three men returning from a rabbit hunt. The first carried a box for the ferret, the other two had a stick, on which was a goodly lot of rabbits. With game growing scarce and the killing element increasing, how long will it be before we will have only a mark to shoot at? Yet the village and town stores are well stocked with rabbits. If there is no law, then if some of our Michigan readers will assist we will endeavor to have one.

J. C. Y.

[There is no law whatever on rabbits in Michigan.]

## Kansas Quail for Pennsylvania.

A MEETING was held recently in Reading to devise measures for stocking the covers of Pennsylvania with quail. A committee of 15 was appointed to solicit subscriptions for the purpose. The members chosen were: William Seitzinger, Peter Texter, C. W. Potteiger, J. K. Getz, James Smeck, Frank Swartz, Fred. Gerhart, A. C. Buckwalter, all of Reading; W. D. Filbert, Womelsdorf; Thomas Bucher, Boyertown; Oscar Melot, Fleetwood; James Gougler, Leesport; G. M. Rick, Bethel; L. H. Focht, Birdsboro. The following committee was appointed to purchase birds, receive them when shipped and provide a place for keeping them until spring: A. C. Buckwalter, Frank Yost, George Ritter, Fred. Curtis and George Scheele.

The birds will be distributed *pro rata* to subscribers. The quail will probably be secured from Chas. Payne of Wichita, Kans., who has advised the Pennsylvania importers that he can supply any quantity up to 1,000 doz., at \$4 per dozen.

Herbert Green's motion that it be the sense of the meeting to refrain from further shooting in the county during the remainder of the season was overwhelmingly defeated. Those present organized themselves as the Berks County Gunning and Fishing Protective Association.

A correspondent writes: "It seems to me that there must be something rotten when Charles Payne, of Wichita, Kansas, can offer to furnish any number of birds desired, from one pair to one thousand dozen quail. I am all for the protection and the propagation of quail and other game birds, but I do not believe in helping to deplete any portion of the United States. If Charles Payne's offer was not so astoundingly unlimited I would not have said a word. Will you cast some light on this matter? My opinion is that it would be far better if the members present at the Reading meeting had voted for Mr. Herbert Green's motion instead of knocking it out. The example set by the Pittsburgh Gun Club in unanimously passing a resolution not to kill any more quail in the State during the present season is to be highly commended, and could be followed by all other similar organization in Pennsylvania with advantage to our future prospects."

## Red Deer for America.

Mr. W. H. Root, the importer, exporter and dealer in living wild animals, of Laramie, Wyo., tells us that he has just sold to Mr. Austin Corbin seventeen European red deer—fifteen females and two males. They will be shipped in April or May by the White Star Line from Liverpool to New York; and are destined for Mr. Corbin's Blue Island Park in New Hampshire. There are already within the 27,000 acre inclosure, 400 elk, 300 deer, with 40 buffalo and about as many moose.

## Yellowstone Park Game.

A PARTY recently out from Fort Yellowstone in the National Park saw about 40 buffalo near Twin Buttes; another party saw 22 in the Hayden Valley. The last party also saw a herd of about 1,000 elk in Hayden Valley, one of which had a rope on him and was very tame. Another big band of elk estimated at 500 was recently seen back of Electric Peak.

## Woodland Caribou in Montana.

JENNINGS, Montana, Nov. 23.—*Editor Forest and Stream:* Please send me the FOREST AND STREAM of Oct. 14 containing portrait of the moose. Have just got Nov. 11 issue with fine portrait of woodland caribou. Quite a number of the latter are yet to be found in this section of country.

L. O. M.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## Sea and River Fishing.

## HOW TO CATCH PICKEREL.

IT is well known that the pickerel has neither the stubborn fighting power of the black bass nor the lightning activity and gameness of the trout, but he is a splendid fish nevertheless. Few amateur, yes, for that matter, few professional fishermen ever discover the truly successful way to land the best fish in any waters. Study of the habits, food and lurking places of any fish is necessary for a painstaking angler who would make the most of his opportunity.

Bait-fishing has long been favored by conservative sportsmen and backwoodsman. They have always fished in that way and shun improvements and resent innovations. You cannot call the attention of such a man to the fact that fully seventy per cent. of the fish that strike get off; that many others shyly steal the bait and leave him with an empty hook without once tautening the line; that live bait are a nuisance, hard to procure and very short-lived. It is no use. He prefers to broil in the sun and feed ungrateful but sophisticated pickerel which lie under the lily-pads and dine at his expense.

Trotting is par excellence the real way to fish. Neither skittering with a spoon or bit of dead fish, nor still-fishing, nor bait-casting can be compared with it. It is restful, exciting and profitable to a high degree. But if you troll you must have some lure. Here again the conservative man doggedly comes to the front with a piece of perch strung on a gang of hooks that trail out behind like so many ice tongs. He will not believe that the pickerel see through his little game, and that though he may deceive a few small ones, their older brothers will winkingly scorn his wiled carion.

The over-progressive man on the other hand frequents the shops ever on the lookout for some new patent bait. Nothing is too impractical, too gaudy, too ridiculous for him to try. Like the novice, he procures the shiny silver and vermilion affairs, the typical spoon hooks, highly recommended by dealers, and named with considerable accuracy by a veteran lakesman of my acquaintance "fish alarms."

Of course any one who has ever used a trolling spoon will never return to bait and will grow to love the sim

plicity and neatness of this tackle. But its failure to kill will surely disappoint many, many times, when wind and weather are most propitious and the locality known to be a good one. I long puzzled over this, and tried all manner of changes, but the nickel and red combination remained unsuccessful. In some waters it was better than others, however, and I wondered why.

A few seasons ago I fell in with an old angler, a hermit, who had devoted much time to fishing, and particularly to fishing for pickerel. His cabin was on the shore of a small lake, well shut in by high wooded banks, and wild enough to be but little frequented. It was at his invitation that I bunked in the cabin during my stay, and on the first night he told me more of pickerel ways and pickerel lures than I had ever imagined a human being could learn.

In the first place, he said, a man must realize that the fish most numerous in a pond will, as a rule, be food for the pickerel. According to what those are the lure must vary in different locality. He always used a spoon, he said, but made it himself, and the line and sinkers as well, though this latter for a casual fisherman would be impractical. The chief trouble with the market spoons was their undeviating sameness in coloring and shape, and their unscientific construction. Long research had taught him much as to the effectiveness and results of different tones and tints in spoons. On a lake where yellow perch breed plentifully they are apt to kill off the other young fry and baitfish, and their own young in consequence become the prey of the pickerel. In such water an all copper spoon will be always attractive and will be reliable if rightly made. Sunfish in other lakes are the only food and here solid brass spoons are the only kind to use. In still other localities the common "shiners" swarm, and because of their feebleness and tender flesh are highly prized by the pickerel. Here you will use a spoon of German silver—with no red anywhere about it. The beauty of these devices is at once seen. The reddish metallic luster of copper suggests the ruddy fins and scales of the perch as no red paint can, and it is a steady flash not intermittent, red and white like the painted traps. The brass takes off well the lighter gold of the roach or sunfish, and the silver is a perfect substitute for the glittering shiner.

All of these spoons were small, not over an inch and a quarter in length by three-quarters wide, and of an even regular shield-like shape. The hooks, a grapple of

them soldered together, must hang on a short shank so that the end of the spoon just plays over the points of the hooks without catching. This remedies a striking defect in the store spoons when the distance between the spoon and the barbs invariably allows cross-coming fish to bite and fling off before being struck. Then, too, the even shape makes the spinning perfectly regular, the effect being that of a shining, but not of a wobbling object, as the other kidney-shaped ones appear. The hanging on a spindle must give a perfectly free swing and the revolutions will be fully twice as quick as those of the old-fashioned kind.

The line should be dark-colored, grayish if possible, heavy as curtain cord and braided. You will see many out trolling with 200ft. of it trailing behind the boat and even then their spoon has not sunken well. These human rope walks do not realize the miles of cord they handle, pulling in every time, grass clogs the spoon or it fowls. And these long strungout clumsy manufactured spoons will catch in the pickerel-grass twice more than old "Tom's" do; let your line be of only 40ft. length, 35 is enough, and on it place three heavy buckshot for sinkers. One 6ft. from the spoon, another 14 or 15ft. from that, in the middle and the third 6ft. from the boat end. Cut on the bank a short pole of a thumb's thickness, not over 3 or 3½ ft. long, and fasten your line well to one end. Select light buoyant wood always, and then when you suddenly strike a bad snag, you can at once let it go overboard and your pole will float the line till you can back up and pull loose. Rigged thus your spoon will play about 4ft. deep and then the pickerel bite. Bigger fish lie deeper. For them use twice as heavy weight and play about 10ft. down. Such fish seldom frequent the shallows even to feed and will not rise for to bite.

Never strike with the pole; just hold it motionless near the surface and braced firmly. Let the rowing be gentle, even and slow, and make no motions in the boat. Every movement there is plainly shown by the spoon in its vibrations and tends to alarm the fish. When one strikes, the spring of the pole will hook him firmly and you will fling the short pole into the bottom of the boat and land your fish. No kinks nor snarls to bother you, for your line is short, and no losing a valuable spoon every time you hook a sunken log. On the lake where old Tom lived, we used only the copper, for it was a yellow perch ground and the spoons I noticed for another thing were, before use, polished, even the hooks themselves brightened and scoured. Our catches there and the unusual luck that has followed me since with my home-made tackle, convinces me that if others will try these ideas they will enjoy some rare sport on the lakes and ponds this season.

HARRY PRESCOTT BEACH.

#### The Little Star Gazer.

Editor Forest and Stream:

In your issue of Dec. 9 Mr. James Hyatt notes the fact that in my "Adirondack Fishes," published as an extract from the Report of the Adirondack Survey in 1883, I insert the *Uranidea* on the authority of Dr. C. Hart Merriam. I considered the authority sufficient, as Dr. Merriam had more experience in that region than I, but a year or so later Mr. A. R. Fuller sent me a pint jar of them taken from a stream emptying into Meacham Lake, near his hotel. There are nine species of this little fish, according to Jordan (Manual of the Vertebrates), ranging from Canada to Georgia, and will, no doubt, be found in most small, cool, stony brooks. They are plenty in the streams flowing into the Genesee River, south of Rochester, but I have not met them on Long Island.

FRED MATHER.

COLD SPRING HARBOR, N. Y.

#### THE ONONDAGA ANGLERS' YEAR.

THE annual report of the Anglers' Association of Onondaga County was presented to the Supervisors this afternoon as follows:

To the Honorable Board of Supervisors of Onondaga County:

"We have the honor to present this annual report of the Anglers' Association of Onondaga County:

"The active work of Game Protector Jackson this year did not commence until March 28. It was not deemed necessary to incur the expense during the winter months, but since the Legislature, at its last session, amended the game laws (sect. 136), allowing the use of fyke nets of not less than 1½ in. bars, in Seneca River between the first day of October and the first day of May to catch bullheads, catfish, sunfish, suckers and eels, it will be necessary during the time which this legalized netting may be allowed, to keep a protector on duty most of the time during the winter months, so that no fish are caught and killed, other than those named; also that illegal fyke nets of less than 1½ in. bar are not used in the Seneca River. Some concerted action should be taken, to the end that this amendment to the game laws shall be repealed, to the next session of the Legislature. It is impossible to prevent illegal fishing and the killing of game fish if nets are allowed to be used at any time.

"The following amount of fish fry, obtained from the State hatcheries have been put in the streams and lakes of the county during the year: 100,000 pike in Seneca River, 100,000 pike in Tully Lake, 100,000 muskallonge in Tully Lake, 50,000 muskallonge in Oneida Lake, 50,000 muskallonge in Onondaga Lake, 25,000 California trout in Onondaga Creek, 50,000 muskallonge in Otisco Lake, 8 cans black bass in Tully Lake 6 to 12 in. long. This was done under the action of the association at a cost of \$70.99 for the distribution only, which was paid from the county appropriation.

"The total amount paid this year to Protector Jackson and assistants for salaries and expenses to Dec. 1, 1893, is \$756.87. Of this amount \$433.81 was paid from the funds of the association, and \$323.06 was paid from the amount of \$500 appropriated by your honorable board for the protection of fish and game pursuant to Sec. 274, Chap. 81 of the General Laws approved May 5, 1892, subject to expenditure by the District Attorney in his discretion. The unexpended balance of this appropriation is \$105.95.

"It has been our aim to administer the funds of the association and of the county in such manner as to obtain the greatest possible efficiency, with the least possible outlay of money, to protect the public waters of this county from the depredators who, without such protection, would soon deplete the waters of its food fish which add so greatly to the economy, comfort and enjoyment of the people.

"The importance of increasing the quantity and cheapening the price of fish food increases as the years go by. Fish protection is for the benefit of the masses, not the few, and it would seem to be a duty which official representatives of the people owe to its people to provide them with an abundance of fish at the smallest cost, whether obtained in the markets or as the proper result of days spent in life-giving recreation.

"The thanks of the people of this county are extended to your honorable Board for the assistance you have given the cause of protecting the public waters.

"This association has a membership of 305, of which number 61 joined the present year. All of the revenues are strictly applied to the protection and propagation of food fish in the waters of Onondaga county.

"The efficiency of the work done during the year cannot be estimated solely by the number of nets, etc., captured, or of parties arrested and convicted for illegal fishing. The fact that a game protector is constantly on patrol of the waters deters many parties from illegal fishing.

"We respectfully petition your honorable Board to appropriate the same sum of money as last year, promising that our efforts shall be devoted to an economical administration of the same.

"Annexed hereto is the detailed report of the work done by the Protector for the year ending Dec. 1, 1893.

D. H. BRUCE, President.

GEORGE B. WOOD, }  
AMOS PADGHAM, } Executive Committee.  
M. J. FRENCH, }  
WILLIAM EVERSON, }

SYRACUSE, Dec. 5.

Addressing the Board after the reading of the report, Gen. Bruce said that the great object in view was the cheapening of fish food by increasing the possibilities of supply. The Anglers' Association had only one paid officer; the reward of its members generally was in the feeling of having done something for the public good. As a result of the appropriation made last year, and in recognition of the enterprise shown, the Fish Commissioners of the State, the General was authorized to say, had determined to establish a hatchery somewhere on the northern shore of Oneida Lake, and the consequent advantages could not be too highly estimated. What had already been done had made the lake an especially good fishing ground this year, more fish having been taken from it with hook and line than in any five years previous. Gen. Bruce concluded with an earnest appeal for the renewal of the appropriation.

#### The Breaking Strain of Gut.

We are often asked by tackle dealers, and have also had several letters from anglers, asking us to give them the breaking strain of gut of different thicknesses. The names given below are well known in the trade. The gut tested was perfectly dry, and of course would stand a much greater pull if soaked in water for a short time.

SALMON GUT.		LAKE AND TROUT GUT.	
Sizes.....	$\frac{1}{2}$ , 2, 3, 4	Fine. Refine. 1x Drawn. 3x Drawn.	
Strain.....	15lbs. 12lbs. 10lbs. 9lbs.	5lbs. 4lbs. 3lbs. 1lb.	
Padron. Regular. Sibos.			

S. ALLCOCK & CO.

#### Summer Homes.

A BEAUTIFULLY illustrated book; list of over 3,000 summer hotels and boarding houses in Catskill Mountains and central New York. Send six cents in stamps to H. B. Jague, Gen'l Eastern Passenger Agent, West Shore R. R., 363 Broadway, New York, or free upon application.—Adv.

### Fishculture.

#### Note on Spawning Conditions of Sturgeon.

By BASHFORD DEAN, Columbia College, New York.

Of the breeding habits of the sturgeon (*Acipenser sturio*) little has been recorded either by practical pisciculturists or by students of embryology. In the following preliminary paper a few notes are given as to the movements of the fish during spawning and as to the natural conditions under which the eggs are deposited and hatched.

Along the eastern coast of the United States a rich sturgeon fishery has been becoming very generally depleted. And in view mainly of cultural needs an experimental study—during the spring of 1893—was carried on by the writer in behalf of the Governmental Commission of Fisheries. The station chosen for the experiments was in the region of the mouth of the Delaware at Delaware City, a point especially favorable, as the work of Prof. Ryder\* in 1888 had demonstrated.

During the writer's visit about 50 fish were brought in daily to the wharves of the fishermen, and during the spawning time there was abundant material for cultural studies.

As to the mode of occurrence in this locality of the adult fish a few notes might be given. They are usually taken as they pass up the river in "schools." These "schools" or "runs," as the gill-netters state, comprise as many as 30 or 40 individuals; they occur at brief intervals, are usual at the beginning of the tides and as frequent by day as by night. During the season of well-marked "runs" the earlier fish are of unripe ovaries ("cow fish"), valuable, therefore, in the making of *caviare*; these, accordingly, might well be expected to pass further up the river to spawn. From a few days to a fortnight later occur spawning fishes ("runners"), a "run" that is surprisingly brief, often at a particular point not longer than one or two days. A great number of spawning fish is then usually to be taken. The fishermen maintain that these spawning days occur regularly each year and at nearly corresponding times; and it is of interest to record that the writer, three months before his visit, was told by Mr. Reuben Anderson of Delaware City the exact day when ripe fish were to be taken. Thereafter, although "runners" are brought in intermittently, it has proven most difficult to secure at the same time the spawning males and females. The later fishes are in the majority of cases spent ("slunkers"). The breeding habits of the sturgeon have been observed in a locality a few miles below Delaware City. Here, when formerly very abundant, the fish were known to come into shallows noted for swift-running current and clean, shelly bottom, and would be seen depositing their eggs. This would occur, according to fishermen, about the beginning of May and continue for three or four days. The spawning fish is said to have been attended by several "bucks" (males) and frequently pressed on its side as the eggs were extruded. This testimony appears trustworthy, as the males are clearly to be distinguished by their smaller size; and the fishes' white abdomen might readily be conspicuous. This habit is the more probable since spent fishes, in every case as far as the writer is aware, are abraded, often severely scratched, on the ventral side. On these grounds the eggs were repeatedly found, sometimes glued to submerged twigs, often to stones and shells, in patches, sometimes string-like, but never in masses. Recently, however, no spawning in shallows appears to have been observed. The eggs that are occasionally taken are attached in stringy patches to sunken nets or water-soaked brush fragments from the region of the river's channel. The channel region seems accordingly best adapted for trials in artificial propagation, and this influence the results of the writer seem strongly to emphasize. In one experiment, for example, where a half dozen hatching boxes containing eggs similarly conditioned were arrayed from river margin near the mark of low water out to near the channel, the eggs of marginal waters speedily died, while those of deep water in large part 90-95% were safely hatched.

The arrangement of the eggs in their layers, moreover, was found a condition necessary for aeration. This mode unfortunately is not easily attained. The eggs soon after fertilization become viscid, and unless speedy cure be given, will shortly glue together in a dense jelly-like mass. Of this the inner and poorly aerated eggs speedily die, and their disintegration appears to cause the destruction of all. It is clear, therefore, that in the disposition of the adhesive eggs upon the hatchery trays the greatest promptness is required. As a detail of this process the eggs were found to be most conveniently spread when under water; a mass of eggs placed upon the submerged tray a few minutes after fertilization is readily to be rolled out in a single layer, and may thus be held till attached (about twenty minutes later). In the experiments of the writer the most favorable material for tray bottom proved to be a coarse mosquito netting. On this a single layer of eggs was easily arranged, the meshes of the netting proving sufficiently large to allow eggs to enter and become favorably attached, but not large enough to allow the eggs to pass through; a well prepared tray bottom thus received on either side the best conditions for aeration. Floating hatching boxes with bottom and ends of fine metal gauze were found to give satisfactory results. Space was economized by making the box a deep one, placing the hatching trays almost vertically, allowing four or five to a box. If the trays be slightly inclined downward against the direction of the current they are naturally less apt to suffer from deposits of silt. Under natural conditions the hatching of eggs took place (water temperature 60° to 73° F.) between 92 and 100 hours.

\* Prof. John A. Ryder, U. S. F. C. Bulletin, 1888.

#### Spawning of Rainbow Trout.

COLD SPRING HARBOR, N. Y.—In issue of Dec. 9 this question is raised. Not only can Mr. H. Stewart, of North Carolina, cross the rainbow with the *fontinalis*, as far as the simultaneous spawning is concerned, but I could do it on Long Island if I wished. On Dec. 7 of the present year I took eggs from brook, brown and rainbow trout and could have crossed them if so desired. Outside of the knowledge that this can be done there seems to be no reason for bastardizing fish unless when there is a lack of males of the species which is spawning. Just how far hybrid fishes are fertile is not known, and it seems that there must be a barrier somewhere, as in the case of other animals. I have seen trout labeled "one-sixteenth" of one species, but confess to being skeptical about it. Such crossings would require more careful isolation than is possible in the State establishments in the outdoor ponds where screens of wire cloth is all that separates the ponds, and surely the eye could not detect the proportions of blood in such a fish.

That the rainbow trout has changed its habit of spawning when brought East is sure, and as all animals modify their habits in a changed climate or die out, this is not surprising.

FRED MATHER.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

RODSTONE (formerly Rodrigo)—P. T. Madison's black, white and tan dog (Antonio—Nelly Hope).

ACOLYTE—Dr. W. C. Duke's black, white and tan dog (Toledo Blade—Sue II.).

### Dogs for Private Shooting.

#### Editor Forest and Stream:

I mean the same class of dogs which have been most unfortunately and untruly referred to as "plug" dogs. The term was first applied by a distinguished field trial man in the heat of a personal controversy about individual dogs and would show, if accepted literally, a want of truth and candor which I feel sure that the originator is incapable of. The dog for private shooting is not only cannot be overvalued, but cannot be overrated; and it is only for his improvement that field trials are encouraged. The invidious distinction is a mistake. It would be as just to call a horse a "plug" because his trotting was under a 2.10 gait, though as a fact the useful and desirable road horse is the more desirable animal and it is entirely for his sake that the educated trotter is useful. Of course this line of statement is true of the breeding and running of the racehorse, and is its only reason or excuse. Entertaining these views as to the true and valuable shooting dog, I was very much interested in a statement in your last week's paper to the effect that the Eastern Field Trial Club contemplated offering a prize for private shooting dogs to be handled by their owners. It will be necessary of course to hem this stake in with restrictions to define the term "private shooting dogs" or whatever term may be adopted. It should exclude all dogs that have been ever run or entered in field trials, and also the employment of professional handlers. Of course I am not elaborating details, which must be the work of the club. I think the stake would be a very popular one.

There is now a feeling among owners of, say, one or two dogs, that they have no chance against large kennels, assisted by professional handlers, and judged by rules and standards unfitted for private shooting dogs. That the field trials show the capabilities of dogs as races do those of the horse, but that after all the desirable dog for use is still the dog our fathers shot over and for whose sake trials were instituted.

Of course the rules of judgment of merit should be changed for shooting dogs. Moderate but steady range, bird sense or knowledge of the ways and habits of the game, perfect breaking and obedience, and retrieving might well be substituted for the speed and wide ranging now justly required in our field trials, while the generous rivalry of the owner-sportsmen managing their own dogs will add very much to the pleasure of field trial meetings. Let us all indorse the scheme and make it the favorite stake. The field trial men I have seen are unanimous in its favor. It will conduce to good judgment in all the stakes and good fellowship. Let the club offer generous stakes, good cheer and welcome, and many pleasant times in the future are before us. NIL.

DEC. 4.

### American Spaniel Club Meeting.

A MEETING of the above club was held Nov. 24 at 63 Broadway, New York city. Present: Messrs. A. C. Wilmerding in the chair, E. M. Oldham, R. P. Keasbey, Albert E. Foster. Minutes of last meeting read and approved. Voted that the committees on trophy for World's Fair show and medals be discharged.

Moved and seconded that the communication from Mr. H. C. Glover be answered by the secretary to the effect that while the Spaniel Club is in accord with the proposition submitted by him, yet as they do not give dog shows, they hardly think they are in a position to sign the same.

Voted that the Bell cup be offered at the coming Saratoga show, provided one of the club's classification be adopted.

It was then voted that Mr. Foster having won the Field Spaniel cup the required number of times, it is now hereby officially awarded to him, and the secretary be ordered to return his bond for the same and this fact be duly published.

On motion the president appointed the following committee to obtain specials for the coming New York show: A. C. Wilmerding, R. P. Keasbey and A. E. Foster. Meeting adjourned.

Best all-round hound owned outside New England and New York, and hound showing most speed and endurance owned outside New England and New York, Sandy Spring (Md.) Hunt Club's Barney.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

## Professionalism vs. Sport.

I THINK that the reader will grant that when professionalism invades the realms of sport that the latter suffers from the effects of the invasion. The man, or men, who follow the sport for its own sake become steady contributors to those who follow it for the sake of the revenue derived from it.

The lovers of the sport may tolerate a reasonable or unreasonable degree of professionalism, but there comes a time when the amateur public has had enough of contributing to the coffers of the professional under the guise of a competition.

When the amateur is confronted with an array of professionalism at every turn, an array so formidable that there is almost a certainty of his losing in a competition, what, as a sensible man, is he to do? And what does he do? The history of competitions will readily afford the answer.

At the outset let me state that there is nothing intended in this communication to reflect on the standing or value of professionalism. To professionalism the world is indebted for its best advancement. In the kennel world the professionals have bred the highest class of dogs, and perfected systems of training and conditioning which are of lasting benefit. They, too, have attained a wonderful degree of skill in their specialty. The need of it is conceded. Its value is unquestioned. The only particular under consideration is the inability of the amateur to cope with professionalism and the consequent harm it does to sport.

## Professionalism in Field Trials.

To those who have noted the development of field trials from the tentative beginnings to the present time, it has been apparent that the drift of the competition has constantly been toward professionalism.

The beginning of field trial competition had a simple and direct object in view, namely, to determine which dogs in a competition were the best. The purely commercial features were few and relatively insignificant. There were then no regularly organized kennels which bred puppies in dozens to supply the public demand. The stud service of a dog in most instances was a matter of asking. The trainer commanded no large fee on the score of having a successful field trial record. Puppies did not sell for higher prices than horses.

Through all the intermediate changes which mark the evolution of field trials through their years up to the present, the professional has grown constantly more skillful and more formidable, and the amateur of to-day is much the same amateur as those amateurs of the intervening years from the beginning of field trials. The amateur of to-day, however, has been gradually driven out of competition by overwhelming force and superior skill. He has learned by expensive experience that he can not successfully or creditably compete, hence he wisely holds aloof from participation as a contestant. And why should he do otherwise? Why should he match his fondness for sport against the trained professional skill of an expert, who has only an interest measured by the possibility of gain? But the question is hardly necessary in view of the fact that the amateur is not coming in competition with the professional very frequently in 1898. The classes are differentiated.

## The Inducements to Amateurs.

What are the encouragement and inducement to amateurs? In the first place, he has opposed to him as handlers men who have made a profession of dog training and handling for years; men who have been in dozens of field trials and know how to take advantage of every circumstance, and who know what to avoid; in short, how to make the best of everything. These men are thoroughly conversant in the matter of rules and field trial requirements. They know to a nicety what quality of dog to select for a field trial competition. Many of them have a large kennel from which to select their dogs.

It needs no argument to establish that a man who has 100 well bred dogs to select from can produce a better lot than the man who has but two. The man who has the 100 can enter five or six or ten picked dogs in a field trial where the other man can enter but one or two at the most, and with a probability that they are inferior. With five to one or ten to one chances against him, how much less, then, is his chance of winning? With the success of the five or six or ten entries of the big kennel come a good win of prize money and a ready sale at remunerative prices of the remainder of the 100 puppies on the score of relationship to the ones which won. The amateur is so far surpassed in skill and material that there is not even a forlorn hope left to him. The purely business phase of field trials, that is, to win purses which, being quite large, are worthy of keen effort to capture to make reputations for dogs with a view solely to fees for stud services or sales of puppies, and to win a wider reputation and prestige which go to make up that invaluable feature of a business called the good will—all these are well known to the field trial supporters.

No field trial club, whose environment is such that it must draw its chief support from amateurs, can survive if it throws open its trials to the competition of the world, if it puts up sufficient money to tempt the professional. At this day, there is no place in any game section of the United States but what a professional will go to if a field-trial event is inaugurated and money enough offered in prizes. This is particularly true if the competition is largely amateur.

## For Instance.

I have in mind a club which this year held a field trial. There was a good deal of enthusiasm in its membership. It offered good cash prizes, enough to make them attractive. A professional took a string of dogs to those trials, and won all in two stakes except a trifling division in third. He made a trip of 1,800 miles, more or less, as near as I can estimate the distance. He won the prizes all right. He had a perfect right to compete. There is no question whatever in that respect. But from the point of the amateur, what is the result? That club will probably never hold another trial. Some of the members expressed admiration for a man who would go so far to win their money. Others said that they were willing the money should go, in return for the knowledge of what constitutes a good dog.

But they have now the knowledge. They have a stock of admiration. They have a knowledge that there is no chance to win against the professional, and that knowledge keeps them in future out of the trials, and wisely so. If that club holds another trial, and that or a similar win is repeated—as it probably will be—the fate of that club is a certainty.

The Philadelphia Kennel Club threw its competition open to the world last year. What was the result? From having been a gathering which was the embodiment of good fellowship and friendly competition, it assumed all the stern earnestness of a competition on one line, a competition straight to the money without any embellishment or sentiment. There were the usual unpleasant features and unpleasant responsibilities foisted on the men who followed it for the love it; by the men who followed it as a business. That ended the open-to-the-world feature. This year it returned to the previous conditions, i. e., a restriction to membership. It was a wise move. Though urged to again reopen its competition to the world by apparently disinterested field trial supporters, the club had the firmness and good sense to refuse. There is no very good reason why it should devote its energies and its revenues to something in which it is not particularly interested.

Several clubs which had arranged to hold field trials this

year withdrew from the venture. Nearly every one of them had some special reason for withdrawing. Undoubtedly the hard financial year had some effect in producing such results.

## The Distinction.

While professionalism has grown steadily and has been energetically encouraged, the amateur has received very little attention. Once in a while an amateur stake has been arranged, which, being run with a large element of spectators who were professionals, was largely an event for amusement or derision.

The solution of the problem is the holding of trials similar to that of the Philadelphia Kennel Club. The members own their dogs and in the competition handle them themselves or engage professionals to handle them.

The great trials of the United States, the Eastern field trials, the United States and the Southern trials, are almost exclusively supported by professionals or semi-professionals. They afford every opportunity for a professional competition.

For a new club of amateur membership and support, to frame its existence and policy on the same lines as the great clubs aforementioned, is to court failure. Each club in its policy must be governed by its support and its environment.

Clubs can be organized and their competitions arranged for limited prizes. It is a great mistake to attempt to offer prizes which will equal those of the great clubs which are better known, which have the prestige which comes from years of success and good name, and which have trained and skillful managers.

There is one thing certain. The man who owns one dog and in whose nature there is a fondness for the sport in a pure form, is worth considering and encouraging. When the competition is reduced to the great kennels alone field trials are in their decadence. In the competition between the great kennels some one or two kennels are sure in the end to defeat the others, and the great kennels alone can not maintain field trials, interest the public at large or meet the true demand of field trial competition. After all is said and done it is the man who owns one dog or two for the love of them and of field sports who is the foundation of the superstructure. He should be properly recognized, first because he is engaged from a love of sport, second because without him there is sure to be a cramp or a break, and third because the whole interest would be better with him as a member and supporter.

Dr. R. H. Tullis, of Columbiana, Ohio, writes me that the shooting in his section is poor this year. He is fortunate in owning a sister to Strideaway, the pointer which made such a phenomenal competition in the U. S. trials at Bicknell.

## Manitoba Shot.

The following, in a letter from Mr. Thomas Johnson, of Winnipeg, followed me around a part of the field trial circuit, hence was received too late for last week's issue. It recounts the loss of a valuable dog, a dog great in the qualities which make a companion and a worker. Under date of Nov. 27 Mr. Johnson writes:

"You will sympathize with me I know when I tell you that Manitoba Shot died a week ago to-day. In Shot I had the most pleasant shooting companion I ever owned in dogs and I hardly ever hope to have his equal for my prairies. He was different in disposition from any other dog I ever owned. He had an amount of courage, yet from the first time he went afield, if he through accident or down wind made a flush, even if he was a half mile away from me, he would feel so mean that you had to give him a friendly slap and a word of encouragement before he would again go with his peculiar style and dash.

"I have seen him scores of times this fall turn around on his point to see how far I was away, and if I was a long distance, he would drop until I got near him, when he would rise to his point again. I feel his loss very keenly, so much so that I shall probably not take any part in field trials this year.

"I have returned Mr. Lonsdale's dogs to England, but my own are still at Chatham. Our mutual friend Mr. Wells will likely keep them until the end of the shooting season there."

I do heartily sympathize with Mr. Johnson in the loss of so great and valuable a dog. He was that great combination in the best sense, a great field-trial competitor and a great field dog, terms which are now commonly believed to be contradictions. The same good sense, industry and pleasure in working to the gun, were traits, if I remember correctly, which were possessed by the whole litter of which he was one.

I well remember Shot's first field trial competition last year at Morris, Man. When he was placed in the Derby there was a wail long, loud and harsh from some present who had an interest in setters. The following day Shot ran in the All-Age Stake, and there was a full attendance of spectators to see what was to be seen. They saw Shot go with a dash, an intelligence and a skillful beating out of the grounds which either silenced completely his detractors or excited their admiration. On birds he made that day some brilliant performances. He was nearly a model of what breeders should strive for in field performance, good sense, endurance, industry and good temper.

Mr. John Davidson, in a letter of recent date says: "My loneliness was relieved by a little accident lately, just by way of variety, I suppose. A runaway team, dragging the front wheels of a lumber wagon, dashed into my buggy, starting me on an excursion toward the moon and reducing part of the buggy into kindling wood. The bystanders stated that I came down with such force as would have killed anything but a mule or a Scotchman, and I am not prepared to dispute them. I was badly bruised, but was feeling recovered in about 20 minutes. No bones are broken, and the soreness and stiffness are gradually disappearing."

There was but little difference between that accident and meeting a disappointed exhibitor. I am glad it was no worse.

900 SECURITY BUILDING, Chicago.

B. WATERS.

## Akron Show.

It seems as if the Akron Poultry and Kennel Club is making every effort to get up a nice show in this bustling Ohio town. Mr. Peck, the secretary, writes us that everything is looking bright, and they have secured a fine hall that will be lighted with 100 electric lights, and will be well heated. It is located in the center of the business part of the city, and street cars run past the door every five minutes. In addition to cash specials that are in the premium list, \$10 cash is offered for the best kennel of four American foxhounds, and \$5 cash for best kennel of four beagles. The committee is still at work on specials, and hope to secure more cash; all arrangements have been made to take care of the dogs that come from the Chicago show.

We received the premium list too late to be of much benefit except to those of our readers who receive FOREST AND STREAM on Wednesdays. The show will be held Dec. 19 to 23. The classification is very liberal, there being 148 classes, but as the prizes are on the percentage plan, 60 and 80 per cent. of the entry fees, the club has no direct interest in the matter as no club money is at stake. No doubt several of the Chicago entries will take the show in on the way home and wins will count. The entry fee is \$1 and entries close Dec. 13.

## Irish and Gordon Setter Field Trials.

Editor Forest and Stream:

In their remarks on the unsatisfactory results of the various field trials just finished, in the way of entries and attendance, it seems to me that the papers have ignored the most potent influence of all, viz., the last summer's silver panic and subsequent "hard times." Considering the fact that most of us have had grim business necessities to attend to, and but little heart or time for the indulgence of our hobbies, it is a matter for congratulation that we have done as well as we have.

As regards the Irish setter field trials, when we reflect that the Central, Ohio, and New England field trial clubs gave up entirely this year, and look at the sparse entries of the Philadelphia and other strong clubs, it don't seem to me that six Irish Derby and eleven All-Age entries show up so badly. It must be remembered that there are at least five broken English setters and pointers (combined) to every field trained Irish setter, and that it is much easier to get ten very good performers from fifty entries than two such from an entry of ten. Lovers of English setters and pointers have had twenty years of field trials to train up to and compete in. Long before that time we Irish setter men will have the satisfaction of seeing our favorites compete successfully in open trials. Business ought to improve before another year rolls around, and next autumn see a better state of affairs. So let us hope that Dr. Davis will look at matters in this light and continue his efficient and almost indispensable services as secretary of our Irish Setter Club, for it was not indifference that made him the only member that attended the late field trials at Thomasville, N. C.

I may be allowed to remark here that I sent my red bitch Nugget II. to the trainer in North Carolina as soon as I became her owner, last October, and ran her in the trials, although she had then been only a short month in trainer's hands, and was suffering from an abscess on her neck, which has been lanced. Perhaps that caused her to get only second in the Derby, as she had shown, previously, great speed and good powers for such a green pup, and, afterward, hearing that there were likely to be so few entries in the All-Age Stakes, I sent my red bitch Lady Alice, which divided third last year with Currer Bell, to a North Carolina trainer, although she hadn't seen a bird since then and was very fat. As she had only two weeks' preparation she wasn't placed this year.

Doubtless others acted from like motives, endeavoring to help the Irish setter field trials. If the owners of the large Irish kennels, which now contain the best bench show winners, Mr. Fowler and Dr. Sauveur, would also enter their dogs, the field trial entries would foot up a goodly number. Let us hope that they will next season.

So with the Gordon setter field trials at Fremont, Mass., on Nov. 20 last, which seem to have been the result of labors of Eastern owners of Gordons who probably disliked to have the season pass without an effort to do something. And so they formed a Gordon Setter Field Trial Club. But they started too late, and didn't announce their intention until October. A month is not enough time to prepare in; trainers and handlers are hard to get, especially in the North and East, and the result was that the entries had to come altogether from kennels near the place of trial. Allusion has been made in some of the papers to the fact that the well-known Gordon kennels of Dr. Dixon and Mr. Blossom were not represented.

I can't speak for the doctor, but I know that I was not indifferent. Gordons are my favorites, even over Irish setters. It was not possible to run my own dogs; and, after vain endeavors to get a handler, I had to give up making any entries. The two which I intended to enter were as fat as a miller's hogs, and hadn't seen a bird since last year. As it was, so short was the notice, some of the dogs made a poorer showing because handled by strangers or anyone that could be gotten. Pets, taken from their owners' fireside almost, are not ready for a creditable appearance in the field, especially if that field be bare of birds.

Let all credit be given to those that took so much trouble in the cause of the Gordon setter; but let us hope that ample notice will be given next time. Doubtless those present at the field trials had "a good time; but so many excuses have been made heretofore for the comparatively poor showing by Gordons that I think we, their owners and advocates, should endeavor to start them for public competition, with such training and other timely preparation as shall give them a chance for creditable performances as other breeds have had. Gordons setters are probably only half as numerous as the Irish, and while many are used for private shooting, very few are prepared for public competition.

Cannot we Gordon owners join our forces, and instead of desultory and divided efforts, endeavor to get together in time for field trials next year that shall be properly prepared for and at timely notice?

If anything which I have said shall encourage owners of Irish and Gordon setters, or be the means of getting them together for united efforts for next year's trials, I will be very glad.

JAMES B. BLOSSOM

A Member of Irish and Gordon Setter Clubs.

NEW YORK CITY, Dec. 9.

## Death of Riotor.

Editor Forest and Stream:

I write to inform you and your readers of the death of that well-known dachshund, champion Windrush Riotor. This great dog was found dead in his kennel this P. M., evidently having died from a fit, though I never knew him to have one before. Champion Windrush Riotor has met every dachshund dog (except champion Jackdaw) of late, and to his honor, it may be said, his list includes nothing but firsts.

Champion Windrush Riotor was whelped Nov. 29, 1887, and bred by Mr. J. G. Ravenor, Mr. F. E. Fole imported this dog for me in the spring of '91. He was probably the best known dachshund in America, he and champion Janet having always been kennel mates and shown together. He was sired by champion Maximus out of Polecat. His wins are as follows: In England, first open Birmingham 1889; first open Liverpool, Gloucester, Southampton and Stockbridge 1890; in Canada, first Montreal, Hamilton, Toronto 1891; in this country, first Danbury, Gloversville 1891; first Albany 1892; first challenge Chicago, Jackson, New York, Philadelphia, Washington, Pittsburg and Brooklyn 1892; first challenge New York, 1893; specials at every show where they were given. These are the only times shown. We feel his loss keenly, as he was a pet as well as a show dog.

EDWARD A. MANICE.

DEC. 4.

## Southern California Field Trials Abandoned.

Editor Forest and Stream:

I have been asked to notify you that the trials that were to have been held here on the 4th have been abandoned and am exceedingly sorry to have to write it, as I had hoped there would be a good meeting. There are plenty of birds on the grounds, and in fact the shooting during the past week has been better than at any time since the season opened. There was, however, a lack of interest evinced lately by the very men who should have taken the keenest interest in the trials.

The entry, which was none too large, suffered by the death of C. J. Miller, who would have had five starters, and were withdrawn after paying the second forfeit. Again, the changing of dates had an unwholesome effect. Had they held to the first date chosen they would at least have received the credit of being firm in their decisions.

It is to be hoped that the northern meeting will be successful, but as it has suffered by Mr. Miller's death the prospect is not charming.

At best the number of starters on the Coast is small, and when four or five are withdrawn it is hard to keep the interest from flagging.

There are numbers of birds all around us, and the duck shooting has been better than for years. A party returned from the Santa Anna River on the 27th and reported ducks in great numbers. The reports from Elsinore Lake are very flattering, so that the sportsmen are at least having good sport afield. Dr. Green, of Hesperia, informs us that the mountain quail are a perfect pest in his town, and as the report is reliable a party from Los Angeles and Ontario will try them next week.

We will give you a few items of interest shortly on the kennel question, as there is a very good outlook for some A1 material in pointers and setters. J. C. Collins, sheriff of Los Angeles county, is going into pointers, and has started with the bitch Brown Betty, who did so well at the trials last year, though not in the money. There is not a single good specimen in southern California of either bulldog or bull-terrier, and a kennel of either should do well. T.

ONTARIO BEACH, Cal., Dec. 2.

### Smoking at Shows.

Editor Forest and Stream:

I have noticed in attending dog shows, outside of New York, that smoking has been allowed in all parts of the show building. Although the chances of fire originating from a cigar being thrown on the floor, may be small, it seems hardly worth the enjoyment of a smoke to run the risk of such a thing happening when there are so many valuable dogs on exhibition.

Take the Newark show building for instance, there was not much to the building itself, it is true, but there was plenty of inflammable material in it, and I would venture to say that out of the 500 odd dogs exhibited there, not one-half could have been removed in case of fire, to say nothing of the loss of life to those attending the show.

That the attendance is affected by it is certain. The New York show would never have been what it is to-day, if smoking had been allowed in all parts of the building, and the sooner kennel clubs make a rule against it, and have it enforced, the better it will be for all concerned.

I do not say this against the managers of the Newark show alone, it is allowed almost everywhere, but I do say that there is a place for everything, and that a dog show is not the place to smoke. AN EXHIBITOR.

New York, Dec. 7.

[As far as we could judge the Newark managers were very strict in regard to smoking in the show building.]

## DOG CHAT.

### Imperator Sold.

While at Newark show Mr. Pitkin, of Hartford, Conn., was nibbling at Imperator (25,411), by Alton out of Hilda, winner in novices, but the deal fell through. Now Mr. Frank Linck, of Newark, N. J., has purchased Imperator. Besides this handsome dog, Dr. Lougest sold a mastiff bitch pup by Beaufort's Black Prince out of Gerda II., to Mr. Wm. Arnot, of Newark, and a young mastiff dog by Ingleside Maximilian out of Gerda II., to J. H. Goldberg, of New York. It will therefore be seen that the Newark show is already exerting a beneficial influence, and that Newark citizens and fanciers will not be content until they can show some of the best. Mr. Linck already has a very fair dog in Ashland Jumbo, who should have been second to Imperator at Newark.

### A Newfoundland Saves a Life.

The Newfoundland scores again. It is only human nature on our part to attribute the following to a Newfoundland proper: the vicious escapades we naturally attribute to the big, black, curly dogs that roam about under the same category. On the morning of Dec. 3, about half past three, Meier's grocery store in Kingston, Ont., was found to be in a blaze. The owner of the store was in the country and only his aged mother was in the dwelling rooms at the time. She was awakened by the dog, a large Newfoundland, howling and throwing himself against the door of her room. The faithful animal succeeded in saving the life of his mistress, but was smothered himself in the smoke.

We are indebted to Mr. R. S. Bell, of Bedeville, Ont., for the particulars in the case.

According to an account of the occurrence which we find in *Le Chenil* it is almost as much as a man's life is worth to kill a dog in Turkey's capital. Major Marini, military attaché at the Italian Legation in Constantinople, having killed by accident one of the dogs that infest the streets of that city, was pulled from his horse by a Turkish soldier, roughly handled and eventually taken before a police officer. There, having established his identity, he was given his liberty with profuse apologies, but he promises to respect hereafter, in the same light as he would a human being, the life of the canine pariah in the streets of Constantinople.

### Saratoga Show.

The premium list of the Saratoga dog show, to be given by the Saratoga Poultry and Kennel Club, comes to us in good season. The early issue gives exhibitors plenty of time to choose their entries and condition them properly. Challenge classes divided by sex are given in almost every breed with \$7 and diploma as prizes. In open \$7 and \$5 and diploma is the rate for mastiffs, St. Bernards, all setters, collies, great Danes, greyhounds and foxhounds, both strains. Puppies get \$5 and diploma. Other breeds have \$7, \$4 and diploma. The kennel prizes are club diplomas. Spaniels have Classification No. 1. Collies, spaniels and beagles are already nicely treated in the way of specials and American foxhound have \$10 for the best. The entry fee is \$3, which is rather too much for the amount of money given, but as wins will count this perhaps will not be considered so much. Mr. W. A. Coster is the superintendent, and we have not seen him in this capacity since the old show at Cincinnati, when Hugh Dalziel judged and Mr. Coster's patent-homemade stick-to-the-ribs all eat-it food soured on all of us. Mr. C. H. Mason, Philadelphia, Pa., is the judge. Spratts Company will bench and feed. Mr. Lyman W. Clute, Ballston Lake, N. Y., is the secretary.

A man has just completed a journey from San Francisco to New York on foot. The feat becomes interesting to our readers from the fact that he was accompanied by his dog, which, under the conditions of the wager, he was to deliver in this city within six months. The quadruped, however, did not pay that strict attention to stomachic conditions that it should have done in and for some distance after leaving Toledo, O., his owner was compelled to trundle a wheelbarrow containing the dog, as the animal had fed not wisely, but too well, before leaving that city. The distance was to be covered within six months and this was done with some days to spare.

The rumor that Mr. F. Redmond had sold his crack fox-terrier champion D'Orsay to the plucky Welsh lady, Mrs.

Lawrence, for \$2,500 is denied by the *Stock-Keeper*. Mr. Redmond still owns the dog. This gentleman had quite an innings at the fox-terrier show at Wolverhampton, winning no less than \$400 with his team. This team, besides the individual prizes, won the team prize and Mr. Redmond also took the brace prize with D'Orsay and Dickon II. In the competition for the team prize, Mr. Stephens spoiled his chance by including Stipendiary, whose size marred the levelness of the lot. Stipendiary, however, had his revenge in the stud dog competition, for with his celebrated set, D'Orsay, Hutton Justice and Acton Blanche he was enabled to beat Rowton Warrant, who is himself a near relation of the great stud dog. Speaking of the team prize reminds us that many of our exhibitors in showing and making up their teams for the kennel prize attach too much importance to the individual wins of the dogs in their previous competitions. This should not enter into consideration so much as the general "sortiness" and levelness of the team, and if exhibitors would bear this in mind there would be less grumbling when a judge with a proper conception of his duties places a kennel ahead of another whose individual members have perhaps won more firsts than the other. And another point is often lost sight of, the mere fact of a dog winning a first should not be considered alone, but the competition it had to contend with in doing so.

One of the Sefton Hero—Ormskirk Dollie pups bred over here was sent to England on the Majestic Oct. 25.

There must be a bad link in Geo. Bell's long chain of luck, for the other day his noted fox-terrier champion Dusky Trap was run over by a trolley car in Toronto. Dusky Trap is, however, a tough member and a terrier all over, for he escaped with some bruises only.

The charges and counter-charges between Mr. H. Huber and E. P. Schell, both of the Pacific Kennel Club, have not yet been considered by the club because at the last meeting a quorum could not be had. A peculiar feature in kennel

bably, ere this appears, be the owner of the well known bitch Prudence, now in the Shrewsbury Kennels.

As a means to securing that sprightliness of action so much desired in the ring, especially when collies and terriers are under judgment, a mouse in a cage was brought into the ring at the Cambridge (Eng.) show recently held. This was during the competition between Rufford Ormonde, the collie, and Jack St. Leger, the wire-hair fox-terrier, for best in show. At the supreme moment the mouse was released and Rufford Ormonde scored the run up and kill, much to the discomfiture of both the wire and his owner, Mr. Clear.

Some of our judges who are in mortal terror when the novice classes come in of reversing some previous decision, may take heart of grace from the fact that such an old hand as Geo. Raper, at this same show, withheld first from a wire-hair fox-terrier puppy, and then in novices a few minutes afterward awarded it first prize.

We find in *Stock-Keeper* that the railway authorities have decided that if a dog's fare has been paid he is as much entitled to a seat as any of the carriage's two-legged occupants. We do not know how these things are arranged nowadays, but years ago one could purchase dog tickets on the railroads, and one's canine companion was allowed to travel along in the same compartment. This has since struck us as a most laudable concession on the part of the railroad companies. Would that the same authorities over here had some such milk of canine kindness in their corporate systems. There are many people who would like to take their dogs with them when traveling, but rather than consign them to the dirt and tender care of the baggage man in a crowded baggage car, leave them at home. But when our railroad and express companies combine to charge double rates for less attention than they give other freight, we cannot hope for such a millennium as this.

The English *Stock-Keeper* does us the honor of publishing

A ROYAL FLUSH.  
Collie Puppies by Christian out of Ouida, Christian by Christopher.

club legislation was the appearance of counsel for both parties. This is by no means a desirable innovation, and is one that should be discountenanced at once. A man's case must be poor indeed when a lawyer is needed for a private investigation that it not in any way a court of law. The presence of lawyers in such a case is a trespass. We understand that as yet no charges have been preferred against Mr. Huber by Mr. Schell with the A. K. C.

### M. K. C. Club.

The Maryland Kennel Club has gone up Salt River, we understand, as far as giving another bench show is concerned. The unpleasantness arising from the action of an irresponsible scribbler last year determined those who had the best interests of the club at heart and made good the losses not to expose themselves to any more of the same sort of thing. The game is not worth the candle they say, and it is not when the reputation of such men can be attacked by any disgruntled scribbler that comes along and can find an empty column to fill. Mr. W. S. Diffenderfer has resigned as secretary, member and delegate to A. K. C., and Messrs. Will Farber and C. Diffenderfer have also resigned. So it's very probable that we must count Baltimore out of next spring's circuit.

We are pleased both for the paper's sake and that of the dog public to see Mr. V. M. Haldeman's name once more at the top of the *Fancier's Journal's* editorial page. A gentleman will always rise to the surface, though meteoric blackguardism may become rampant for awhile, it cannot last, and the clean man comes to the top once more. We look for an era of cleaner kennel journalism now throughout the fancy. It is needed goodness knows.

Mr. R. P. Keasbey, the genial secretary of the Spaniel Club, had a smile of large dimensions with him at the Newark show. It was all on account of Madge. Madge is a cocker spaniel bitch, and she brought joy to the kennel of Keasbey when she whelped eight pups to Little Nig. That three of these are reds and one fell in the milk has nothing to do with this tale. Mr. Keasbey has had diabolical luck, for although he is one of our oldest exhibitors he has never been able to breed any young stock. It never rains but it pours, and last week a litter of six field spaniels arrived by Echo out of his Bess. These pups are all well and hearty, and it looks as if the worst is over. Mr. Keasbey is joining the beagle ranks, but even here his ill luck pursued him, for after buying a Royal Krueger dog last September he had two days' hunting with it, and it hunted so well that somebody thought he would like it, too, and that is the last he has seen of it. He is not disheartened, however, and will prob-

extracts from *FOREST AND STREAM's* National Beagle Club field trial report. We also note that the journal coincides with us in our estimate of Pade from the rough sketch we published, and which estimate was unanimously borne out by the decision of the field trial committee which disqualified Pade.

Mr. C. A. Shinn, well known as the owner of the Skye, Sir Stafford, is coming out largely in this breed. During the Newark show he arrived from Europe with five Skyes.

All the boys seem to take a little pleasure in giving a dab at Mr. Morris. Perhaps he may be a little ahead of the times, or the other way, but when there is some solid helpful work to be done, there is no one who gives his time and energy more willingly than Mr. "Dexter" Morris. At Newark for instance, he must have been an invaluable aid in giving time and labor that he could ill afford, besides the benefit of his experience in show matters, to the interests of the N. J. K. L. in the preliminary work of their late show. The rather vicious communication in the daily on his work in the ring were entirely uncalled for and unnecessary. The old saying crops up here whether we like to own up or not.

### New Jersey Kennel League Meeting.

This club has acted with commendable promptness in disciplining their "vet." reference to whom we felt compelled to make in our last issue. At a meeting held Dec. 8, Dr. Sattler was expelled from the N. J. K. L. on Article VI. of the constitution, which reads: "The executive committee may suspend or expel any member for conduct prejudicial to the League," etc. The other business done was chiefly the passing of accounts, one of which was for a large sum for service rendered by the veterinary, who was supposed to be a volunteer, which will help to curtail the balance on hand.

The Akron people seem to have a just conception of the value that the kennel journals are to shows and other ventures connected with dogdom. The fact is too often lost sight of, and the accompanying acknowledgment which we find in the premium list is as rare as it is gratifying: "To the Journals.—We desire to specially acknowledge our appreciation of the favors conferred upon our association by the various fanciers and sporting journals who have so kindly noticed our exhibition in their columns and by the donation of specials, and to all such we have to say it will be a great pleasure to us to afford them every facility for distributing sample copies, taking subscriptions and otherwise enlarging their circulation, and if they will visit our exhibition or send samples we will be pleased to render them all them favors within our power. No fancier can

reach a high standing in the fraternity without the aid of such journals. Their aid is invaluable and they are always worth more than their subscription price." The italics are ours, but the man who concocted that is imbued with considerable horse sense, even if he be a chicken man.

#### Puppies at Shows.

It may be well to draw attention to the new A. K. C. rule regarding puppies at shows which goes into effect Jan. 1, 1899. "Rule 10—No entry shall be accepted of any puppy under six months of age, either for competition or exhibition, subject to a penalty of \$10 for each under age puppy placed on exhibition." We have several times drawn attention to the fact that the intention of the old rule to exclude puppies under six months old from dog shows was frustrated by entering such puppies for exhibition only, which meant really—for sale only, and both exhibitors and buyers suffered in consequence. The Saratoga show next month will be the first show held under the new rules, and we trust for the sake of exhibitors that the rule will be rigidly enforced.

It is a pity that the Providence show, at least the kennel part of it, has not been put in the hands of a practical dogman, one used to show usages. This office has never received a premium list, and even the A. K. C. only received its list within the week. There is no intimation or instruction to exhibitors about listing excepting the remote notice in the A. K. C. rules, and in an irregular manner. We are told that unless there are three entries in a class the first money advertised will not be paid. This is poor chess paring policy and not at all fair to the judge, Mr. J. Otis Fellows. A number of fanciers who wanted to show there failed to do so because they did not know the secretary's name nor obtain a premium list.

#### Birmingham Dog Show.

The Birmingham show, held Nov. 25 to 29, was not a success in the non-sporting division, but in the sporting division there was a good gathering. Space forbids our commenting on the show this week, but we may say that America was represented by Mr. W. C. Reick, who unfortunately, in rousing the beautiful St. Bernard Lady Mignon from her slumbers, received a slight bite on the hand. Mr. Reick is now a full-fledged fancier, dogman or whatever the correct term may be.

The next English Kennel Club show will be held April 10 to 12 at the Crystal Palace, London.

#### Detroit Dog Show.

Owing to the conflict of dates with the Columbus Fanciers' Club and to assist in forming a Western circuit, the City of Straits Kennel Club have had to change their dates to March 7 to 10, 1899. So the club will hold its second annual bench show on those dates at the Detroit Auditorium. The premium list will be ready Jan. 15, and will be mailed to any address on application. There will be about \$2,500 in cash prizes and specials, besides the club's cups medals, etc. The show will be under A. K. C. rules, and awards will count. The dogs will be judged by Messrs. John Davidson, James Mortimer and Chas. H. Mason.

Detroit will be well represented at the Chicago show this week. The well-known Tom Blake leaves that city with a string of ten winners, which include John Mandt's English setter Washtenaw Grouse, Fred. Moe's Irish setter Nona, W. Howie Muir's deerhound Bruar II., Mr. Predhomme's English setter Dick, Guy Welton's beagle champion June M. and Pomp, Mr. Parkinson's beagle Jennie Lind, Blake & Herbertson's cockers Pickpania, Lady Duffin and La Dina. From Chicago Mr. Blake will go to Akron, O.

The Sussex spaniel Ilfracombe, first Newark, did not live long to enjoy the sweets of victory. Shortly after the show she was taken sick with a throat affection that would not yield to treatment. This is quite a loss to the Ohwahgena Kennels, who imported her through Mr. Morris.

#### Death of Champion Harper.

Champion Harper, one of the cracks of the bulldog fancy, has fallen a victim to the poison fiend at Mr. Mariner's kennels at Milwaukee. The Graven Image was also poisoned, but beyond destroying her unborn pups, of which King Lurd was the sire, no further harm was done. This is most unfortunate, and we trust that Dr. Mariner will be able to protect himself in future and get a line on the wretch who did the work.

## Hunting and Coursing.

#### FIXTURES.

Jan. 15.—Brunswick Fur Club's winter trials. Bradford S. Turpin, Sec'y.

#### San Francisco Coursing Club's Meeting.

(Special Report).

THE meeting which I mentioned in my last communication which was to take place at Newark, under the auspices of the newly organized San Francisco Coursing Club, was commenced yesterday, and in every respect surpassed the most extravagant expectations of the club, or indeed of the whole coursing community.

Sixty-four dogs were entered for the All-Aged Stake, and twelve for the Puppy Stakes. All the crack dogs in the State were entered for the former, and never, I believe, since coursing was inaugurated in California was such interest taken in any meeting.

The weather for the past five or six days was certainly anything but what was desirable, as the rain fell in torrents, and continued until early yesterday morning. Nothing daunted, however, fully 200 people and about 80 dogs put in an appearance at the railway station determined to brave anything rather than postpone the meeting. Fortune favors the brave, however, for no sooner had the train gone beyond the neighboring city of Alameda than the weather cleared up, and on arrival at the park we found that the rain had just lifted it for the most perfect coursing, making the sward springy and elastic and perfectly safe for dogs to run over.

It was noticeable, too, that the great proportion of the crowd, in their enthusiasm for coursing, did not forget that it was Thanksgiving Day, for large hampers were to be seen in all directions, and few, I think, will gainsay the assertion that the leg or wing of a good turkey is a thousand times more toothsome when partaken of under conditions such as surrounded the crowd at Newark than if taken at the family table, however highly polished the surrounding furniture or costly the ware on the mahogany dinner table may be.

The card for the day's work was a heavy one, and no time was lost, as it was settled that the first round must be finished by 5 o'clock. The officers of the club had taken every possible precaution to have everything in shipshape order, and consequently everything moved like a piece of machinery, not a single hitch occurring during the whole day. The fact that 32 regular courses and four undecideds was got through in just six hours is ample proof of how smoothly things worked.

The field officers were: Judge, John Grace; slipper, James Wren; slip steward, J. R. Dickson; flag steward, J. H. Perigo; field stewards, J. W. Butterworth, John Eagan and P. D. Nolan.

Just as the first brace of dogs were handed to the slipper Mr. D. Shannon, president of the club, stepped on to the stand and addressed the crowd, telling them of the beauties of the chase and the unalloyed pleasure that is attached to coursing when carried on strictly according to rule and free from petty or unfair motives. He trusted that no such charges could ever be fairly brought against any of the members of the club or those who may course within its folds, and the public could depend on it that no unworthy actions would ever be tolerated within it. Mr. Shannon was loudly cheered on resuming his place.

The coursing during the day was without doubt the greatest that has been seen outside of Merced. The hares were regular flyers, and many of the courses were more than sufficient to try any pair of dogs in the world. Nearly all the great cracks went down, such as the great Skyrocket, Long John, Moondyne, Nelly Bly, Twilight and others of less fame.

But assuredly the most astonishing course of all was the run between Long John and Pride of the Park. The former dog is a large, heavy dog, weighing about sixty-five pounds, and has a wonderful dash of speed in him and has won many good stakes, while Pride of the Park is the most diminutive greyhound I have ever seen go to slips. She weighs but 35 lbs. and is much more like an Italian greyhound than anything else, and as both dogs passed into the park in charge of Wren, considerable was the chaff and badinage that greeted his ears and that of the owner of the beautiful little creature—Pride of the Park. In the very height of the fun a big jack jumped up, and on the dogs being loosed, to the utter astonishment of all the crowd the little fellow shot right to the front, and do his utmost, the big brindle could not get within a length of her while she closed steadily up to the game and eventually brought it round, and before Long John could steady himself she was round again like a top and took second turn; indeed she was all round both hare and dog and scored every point in a long course. The crowd went literally frantic with excitement, but when the little thing grabbed the hare and it was seen that she was not able to hold it, the cheering was louder and longer. Long John, however, came gallantly to the rescue and without showing an atom of jealousy at this discomfiture by so insignificant a rival, prevented the long-eared jack from running away with her into the escape, by grabbing it by the neck, finishing its earthly career in an instant. Never before was victor—quadruped or biped—so vehemently cheered. One enthusiast rushed out as she was being led back to the kennels and lifting her up over his head called for three cheers for the "little fairy." It was given three times over.

Another event, too, that caused some excitement was the course between Skyrocket and Dark Rustic. It was looked upon as such a certainty for the former that \$20 to \$1 could be had in the pools on the course, but no one would even risk that much on the event, so certain did every one feel that Rustic could not beat the great Skyrocket; but on this occasion the unexpected occurred with a vengeance, for in a good course the only thing he scored was the run up.

The following is a summary of the day's running:

#### All-Age Stake.

First prize \$100, second \$60, third \$25, fourth \$25; next four dogs \$10 each.

#### First Round.

JACK DEMPSEY—LITTLE ROSE.—T. J. Cronin's white dog Jack Dempsey and Dowling and McCormack's black and white bitch Little Rose were the first pair called to the slips. A hare was soon started and there was seen a course worth traveling miles to see. Both dogs went as if locked in the slips for 500 yds., and then Jack drew out for first turn, which he got, and the balance of a long course was in his favor, but he had to put his best leg foremost, as Little Rose was constantly at his side. He eventually killed and won.

SWANEE—FLIRTATION.—W. Creamer's black and white bitch Swanee and George Dougherty's brindle bitch Flirtation were next handed to the slipper, and a hare was soon started that put the pair of longtails at their best to take a turn out of him. They eventually succeeded, however, and after this Swanee had the balance of a fine course almost to herself. The bitch will be heard of yet, as she is both fast and clever. Swanee won.

MARY ANN—GEM.—P. Tiernan's fawn bitch Mary Ann and D. O'Connell's black dog Jim had the next spin, and a most determined one it was, for though Mary Ann won she had to put forth her very best efforts, for Jim is no slouch and showed well in a long course. The bitch killed and won.

GLEN FARRON—SALVATOR.—The same owner's well known red dog Glen Farron surprised most people, and certainly his owner, by the way the old veteran polished off D. J. Healy's nomination, the brindle dog Salvator.

DEPEND ON ME—WATTLE BLOOM.—T. J. Cronin's white and black dog Depend On Me and R. E. de Lopez's fawn bitch Wattle Bloom were then placed in the slipper's hands, who had some difficulty in getting the latter sighted, as it was the first time she was ever in slips. Three hares passed by before she could be got to look at one; but eventually they were let go and the little youngster shot out and led Mr. Cronin's fine dog until nearing the stand, got first and second turn and then got a cropper. This completely threw her out of the balance of a long course. Depend On Me won.

WHITE CLOUD—ELECTRIC.—A. Seal's white and brindle bitch White Cloud and Eugene Gray's white and brindle dog Electric had a fine course, but the former proved too much for her handsome opponent and won a fine course.

LONGFELLOW—MOONDYNE.—J. Perigo's black and white dog Longfellow, to the surprise of the crowd and the disgust of the talent, completely shattered the high pretensions of D. J. Healy's brindle dog Moondyne by giving him a thorough thrashing.

FAIRY—BLACKSTONE.—J. Reilly's fawn bitch Fairy was altogether too much for Dr. Proctor's black and white dog Blackstone, and simply ran round him.

COOMASSIE—OVERLAND.—W. Perry's white and brindle bitch Coomassie ran clean away from M. Culligan's white and brindle dog Overland and won with ease.

STING—NELLY BLY.—P. D. Nolan's brindle dog Sting and James Byrnes's fawn bitch Nelly Bly had a fine undecided course in which both dogs showed up well, both as runners and workers. But in the second attempt Sting won a one-sided course.

LONG JOHN—PRIDE OF THE PARK.—P. Tiernan's brindle dog Long John and J. J. Edmond's brindle bitch Pride of the Park furnished the first real surprise of the day. The latter is the smallest greyhound that has ever gone to slips in this State. She does not weigh more than 35 lbs., but she can run and work, and Tiernan's great crack, Long John had to strike his proud colors to this wonderful little specimen of the greyhound. Never was surprise so great, and never before was a dog awarded such unmeasured cheering by an enthusiastic crowd.

SHORTSTOP—CAPTAIN.—P. C. Curtis's brindle dog Shortstop had a sharp, short course with H. McCracken's fawn dog Captain, which he won easily.

SKYROCKET—DARK RUSTIC.—The next pair sent out was P. C. Curtis's white and black dog Skyrocket and P. D. Nolan's black dog Dark Rustic, but great was the surprise of the course between Long John and Pride of the Park, this course was a still greater one, for the greater dog fell completely before this utter and complete outsider. Fifty dollars to \$1 was offered, but no one would accept of it. On being slipped the great crack led up, as usual, and took first turn, but that finished him, for Rustic did all the rest and won cleverly. Such cheering has not been heard on a coursing field for years.

QUEEN OF THE VALLEY—LADY H. GLENDYNE.—J. Dow-

ling's brindle bitch Queen of the Valley beat H. McCracken's white and black bitch Lady H. Glendyne handsomely in a long course.

GARROWEN—RAMBLER.—J. Buckley's white dog Garrowen had an easy thing with J. P. Burke's black and white dog Rambler.

VALLEY QUEEN—SIR JOHN.—J. J. Edmond's white and black bitch Valley Queen easily beat Dowling & McCormack's brindle dog Sir John.

BARRY F.—GOVERNNESS.—James Byrnes's black and white dog Barry F. had a short, sharp course with J. Wren's fawn bitch Governness, and won.

WARATAH—GLENADE.—R. E. de Lopez's black and white dog Waratah beat P. Tiernan's Glenade after a good course. This dog showed a fine dash of foot and he is also a good worker.

BLUE JACK—CHIEF OF THE VALLEY.—P. Ryan's black and white dog Blue Jack beat J. Dowling's brindle dog Chief of the Valley easily.

SPOKANE—LADY NAPOLEON.—Carney's white dog Spokane and W. Dalton's fawn and white bitch Lady Napoleon had a very fine course, the latter portion of which the judge could not see, as it was behind the stand and the crowd was so great that Mr. Grace of course could not get even a glimpse of the work done by the dogs. Of course he had to decide on what he did see, and sent the flag up for Spokane, which certainly had the best of it in the first part of the course.

MAGPIE—ROLL ALONG.—P. Ryan's black and white dog Magpie and James Grace's black and white dog Roll Along had a sharp course; the former won. This course was judged by J. R. Dickson, as Roll Along is owned by Mr. Grace's son. SCULPTOR—WHITE RUSTIC.—Thos. McHugh's black and white dog Sculptor, after an undecided heat, beat Dowling & McCormack's white dog White Rustic easily.

DOTTY DIMPLE—ACTIVE.—T. J. Cronin's white and fawn bitch Dotty Dimple and D. J. Hendy's black and white bitch Active ran a great course, which the former won, but it must have been a very close thing.

OLYMPIC—BLUESTONE.—P. Tiernan's brindle dog Olympic easily beat Dr. Proctor's black and white dog Bluestone.

WEE LASSIE—OCCIDENTAL.—J. Perigo's fawn bitch Wee Lassie had a good run with J. Byrnes's fawn dog Occidental, the former winning.

TOM HAYES—LAZY GIRL.—P. Tiernan's black and white dog Tom Hayes had a good course with John Lucy's brindle bitch Lazy Girl and beat her well.

BAN BOY—HOME RULE.—T. McInerney's black and white dog Ban Boy and T. Cooney's brindle and white dog Home Rule had one of the finest courses of the day, Ban Boy winning by the "skin of his teeth."

VIDA SHAW—DOMINO.—J. J. Edmond's white bitch Vida Shaw ran away from H. M. N. Spring's black and white dog Domino and won.

RUSTIC MAID—PRESTO.—Dowling & McCormack's white and black bitch Rustic Maid beat A. Seal's white and black dog Presto easily.

NATTY—TWILIGHT.—M. Kerrigan's black dog Natty (the Evergreen) beat in a good course Dr. Wadan's beautiful black bitch Twilight, which certainly was another astonisher to the talent.

LITTLE BANSHEE—SWEDE.—J. McInerney's black bitch Little Banshee had it all her own way in her course with J. Moory's brindle and white dog Swede.

OLDEN—RED PRINCE.—J. Healy's black and white dog Olden beat A. Merrill's fawn and white dog Red Prince in the last and certainly not the worst course of the day.

The balance of the stake and the Puppy Stake will be run off on Sunday next, when an enormous crowd may be expected. GAZEBOUN.

#### In the Good Old Way.

THE Valley Hunt Club had their first run of the season Dec. 24. Starting with twenty-two riders, Reynard was found on the wooded hill west of Wawa Station, and he gave a lively chase, crossing the railroad with the hounds but a short distance behind. After a short but spirited run he took to earth in the rocky hill on the Wolf Farm.

Another fox was soon started, however, in a bush pile in the centre of a large field on the same farm and afforded the best run of the day. Starting not more than 100 ft. in advance of the hounds he gained rapidly at first, and crossing a marshy meadow on Charles Dowd's place the hounds were thrown off the scent, but after a short delay they again took up the trail, and a hard run was given for several miles, but the hounds succeeded in overtaking him soon after he crossed the road on the south of Barclay's Woods.

The brush was captured by Cooper Sichel, and close behind came John Everhardt, the master of hounds. While crossing a field on the Struther's Farm the horse that Cooper Sichel was riding stepped into a woodchuck hole and was thrown, but nothing resulted except a skinned nose and a broken stirrup leather.

Those who kept up well during the chase were Harry Shortridge, Clinton Wells, George Price, Frederick Y. Allis, Geo. Yarnall and Edward Mayhew.—Philadelphia Times.

#### HUNTING AND COURSING NOTES.

One of the gayest fox chase witnessed in East Bradford township, took place near West Chester, Pa., Dec. 7. The start was on the farm of C. Heller. There were present the West Chester Hunt, the Garfield Avenue Hunt, the Gibson Hunt, Cream Ridge Hunt, Green Hunt, Mortonville Hunt and Srode Hunt—in all over seventy hunters with their packs, aggregating over one hundred dogs.

While waiting for the hour for dropping the fox to arrive a lunch was served by Farmer Heller, and by 1:30 o'clock there were over five hundred people present, some in the saddle, some in carriages and many on foot. Councilman Shaner, of the West Chester Hunt, brought forth the fox, which had been captured by his hunt some weeks ago. He was a fine, large fellow, with lithe limbs and big brush. He was given a start of five minutes, which he made good use of. The hounds started in hot pursuit, and in their wake the horsemen followed in a mad scramble and much blowing of horns. The dogs soon divided. One portion took a Brandywine course, against the efforts of the hunters, while the other and main portion stuck closely to the fox's trail, and soon riders and pack were out of sight and hearing over the hills toward Glen Loch, the old hiding place of the fox before he was captured weeks ago. The chase was continued into the afternoon, and terminated by the fox eluding his pursuers in a cavern near Downingtown.

The Rose Tree Hunt, of Media, Pa., had a bad turn of luck a week or two since. Some of the hounds while at exercise were bitten by a presumably mad dog and the most of the pack were destroyed, as symptoms of rabies had developed. The hunt has now received ten couple chiefly from Virginia we believe, and these will be entered at once.

The members of the Hoboken C. C. held their first smoker on Dec. 2 at the club house foot of Tenth street, Hoboken. Every one was provided with pipes and tobacco and there were plenty of refreshments on hand. An excellent musical programme was one of the features of the evening. Mandolin, L. Kreitzer, F. Gottschalk, F. Muller; guitar, J. Warnecke; banjo, G. V. Strahan, E. Muller, Bart. Allen, the Texan; vocal solos, Com. J. R. Lake of N. Y. C. G. P. Douglass, Ianthe; humorous reading, P. Muller; T. Cameron, a Yale College student; pantomime, silent art, Dr. Hertel, and imitations, G. Metz. The following clubs were represented: New York, Brooklyn, New Jersey Yacht Club, Vixen crew, Ianthe, Arlington, Orange, Rutherford, Knickerbocker.

Canoeing.

While the rules of the American Canoe Association were based originally on those of the Royal Canoe Club, the two have for some years differed greatly, the American rules having been amended from time to time to keep pace with the advance of canoe racing, while the R. C. C. has clung most tenaciously to several absurd and obsolete restrictions. At the last annual meeting, in 1892, a strong effort was made to revise the rules to meet modern conditions, recognizing the Butler sliding seat and remodeling the definition of the second class, but it failed entirely through the opposition of the more conservative members.

This year, after another dull season of racing, the movement for a change has not only been more general, but the change itself has been radical in the extreme, and after declining for years to go as far as the Americans, the Royal C. C. has now at one jump far outstepped them; with what results remains to be seen. The continued existence of a bad rule has, with other causes, brought canoe racing to a very bad state, so much so that even a decided improvement of the rule may now fail to restore it.

Whether the new rule, published elsewhere, will prove a success is a matter of conjecture, and for our part we doubt the wisdom of thus destroying the distinctive features of a canoe, as established by long use. The increase of beam, if accepted by canoeists, will tend to a larger and clumsier canoe, and one more difficult to transport; a very serious consideration where canoe meets are an established custom, as in this country. The limit of sail is still retained at 118sq. ft. for 16ft. length, with the probable result of a waterline of less than 14ft. in order to get at least 130sq. ft. of sail. The remaining 2ft. of over all length allowed will be put into a raking sternpost, which is evidently permitted by the rule, and into a bow like the modern fin-keel racer.

With the same limitations of depth and centerboard, the canoe built under the new rule would be an inferior craft to such American canoes as Wasp, Bee and Glenwood; but as we understand the *Field's* report, all restrictions on ballast, centerboards, depths and draft have been swept away, and the path left clear for a bulb fin racer without the least semblance of a canoe.

The former recognition of the canoe yawl class is not new in England, and little change has been made in the old rule. The class would be a good one here, but all efforts of the A. C. A. to bring out a definite class of larger and wider canoes have proved failures, owners have not indicated any desire for a racing class of this type of canoe. The paddling classes call for no comment, they are similar to those which have worked well in practice on this side, and probably will answer perfectly well. While the change has on the whole much to commend it, we have grave fears of the "canoe" of the future which must result from the new R. C. C. rules.

THE LOG OF THE FRANKIE.

The '92 Cruise of the Shenandoah C. C.

BY THE COMMODORE.  
Pro Log.

"Wnx is it," asked Capt. Jim one evening last June as we sat smoking our pipes around our evening camp fire on the banks of the Greenbrier, after a successful day's fishing. "That you fellows, in your summer cruising, always get tired of the Shenandoah? Aren't there other, more beautiful and just as accessible streams that would afford you as much sport and give you more variety than you get by always year after year, going down the same stream? don't you ever get tired of it?"

"Well, Captain," I replied, "why is it that you always make this same Greenbrier trip year after year? Aren't there other good fishing streams that would do as well, and give you more change—more variety? Don't you ever get tired of this same old Parkersburg pike? or climbing these same mountains? of fishing this same stream?"

"Great heavens, man!" he broke in impatiently. "That wasn't exactly the expression the Captain used, but it looks better in print." "Have you no eye for the beautiful! Can a man ever get tired of such a magnificent trip! such grand, varied and beautiful scenery! Such a lovely stream! to say nothing of the fishing! Why, if I had a hundred years longer to live, I should grudge every year missed from this trip and count it as much lost to me; a man who has the love of nature in his soul, and who can admire and appreciate beautiful scenery can never tire of such a trip. I grant you there may be other rivers where the fishing is as good, and other trips where the scenery is as beautiful, although it is hard for me to believe it. But life is too short for me as it is, to exhaust the possibility of this trip and—"

"Precisely, Captain," I exclaimed in turn, interrupting him. "That is just why we cruise the Shenandoah, year after year. There may be other beautiful streams, in fact I know that there are, but there never was a finer all around cruising stream in existence—one combining so many good points, such as grand, imposing and beautiful mountain and pastoral scenery; fine, bracing, beautiful climate; bold, dashing rapids; good fishing, accessibility, etc., and the more we cruise it, the more we love it and want to cruise it again, and we really have no other way to spend a season in exploring some new and undeniably beautiful and desirable stream than you have to lose a season from the Greenbrier in exploring some new and no doubt really excellent fishing grounds, see?"

"I see," said the Captain as he lit a fresh cigar.

The Log.

Wednesday, July 27.—The party this trip consists of Col. C. L. Cooke in a new canoe Mary Lou, George Bell in the canoe Shenandoah, Lacy Gibson in the canoe Clyde and the Commodore (F. R. Webb) in the canoe Frankie, all members of the Shenandoah Canoe Club of Staunton, Va.

We drove down to Bowlings on Middle River, yesterday evening with the four canoes, loaded in as many express wagons, and each canoe loaded to the guards with camp duffle. I brought Frankie (my small boy, not the canoe—although as before stated the canoe was along also) down to stay all night with us at the first camp.

We went into camp without wetting a keel or a paddle, right under the big willow trees just below the bridge at Bowlings, where I have often had a desire to camp; and the four canoes, each with its picturesque little Mohican tent of striped awning cloth over it, were soon in position for the night, while I fixed up a tent for Frank by rigging up our dining fly close to the ground on short poles, and filling it with straw, over which I placed my rubber sheet and one of my blankets, closing up the open end of the fly at his head with a rubber cork.

Capt. Jim, George Bell and Rick Bell, drove down at 6:30 and took supper with us and I got up a royal supper of fried ham, fried potatoes and onions and cheese omelette, flanked with biscuits and pot of hot coffee, to which the party did full justice.

The night was hot, but with the flaps of our tents up on both sides we passed a very comfortable night, soothed by the drowsy roar of the big dam but a few yards above us, and were out betwixt in the morning, and after Bell had photographed the camp with his fine, large Anthony camera, provided especially for this kind of work, the tents were quickly struck, the canvas packed and we were ready to start.

The weather is intensely hot and the river very low, so low that at our camp pretty much all the water in the river passes down the mill-race, and we were obliged to carry the canoes fifty yards or so below the camp before finding the water enough to float them, and then make another carry over the reefs under the railroad bridge, but after passing the mouth of the millrace the water improved and we were able to step into our canoes and paddle carefully and slowly along.

Frank rode in my canoe until we reached the carry at the railroad bridge, when I set him out and kissed him good-bye and left him standing in the middle of the river, fishing rod in one hand, his lunch basket in the other, and his preposterous big straw hat on his head, a forlorn little figure, looking wistfully after the canoes and watching them out of sight (He will fish all the forenoon and go up home on the noon train).

We found the water discouragingly low, and had to get out at every riffle for the first few miles and ease the canoes over. In shoaling one promising-looking rapid Lacy, whose canoe is an old one, ripped a big

hole in the bottom of it, through which the water rushed in a torrent that threatened to swamp him instantly. He promptly sprang out into the water, which was nearly waist deep and hastily rushed his boat ashore, beaching her just before she filled. So Lacy had to lie up here for an hour while the disabled canoe was unpacked and turned bottom upward in the hot sun to dry out. Once dry, a canvas patch was quickly and easily plastered over the break, and she was all right again.

A canvas canoe may be more easily injured than a wooden one, but the injury is not apt to be so bad as in a wooden boat, for there is no wood to splinter and shatter and repairs are very easily made.

Our detention here was a pleasant one, as we had a nice shady gravel bar to lie upon, and while doing the repairs George took a snap shot of the proceedings with his Kodak.

As the day advanced the heat became excessive, and about 11 or 12 o'clock in the long open reach of river above Laurel Hill we felt it keenly, and the large sponges which we kept saturated with water in our helmets proved to be a great comfort as well as an approved protection. We were glad that the water improved and as we got further down the river, and the cruising became more pleasant and less troublesome.

At noon we reached the place where Beall and I camped last year: and as it was a nice shady place with a spring house only a short distance away we laid up here for several hours for lunch and rest, and then pushed on down for our evening camp ground, which Cooke and I had photographed by Beall's camera.

We had a very pleasant afternoon's cruise, as the heat of the sun was tempered by the clouds all the afternoon and reached our chosen camp ground—a beautiful turf-covered bank, shaded by several immense willow trees, near Bailly's farmhouse—at 5 o'clock, where as soon as we had the canoes drawn up on the bank under the trees, we proceeded to take a good refreshing plunge in the river.

The bowlings is quite red, while as we go further down it gradually clears, and at our evening camping place it is clear enough for bass fishing.

The evening was quite blustery, with a high wind and several rain storms visible at different points, but beyond an occasional sprinkle we had no rain. The wind dislodged several large limbs from the old decaying willows, which crushed down in our immediate vicinity during the evening, causing us some uneasiness lest some of them might fall on to the canoes. Fortunately the bluster was over before we were close to us. Wrote a short letter home before turning in for the night.

Thursday, July 28.—It didn't rain last night for all the bluster, and we passed a pleasant night, and were up early this morning, and after a good breakfast of bacon, eggs and boiled potatoes the camp was struck, the canvas packed and we were afloat by 7:30, the camp first being photographed by Beall's camera.

Our day's cruise was a delightfully pleasant one, but not specially eventful. This part of the river is quite interesting to me, with its numerous reefs and falls, all on a mild, easy scale; good to get our hands in, as it were, before tackling the serious business of the Shenandoah. The water continues to improve as we descend, and we had but little difficulty at the reefs and rapids, although Col. Cooke had to do the bullfrog act quite occasionally.

We passed the mouth of Christian's Creek not far below our camp, and its added volume still further improved the water. The stone fish dam below it could not be shot, but was easily portaged, while the next one, a little below, was jumped at the expense of a thump or two. We portaged the big dam at Humbert's Mill by sliding the canoes over the crest at the right hand end, with Beall in the water below to ease them down. Our letters were left at the mill here to be carried over to the Hope and Hopedale mills.

A party of young people (including several "Jerney mansions," as the Colonel with his somewhat limited and imperfect knowledge of the German language is accustomed to designate the pretty girls we see from time to time along the river) hastily collected on the bridge to see our flotilla pass under, and were promptly gathered in with the Kodak by Beall as we came down. Not far below the bridge we reached the beautiful, shady bank of the Miter place, where George and I lunched last year, and we laid by here for a couple of hours for our usual noonday lunch and siesta. We found a party of Staunton boys encamped here on a fishing and loafing trip, including among others, Ed. Baker, Ben. Fultz and George Haines.

Fortunately for us, the afternoon was again cloudy, so we took advantage of the temporary obscuration of the intensely hot sun to start again as early as 2 o'clock. The Kline Dam was portaged in the same way as the Humbert Dam, and the afternoon cruise was like the morning's, pleasant but uneventful, and we made an early camp at the Gratian place—a nice camping place and one I have often marked as a good place for a canoe camp. I did not feel very well this evening, having smoked once or twice too often during the day, and so retired early. The evening was again threatening and blustery, so the boys put up the dining fly over the mess table before supper, but the impending rain evidently went some other way, for we got none of it.

Friday, July 29.—To-day's run was a short one, only five miles, but a most eventful one. It was a beautiful morning, the threatening storms of the evening before having all vanished, and after George had taken a couple of good photographs of the camp the tents were struck, the canvas packed, and we were again afloat upon the lovely Shenandoah. The beautiful scenery was again in evidence, and an interesting section of old Augusta. To our left, up on the bluff, was the fine old Finlay mansion, and not far away was the ample residence of Col. Crawford, with Wm. Bell Crawford's comfortable and handsome home also in sight just above us the river.

For a couple of hours our cruise was delightful, the river scenery was lovely, the water good, affording us fine sport in shooting the now little stiff little rapids and falls which abound along the course of the stream.

At the snug little fall a mile below our camp the Colonel hung up badly on the ledge which constitutes the fall, and George got a couple of excellent Kodak snap shots at him while he was doing the bullfrog act. The bullfrog act, it may be said in passing, consists in straddling the canoe, when it sticks on the rocks, one foot out on each side, and standing up the middle of the canoe over the rocks in a series of jerks and shoves—a most ludicrously ungraceful performance. One of the boys was quite hard on the canoe, as well as more trouble and work than quietly stepping clear overboard alongside the canoe and lifting the stern end up and shoving it gently over the obstruction—a regular lazy man's act in fact.

We passed smoothly on down to the big dam at Hoy's mill, where the canoes were easily portaged by sliding them down on the rocks at the right hand end into the deep water below. The other fellows did the work while I manipulated the Kodak; in other words I pressed the button and they did the rest. The set of pictures obtained here we regarded especially interesting and valuable.

The dam several miles below at Mount Meriden is broken out and we found that the consequent lowering of the water in the mill pool had uncovered a particularly rough series of reefs, 100yds. long, just around the bend below the dam, resting in a particularly nasty, stiff little fall. The channel is close under the left bank and the water very strong, swift, rough and rather deep, while a couple of overhanging trees just above the surface of the water a little below the head of the rapid made the passage an ugly and risky one.

Lacy went down it first and promptly hung up in the trees, while the Colonel, without waiting for Lacy to get out of the way, came right down it and did the same thing, and then the Commodore went in the bow of the Mary Lou, fortunately above the waterline, and threatened more serious damage, if not destruction to both canoes. They broke their way out of the trees and went drifting and bumping together sidewise down the rest of the fall until they finally reached the smooth water below, while George and I remained quietly back paddling in the pool above the verge of the fall, waiting for them to get round and laughing at their tribulations.

I followed, and by laying my canoe a little across the current as I shot over the upper edge and by a strong, dexterous shove against the tide with my paddle, as I reached it, which threw me out around the overhanging branches, I made the shoot safely and passed on down the rapid, to the smooth water below, where I rounded to and waited for George.

I followed, and by laying my canoe a little across the current as I shot over the upper edge and by a strong, dexterous shove against the tide with my paddle, as I reached it, which threw me out around the overhanging branches, I made the shoot safely and passed on down the rapid, to the smooth water below, where I rounded to and waited for George.

We regret to learn that Mr. Woodward T. Norgrove, a member of the Red Dragon C. C., and one of the oldest connoisseurs on the Delaware River, was instantly killed by an express train on the Philadelphia & Reading R. R.

## Pachting.

Our comments of last week have brought out a reply from the *Marine Journal*, which we reprint in another column. Those who have followed our side of the dispute will recognize that we have not denied the existence of the sloop down to the present day, and we are content to leave with them the decision whether we have established the two main points of our argument that the two types, sloop and cutter, are each marked by certain characteristic principles; and also that the modern American yacht possesses the characteristics of the cutter, and not the sloop.

The course of development which we have traced in singlestick yachts, by which the modernized and modified cutter has replaced the old sloop, is also found in the case of the schooner yacht, the circumstances being almost identical. The old American schooner rig, used up to 1885, with a large foresail, single jib and flying jibboom, has given place to the English rig made famous by Miranda in 1876, with a very large mainsail, small foresail and the head rig of a cutter, with pole bowsprit and double headsails. This rig, by the way, was known for a long time as the "two-masted cutter," a nickname often given to Miranda in her early days. It is the basis of the modern American schooner rig, the old-time schooners having disappeared almost as completely as the sloop.

A LITHOGRAPH of the famous Maria is still extant, printed in New York in 1852, which shows the yacht, with the America in the background. The rig is essentially a sloop, with single jib and very short topmast, but the title of the picture is "The Cutter Yacht Maria, owned by John C. Stevens, Esq., Com. New York Yacht Club."

The exploits of the bogus "Charles Herreshoff" and "Dixon Kemp, Jr.," are quite obscured by those of Mr. Howard W. Ream, which have just come to light. The English swindler, with his beggarly haul of a few pounds in England and a few dollars in New York, has no place beside the American genius who actually induced the Herreshoffs to begin the construction of a costly yacht without showing them a dollar.

## A Florida Cruise.

(Continued from Page 509.)

FEB. 21.—We sailed out and anchored under the lee of Sanibel Light, but did not go outside, as there was a head wind.

For dinner to-day we had clam soup, sheephead fried, new potatoes, hock and coffee; and we had the appetite to get away with the whole outfit. After dinner we went ashore and made the lighthouse a visit.

Sanibel Lighthouse is built of boiler iron, in tubular form. A winding stairway conducts you to the lantern, which is 130ft. from the level of the sea. A very fine view of the Gulf and Bay can be enjoyed from the top.

There are two keepers who stand watch and watch every night, year in and year out.

The Government has built two substantial houses for these keepers and their families. These houses stand on piles 16ft. from the ground, for a tidal wave once passed over the key, sweeping everything from the island. One of the keepers had been fifteen years on that lonely key with wife and children. They seldom saw visitors and heartily greeted all who came.

We put a small sheephead on a shark hook and threw it out from the dock, tying the short end of the line to a snubbing post. In about fifteen minutes the slack of the line began to move off, when our commodore ran up and gave the line a sharp jerk, and then the fun commenced. We had struck our first shark, and right lively did he make it for us. The strong manilla line would whirl through the water this way and that, then he would try to run under the dock and thus to entangle the line around the piling; but the commodore held a taut line on him until we got him near enough to use a harpoon, which was driven into his back; then with a pull all together we landed him on the dock with three cheers and a tiger. He was 8ft. long, with a mouth large enough to snap a man's head off at one bite.

The "Distinguished Landsman" had the captain strip off a piece of his skin for a knife-sharpener. The skin of a shark is very rough, like emery paper, and makes excellent knife-sharpeners.

FEB. 22.—We left San Carlos Bay at daylight, sailing down the Gulf on our way to Cape Romano. With a smooth sea and a fair wind, we had a delightful run outside. On our way down we saw three very large devilfish; the largest was about 8ft. long by 6ft. wide. They are wide, flat and very ugly and black, hence the name. A few hours later we saw a large loggerhead turtle, that the captain said would weigh about 400lb.

We made Cape Romano at 3 P. M., and came to anchor in a snug harbor, where we shall remain until we get a fair wind. From Cape Romano we shall run straight across the Gulf for 150 miles, which will take us out of sight of land for about 10 hours, when we shall see Key West, the objective point of our cruise.

We are now among the 10,000 islands, and from the masthead we can nowhere see a house or habitation for the whole country, as far as the eye can reach, is one vast "howling wilderness," covered thickly with pine, palmetto and water oak trees.

FEB. 23.—At 4 P. M., we sailed out into the great Gulf of Mexico and laid our course S. by W. for Key West. The wind was fair, and we went gliding over the long swells at a six-knot speed. The receding land became so distant that it looked like a long, low cloud just above the horizon, and then the king of day sank into the water, looking like a great ball of fire.

The Distinguished Landsman was loath to take this outside run, and long and regretfully did he gaze on the fleeting strip of land. He wanted the captain to crab clean around the keys, thus ever keeping one piece of land in sight; and he argued that we could then anchor under the lee of a key every night, where the water was shallow and safe. He said, "In case the vessel should spring a leak at night the water would be so shallow that we could stand on the deck of the cabin until morning. Suppose a S. E. wind should spring up to-night and blow us 80 miles and land us on the coast of Texas or Mexico and drown the whole party. How can you sleep with only a 14in. plank between you and the bottom of the Gulf?"

Precious time did the Landsman sleep that night. Several times did his night-cap appear above the companion way, asking the captain about the direction of the wind, the prospects of a gale, and what would the captain do should thus and so happen; and, after comparing the compass with the North star, he would again turn into his uneasy and sleepless bunk.

FEB. 24.—We are all on deck early to see the sun rise from the water, which was so much more beautiful than the sunset of the previous night. We had made a fine run during the night, and the captain said we would see Key West by noon. We found one schooner in sight, and, as she was bound for Key West, we had her company during the run. About noon the cook went to the masthead and soon sang out, "Land oh!"

He said he could see no land, but could see trees and the tall masts of the shipping. Really we saw the land, and it looked as low and near the surface that we came to the conclusion that a great tidal wave would sweep it out of existence. We anchored off the fort, and went ashore to see the city.

Key West is a city of 25,000 inhabitants. It is situated on an island, or key, bearing the same name, and the city covers a large part of the island. The island is composed of coral rock, and the highest part is not over 5ft. above the level of the sea at low tide. The streets run from beach to beach at right angles, and one can see the blue ocean from any of the streets, look as you may. A street railroad runs around the city, making a circuit of about 15 miles.

The stores are largely built of wood, and many of them only one story high, with the old style sash fronts, holding small panes of glass. All of these are closed on nights and Sundays with tight board blinds, thus giving a peculiar good chance to work without interference from the streets. Many of the storekeepers live in the rear of their stores, and the customer is forced to smell the odors from the kitchen stove. The prices of all Northern-made goods are tremendously high, but all sponges, fish, shells, cigars and fruit are sold very low.

The greatest industry is the manufacturing of cigars. About 12,000 men, women, boys and girls, black and white, work in the cigar factories. All of these people speak the Spanish language, and we think that three-fourths of the whole city speak Spanish alone. The names on the cigars are largely Spanish. We saw on a hat store this sign, "El Sombrero Blanco." The little toddling pickaninnies talked Span-

ish, even the parrots swore in Spanish, and to all intents and purposes Key West is a Spanish city.

We visited a large cigar factory that employed 1,000 hands. In one large room were 50 girls stripping the stems from the tobacco leaves. The room was full of steam that is used to keep the leaves moist, and the air was stifling with the moist nicotine. The girls looked thin, yellow and prematurely wrinkled and old. We watched one Cuban darky dude, who was making a \$65 cigar. He had long, dirty fingers, and used them deftly in his profession. We noticed that he put the pointed end of each cigar in his mouth to moisten it for the final twist. The cigarmakers hire a Spanish reader, who reads Spanish newspapers to them while they work. They are a well-dressed lot of men, and seem contented and happy.

The first day—Saturday—that we arrived at Key West our captain got on a spree and all day long he kept the path warm between the Blanche and the nearest saloon, and all day long he swore at the cook and abused the crew. About midnight he came aboard and moored the Blanche out between two slips, and laid down on the forecastle, using some stove wood for a pillow. After a while he roused up and said, "Keep her S. S. W. and let her go," then he again fell asleep and snored like a quarter-horse.

After about an hour he got on his feet and started aft, but stubbed his toe, made a frantic effort to save himself by catching at a stove-pipe, when in the next instant he fell overboard, making a great splash. We ran to the rail to give him aid, for the water was deep and contained many sharks. He came up blowing like a porpoise, and struck out for the dock, which he reached, and hanging on to a pile with one hand he looked up with a drunken leer and said, "Why, what's the matter up there?" We finally got a line under his armpit and fished him out on deck, and put him to bed, where he sang sailor songs, like Black-Eyed Susan and others that would not bear repeating, until near midnight, when he went to sleep, giving us also a chance to sleep.

The next day he was very penitent and put in the whole day listening to a Salvation Army preacher, and came home very devoted. How ludicrous, and yet how much like the old shellback!

All the fresh water used in the city comes from the clouds in rain or heavy dew, all being stored in large cisterns. No other water is obtainable unless it be evaporated sea water, which is too expensive. All the houses, small or large, are built with verandahs, and much of the time both day and evening is spent on these verandahs, where they have their parties and entertain their friends and relations. No one thinks of going to bed before midnight, and no one thinks of getting up before 9 o'clock in the morning. The business houses open very late and close very early.

On Sundays all business houses are religiously closed and everybody goes to church in the forenoon, after which everybody indulges in a big dinner, and then the afternoon is given up to social visits on the verandahs, or the carriages are brought out, and the little ponies are whipped up and down the streets until even the clouds in rain or heavy dew, all being stored in large cisterns. No other water is obtainable unless it be evaporated sea water, which is too expensive. All the houses, small or large, are built with verandahs, and much of the time both day and evening is spent on these verandahs, where they have their parties and entertain their friends and relations. No one thinks of going to bed before midnight, and no one thinks of getting up before 9 o'clock in the morning. The business houses open very late and close very early.

The colored people outnumber the whites, and outvote the latter by a large majority; but the whites have gotten to windward of the blacks, by having a State law made, wherein all sheriffs and mayors are appointed by the governor, thus cutting the blacks out of all offices within the appointing power of sheriff or mayor.

FEB. 27.—After taking on wood, water and provisions, we proceeded to sail N. by E., keeping within sight of the Keys; we thus sail until sundown, when we came to anchor under the lee of a key. We jump out of our beds and go over the side for a salt water bath, finding the water about three feet deep with a fine sandy bottom, making it pleasant for our feet.

We sail on our course for about fifteen miles, when the wind goes down and all hands soon have fish lines cast over the side. We caught Spanish mackerel, and red grouper, and then came the sharks and drove the fish away. The Gulf is our fish market, for we have only to anchor over a bed of rocks, when we can in a few minutes catch all the fish that we can use. We have passed many fishing boats from Key West. They are constructed with a well to keep their catch alive until they get back to market.

We have seen several spongers plying their vocation as follows: Each schooner carries four small boats, which carry two men each. Each rowboat contains a jointed pole from forty to sixty feet long, with claw-hooks secured to the bottom of the pole, and a water glass, for viewing deep water. One man keeps his head in the water glass over the side, looks the bottom over for sponges; and when a sponge is laid he is in the water, and pulls the pole up to the proper length is had, when the first man takes the pole and runs the claw-hooks under the sponge and tears the same loose and pulls it into the boat.

R. P. BELL.

[TO BE CONCLUDED NEXT WEEK.]

## Another Yachting Swindler.

THE following letters, for which we are indebted to the Providence Journal, tell a story which has afforded no little amusement to yachtsmen during the past week. Mr. Howard B. Ream, as told in the extracts alluded to in the second letter, has a very shady career, having been in jail in Chicago. He has just been under arrest in Boston on charge of theft, but was released on the confession of one of his associates.

The letters are as follows:

THE WALDORF,  
Fifth Avenue and Thirty-third Street,  
New York, Oct. 23, 1893.

Messrs. Herreshoff Bros., Bristol, R. I.  
GENTLEMEN—I am contemplating building a steam yacht. Will you kindly inform me as to the length of time you would require to build a boat of the following rough description. Just when you could guarantee to deliver her in New York.

I want a steel boat about 185ft. over all, which is, I believe the maximum length of a boat which will pass through the St. Lawrence into the Great Lakes.

Beam in proportion to length. Draft accordingly. About six staterooms, bath room and closets, cabin, small office or library and pantry forward of engine room and boilers. Aft of boiler and engine room have chart room, galley, captain's and engineer's room, crew's quarters, etc. Of course this is a rough idea, but can be detailed later. I want the finished boat furnished as fine as she can be, especially cabins and staterooms, and large cabin and deck over lower cabin. Best of engines and boilers. Electric lights throughout in abundance. Steam heat. Electric calls and every modern improvement in yachts up to date. In short, what I want is a 185ft. boat built in the best shape of steel, combining comfort, luxury, speed and safety. What I want to know at once is when you can guarantee to deliver her, providing you get my order before noon of Nov. 15, at a rough maximum cost of such a craft. I enclose a simple sketch of cabin and stateroom plans which I think could be worked in a boat of that length. If you will reply at once, stating when I could receive her and probable cost, I will run up to Bristol and consult you further. I remain respectfully yours,  
HOWARD W. REAM.

(Care The Waldorf, New York.)

Editor of the Journal:

DEAR SIR—Regarding the 185ft. steam yacht we had contracted to build for one "Howard W. Ream," and on which we have stopped work, we beg to make public the following statement:

In the early part of November last, we were approached by Mr. Ream, by letter, regarding the construction of a steam yacht, and late in the month of December we had an interview with him, at which he entered into a contract with us for the construction of what was to be the finest steam yacht afloat, its bottom plating to be of Tobin bronze and the topsides of best mild steel and the sides of deck houses of aluminum.

This contract was dated Nov. 9, and was entered into by us upon the representation by Ream that he was in the stock brokerage business in Wall Street, New York, having as office at 110 Liberty Street, and that he was then fitting up new offices at 40 Wall Street, for the purpose of doing a general banking business, and was then on his way to Boston to arrange for the opening of a branch house in that city. He (Ream) also stated that he was the owner of a fine residence at Little Neck, L. I., which was worth \$50,000, also property in One Hundred and Eighty-sixth Street, New York, valued at about \$40,000. No expense was to be spared to make this yacht the most luxurious and finest of its class afloat.

It is a rule with builders to have a certain sum payable upon the signing of a contract, which in some cases is waived, or deferred, for a short time, and which was done in this case, he (Ream) requesting it to be deferred until Nov. 30, the request being made by him in our office in New York. He also stated that he had the proceeds of which were to provide for the first and succeeding payments. Upon the payment becoming due, and after the time going by, we requested payment, and were put off from day to day, which aroused our suspicions as to the reliability and the truthfulness of his former statements, and we instituted further inquiries, which brought out that he was a swindler in New York, or, in fact, anywhere else, and is, what is vulgarly termed, "dead beat" of the worst type. Our contract was signed by him as "Howard W. Ream," and he figured in New York as "Howard A. Ream." Further search brought out his career at Chicago in the fall of 1892, and the following extracts from Chicago newspapers show him up there:

Having learned the above, we stopped work on the yacht, the loss on which, to us, will be not inconsiderable, but the great thing is, considerable material has already been purchased and much preliminary work done, but this may be of benefit to some yachtsman who may wish, at short notice, a handsome and very roomy steam yacht of about the dimensions which were, or are, 185ft. over all, 100ft. water

line, 23ft. beam with 8½ft. draft of water, to be driven by two triple expansion engines working twin screws. Respectfully,  
Bristol, Dec. 4.  
HARRISHOFF MFG. CO.

The preliminary estimates were arranged in good time, and as Mr. Ream wanted his yacht as quickly as it could possibly be built, designer Nat Herreshoff set to work on a model. Mr. Ream had sent in his original letter a sketch of what he thought would be the proper thing in the way of the interior cabin of a modern yacht. Mr. Herreshoff, therefore, had Mr. Ream's idea in mind when he went to work on the model. It started in Nov. 9, and when he finished his labors he had turned out what the Herreshoffs consider the finest model of a steam yacht that he or anybody else ever created. The firm was proud of it and Mr. Ream was satisfied. The specifications of the proposed yacht called for the following:

"Length 185ft. over all, 25ft. beam, having a draft of water of 8ft. 6in. Hull platted below water line with Tobin bronze and steel above. Yacht to be fitted with twin screws, driven by triple expansion engines, and two boilers. To have six state rooms, saloon and bath room forward of machinery, dining room, galley and crew's quarters aft of machinery. Large deck saloon, with sides of aluminum. Complete electric plant, steam steering gear and steam capstan, rigged and equipped complete, and furnished in crew's quarters and galley. One steel launch and three rowboats. Regular speed sixteen miles per hour. Cost of the yacht, not to exceed \$140,000, and to be paid in ten equal installments.

"Mr. Ream further stipulated that the yacht was to be two-masted and schooner rigged. In the matter of detail Mr. Ream said that his yacht should have a search light; that the deck saloon should be finished in mahogany, and the quarters of the officers and crew in butternut.

"The company, at Mr. Ream's request, began to rush work, and contracts for materials and labor were made without delay. When the work was stopped on Saturday and telegraphic communication had with the parties having the contracts, a summing up discovered the following as the progress of the work on the yacht: The ship in which it was to be built was 30ft. shorter than the required length of the yacht, and as a preliminary lengthening it, piles had been driven for the additional foundation; a number of patterns had been prepared; one-third of the beams had been fitted of material on hand; all the steel angle frames were rolled and were at the Bristol Railroad depot awaiting unloading; castings for a duplicate engine were made, and work on the engine was well progressed, even to the forging of the shaft; a number of the Tobin bronze plates were rolled; one-half of the steel plating was finished; all the deck beams and other deck parts were rolled and cut to size; the shop had been cleared of other boats and machinery, and a number of steel-workers had been employed for some time. This was practically all, but in addition a large gang of steel-workers had been engaged to start in yesterday. These men were, of course not put to work, and the others were laid off by Mr. Ream's bill for two days. The Waldorf is not yet paid, and the proprietors of the Adams House, Boston, are also looking for him.

## The Rig Proclaims the Vessel.

(From the Marine Journal.)

THIS matter of improvements in rig, as well as in design of hull of yachts and all other vessels is and always has been a very important one. It is pleasant to find that our worthy contemporary *Forest and Stream* has taken up the subject in a most detailed history of such improvements, so many of which have been made in recent years, constitutes a valuable record, never, perhaps, hitherto perfectly compiled, and it has therefore in its own province as a popular weekly among yachtsmen, devoted a page and a half in its issue of Dec. 2 to a review of the development of yachting types. It is certainly gratifying that the incentive for such a lengthy and attractive article was supplied by the editorial result in the *Marine Journal*. Our contemporary yacht Valkyrie as a "keel sloop." *Forest and Stream* took exception to the term and, though it admits among other things that we are "correct in saying it is the rig and not the hull which determines the class of vessel," it avers that "it would be a good thing if some new term could be found in place of the clumsy expressions 'sloops, cutters and yawls,' to distinguish these various yachts from a general class of boats." It is a pity that the editor of the *Marine Journal* also remarks that "the whole question is so complicated that any attempt to discuss it in a few words would lead to hasty generalizations," and then proceeds to elaborate and explain the "complications."

This, if our yachtsmen friends will calmly consider the matter, is exactly where the mistake is made. Our contemporary explains exactly how the present types of yachts have been evolved, both as to hull and rig, but is inclined to misrepresent the fact that because of these evolutions the sloop-rigged vessel is none the less a sloop now as she ever was. It is the rig that always does and inevitably must determine the name of the vessel, be it sloop, cutter or yawl. The name of the vessel is not determined by the hull, but by the rig. The Valkyrie when spoken of at sea by a passing ship was entered in the ship's log as a sloop yacht. So was the Navalee. So would any vessel of similar rig be referred to by a sailor. If a man went to an American shipbuilder and said: "I want you to build me a cutter," the shipbuilder would get at his intentions by asking: "You mean a keel sloop?" and the yachtsman would answer: "Yes." The term "cutter" is the American term in England. As applied to yachts, it was only imported here with specimens of "English cutters." That the English themselves deem the term wholly a designation of the vessel's rig is shown by the fact that though other and larger vessels may have hulls on exactly the same lines, the qualification of "cutter" is never applied to them. Who ever heard of a "cutter schooner" or a "cutter ship"? Neither does any one hear of a sloop yacht in England except the "American sloop" term in illustration of the fact that modifications in rig do not affect a vessel's class is shown in the adoption of four and five masts, of double topsail yards and other innovations of comparatively recent date on square-rigged vessels. They are none the less ships, barks or brigs, however many yards or patent appliances they carry. A yawl-rigged yacht always has a jiggermast aft and a sloop has a single mast with headsails. We quite fail to see what necessity there is for attempting to complicate the matter, and we fear that *Forest and Stream* has not the sympathy of the shipping or the yachting world in its demand for greater particularity of definition. Wherein lies the necessity for any complications? A sloop is a sloop all the world over, and so is a ship or a bark, barkentine, brig or schooner, according to the rig of the vessel.

## \*YACHT NEWS NOTES.

The new yacht Columbia, built by the Messrs. Cramp, for J. Harvey Ladev, of New York City, left their yard on Dec. 3, under command of Captain Bergman, for Long Island Sound, where she will have her trial trip over the American Club course, from Larchmont to New London, a distance of eighty miles. The quickest time over this course is held by the late Mr. Gould's yacht, *Alalanta*, with a record of 17.21 knots per hour. This boat, it will be remembered, was also built by the Cramps, but the Columbia will do to a certainty make a better record. She is certainly one of the handsomest steam yachts afloat, and has been designed and built in the design of her hull and her construction, which is of the stanchest character. The principal dimensions of the yacht are: Length, 185ft.; beam, 23ft.; depth, 15ft.; and displacement 400 tons, with a draft of 10ft. Her engine is of the four-cylinder triple-expansion type, the high pressure cylinders being 24½in. in diameter; intermediate cylinder, 31½in.; the two low pressure cylinders each 36in. in diameter, and the stroke of the piston is 20in. At a steam pressure of 160lb. and a piston speed of about 93ft. per minute, her engine are expected to develop about 1,300 horse power, which will make her, in proportion to her displacement, the highest powered steam yacht afloat, and will certainly enable her to make her guaranteed speed of 18 knots an hour. In all her fittings and upholsterings the utmost care and taste has been the principal point, combined with excellent design and construction. The electric lighting has been splendidly carried out, and presents certain features of excellence not hitherto applied to marine work. She is also fitted with the Williamson Bros' steam steerer and the American Ship Windlass Company's windlass. Her rig is regular steam yacht rig and gives her, with the fine lines of her hull, an exceedingly graceful and speedy appearance, and she will doubtless be awarded the honor of carrying the fastest time over the American Club course. The new York Yacht Club. After the trial trip she will be ready to go in commission in a very short time.—*Marine Journal*.

The report of the purchase of Vigilant by the Emperor William had origin in a silly joke, and is untrue.

Mr. Clapham is now busy with two racing craft of the Bouncer type, a cabin cat 26ft. long, 10ft. beam and 12in. draft, for a member of the Douglass Y. C., and a sloop 20ft. long, 6ft. beam, for a Canadian yachtsman. Mr. Clapham states that the prospects for work this winter are very good.

Mr. Thomas Manning, of the Yacht Agency and the American Yacht List, has received from the Committee on Awards of the World's Fair the medal for the best arrangement and display of yachting records. The Yonkers Y. C. has elected the following officers: Com., William L. Bickmore; Vice-Com., John O'Leary; Fleet Captain, C. L. Bloomer; Treasurer, George L. Bolwell; Sec'y., Fred L. Sear, Jr.; Charles E. Williams; Treas., H. Van Allen; Meas., George Warren; Steward, Herbert James; Trustees, A. K. Shipman, T. C. Poole and Thomas Luckey.

# Rifle Range and Gallery.

## Army Shooting Record.

SINCE 1889 the details of practice in rifle and carbine firing by the U. S. Army has been practically unchanged, and the following data are interesting as showing the best record reached in the several yearly competitions held in the various Division and Department contests. It is fair to assume that with the number of men at this drill and the number of years over which the records reach, that these figures represent all that there is in a shooting way in the regular issue of rifle and carbine.

In rifle shooting, using the Springfield Cal. .45, the best individual record in competitive firing including known distances and skirminish, was made by Sergeant R. N. Davidson, Company G, 16th Infantry in the Department of the Platte rifle competition, held at Bellevue, Nebraska, in August 1892. The score was 630 out of a possible 800, equal to 78.75%.

The best individual record in known distance firing, was made by Lieut. C. H. Muir, 17th Infantry, in the Division of the Missouri rifle competition, held at Camp Douglas, Wisconsin, in August 1890. The score was 348 out of a possible of 400, equal to 87%.

The best individual record in skirminish firing, was made by Sergeant T. O'Rourke, Company G, 15th Infantry, in the Department of the Missouri rifle competition, held at Fort Sheridan, Illinois, in September 1893. The score was 308 out of a possible of 400, equal to 77%.

The best team record (the team consisting of ten men) is 5950, this being the total of the Department of the Missouri rifle team for 1892. The possible score of the team was 8000 points, so the above named total is equal to 74.38%.

The shooting in the competitions is at 200, 300, 500 and 600yds.; at the first distance the position is off-hand and standing; at 300yds. kneeling or sitting; at 500yds. lying down prone; at 600yds. lying down prone or on side or back.

In skirminish firing the shooting is at silhouettes target; distances from 200 to 600yds. and the men are permitted to assume any position they please in firing.

In the Cavalry arm where the Springfield carbine Cal. .45 is the arm, the best individual record in competitive firing with the carbine (including known distances and skirminish practice) was made by Blacksmith A. Keiser, Troop H, 6th Cavalry, in the Cavalry competition held at Fort Wingate, New Mexico, in August 1890. The score was 646 out of a possible 800, which is equal to 80.75%. In the same competition Blacksmith Kaiser also made the best individual record at known distance firing; his score being 339 out of a possible 400, equal to 84.75%.

The best individual record in skirminish firing was made by First Sergeant F. E. Toy, Troop G, 7th Cavalry, in the competition held at Fort Leavenworth, Kansas, in August 1892. The score was 323 out of a possible 400, which is equal to 80.75%.

The best team record (the team consisting of ten men) is 5705, this being the total of the Department of the Missouri Carbine team for 1892. The possible score of the team was 8000 points, so the above named total is equal to 71.06%.

The distances fired over and the manner of shooting are practically the same as those prescribed for the rifle.

tempt on the little .22 S. & W. They can see no good in anything that doesn't make a big hole. They like to "feel" a pistol or rifle when it goes off, and certainly with their big jumping .44s and .45s their desire in this direction is gratified.

Some fair rifle shots are to be found in all frontier towns, but I infer from what I see and hear that the average backwoods rifleman is at his best when he is alone. When he is put before a target for a string of a dozen or so shots off-hand he isn't "in it" with the experienced club rifleman. Unfortunately there is no game in this vicinity to occupy the sportsman's attention.

ROSEL.

## Pennsylvania Teams.

EPHRAATA, Pa., Dec. 2.—Thursday last, Nov. 30, our club (North End Rifle Club) was at Lancaster City to participate in an all-day shoot, a report of which I clipped from the *Lancaster Intelligencer* of Friday, and inclose to you: The shooting was at 300yds., standing rest, American targets, ten for the center, and Jacob W. Balz was scorer. The North End club showed the best shooting of the day, and the result of the five-shot and three-shot matches was as follows:

North End Club.									
W. D. Winters.....	10	9	9	10	—47	23	28	26	26
J. W. Lightner.....	6	7	4	6	—34	12	14	25	25
E. M. Weiste.....	6	5	10	6	—33	24	20	25	25
D. B. Lefever.....	10	9	9	8	—44	25	30	27	27

Coatsville Club.

H. Breiter.....	.....	.....	.....	.....	.....	18	26	15	15

## Cincinnati Rifle Association.

CINCINNATI, Dec. 3.—The Cincinnati Rifle Association held its regular practice shoot to-day and made scores appended. Conditions 200yds., off-hand, at the standard target:

Guinde.....	8	9	8	10	9	10	10	8	9	8—80
Louis.....	9	8	7	9	9	8	10	8	9	7—84
Wellinger.....	8	8	8	10	9	8	9	9	9	5—83
Payne.....	9	10	8	7	10	9	9	8	7	—82
Brumback.....	7	6	10	9	8	7	8	7	5	8—71
Hake.....	8	6	8	6	10	9	7	8	10	8—77
Drube.....	5	8	6	6	6	5	9	7	8	10—73
	9	5	5	10	8	10	7	10	7	—73
	6	7	8	7	8	7	10	7	7	—73
	5	6	7	8	7	9	7	6	10	9—73
	4	8	7	7	8	5	7	8	9	10—73
	8	7	7	8	7	9	7	7	10	8—78
	6	5	9	8	8	8	8	6	8	—76
	7	6	8	8	8	8	5	9	7	8—72
	7	5	5	8	10	9	7	5	6	—73
	7	5	10	7	8	10	4	7	8	—61
	7	5	5	9	5	4	5	4	9	—58
	10	10	9	8	7	9	9	8	8	9—87
	10	10	7	6	10	8	10	8	9	—87
	9	5	9	9	9	10	7	7	10	8—83

## Greenville Rifle Club.

TWENTY-ONE members of the Greenville Rifle Club on Friday night of last week kept up the target for a constant four club target in competition for the club prizes. The excellent arrangements which are to be found in the headquarters of this club are such that on nearly every night of the week a large number of the members may be found there busily engaged in perfecting themselves in the use of the rifle, and on regular shooting nights the headquarters are crowded with the members and their friends. Ex-Capt. Robidoux was in fine fettle and succeeded in putting up the high score of the night. The scores are appended, 10 shots, 25-ring target, distance 241'. Robidoux 241, C. Boag 238, Geo. Purkess 237, J. Boag 236, M. Dorrier 235, Plaisted 235, Seehelne 234, Dadds 233, Spahn 233, Collins 232, Lutz 229, Chavant 223, Gotthardt 227, Bischof 218, Agneau 209, Graef 203, Daniels 203, Holzapfel 206, F. Wuestner 204, Hill 200, E. Wuestner 199.

A small contingent of the regulars ventured out in the fog and rain on Saturday last and endeavored to make themselves believe that there was sport in rifle shooting under the conditions present at that time. The atmosphere was so heavily charged with mist that it was hard to discern just where the bullseye was located. Messrs. Boag, Collins, Plaisted and Chavant shot through the regular 50 shot handicap sweep, Boag with his liberal handicap landing on top:

C Boag.....	190	206	202	188	197—75—1053
W C Collins.....	178	206	192	210	197—60—1043
G W Plaisted.....	213	199	211	207	187—1032
C H Chavant.....	212	180	198	185	203—40—1024

## Zettler Rifle Club.

THE annual meeting of the Zettler Rifle Club for the election of officers for 1899-4 took place at the headquarters of the club on Dec. 5. The old board was re-elected, viz., B. Walther, Pres.; Geb Krauss, Vice-Pres.; Gus Novak, Sec'y; Chas. G. Zettler, Treas.; B. Zettler, Shooting Master. The close of the business before the club was followed by an adjournment, after which the members gave their attention to the work of putting up big scores on the prize target and for the champion medal. Messrs. Holges and Flach divided honors for the best score for the medal target, and Messrs. Ross and Flach on the prize target. During the evening there was much interest evinced over the rumors of the many matches that are said to be brewing between some of our local experts. There is no doubt but that rifle shooting interests in and about New York are of late taking a decided turn for the better, and it is expected that when the season of 1894 opens there will be plenty of sport for our riflemen. Scores:

Champion medal: Henry Holges 245, Louis Flach 245, R. Busse 244, F. C. Ross 244, C. G. Zettler 242, B. Zettler 239, Gus Novak 238, H. D. Müller 237, H. Strate 237, M. B. Engel 236, H. H. Kohlmetz 238, Geb Krauss 230, H. Harman 236.
Best 10-shot score, five entries: F. C. Ross 247, Louis Flach 247, H. Holges 248, M. B. Engel 245, R. Busse 244, B. Zettler 243, C. G. Zettler 242, H. Strate 242, Gus Novak 238, H. D. Müller 233, A. H. Kohlmetz 238, Geb Krauss 230, R. Harman 236.

## New York Schuetzen Corps.

THIRTY-SEVEN members of the New York Schuetzen Corps, Capt. Offerman, assembled in the gallery of the Zettler Bros. on Friday night for gallery practice and team shooting. This corps has inaugurated a series of bi-monthly shoots for the coming season, and while it is the first attempt of the corps in gallery practice, the prospects are that the venture will be highly successful.

The evening was devoted principally to team-shooting, the members being divided into teams of fifteen men each, ten shots per man. First match: Capt Tholke's team.....3,176 Capt Lemcke's team.....3,097 Second match: Capt Vehrenberg's team.....3,316 Capt Offermann's team.....3,290 In and between six of the members, 10 shots each, the following scores were made: Henry Strate 239, Fred Fackre 239, Dr. Chas. Grosch 238, Fred Feigl 238, John D. Wilkins 237, Aug. J. Christian 237.

## New York Against New Jersey.

Editor Forest and Stream: Ever since the championship match at Cypress Hills on Election day, the air has been full of championship talk. The Ross-Zimmermann match being off next is a much desired match between Ross and Dorrier. But last and greatest of all is New York vs. New Jersey. "Whoop her up, boys," there are lots of people looking at you and waiting to see that match materialize. In figuring on the possible result and taking the championship shoot on Nov. 7 as a base of calculation, I find the total number of points made by the five men on the proposed New York team (Ross, Holges, Flach, Hutch and Boyken) to be 10,712, while for New Jersey representatives (Dorrier, Hayes, Hansen, Schlicht and Plaisted) we have a score of 10,728, or a lead of 16 points. Again, taking the best 10 shot scores of each team we have New York 1,143, New Jersey 1,116, or 29 points in favor of New York. The best possible way to decide is to have a match before the weather gets too cold. All those "Jersey Skeeters" in the above list are of the non-migratory sort and can be found congregated on the eastern side of Newark Bay any sunny Saturday should any one be looking for them. Who dares knock the chip off?

R. R.

## Lady Miller Club.

AFTER a week of busy work in preparing for Thanksgiving and its many cares, the members of the Lady Miller Club came out Monday night prepared to put up their customary good scores in regular club practice. The ladies shoot in three classes for medals, and on this occasion one of the members, Mrs. Mannheimer, presented an extra prize suited to the boudoir, for the member making the highest score of the night. Mrs. Mannheimer's prize was won by Mrs. Meyns on the creditable score of 231. The scores are appended, medal winners being marked with an asterisk: \*Mrs. August Meyns 231, Miss M. Miller 218, \*Mrs. Boardman 218, \*Miss Begerow 210, Mrs. Ahnert 209, Miss Sanders 207, Miss Kreiger 200.

## Our Own Rifle Club.

THE weekly gallery shoot of the Our Own Club of Hoboken on Dec. 4 brought together twelve members in competition for the club medal. Captain Hencken, J. H. Kruse, W. F. Dilger and Wm. Bohnacke, had a close race for first position, and the result was undecided up to the last shot. Kruse succeeded in pulling himself into first place over Bonicke and Dilger by one point, and the two latter came in one point ahead of Captain Hencken. Scores: J. H. Kruse 235, William Bohnacke 234, W. F. Dilger 233, E. D. Hencken 233, H. Malz 233, Otto Schmidt 232, C. Feldmann 228, H. Schultz 227, O. Keller 226, J. D. Sinclair 215, H. Moser 215, D. Page 214.

## New York Rifle Club.

SIX members of the New York Rifle Club assembled in the St. Mark's Place Gallery on Saturday P. M. for weekly practice. The story went that the members had a high score, but the result was not decided until the last shot. The scores are appended, 10 shots, 25 ring target, distance 100ft.: H. H. Isbell 241, M. Herrington 238, C. E. Fensch 238, R. J. Young 238, E. R. Chadbourne 236, F. C. Hamilton 227.

## Excelsior Rifle Club.

THE weekly shoot of the Excelsior Club on Dec. 5, had an attendance of 8 members. The shooting was not up to the average of the weekly shoots. The absence of Captain Hansen may have had a depressing effect upon the nerves of these present. The high score of the evening was made by L. A. Ryor. J. Hennessy 238, W. Weber 247, R. H. Duff 232, W. Hughes 198, J. Bins 225, Bryce 230, J. Hughes 232, L. A. Ryor 239.

## Beideman Rifle Club.

BEIDEMAN, N. J., Dec. 6.—The following shows the weekly scores of the Beideman Rifle Club, conditions 25yds., strictly off-hand. Targets 142in. bullseye, 4in. ring, possible 250. Week ending Nov. 25: H. J. Mehard 245, E. L. Gardiner 245, J. L. Wood 237, A. Schmittman 235, A. McGowan 235, W. Gilbert 233. Week ending Dec. 2: W. Gilbert 238, J. L. Wood 232, E. Gardiner 231. Pistol score, 50yds., possible 100: H. J. Mehard.....10 10 10 10 9 9 6 8 8—92 WALT GILBERT, Secretary.

## RIFLE NOTES.

Reproduced in another column of this issue will be found a facsimile of the fifty-shot target, of which we made mention last week. Our purpose in using a combination load of this nature was to overcome if possible the extreme fouling of the rifle barrel, one gets when using black powder by itself. Our reader may query as to why we did not use nitro full charge and done with it. Our answer is, that having had considerable experience with nitro in shot guns and a little with the rifle, and knowing somewhat the accuracies of the nitro explosives, we did not care to venture too deep with the Ballard action and the old style shell, and then agri in the sample of nitro supplied to us was too small to have loaded enough shells for a series of shots. All of our lubricated cranks are well acquainted with the many perplexities met with in shooting black powder without cleaning and how we have all been looking forward to the time when our powder manufacturers would come forward with a powder that, after combustion would not leave the interior of our rifle barrels like Pittsburgh chimney long in use. One of our old riflemen, John H. Brown, whose name is familiar to the patrons of FOREST AND STREAM, some years ago gave considerable time and study to the use of nitro in the rifle. His experience was much the same as that of many others in the fact that reliable work could not be done with the nitro using the shells and primers then on the market. It was the advent of the new Winchester No. 3 W. J. primer that brought the accuracy of the nitro explosives to powder in the rifle. A few trials with the new primer from muzzle rest and off hand gave good results, these were followed by the fifty shots published in this issue. We are expecting new supplies of nitro for experimental work on or about Christmas. When the new powder comes to hand, we shall proceed to take a little deeper dip into the mysteries of it, and if we are lucky enough to come to the surface again we will give the readers of FOREST AND STREAM a little further light upon what we found.

We note that the War Department has at last decided upon a smokeless powder. Report says that the Leonard Powder Co., of New York, is the successful bidder for the first order to be placed by the Government for 10,000lbs. of powder for ordnance and small arms purposes. The success of an American company in securing the Government patronage for smokeless powder is a matter of congratulation to all true Americans, and we congratulate President John H. Brown and his co-workers in the Leonard Powder Co. for the enterprise in pushing their American powder to the front. Mr. Brown is one of the veterans in the fraternity of rifle shooters and is best known to the American public as the inventor of the Brown segmental tube wire gun, now in the hands of the Ordnance Board at Sandy Hook.

At the annual ball of the New York Central Corps in Terrace Garden on Thursday night of last week, many of our prominent German shooting societies were represented. During the night a group of the several societies represented became interested in the topic of team shooting and the result was that a match was made to shoot a gallery match on the Zettler Bros. ranges early in February between teams made up from the New York Schuetzen Corps, the New York City Corps and the Harlem Independent Corps, each team to consist of ten men, the losing team to pay for the expenses of the gallery and the usual refreshments.

The report of the Hartford Rifle Club shoot in last week's issue, in which H. M. Pope is credited with a total of 855 points in 100 shots on the standard American target is highly gratifying to the many friends of this popular sportsman. With his bicycle and his rifle Pope has got an acquaintance that extends from Maine to the Pacific.

The Zettler Rifle Club will hold its annual gallery prize shoot at the headquarters on Jan. 30, 31 and 32. On the prize target there will be fifteen prizes ranging from \$25 to \$1. On the bullseye there will be ten prizes, from \$10 to \$1. Tickets will be three shots, 35 cents each, or three for \$1.

At the monthly meeting of the New York Schuetzen Corps last week three prominent riflemen, Messrs. B. Walther, Gus Zimmerman and Capt. A. Knobloch were made members of the society.

## Trap-Shooting.

All ties divided unless otherwise reported.

## FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 10-12.—West End Gun Club tournament, at Davenport, Ia.  
Dec. 21.—Elliott vs. Class, 100 live birds each, on Erb's grounds, Bloomfield avenue, Newark, N. J., beginning at 10 A. M.  
Dec. 25.—Union Gun Club tournament, at Springfield, N. J.; 9 A. M. to 1 P. M. live birds; 1 P. M. until dark, targets. Open to all.  
Dec. 25.—Dexter Park live bird and target shoot.  
Dec. 26.—Open sweep at live birds, on Erb's grounds, Bloomfield avenue, Newark, N. J.  
Dec. 28.—Team of three shoot, at Willard's Park, Paterson, beginning at 10 A. M. Three men from any club, \$30 entrance per team, 15 live birds per man.  
1894.

Jan. 1.—New Year's tournament, Towanda (Pa.) Rod and Gun Club at Towanda, Pa. Live birds and targets.  
Jan. 1.—Dexter Park live bird and target shoot.  
Jan. 1.—South Side Gun Club's thirteenth New Year's annual, at Newark, N. J.  
Jan. 9.—New Jersey vs. Kings county, team shoot, on Al. Heritage's grounds, Marion, N. J.  
Feb. —Reading Shooting Association tournament; two days target, one day live birds, at Three-Mile House, Shillington, Pa.  
April 4-6.—Interstate Manufacturers' and Dealers' Association's grand annual shoot, at Dexter Park, Long Island.  
April 24-27.—Central City Gun Club's tournament, Central City, Neb.  
May 1-6.—Arkansas State Sportsmen's Association's tournament, at Fort Smith, Arkansas.  
May 17-18.—West Newburg (N. Y.) Gun and Rifle Association's spring tournament.

## Best When He Is Alone.

INDIO, Southern California.—California is a much larger State than most of our Eastern friends realize; in fact, most of our Californians themselves have only a hazy idea of its size. This station is over 600 miles southeast of San Francisco, and still it is many miles from the outer limits of the State. The many degrees of latitude thus embraced within her borders imply a vast variety of climates. It is, I believe, a general impression in the Eastern States that all of southern California affords a fine winter climate for invalids. This is true to a certain extent, but different portions vary extremely in climatic conditions; for instance, Los Angeles and Riverside are towns famous for their healthfulness, and still asthmatic; consumptive and rheumatic patients are fain to get further away from the moist winter weather of the coast region.

Having suffered within a year two attacks of grip I found it very desirable to come to a warm and dry climate, hence this letter is written in the midst of an oasis which gems a truly desert scene. Passing seven miles west over a flat plain overgrown with sage brush, mesquite and cactus, one reaches the sheer front of the San Jacinto foothills, which culminate about 25 miles northwest in the snow bearing peak of the same name rising over 10,000ft. above sea level. Twenty miles northeast of this uplift (though seemingly in this clear atmosphere only five miles) rises Old Baldy, the dominant sentinel of the San Bernardino Mountains, whose altitude surpasses that of its mighty neighbor. The plain between the ranges is very dry—about 3in. annual rainfall. To-day, Nov. 15, an average specimen for this time of year, temperature at 9 A. M. was 80° F.; at noon, 76°; at 6 P. M., 74°; this is the coolest part of the premises.

Upon deciding that a temporary stay in the wilds was necessary, I began to consider what "shooting irons" would afford me most pleasure on my trip. After consideration I decided first to take a Smith & Wesson .22 single shot, 5in. barrel target pistol, and secondly to rig up a .25-30-86 W. C. F. single shot 26in. barrel 8lbs. shotgun butt, set trigger, Lyman rear view-gauge and Winchester interchangeable disk front sight. I had some years ago thought a .38 the best caliber for 200yds., but soon discarded it for the .32-40. This I still use in the rather windy climate around San Francisco; but in the still atmosphere of this vicinity the cute little .25 "gets there" delightfully at 100yds., though I have not tested it at any greater range. I don't much like the .22 for general shooting, though realizing that for a moderate range it is very accurate. The shot that gives me satisfaction is not only at 40 or 50yds., but at distances much beyond that, distances that would be well in reach of the .25. As a minor point, the little .25 cartridge (W. C. F.) is to my eye a thing of beauty. My pistol experience is not extensive, but I am well able to hold my own with the best revolver shot I have met here. He is a middle-aged man most of whose life has been spent on the frontier. He uses a heavy .45 Colt. Of course he and all the locals look with considerable con-

May 22-25.—Knoxville (Tenn.) Gun Club thirteenth annual tournament: first days, target, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.

June 5-7.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.

June 11-16.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-sixth annual tournament, at Utica, N. Y., under auspices of Onondaga County Sportsmen's Association.

June 19-21.—Chamberlin Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.

June (third week).—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Griscom, Sec'y, Atlantic City, N. J.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsonock Park, Altoona.

Oct. 4-5.—West Newburg (N. Y.) Gun and Rifle Association's fall tournament.

## DRIVERS AND TWISTERS.

After the Elliott-Class live bird match at Willard's Park, Paterson, on Dec. 8, the Class contingent seemed to be still in doubt as to the fact of their Morrisstown favorite being the inferior in point of shooting ability to the expert from Kansas City. As a result, Mr. John Leonard of Morrisstown, who has financially backed Mr. Class in all his recent matches, held a consultation with his principal, and then proposed to Mr. Elliott a match on the following terms: Each man to shoot at 200 live pigeons for a stake of \$300 a side; match to be shot on the grounds of John Erb, Bloomfield avenue, Newark, N. J., on Thursday, Dec. 21; Hurlingham rules to govern except as to the boundary, which shall be governed by the rules of the grounds; the difference between the price of the birds and the gate money to be paid by the loser. The above was agreeable to Mr. Elliott, and Mr. Class placed \$50 forfeit money each in the hands of Mr. T. W. Morley of Paterson, to be turned over by the latter to Mr. John Riggett of Rockaway, who was decided upon as stakeholder and referee. In case, however, of Mr. Riggett refusing to act as referee, a referee shall be selected by the contestants on the day of the match. The match is to be played or pay, barring rain. This match is one which should attract a big crowd of spectators, as it will be a fine exhibition of the art of shooting, and besides will be shot strictly on its merits. John Erb, as is well known, can furnish as good pigeons as any man in this country, and for this occasion he will try to get them as good as can be found. The trapping and retrieving on his grounds is done by experts, and there are never any tedious drags to test the patience. Under these conditions there is no reason why the match should not be run off to the satisfaction of both sides. The match will be exciting, both men are shooting in their best form, and many who have watched their recent work are of the opinion that, all things equal, there is not a difference of one bird on 100 in their skill. An analysis of the shooting of the two men fails to show even the above difference. In their five matches they have shot at 925 birds each, Elliott killing 495 and Class 493, this making Elliott's 99.285 and Class's 93.94. Counting in the birds which fell dead out of bounds with those scored we find that Class hit 96.761 of his birds, against Elliott's 96.190. These figures do not seem to leave much margin of skill on either side of the ledger, and were we asked whom we considered the better shot we should be unable to cast a vote on either side. The coming match will be the first affair at 200 birds a side shot in Newark for many years, and those who miss the opportunity of seeing it will miss what cannot fail to be a fine exhibition, no matter which man wins.

Thursday, Dec. 28, will be a great day at Willard's Park, Paterson, when there will occur a contest between teams of three men each, comprising some of the best shots in this section of the country. The affair was projected and will be managed by Mr. Jacob Pentz of the Newark Gun Club. The teams will comprise three men each from any one gun club, fifteen live pigeons per man, Hurlingham rules except 50yds. boundary, \$300 entrance fee per team, five entries and no money, over 100 live pigeons. Shooting will begin promptly at 10 A. M. in order that all may have the benefit of a good light.

Up to the time of going to press six teams have entered, but there is a strong chance that more will fall in before the day of the shoot. Entries are expected from the Riversides of Red Bank, Centrals of Long Branch, Union Hills of Guttenberg, Emeralds of Brooklyn and others. Below are the teams already entered:

Newark Gun Club, Team No. 1—Samuel Clark, Charles M. Hedden and Ferdinand Van Dyke, all of Newark.

Newark Gun Club, Team No. 2—Milton F. Lindsley and Eddie Collins of West Hoboken, and Dr. P. J. Ziegler of Warrenville.

Climax Gun Club, of Plainfield—Neaf Apgar, of Avoca; Enoch D. Miller, of Springfield, and Charles Smith, of Plainfield.

Trenton Gun Club, of Trenton—Charles H. Long Branch; Eddie Hill, of Trenton, and Chas. Zwerlein, of Yardville.

Cosmopolitan Gun Club, of Plainfield.—A. W. Morley, of Oakland; John Rothaker, of Philadelphia and Thomas W. Morley, of Paterson.

New Utrecht Gun Club, of Bay Ridge.—C. Ferguson, G. E. Nostrand and C. E. Morris, all of Long Island.

On Saturday Dec. 9, some interesting shooting was indulged in on the race track at Guttenberg, N. J. The afternoon was disagreeable for sport, the light being bad and the rain coming down in torrents. The event of most interest was the shoot in which Mr. F. Lindsley the famous wood powder man and J. A. R. Elliott the American Field champion, were pitted against Berkery and Charles Woolington, of Hoboken. Each man shot at 25 live pigeons under Hurlingham rules, except boundary which was 50yds., for a stake of \$100 a side. The birds were a good lot and would have been still better with clear weather. All the shooters were in good form and it was only by a narrow margin that the wood powder team won. The scores:

Lindsley.....10111111111111111111—21  
Elliott.....11111111111111111111—22-43  
Berkery.....10110011111111111111—20  
Woolington.....00111111111111111111—21—41

"Ned" Banks, the genial secretary of the Altoona Rod and Gun Club, notifies us that the club claims August 21, 22, 23 and 24 1894, as the dates upon which will be held the annual tournament of the Pennsylvania State Sportsmen's Association. The shoot will be held on the summit of Wopsonock Mt., near the present club grounds of the Altoona Rod and Gun Club. Mr. Banks says: "Our club will spare nothing to make the shoot the success of the season and I believe we can show visitors something in the way of skyline that they never saw before."

The first of the series of shoots for the championship medals of the Riverside Gun Club, of Red Bank, N. J., took place on Dec. 8. The scores: Event No. 1, 25 targets, John S. Hoy 22, J. C. Cooper 21, E. M. Cooper 20, James Cooper 17, A. Whymer 11, T. L. Davis 19, Oscar Hesse 21, C. E. Throckmorton 10. No. 2, at 15 targets, E. M. Cooper 14, Hesse 12, Hoy 12, Jas. Cooper 9, H. N. Campbell 8, J. P. Cooper 9, Oscar Hesse 9, 8, L. S. Campbell 6.

The West End Rod and Gun Club, of Syracuse, N. Y., made the following scores at their last shoot, each man shooting at 15 targets. Fred Klock 11, Vince Case 9, Lewis Simpkins 14, Edward Klock Jr., 10, David Papworth 12, John Flannery 12, James Breen 7, Marshall Hall 10, John Goodridge 8, George Steves 10, John Kelly, Edward Church 7, F. H. Bellinger 9, H. L. Blye 8, Frank Klock 10.

The new 100-page catalogue published by Henry C. Squires & Son, is a marvel in its way, both as to the number of articles described and the low prices quoted. There is scarcely an article in the sporting goods line that is not mentioned, and besides the book shows prices on many articles useful to others than sportsmen. Copies are sent to all who apply.

It is about time for the public to hear something about the lately proposed live bird match between T. W. Morley, of Paterson, and M. F. Lindsley, of West Hoboken. The conditions were for 50 live birds per man and best bags to win. This match could be shot at Erb's on the 21st inst., previous to the Elliott—Class match.

The Stroudsburg Gun Club will hold a one-day shooting tournament on the club grounds near Broad street, Stroudsburg, Pa., on Dec. 25. A programme that is up to date in every respect will be arranged. Stroudsburg is on the D. & L. W. R.R., N. Y. S. & W. R.R. and W. B. & E. R.R. You are invited.

Our list of fixtures for 1894 is growing apace, but there is a marked scarcity of events previous to April. Send in your announcements as soon as possible, so that shooters may have plenty of time to arrange for attending your tournament.

Wm. Telf Mitchell, of Lynch's Station, Va., says in a private letter that game is not as plentiful as was antiques for this season. He says his best bags thus far have been 48 and 38, respectively.

Don't forget that open to all tournament at live birds and targets to be held on the Union Gun Club grounds at Springfield, N. J., on Christmas Day.

But a few weeks more to roll by and then will come that great team match between the experts of New Jersey and of Kings county, N. Y.

Louis Miller announces open to all shoot at live birds and target, to be held at Dexter Park, on Christmas and New Year's Day.

Don't miss the Elliott—Class 200 bird match at Erb's, on Thursday, Dec. 21.

Don't forget to send in the result of your club elections.

C. H. TOWNSEND.

## Elliott Wins the Fifth Match.

ONCE more have J. A. R. Elliott, the American Field champion, of Kansas City, Mo., and Frank P. Class, champion of New Jersey, met at the traps and once more has Elliott been victorious. This contest, the fifth of the kind shot between these closely-matched experts, took place at Willard's Park, Paterson, N. J., on Friday, Dec. 8, and there were on the grounds just 92 people, including the shooters. Surely it looks as though it were useless to try and attract a crowd to see a shooting match in Jersey. These matches between Elliott and Class, though not for fabulous amounts, are nevertheless "on the square," and our firm belief is that in each and every one of the five matches each man shot to kill as many birds as possible. This being the case, and there being only a slight difference in the number of birds killed by the two men, it seems curious that the attendance at this match should have been so light.

The day was an ideal one for early winter, the air cool and crisp, the wind blowing lightly from the northwest, its keen edge being nicely tempered by a clear sun. The grounds were rather heavy and sloppy from the melted snow. The birds can be disposed in few words as an extremely indifferent lot, in fact, there were only 22 birds noted by the press representatives at all above the ordinary. They were the poorest lot as a whole trapped in the series. Forty-four out of the lot were "flippers," which merely jumped from the trap and attempted to alight within a few feet, but were killed too soon to get the chance.

In the score these are designated by an "H." M. Hedden, of Newark, being chosen as referee. C. Wright of Passaic, trap tauler and the representatives of the sportsmen's journals doing the scoring. Elliott won the toss and shot first, killing a left-quartering driver. Class followed by killing a "flipper." Neither man lost until the ninth round, when an incoming right-quarterer got away from Class, although it was by no means fast. On this round Class's twelfth and fifteenth rounds, when a right-quartering driver, carried their lead over the boundary. Elliott 22, Class 22.

On the next round Elliott scored another straight, while Class's first and eleventh fell dead out of bounds. At the end of the round Elliott had scored 50 to Class's 45.

The third round opened with a kill by each. Elliott, who was in splendid form, centering his birds beautifully, kept up his killing until the twelfth round, when a right-quartering driver, which he moderately fast got away from him. This left him with a straight run of 60 kills. His twenty-second bird, a fast driver, was hard hit but was tough. When Eagle started for him he managed to evade the dog's mouth, and finally gathered strength enough to get close to the rear boundary. Here Eagle made a jump for him, but just as the dog's jaws were about to close on the bird he struck a slippery spot and slid over the line, grabbing the bird not more than six inches from the line. This bird could have been gathered by a man. On this round Class lost his third and twelfth birds. The round ended with a score of 73 for Elliott to 69 for Class.

On the fourth round Elliott killed 25, while Class lost his eleventh and twenty-fourth, the race ending with 98 kills for Elliott to 91 for Class.

We do not consider that we would be justified in adversely criticizing Class on the form he displayed, which was miserable. At least two-thirds of his kills were "slobbers," he showing very few of the clean, centering shots made by Elliott, who was at his best. For Class's work there was an excuse. Early in the week he knocked the skin from the middle joint of the middle finger of his right hand, put thereon a piece of plaster, and supposed that would end the matter. On the following morning, however, he was obliged to remove the plaster, the finger having become badly inflamed and swollen. As it continued to grow worse he finally consulted a physician, who said he was afraid the finger had been poisoned by the black courtplaster. On this day the finger was extremely painful and was still badly swollen. With this handicap a fine exhibition from him was not to be expected.

The match was an extremely uneventful one, the shots above the average being here noted: Elliott 34th and 35th (both fast drivers), 43d (left-quarterer), 46th (a very fast towering driver, a nice kill), 48th (a quick kill), 51st (ditto), 54th (ditto on fast bird), 72d (awfully fast driver and a pretty second, but dead out of bounds by action of dog as before explained).

Class's 9th (fast driver, incomer to right, dodged both loads), 23d (fast driver and neat first), 40th (left-quarterer, behind with first, got swift and brought down by pretty second), 53d (fast driver, lost, shot behind), 63d (fast left-quartering driver, good second), 69th (fast right-quarterer and a clean second), 72d (elegant second on driver that was awfully fast), 75th (the star shot of the day on an extremely fast driver that was yards away before the trap settled), 86th (an ugly zig-zagger of a left-quartering driver and extremely fast, did not course a yard and got clean away from both barrels) and 94th (fast right-quarterer, quick first).

Class's 12th bird struck the wire fence and fell over. His 15th just managed to get over. His 18th and 100th were shot on ground purposefully and other birds allowed. His 49th was shot on ground, but seemingly not met by the referee.

Elliott's 47th, 62d, 55th, 60th and 93d birds were all plainly shot while on the ground, but none of them were called by the referee.

Elliott's runs were 69 and 28, Class's 23 and 12. Elliott used his second barrel 45 times, Class 43.

The times by quarters were as follows: 35m., 28m., 32m., and 25m., a total of 2 hours.

Strings of 10 shots each the race ran as below:

Elliott.....10 20 30 40 50 60 68 78 88 98  
Class.....9 17 26 35 45 54 63 73 82 91

Below are the detailed scores, shown as only the greatest journal on earth can show them:

Trap score type—Copyright 1893, by Forest and Stream Publishing Co.

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25  
Elliott.....1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25

Lindsley.....12212121-8 220  
Elliott.....12121121-8

## Glenmore Rod and Gun Club.

THE monthly shoots of the Glenmore at Dexter Park of late have been noted for the light and the members. In times past this old organization used to have an attendance at its monthly shoots equal to any of the many clubs that patronize this popular resort, but things are not as they used to be. Now an attendance of half a dozen members at a monthly shoot is an exception rather than the rule. At the last regular shoot on Nov. 29 there were four men on the grounds to compete in the club event, Messrs. Edgerton, Thompson, Lewis and Kay. They shot through the club event and one 5-bird sweep and then retired.

Club event:  
T T Edgerton.....012120-5 W Levens.....200212-5  
E A Vroom.....121211-7 J B Kay.....110101-5  
Sweep, 5 birds:  
T T Edgerton.....2021-4 J B Kay.....1112-6  
W Levens.....02212-4

## Waverly Gun Club.

FOUR members met at Miller's Dexter Park on Dec. 4. The afternoon was devoted to smashing live rocks. The club event called for ten birds, this was followed by four sweeps of ten birds each:  
O. Hillmer.....11001010-5 L. Grane.....00000000-1  
P. Van Staden.....10010100-4 J. Fehleism.....00101001-4

## Garfield Gun Club.

MATCHES shot Nov. 30 from 5 unknown King traps, 30yds., 10 live birds:

## Perth Amboy Gun Club.

PERTH AMBOY, Dec. 1.—The Perth Amboy Gun Club held a Thanksgiving shoot at live birds and bluecocks on their grounds yesterday, with all sorts of prizes. It was one of the best day's sport that has been witnessed in eastern New Jersey in many years, and was attended by hundreds of pigeon-shooting enthusiasts from all parts of the State, with goodly sprinkling of New York cranks. William F. Hartman of Perth Amboy Gun Club entered in four of the five live bird shoots, and killed every bird, making a clean score in every one of the events.

The first match was with the rifle, and ten contestants faced the targets. Thomas Brautingham of the South Plainfield Gun Club was the winner on a score of 31 out of a possible 36. He won the turkey. Six men faced the traps in a shoot at five live birds, conditions 2yds. rise, and but one barrel to be used. James Van Brackle of Matawan killed every bird but his second. James L. Tooker killed every bird with the exception of his fourth, thus tying Van Brackle and William F. Hartman killed his five birds straight, taking first money. The next match was at five live birds, same conditions as before. William F. Hartman and James Van Brackle killed their five birds and divided first money. Leander B. Cambell of the Riverside Gun Club of Red Bank killed four birds and took second money. James M. Glens and O. Brown of the home club, who killed three each, divided third money.

The next event was a match at five live birds with similar condition to previous match. William F. Hartman captured first money by killing every bird. Dr. Brackle of the Perth Amboy Club and Leonard Cambell of the Red Bank Club tied for money and divided the purse. There were eighteen entries in the fourth event, which was a target shoot. Each man had three shots with twelve points to a shot, making a possible 36. The prize was a young pig. William F. Hartman made a clean score and was tied by H. Jones of the Midway Gun Club at Matawan.

Second excitement was intense in this contest, as Hartman had so far made a clean score in every event. In his shoot off Hartman only made 32, and Jones scored 33 and took the young porker. A match at 10 ten bluecocks followed: Conditions, 25yds. rise, both barrels allowed. Brautingham and Fred. Mason of the Perth Amboy Gun Club broke 8 birds each and divided first money. James L. Tooker broke 7 and took second money. William F. Hartman broke 6 and took third money. The last match of the day was at three live birds each man, 25yds. rise, single barrel. William F. Hartman won first money by killing every bird. Geo. Terry took second money by killing his first two birds.

## Central Gun Club.

DULUTH, Minn.—The Thanksgiving afternoon shoot under the auspices of the Central Gun Club drew a large number of contestants and spectators. There is nothing of a novelty in a Thanksgiving Day shoot in some climates, nor here, in ordinarily warm falls, but when such a large number of entries will turn out and the thermometer registering zero all day, it shows that the sport is on the increase in this section, and illustrates to what extremes the enthusiasts will extend. While the scores were not as good as expected, nor nearly up to the standard of a few years ago, the old regulars were the best men in the field for the most honor and surprised the best of them, altogether the scores were as satisfactory as could be expected. The severity of the weather considered, and everybody enjoyed a good afternoon's shoot. Darkness prevented the shooting of the full number of events on the programme, and they will, with a few additional ones be that on New Year's Day, weather permitting. The prizes offered in this shoot were a turkey and some of the old regulars won the first prize to be had in the club. Scores and winners as follows:

First event, 15 singles: Pastoret 11, Nelson, Day and Moor 10, Proctor and Little 9, Gunderson 8, Moore and Bakke 7, Owens, Larson and Johnson 6, Springer 5, Jones, Stevens, Dewar and McDonald 4, Carlson 3, Heimbach 0. Winners: Pastoret first, Nelson second, Proctor third, Gunderson fourth. The first three won on shoot off.

Second event, 15 singles: Dodge and Greene 10, Day, Nelson and Moor 8, Johnson, Moore and Larson 8, Myers, McDonald and Dewar 7, Little, Owens and Wood 6, Pastoret and Springer 5, Greene first, Day second, Johnson third, Myers fourth, all on shoot-off. Nelson and Pastoret handicapped 4yds. in this event.

Third event, consolation, 10 singles, open to all non-winners in events one and two: Owens, Moor, Donald and Springer 4, Moore and Little 3, Stevens 2, Armstrong 2, H. Little and Carlson 1. Owens first, Moore second, Stevens third, H. Little fourth, each on shoot-off.

## Live Birds at Easton.

QUITE a number of sportsmen assembled on the trap-shooting grounds at Easton, Pa., on Thanksgiving Day, and enjoyed a day's sport at the traps. Among the shooters was "Big Jim" Smith, the good-natured expert from Hackettstown, to whose kindness we are indebted for these scores. The morning's shooting comprised four events at three live birds each, \$1 entry, birds extra. The scores:

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25

## E. S. Benscotten's Disappearance.

READERS of FOREST AND STREAM, more especially of the trap department, will recall the totally unexplained disappearance of the once well-known trap-shooter, E. S. Benscotten of Ohio. Today I have followed up the story of an employer who knew Benscotten after his departure for the West:

MINNEAPOLIS, N. H., Nov. 27.—Nearly two years ago I saw an item in FOREST AND STREAM written by you, telling of the mysterious disappearance of E. S. Benscotten, and so I send to you to ask if you have ever heard anything further of him since that time. While he was a Spokane he was in my employ (I was at that time the manager of the Washington Water Power Co.), and I liked him so well that I have tried in many ways to get some trace of him, but so far without any success whatever.

Nothing whatever has been heard of the missing man since the time, so far as I know, and the case bids fair to remain one of the unsolved mysteries, whether of accident or crime.

E. HODGKIN.

**Close of the Climax Season.**

The Climax Gun Club, of Plainfield, N. J., held its twelfth and final shoot of the season on Dec. 6, on its grounds adjoining Benner's Grove in Fairwood. The day was cold and damp, which accounts for the fact that only a dozen members put in an appearance. This being the date for the annual election there would certainly have been a good attendance had the weather been clear.

The scores in the club shoot are given below:

Brantingham (25).....	1100110110011111111010111	-18
C. Smith (25).....	0111111111111111111111111	-24
Keller (25).....	1110110111010101111111111	-21
D. Terry (25).....	1110110111010101011111111	-20
Apgar (25).....	0001111111111111111111111	-23
J. Darby (35).....	11110111011110010111111101011	-25
Manning (29).....	001111011111111111010101111	-22
W. Terry (32).....	100011110101111111111110001	-22
Goodman (35).....	0011100111010010111111101011	-23
F. Mundy (35).....	0100111100001011111101011010	-18
Delancy (35).....	0111011010101010111111111	-18

In the system of handicapping the strongest shoot at 25 targets each, and the others are allowed to shoot at enough extra targets to give them an opportunity to break as nearly as possible the same number of targets as the scratch man can break. All the shooting is at blue-rack targets from five traps, unknown angles, flyds, rise, one trap being in front; this system of handicap has been well received by all the members and has resulted in some close work all around. In adopting the one-man-up style of shooting the club has also pleased its members.

There is one point in particular for which the club deserves to be commended and that is in its conduct of sweepstakes, the entrance fee to which on club days cannot exceed fifty cents, no matter how many birds are shot at. This is a wise provision and gives the man with a limited depth of pocket an opportunity to shoot during an afternoon without risking a month's salary. And then again a member can enter any sweep by simply paying for the targets, this making his shooting still cheaper. In fact there is an utter absence of any chance for the strong to devour the weak.

The club has been very successful during the season, and will open the season of 1894 with a fat treasury, an increased membership and under his management, on Thursday, Dec. 7, beginning at 11:30 A.M. on the Climax Gun Club grounds, adjoining Benner's Grove, Fairwood, N. J. In winding up his invitation, "Dutchy" said, "The birds will be furnished by our humble servant, and they will be 'goot enof fur euy boty.'" Charles Smith ("Dutchy") said, "And before the day ended the shooters who were on hand perfectly agreed with 'Dutchy,' some even contending that some of the birds were 'too goot enof fur euy boty.'"

The attendance was good despite the threatening aspect overhead. Among those present were W. F. Quimby, senior partner of the W. F. Quimby Co., of New York and Newark; M. F. Lindsley, of West Hoboken and the American Wood Powder; Ferd. Van Dyke, of Newark, well known as an expert either at targets or feathers; J. A. R. Elliott, of Elliott Brothers, sporting goods dealers, Kansas City, Mo.; Arthur W. DuBray, the genial and ever popular advocate of the sports of the gun, manufactured by Parker Brothers, of which goods he is the Southern representative; Leander S. Campbell, an old time expert from Little Silver, N. J.; Charles Zwirlein, the stalwart shooting boniface of Yardville, N. J., and his side-partner in all shooting matters; Eddie Hill, of Trenton; Aaron Woodruff and W. H. K. Davey, of Elizabeth; John Rothacker of Philadelphia, who always finds time to slip away from his brewery in order to take part in the sports of the gun; Keller, of Plainfield who said Climax were "good enough;" "Little Neaf" Apgar of Avona, representing H. C. Squires & Son; Daniel Terry of Plainfield, and the immortal "Dutchy."

The birds were a crack lot of flyers and if the same kind could be guaranteed for matches they would command a good price. Quick as a flash in getting away when the traps were sprung; fast and ir-

regular in their flight and tough and hard enough to carry any quantity of shot, they were a lot of birds, the trapping and shooting of which were well worth witnessing. They were by far the best lot of birds trapped in this locality this season and could scarcely be excelled at any time or on any grounds.

The first event of the day was a "warmer" at four birds per man for the price of the birds. The scores:

DuBray.....	1211-4	Keller.....	1111-4
Zwirlein.....	2122-4	Hill.....	1101-3

Then came a little miss and out event, with an entry fee of \$1:

DuBray.....	111	Hill.....	111
Keller.....	210	Quimby.....	0
Zwirlein.....	0		

By this time the party had increased in numbers, and the real sport of the day began. Events No. 1 and 2 were at 5 birds each, \$5 entry, No. 3 at 10 birds, \$10 entry, three moneys in each. All events were shot under the revised rules of the American Shooting Association.

No. 1.	No. 2.	No. 3.	
Quimby.....	1212-5	2120-4	112130302-7
Lindsley.....	1102-5	2230-4	022122221-9
Van Dyke.....	01121-4	02110-3	
Elliott.....	12222-5	21232-5	121212221-9
DuBray.....	10241-3	01232-4	101212121-9
Campbell.....	12100-3	20201-3	102021220-7
Hill.....	12111-5	10111-4	101230111-8
Zwirlein.....	11111-4	02302-3	221111102-9
Smith.....	21120-4	21241-4	000121221-6
Rothacker.....	11110-4	10100-1	
Woodruff.....		11022-4	101121111-9
Davey.....			1121211001-8
Apgar.....			001220120-5
D. Terry.....			210301111-8

The wind-up was a miss and out, \$1 entry, with nine men in DuBray, Campbell, Pearson and W. Terry each missed and retired on the first round, and on the second round Rothacker, Lindsley, Apgar, Zwirlein and Hill divided the pot, the supply of birds being exhausted. Soon after the party repaired to the hostelry of "Dutchy" in Plainfield, where a general jollification was held. "Dutchy" was elated over his success in getting such a rattling lot of birds to fool the boys, and worked off said elation by inviting them to partake of a toothsome lunch, which they disposed of in a graceful manner. The hour at which the last of the visitors left Plainfield has not yet been divulged.

**"Dey ver Goot Enof fur Euy Boty."**

A short time ago Charles Smith, the great international expert live bird, target shot and boniface, best known perhaps to the people of this and other countries as "Dutchy," sent cards to a number of devotees of the smoothbore in New Jersey, New York and Pennsylvania, inviting them to attend an all-day shoot at live pigeons, at Plainfield, under his management, on Thursday, Dec. 7, beginning at 11:30 A.M. on the Climax Gun Club grounds, adjoining Benner's Grove, Fairwood, N. J. In winding up his invitation, "Dutchy" said, "The birds will be furnished by our humble servant, and they will be 'goot enof fur euy boty.'" Charles Smith ("Dutchy") said, "And before the day ended the shooters who were on hand perfectly agreed with 'Dutchy,' some even contending that some of the birds were 'too goot enof fur euy boty.'"

The weather was not so good as it was on the previous day, but it stood about the grounds, and overshadows and great coats were at a premium. The grounds where the shoot was held have previously been described in these columns as well adapted to shooting either targets or live birds, the background being clear and there being just enough undulation to the ground to keep a shooter guessing when a bird flew low.

The attendance was good despite the threatening aspect overhead. Among those present were W. F. Quimby, senior partner of the W. F. Quimby Co., of New York and Newark; M. F. Lindsley, of West Hoboken and the American Wood Powder; Ferd. Van Dyke, of Newark, well known as an expert either at targets or feathers; J. A. R. Elliott, of Elliott Brothers, sporting goods dealers, Kansas City, Mo.; Arthur W. DuBray, the genial and ever popular advocate of the sports of the gun, manufactured by Parker Brothers, of which goods he is the Southern representative; Leander S. Campbell, an old time expert from Little Silver, N. J.; Charles Zwirlein, the stalwart shooting boniface of Yardville, N. J., and his side-partner in all shooting matters; Eddie Hill, of Trenton; Aaron Woodruff and W. H. K. Davey, of Elizabeth; John Rothacker of Philadelphia, who always finds time to slip away from his brewery in order to take part in the sports of the gun; Keller, of Plainfield who said Climax were "good enough;" "Little Neaf" Apgar of Avona, representing H. C. Squires & Son; Daniel Terry of Plainfield, and the immortal "Dutchy."

The birds were a crack lot of flyers and if the same kind could be guaranteed for matches they would command a good price. Quick as a flash in getting away when the traps were sprung; fast and ir-

**Crescent Gun Club.**

The monthly shoot of the Crescent Gun Club at Miller's Dexter Park on Dec. 7, brought together four members. The club event was preceded by an individual match, at twenty-five birds each, between Messrs. Jones and Coulston, the result of which was a victory for Jones with a total of fifteen kills to Coulston's thirteen. The club event at seven birds resulted in a tie between Messrs. Vogts, Hopkins and Jones with seven kills each. The club event was followed by a series of five three bird sweeps, in which the honors were evenly divided. With the close of the sweeps, there being a few birds left in the crates, Messrs. Coulston and Jones shot another race at five birds each, this contest resulted in a victory for Coulston. Scores:

Match, 25 birds.	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Jones.....	002-0	022112301201222200020-15

Match for live birds:

Coulston.....	Jones.....
02223-4-1	01120-3-2

**Shooting at Pine Brook.**

On Thursday, Dec. 7, a couple of hundred sportsmen gathered on the shooting grounds connected with Martin's Pine Brook Hotel to witness a match between Samuel Castle and Charles M. Hedden, of Newark, against Eugene Pierre and Mr. Karhart, of Pompton. The day was damp and raw, and those who were not supplied with heavy coats felt decidedly uncomfortable. The match was another of those detestable and unsportsmanlike affairs classed as find, trap and handle matches, in which each handler tries to out-pitch, out-pepper, out-cut, out-vitalize, out-pinch, or in any other ways out-brutalize his opponent. A game of this character is an ignoble one and it is astonishing to see that a spectator is attracted by it.

Castle and Karhart shot at 15 birds each while 10 each were shot at by Hedden and Pierre, this comprising a total of 25 for each team. The conditions were 25 birds a team, \$100 a side, 25 yds. rise, gun below the elbow until bird is on the wing, 30 yds. boundary. The birds were classed as the hardest ever trapped, the drugs, pins, scissors, etc., having done their work well. The birds trapped for Castle and Hedden must have been attended to by a superior (?) handler, as they were much faster and more tricky than those shot at by the opposite team. The result:

Castle.....	11110111111111-14	Karhart.....	0111111111001111-12
Hedden.....	10011111111111-7-21	Pierre.....	1001101110-6-18

**Rhode Island Traps.**

WESTERLY, R. I., Dec. 8.—On Thanksgiving Day a number of sportsmen about here indulged in a trap shoot on the grounds of Mr. Alfred Chapman, near Burton's Pond. The day was perfect with a very light breeze. The boys were a little nervous in the regular shoot, as they do not come together very often, and many easy shots were missed, but considering everything did very well. After the regular shoot they indulged in scrub shooting, making much better scores. Westerly is becoming a very sporty town and before long we can have a club here as good as the best, as we have plenty of material and many brilliant shots. Keystone trap and targets were used. Appended find scores, 25 singles per man:

G E Chapman.....	0110111011101011110010-17

The birds were a fast lot of flyers and the snow on the ground made it difficult for the shooters to score. J. H. MILLS, Sec'y.

## Answers to Correspondents.

No notice taken of anonymous communications

L.B. H., South Wareham, Mass.—Can you inform me whether you have ever known quail to breed in captivity or not? Ans. Yes; it is not uncommon.

J. D. T.—Can some of the readers of the FOREST AND STREAM inform me if good shooting can be had in the vicinity of Lake Dora, Orange Co., Florida? Does any reader know of a good quail county in Florida, where good duck shooting may also be enjoyed? Ans. We should think that Tallahassee would be the point.

B.—I was chatting the other day with an old gentleman, who told me the saying: "Everything is lovely, and the goose hangs high," should read: "Everything is lovely, and the goose *honks* high." The latter sounds more sensible; but is there any significance in the fact that a goose honks high? Ans. It may refer to the high flight of geese in clear weather.

FRED SAVAGE, New York.—Will you be kind enough to tell me through your paper where the best place is for all around hunting and trapping for a living and sport? Ans. Your question is so vague that it is hardly to be answered. However, we recommend the mountains lying between the northern tributaries of Peace River and streams flowing into the Liard River.

SUBSCRIBER, Temple, Texas.—I have a large white pelican—mounted—that has become soiled by exposure to open doors, dust, etc. How can feathers best be cleaned? Ans. Wash the bird with warm water, but no soap; wipe off the water with a cotton cloth and then apply turpentine, rubbing with the grain. To dry this latter application, lay the bird on a sheet of paper and cover with plaster Paris. If one application does not thoroughly clean the bird repeat several times. —From Hornaday's "Taxidermy and Zoological Collecting." Price, \$2.50.

J. M. H., Philadelphia.—Will you please let me know through your paper what advantage does the metal patched bullet have over the lead ball. I have .45-90 Winchester in which I used the metal patched ball which has a copper covering with lead inside. Old hunters objected to the balls saying that they being so hard would ruin the bore of my rifle in course of time, and that the lead ball was better on account of it being softer. Then again they said that if the ball should hit the game it would not do the damage that a lead ball would, as it would not flatten out as the lead ball. Ans. The metal covered balls have much greater penetration and are less likely to upset than lead balls. The copper covering in no wise injures the rifling of the gun, as it is very soft and oily, and made exactly to gauge. For deer hunting the lead bullet would be preferable.

<b>Natural History.</b> A Time with a Leopard. Cougars in the Northwest.	<b>Yachting.</b> A Florida Cruise. Yacht Building. Origin of the Centerboard. The Measurement of Sail Area. News Notes.
<b>Game Bag and Gun.</b> Powder Tests. Niagara County Duck Shooting. Washington Notes. Experience with Deer and Moose Chicago and the West. National Park Road Question. Boston and Maine.	<b>Canoing.</b> The Log of the Frankie. News Notes.
<b>Sea and River Fishing.</b> Angling Notes. Fishing on Sunday. Buzzards Bay Fisheries.	<b>Rifle Range and Gallery.</b> The Revolver Championship. Rifle Club Doings. Rifle Notes.
<b>Fishculture.</b> Relations of the Community to the Fisheries. The Experience of Pennsylvania.	<b>Trap Shooting.</b> Something Anent Targets. Great Birds at John Erb's. Vernon Rod and Gun Club Tour- nament. Drivers and Twisters.
<b>The Kennel.</b> Chicago Dog Show.	<b>Answers to Queries.</b>

For Prospectus and Advertising Rates see Page v.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## Christmas Books.

This year we urge those who contemplate sending to us for their Christmas gifts to forward their orders at once, so that they may be sure to receive in time whatever it is that they desire. About Christmas time all business people are pushed to their utmost to fill their orders; the mails and express companies are overwhelmed with parcels; transportation is slower than at other times, and mistakes in the delivery are likely to occur. It will, therefore, be a real advantage to our customers as well as a great help to ourselves if orders can be sent in at once.

### FOREST AND STREAM PUBLISHING CO.

### THE COAST FISHERY CONFERENCE.

THE conference called by President Huntington and others, to consider the subject of the fish supply of Atlantic coast waters, brought together a large number of fish commissioners, commercial fishermen, rod and line anglers and others interested, at the Gerlach in this city last week. While the meeting resulted in no definite action looking toward a solution of the question it was called to consider, the proceedings were extremely interesting, and brought a mass of testimony from all sides and a wealth of opinion and suggestion. A number of papers were read, some of which had been put into type for to-day, but which are withheld, pending the publication of the full official report by the secretary in our issue of Jan. 6.

### RAILROAD ROUTES TO COOKE.

THE condition of things in the National Park along the Yellowstone River, East Fork and Soda Butte Creek this winter is a good commentary on the plan—so often advanced—to build a railroad along these streams from Gardiner to Cooke City. We are informed that the contractor who carries the mail between Cinnabar and Cooke City has applied to the Post Office Department to have the Cooke City route abandoned for the winter, because the mail must be carried sixty miles on snowshoes, and the work is too dangerous. For many months in the year deep snows overlie this whole region, and no railroad could be operated unless snowshoes were built over practically the whole route. This would require sixty miles of snowshoes—a railroad running inside of a house the whole distance between the two points.

On the other hand, a route from the east, such as we have often suggested, and as is mentioned in Mr.

Gallaher's letter, printed in another column to-day, would have no snow to contend with, except for a very short distance through the mountains. A railroad from Cinnabar to Cooke City, if built, would be a summer line only, and would, therefore, be of no value whatever to the suffering Cooke City miners, about whom we hear so much.

We yield to no one in our interest in the Cooke City mines, or in our sympathy for those who have so long been holding claims there in the hope that they might some time get an outlet to the world for their product, but the relief which its true friends desire for Cooke City is a real relief and not a pretended one, and a railway which could only be operated for four or five months during the year would be a good deal worse for Cooke than no railroad at all.

Mr. Gallaher is a civil engineer, a practical surveyor, whose word should carry weight.

It would naturally be imagined that Montana men and Montana newspapers would be strenuous for the honor of their own State, and would indignantly resent the imputation that any considerable class of its citizens is so lost to all sense of rectitude and decency as to destroy public property because legislation which suits them is not enacted. This is not always the case, however, for we have seen that Colonel Brackett calls Cooke City miners, and others living in the mountains to the east of the National Park, anarchists, and now the Livingston Post, in its issue of Nov. 30, covertly incites law-breakers to wreak their vengeance on the National Park. It says:

Everybody concedes that the destruction of the Park by fire would be a public, a national calamity, and about the only way to avert such an impending danger is for Congress to grant the reasonable request of the people of the West by passing the segregation bill.

However natural it might seem to hear language like this in the slums of Paris, London, Chicago or New York, it is a new tone to come from the free and manly West. The Post, like the three tailors of Tooley street, considers itself, and a few Livingston town lot speculators, "the West," and in its eagerness to start the hoped-for railroad boom does not hesitate to bring disgrace on its own State. Truly, 'tis an ill bird that fouls its own nest, and we fancy the Montana press generally can not feel very proud of the Post.

### THE GOOD GOVERNOR AND THE EGGS.

THERE are those who will say that if Governor John P. Altgeld of Illinois were not wanting in common sense he would not now be occupying the extremely foolish position he is in of having been blackballed by a sportsmen's club. His official record with respect to game legislation, they will say, is a bad one, so bad that he should have known better than to subject himself to the peril of the rebuff given him by the Swan Lake Shooting Club of Chicago, when he tried to get into it the other day. But this only demonstrates anew how harshly, intemperately and wrongly we may judge our fellow men; they who so reason do not know Mr. Altgeld for the man he is and we have shown him to be. If Gov. Altgeld has—to use a current idiom of the West—"run up against" thirty-one blackballs, he has done so strictly within the line of his duty as a truly Good Governor, and only in the way of carrying out his campaign against the machinations of the Wicked Doctor.

The story was told in these columns last summer, how Dr. W. O. Blaisdell, of Macomb, having imported into Illinois certain game birds, to wit, chuckor partridges, from India, had sought to obtain a law for their protection, and how the Legislature falling into his net he would have succeeded but for Gov. Altgeld. The Good Governor vetoed the bill, and at the same time pulled the mask from the plot of the Wicked Doctor. The imported birds, he declared, had been brought into the country to menace the liberties of the people; they were to be used for the purpose of inveigling the people of Illinois into jail.

The partridge plot being thus nipped in the bud, or perhaps we should say addled in the hatching, it is a significant fact that the Wicked Doctor has from that time to this kept mum about whatever became of the imported birds. And indeed he might, for well he knew that the progeny of the chuckor fowl were a horrid brood, more to be dreaded than harpy or cockatrice. If the Wicked Doctor hugged to his breast the delusion that no one but himself knew what sort of eggs he had in his basket he was hugely mistaken. The event goes to show that in Illinois evil may not be incu-

bated by Wicked Doctors, not so long as a Good Governor holds down the executive chair. How the Good Governor came to find out about the pestilential chuckor eggs is not known. Perhaps he was told by the Indian jugglers in the Midway, who while they could not do Indian jugglery a little bit, may have known something about Indian birds and eggs. If the Good Governor got his information there he got more for his admission money than most people did. Be this as it may, whether he had it from the jugglers or whether the same prescience which had smelled out the bird jail plot told him the nature of the eggs of these fowl, he knew that the eggs themselves were lurking in unsuspected concealment, biding their time and full of malign potency to bring humiliation upon innocent and unsuspecting individuals.

In his praiseworthy search for the baneful eggs of the chuckor, Gov. Altgeld has discovered thirty-one of them in the ballot box of the Swan Lake Shooting Club. There must be many more for him to uncover. It is a wicked world and the seeds of evil multiply with alarming rapidity. All good citizens will congratulate him upon the success already attained, and applaud him if he shall continue the prosecution of the search. He will probably find more eggs by seeking membership in other sportsmen's clubs. The Good Governor must not give over until Illinois shall have been wholly redeemed from the plotting of the Wicked Doctor.

### SNAP SHOTS.

THE full text of the opinion of the New York Court of Appeals in the Moses Sunday fishing case is printed in our angling columns. It is a familiar principle that the game and fish laws apply to all waters, whether public or private; but the New York statute violated by Mr. Moses is not a part of these laws; it is a section of the penal code. Its purpose is not to protect fish but to promote the observance of the Sabbath. The court holds that the statute applies to all fishing, private as well as public, even though "it does not affect the sensibilities of any one," and "does not interrupt the repose or religious liberty of the community."

The story told by the rescued Carlin party and printed in another column is a moving tale of hardship and suffering made tragic by the death of the cook Colgate. It was a terrible alternative which was presented to the members of the little band, to abide with the helpless man, when to stay was to be counted certain death; or to abandon him to his fate, and if might be save themselves. There has been some intemperate criticism of the party because of the course they took in this extremity; but the reading of Mr. Carlin's own story carries conviction that they did the only thing left for them to do.

A Denver dispatch in last Tuesday's papers reported that a deputy game warden of Colorado has discovered another small herd of buffalo, larger than the one found in Lost Park last summer, in North Park, Routt county, a region more isolated than any other part of Colorado. There are said to be two dozen in the herd; and they are very tame, being fed by some of the ranchmen of the park. It was hadly prudent in the warden to make known his discovery, although the Colorado law forbids the destruction of the game.

We print the request of a Maryland correspondent for evidence as to the effects of protracted close seasons for game birds. Maryland is talking of forbidding the killing of quail for a period of years. Massachusetts is thinking of a like measure. What have been the practical results of close periods of one, two, or three years, when tried as they have been at various times in other States? We would be glad to receive something on this point.

The annual meeting of the Maine Sportsmen's Fish and Game Association will be held in Bangor Jan. 2. The New York State Association for the Protection of Fish and Game will have its annual convention in Syracuse Jan. 11. The Massachusetts Association for the Protection of Fish and Game will celebrate its annual reunion on Jan. 16.

Walter Aiken, of Franklin, New Hampshire, who died on Tuesday of last week, was a representative of the best type of the sportsmen of New England. An active and successful business man, he found his favorite recreation with rod and gun, and was worthily counted among those who dignify field sports by participation in them.

## The Sportsman Tourist.

DANVIS FOLKS.—XVIII.

### Treasure Seekers.

THE morning after the raising, Solon and Antoine appeared almost at the same time near the site of the old Peggs homestead where Uncle Lisha's father lived and died and where he himself was born and passed his boyhood—a place desolate with complete desertion, telling yet its mutely pathetic story of the years when it was stirred with busy life.

It was told by the ruined chimney and broken hearthstone, the crumbling wall of the cellar, now a shallow, shapeless pit; the sprawling lilacs and blossoming fox lilies, long since run wild away from the sunken doorstep; told by the leaning cratched post that once upheld the creaking sweep of the well, to which no path led now; by the untrimmed, sprouty-rooted cherry trees, straggling along the fallen wall that was matted by gall-bulbed stalks of goldenrod lopped upon it by the winter snows, and by the rank tansy bed, the dry, brown heads overshadowing the young leaves that furnished no more medicine for the sick or garniture for the dead.

The treasure seekers turned their backs on the scene without giving it a sentimental thought, and pressing through the second growth that salvaged the forest began to climb the lower slopes of the mountain. The moss-patched and lichen-clad trunks of the ancient forest now rose all about them, great maples, beeches and poplars, with here and there a fir that had straggled down from its brethren of the heights, and huge yellow birches sagged with rustling manes from writhed roots to lofty branches.

Whenever Solon drew near to one of these he held his forked divining rod with the point upward, a prong in either hand, with his palms turned inward, walking slowly, while Antoine carried the grosser tools, the spade and bar.

It was laborious traveling over the ankle-deep moss and the loose rocks, and climbing the prostrate trunks in all stages of decay, and scaling ledges that barred their way.

At length they reached a little plateau where flourished a colony of yellow birches about the hoary patriarch of their tribe.

Solon studied the place with increasing satisfaction. "This looks as if it might be the very spot, an' I'm goin' to try it thorer. You've kep' the line, haint you, Antoine?"

"Jes as straight as a bee was, Ah bet you head."

Antoine sat down upon a log, dropped his tools beside him and filled his pipe, while his companion, holding his divining rod before him and curiously watched by the Canadian, marched with slow and stately steps around the great birch.

"I know it'll work on silver," he said, "fer I hove a quarter int' the grass in the do'yard, an' when I come over it, it most wrung the bark off."

Perfect silence pervaded the forest about them, not even the querulous cry of the ubiquitous jay or the jeer of an impudent squirrel was heard in their neighborhood, and afar off above them on the mountain, only the ceaseless surging moan of the wind-swept evergreens. It seemed, indeed, as if the invisible spirits of the under world might be guarding here the treasure so long since committed to their care by the old Ranger.

Solon had gone twice around the great tree, each time widening the circle, when uttering a joyful exclamation, he suddenly stood still and stared like one entranced on the earth before him, to which the tip of his hazel twig was pointing.

"Come here, Antoine," he cried, "drive yer crowbar right in there. My goodness me! I c'd n't hol' it! It jest flopped ri' daown in spite on me! I du b'lieve we've faoun' the identicle place!"

Antoine drove his bar into the ground and left it standing by itself, while he stood back rubbing his hands and cried out joyfully:

"We'll mos' gat it. Ah, Solem! Fus' Ah'll goin' bought it hoss ah' waggin an' tree dog, an' w'vach, an' git caplock on mah gaun an' bought it hol' hwoman calekko red dress an' kish lip [kid slippers], Ah do' know 'f he be yaller or red. An' pork free time a day an' more onion Ah'll min' to, an' mud turkey, an' Ah'll goin' Canady vis'tin' an' Montreal. An' Ah'll goin' built in white haouse wid green blindin', an' bought it two honned nacre lan' an' set in de settlin' room an' see de mens work, an' smoke all de tam w'en Ah'll ant heat."

"I haint ezactly settled in my mind haow I shall investigate my funds," Solon declared when he had an opportunity to speak, "but let's duff in a-diggin' an' see what we got. But you wanter remember one thing, Antoine," he said very impressively, "if ever we du strike the money you mustn't speak a laudible word afore we git a holt on 't er it'll slide into the baowels of the earth."

"Oh, no, no-no-no. Ah'll won't spoke no more as snakes," wherewith they fell to digging with great enthusiasm.

The ground was composed of loose rock more than soil, and the digging was slow and laborious, but the crowbar and spade clinked merrily, awaking echoes that had never before found voice in that green solitude, and at last attracted a party of jays that for a while kept up a discordant and annoying outcry above the delvers and then flew screaming away, as if to proclaim to all the forest that strange work was going on within it.

They had sunk a little pit somewhat deeper than their knees, when Antoine, driving his bar deep into a crevice, it struck something which gave forth a sharp, metallic sound.

Solon shook his open hand at Antoine to beat back the exclamation that the suddenly parted lips foretold, but too late.

"O, mon Dieu, we'll gat it!" he cried, and the words were followed by a smothered clink and rumble.

"There," Solon groaned, sinking back on the edge of the pit and casting his spade from him as a thing of no further use. "Naow you've done it! It's moved, an' jest on account o' your darned, useless, onsensible Canuck gabble. Darn ye to altermuttible darnation!"

Antoine looked dismayed, then defiant. "Bah gosh, all fesh hooks! You s'pose mans goin' shut off hees head so long he'll fregit de nowse of hees vovse? Bah gosh, no, Ah guess not me, not for feefty, fave honned, bah gosh, fave tausand dollar!"

"No, you'd rather gab, gab, gab, 'an tu hev the hull world, you infernal, eternal, internal, external fool!" Solon groaned and howled in despair and wrath. "An' we most the same as hed it. Oh, by thunder! I'm as good a minter lick ye as ever I had t' eat!"

He made a half-threatening movement, and Antoine scrambled out of the hole and got behind a tree, where he looked forth with craned neck, as if expecting the explosion of a blast.

"F Ah'll gat mad, Solem! you'll ant leek me pretty heavy, an' Ah'll gat mad pooty quick 'f Ah'll tried. Den you'll wan' ta' careful, fer Ah'll was danger mans, me. Br-o-o-o-o-o!"

He uttered a terrible growl and pranced a little way from his cover, but was disappointed that this demonstration made no impression on Solon.

"Ah tol' you Solem," he said in a more peaceful tone, "f you can fetch back dat moneys fer givin' me leekin', Ah'll willin'. But dat ain't gat no difference. You leek me, it gone jes' de sem. De bes' way was for come aut here an' heat aour deeny? Come."

"I guess that's a sensible idee," Solon conceded, climbing out of the hole and picking up his coat, from the pocket of which he drew forth a packet of luncheon and tossed Antoine's coat to him. Then they sat down upon a mossy log and began an amicable repast, Solon supplementing his companion's coarse and meagre fare with portions of his own bountiful supply.

"Ah an't see mah hoss an' dawg an' watch an' white haouse, an' Canady half so plain Ah was—while ago," said Antoine ruefully.

"I tell ye what, Antoine," Solon said between mouthfuls and waving his jack-knife toward the scene of their labors, "when we get aour victuals eat, I'm goin' to try the rod agin. It looks philosophicable tu me 'at if you can find it once you can agin', an' ef we du you can keep your hed shet."

"Ah'll will, sah, Solem. What Ah'll goin' spoke, Ah'll mek motion. Shssh." Suddenly sinking his voice to a whisper and pointing to a little black animal moving awkwardly and aimlessly about the border of a yew thicket near them, "See dat black woodchuck. See me strike it wid a stone."

Stooping cautiously, he picked up a fragment of a rock and threw it with such true aim that it struck the animal full in the side, evoking a sharp, snarling cry of pain and anger. Almost at the same moment there was a crashing rush in the tangle of brush above as Antoine breathlessly asked:

"What mek dat nowse?" and a great she bear came lunging out of the thicket with a fierce and startling "woof, woof."

As if simultaneously impelled by the impetus of her charge, both men sprang to their feet and went tearing down the ragged mountain side at a breakneck pace, wondering at their own sureness of foot, and silently praying it might be further vouchsafed them, as they plunged from rock to rock, snatching at trees and saplings, and leaping over prostrate trunks that they had slowly climbed over in their ascent.

Never did men maintain a better pace over such a course, and it was kept up till they emerged, blown, torn and trembling, into the clearing, and sank down on the first cradle knoll. Coats and tools were left far behind, nor even remembered till now they were half rested. Antoine arose, straightening his stiffening legs, and after listening a moment shook his fist at the mountain.

"Damn dat bears. 'F he'll come aut here Ah'll leek it, me."

"I p'sume tu say 'f you want her very bad you'll find her up back there. I don't."

Then they made their way homeward, chopfallen, yet in a measure thankful. A few days later they made an expedition for the recovery of their things, whose disappearance was causing domestic comment, and Solon tried the magic power of his rod but it made no sign.

ROWLAND E. ROBINSON.

### HUNTING WITH A CAMERA.

YELLOWSTONE NATIONAL PARK, November, 1892.—*Editor Forest and Stream:* A few years ago I wrote for the FOREST AND STREAM a short sketch of my first attempt at photographing wild animals in their home in the Yellowstone Park; and this, I think, was the first article of the kind ever published. Last winter I made another snowshoe trip after game pictures, hoping especially that I might get photographs of buffalo.

I fitted out at the Mammoth Hot Springs, not as completely as I wished, for I was disappointed in not getting a long focus camera. I had to content myself with a No. 3 Kodak, a handy little machine, but not suitable for good game pictures. Still, hampered as I was, the trip was very interesting, so much so that I think it may interest some of your readers.

The commanding officer at Fort Yellowstone kindly detailed a soldier—Private Dare—to accompany me. For him the trip was a scout, and only one of many made by the soldiers stationed in the Park. We spent one day getting our outfit in shape. We had the best snowshoes (skis) obtainable and spent part of a day heating wax, tallow and rosin into them with hot irons, making the wood very smooth and waterproof. John Fossum, who acted as mail-carrier and telephone line repairer for the Park hotels, joined us for the start to Norris.

We reached Golden Gate about sunrise and found that we must climb up over the rocks to the right, in order to reach Swan Lake flat. The snow blows from the open country, drifting over the roadway clear into the cañon, and forming an overhanging barrier impossible to pass. The climb over the rocks is not the easiest, as they are nearly perpendicular, and one is hindered by his snowshoes, pole and the pack on his back. We all reached the high ground safely and from here on our road was comparatively level to Norris Geyser Basin. As the sun reached the noon mark it warmed up the snow, making it very hard snowshoeing. I had not been on snowshoes for a long time and was quite willing to rest at the Crystal Spring Cañon when we reached it. We had intended to make this our first night's camp, but found the cabin in very bad condition, and anything but a comfortable place in which to spend a winter night without any bedding. We built a fire in the broken stove, made a cup of tea to go with our luncheon, waxed the bottoms of our snowshoes and rested for two hours. By this time the snow was very sticky, and had our shoes not been in the best possible condition we could not have moved at all. As it

was, they would hang on to the snow in the shady places—the snow there being colder—and we would have to strike the sides of the shoes with the pole to knock the snow off. Often there was from five to ten pounds sticking to each shoe, and when one gets tired toward the end of a long day's tramp, he would swear that not less than a ton clings to each shoe. All the snow under the shoes clear to the grass roots comes up at every step; and the snow was ten feet deep on a level. By rubbing the bottoms of the shoes with a candle now and then we got along very well until about 3 o'clock, when we had no more trouble, for then the snow got cold everywhere, and the shoeing was easy. We reached the long hill north of Norris early, ending the day's trip with a splendid run of half a mile in about 70 seconds.

The next day we spent at Norris Hotel, resting. Here Pete Nelson was in charge as caretaker. Pete is one of the most expert and fastest snowshoers in the country. He is also always having adventures with lions, bears, and other wild animals. A short time before we reached the station he saw a lynx go in the open door of the meat house, and, thinking to secure it alive, he slipped up and was shutting the door on it, when it attempted to come out. He kicked it back, when it bit him through his boot. Pete shut the animal in, thinking he had it secure, but the next morning it was gone, having gnawed through an inch board, where it was slivered a little. Pete has more respect for the teeth of a lynx now. Here I was able to secure a very good negative of a Clark's crow during the day, shot with the camera from the window at a distance of 80ft.

Norris is one of the coldest places in the Yellowstone Park. There is hardly a day in the year when ice does not form. No matter how hot it may be during the day, if the night is clear, there is sure to be ice next morning. We were up by 4 o'clock of the morning of Feb. 26 for an early start, Dave and I for the Grand Cañon, and Pete for the Mammoth Hot Springs. He went to the door at 4:20 to look at the thermometer, and called out, "If I tell those fellows at the Springs how cold it is here, they won't believe me."

"What's the matter, Pete; what ails you?"

"Why it's 35° below zero."

"No! Let's see."

Sure enough it was—35°. I had to look carefully to believe my own eyes. There was not a particle of wind, the candle did not flicker at all, but soon began to burn dim, even while we were looking at the thermometer. It registered 33° below when we started at 5 A. M. We did not notice the low temperature much; the exercise we were taking in snowshoeing was enough to keep us comfortably warm.

Before we were 100yds. from the hotel we noticed a fresh mountain lion track along the snowshoe trail. In places the animal had left the road, passed behind trees, stumps or piles of logs that were good places to look along the road ahead for game. It was evidently hunting for its breakfast. Other fresh tracks covered the road in places; now a lynx, a rabbit, squirrel, a fox, birds for a short distance, and even mice tracks. About two miles from the hotel the lion track became so mixed up with older tracks that we could no longer pick it out. Here we found a hole in the snow that led down and under a small bridge buried under five feet of snow. The snow around the hole was patted down with the tracks of animals. The space under the bridge was probably utilized by some of them for a den. I could see only a short distance down. Further on we saw tracks of porcupine, martin, and, along the Gibbon River, mink. We could see no sign that the lion had succeeded in getting a meal. All along the road to the cañon we found a network of tracks. At the cañon we saw the trail of a small band of elk and where they had been feeding. On a point overlooking the mouth of Cascade Creek was a place that was used often by lions to look for elk. Several fresh trails led to this, and as long as we were about here we saw that it was often used, but could never succeed in seeing one of these beasts, nor could we see from any sign that the lions had ever killed anything larger than a rabbit.

Just as we climbed the hill to the hotel we saw two foxes. Quite a number of these animals hang around the hotels all winter and live on the waste meat that has been thrown away during the summer. They have to burrow through the snow after it. I have noticed some very beautiful specimens, some almost black, some silver gray and some cross foxes. The most numerous were light red.

The man in charge of the Cañon Hotel did not go out much and so could not tell us anything about what was going on in the animal world around here. The Cañon Hotel is a very interesting place, as it is on one of the greatest game trails in the Park. A great many animals of all kinds pass here winter and summer, because they cannot cross the cañon for miles and miles below.

Next morning was clear and cold. We packed up early, taking enough grub for two or three days' camping in a cabin. We had secured two single blankets, one rubber blanket and one small ax. A tin cup, each spoon and our sheath-knives made up our camp material. We carried all the provisions we could handily. Traveling up the Yellowstone, we saw the usual number of tracks along the road and to and from the river. There was one place much used by otter. They had a slide of about 20ft., ending in the water. On a bank of snow was a place much used by them while eating fish. I passed this spot many times, but could not get a picture of the animals, though I have often seen them. The river was open most of the way; it was possible to cross only at two or three points. All the kinds of waterfowl that breed in the North were wintering along the river, including swan and geese. At Camp Creek I saw a very black fox, a few gray hairs on his breast and belly, otherwise it was jet black.

We reached Hayden Valley a short time after sunrise. A band of ten elk were feeding close to Alum Creek. We were high up in the dead timber on the side hill, cutting off a point in the trail and to get a good view of a portion of the valley. There was a cloud of mist or steam rising from the warm water in the creek. The elk saw us and made for the creek, traveling in the water, except where they could cut across from one bend to another in shallow snow. I ran down the hill to cut them off, or have them pass close by me. I reached the creek in time, but could not get a picture; the elk trotted up the creek within 50yds. of me, splashing the water over each other in showers. The steam was too thick to think of taking a shot with the Kodak; I would have got but a blurred

negative. With a rifle I could have easily killed several. They passed on up the creek and disappeared in the steam. I could hear them splashing water, long after they were out of sight.

We had to ford the stream soon after the elk passed us, it was rather cold work at the time, but one gets used to such things when hunting, either with a rifle or camera. That's a part of the programme we have to go through.

Our intention now was to make for a little cabin on what they call Trout Creek; a cabin built for the use of scouts while on their winter trips. I had never seen it, but felt sure I could find it although it was "cached." We struck out over the hills, taking a southwesterly course. About a mile from where we crossed the creek, we came in sight of the first band of buffalo; there were twenty-seven in the bunch, five of them calves. Some were feeding, others lying down; they were on ground that is not quite warm enough to melt all the snow off, but it was thin and all gone in places. To the north up a little hot creek, we saw two very large bulls. Traveling on I made for a high knoll, where I dropped my pack and shoes, to have a rest. I went to the top and sat down on the sunny side of a large boulder; just west of me and less than a quarter of a mile distant were eight large bulls, one of them mouse colored. I watched them rooting for grass quite a while, when three of them lay down. I ate my lunch and waited in the hope that they would change their position, as it was impossible to get a good picture where they were. To have any sort of a negative, I must get within 100ft. of them, I must have the light right, but as the wind was coming from the sun, I had to give up getting a negative of that bunch.

Off still further west I could see three buffalo on a point of a ridge, two lying down, one feeding. To the north I could see a large band of elk. They were just at the edge of the timber, on the north side of Hayden's Valley. By carefully counting, we made out between 300 and 400 in this band. We spent an hour on the knoll looking around. Besides the large game, we saw other things, and once what we supposed to be ravens from the way they moved around over the snow. They proved to be wolverines, however. Traveling on, we would scare up a fox or coyote every little way. I do not know what so many animals of that kind find to live on. We seldom—if ever—saw a dead animal.

After a while we got into some broken hills, where there were strips of timber. Here the snow was very much drifted. From the west and exposed side the snow would be blown to the east side, where it was in drifts from 10 to 50ft. deep. Then, too, parts of the timber would be full of snow. Only where the wind struck the western edges would there be any sign of bare ground. Everywhere we could see signs of game; their trails through the snow—even through the deep drifts and in the sheltered part of the timber the snow would be tramped down by elk and buffalo, where they had spent hours seeking shelter from some severe storm. Some of the exposed side hills were covered with snow only as deep as the tops of the rye grass and sagebrush. On these places bunches of elk were to be seen, three, four, and sometimes five in a place. Once we came up to a little basin or pot hole and on the side directly across from us an old bull elk was digging away in snow 3ft. deep. While watching him I noticed to my right two more bulls not over 75ft. away. I had not noticed them at first, as they were standing against the bare ground of the basin's rim, which was just their color. None of the bulls saw us. I was getting the camera out for a shot, although the sun had disappeared under a bank of clouds that was coming up in the west, but just then four more bulls made a run from left to right across the hole. They had not seen us, but had got our wind before they started. They passed between the single and two bulls, stopping for a second about one hundred feet from us. There was no use shooting, as it was too dark for a picture; but what a good chance it would have been if the sun had only been shining. All the bulls left except one of the two to the right. He did not notice that anything was wrong, but went on feeding while we were out of sight. At last he noticed that he was alone. This seemed to astonish him and he looked all around, but seeing nothing to frighten him he went on feeding for a time, but showed by his actions that he did not feel safe. Every few seconds he would look up, step around and move his ears in all directions to catch any sound and smell of the wind for danger. Nothing was wrong so he would feed a little more. He was a noble animal and I disliked to go without his picture, but we could not wait, so we commenced to climb a snowbank, which brought us in sight. Even then he looked for some time before he moved off. I began to think he was partially snow blind, although I am not sure this was the case.

Soon after leaving the elk we were in a violent snow squall. The air was full of snow, one could not see twenty feet ahead. It seemed as though it would smother us. We sought shelter in timber while it lasted—about ten minutes. After the squall was over we soon reached the little valley through which the wagon road runs that leads to Larry's old dinner station. Following a ridge to the right we saw five more buffalo, two on the same ridge, one off to our right and two on a side hill, none of them over one hundred and fifty yards away. All were sleeping except one on the side hill. The snow that had just fallen covered them like a blanket. The sun was still behind a thick bank of clouds, so there was no chance this day for a picture, and not wishing to disturb the animals we slid down off the ridge and turned up Little Trout Creek to hunt up the bit of a cabin.

This we found hidden under a snowbank, all except a bit of the front. Snow covered it completely, except a hole where the chimney was, as it had been occupied for two nights a month before we came. The drift hung over the front like a shed roof. We found a lot of swamp hay in the cabin and enough wood to last a few hours. We threw off our packs and set to work to make ourselves comfortable. The cabin was 7x10ft. inside and about 7ft. high, with an outside chimney, the fireplace in the corner. The door, a small one with a small window in it, gave a bit of light. We had to provide ourselves with wood enough to last all night and this was quite a task as we had only one little camp ax. I cut a dry tree down and into lengths handy for packing, Dare taking it to the cabin on his shoulders. Every move we made outside the cabin was on snowshoes; if we stepped off, down we would go to our waists, for the snow was very deep in the little

gulch in front of the cabin. I could not find bottom with a 6ft. snowshoe pole.

When we fired up, the cabin was soon full of smoke, but we bettered this a little by putting pine boughs up around the outside of the chimney. The inside of the cabin was soon quite homelike, with a bright fire and our duds hanging up to dry. We squatted down in front of the fire to do our cooking and eating, and were as well satisfied, if not better, than in the great, empty, lonesome hotels. They always give me the blues. I can be contented in a hole in the ground better than in a deserted hotel. We found an old tomato can, in which we made our tea, and out of other cans we made water buckets and pans to warm up our baked beans. No fault was found with the cook, food, or service; everything went. By

THE CABIN IN THE SNOW.

eight we were so sleepy we were glad to turn in. We piled up the hay in front of the fire, put a blanket down on this, and using firewood for pillows, drew the other blanket over us and went to sleep. The one that got froze out first would get up and put on more wood.

In the morning we were up before daylight. We were blackened by the pine smoke, but a wash and scrub in the snow made us clean and comfortable and able to stand any amount of cold. We left everything in the cabin except the camera, and struck out for pictures, with the cañon hotel for our next camp. Going back we took a different route. While in the open country I saw a band of twenty buffalo, but they were where I could not get at them for a picture, and did not disturb them, as I was in no hurry. We followed high ridges when possible, for these gave us a better view of the country. Away off to the east, toward the Crater Hills, were large bands of elk, mostly cows, calves and spikes. I did not care for a picture of these, and continued on toward the foot-bridge across Alum Creek. Running down a long, steep hill, I surprised a fox. How he did "light out," with me after him. I was gaining on him every second, running down

A NATIONAL PARK BUFFALO.  
Amateur photo by E. Hofer.

hill, and I would have been on top of him in a moment, but he turned sharp to the right, while I flew past. While running he lost time looking back to see what kind of an animal it was that could run faster than he on the snow. He seemed so astonished that I got laughing until I came near taking a header into a snowbank. I believe the fox would have laughed at me had I fallen. The joke would have been on the wrong party.

We found a lot of ducks in Alum Creek, and they flew as though they were very fat and heavy. I took a shot at them with the camera, but did not get anything. All Alum Creek bottom was pawed or rooted over by buffalo and elk. There did not seem to be a square yard of snow that had not been disturbed. It was hard snowshoeing along the river until we reached Cascade Creek. There the shoes would not stick. We were three-quarters of an hour getting from the bridge up to the hotel. This is a hard climb, winter or summer.

After resting a day we loaded up with provisions and struck out for the cabin. Dare went by the most direct route, while I hunted for a picture or two. I found a buffalo on the ridge about a mile from the Crater Hills, before I could approach near enough to get a shot clouds began to gather. He was on an open side hill in such a position that I could not get closer to him than 100yds. As soon as he saw me he commenced to move for higher ground. I got two shots at him as he was making his way through deep snow, following a trail he had traveled

before. I spent an hour or two looking for other animals, and saw a band of buffalo off about a mile in the edge of the timber to the south of the valley. The clouds were now quite thick and the light too dull for pictures. I made my way toward the cabin, and when I struck Dare's snowshoe trail I found a mountain lion's tracks in it; he had followed Dare for half a mile, turning off into the timber to the right, when Dare's trail started up the gulch where the cabin is.

The next day I saw where the same lion, or another, had followed my trail about as he had Dare's, only he had come almost up to the cabin door.

We now made a visit to the hot country on and around Mary's Mountain, saw signs of buffalo everywhere, but could not find a band. On Mary's Mountain is the first place I ever got a photograph of buffalo.

Our provisions getting low we made another trip to the hotel. What a lot of stuff one can get away with on a snowshoe expedition. When we left the hotel the morning was clear and cool, —25°. The snow was in splendid condition for shoeing. When the sun came out the trees and everything was covered with a thick frost that shone like silver crystals, the frost was as thick on everything as though an inch of snow had fallen. I took two pictures with Dare in the foreground. They look cool and wintry.

I found another buffalo bull on about the same ground as the first one. I got a good picture this time, for I had better light. I slipped up carefully to where I had seen him sleeping, but he was not there. Going a bit further, I looked over the rim of a hill and saw him out in the deep snow. He was breaking a trail to new feeding ground. I worked around to get close to him, and as soon as he saw me he rushed back up his trail to a little hill, passing within 50ft. of me. I "pressed the button" when he was in the best position. He was going like a steam engine through the snow. I supposed I had a first-class picture, but it proved that the camera could not get there fast enough. The legs were blurred, and the negative of no use except as a memento of the hunt. Getting negatives of this kind is like wounding an animal and having it get away from you. You know it will suffer and die and be lost to everything but the bears and wolves. It always gives me a sickening feeling to have it happen. With a negative, though, that don't come until the hunt is over. The buffalo ran to the top of the knoll and stopped. Dare was between him and higher ground. The snow was not much over a foot deep where he was standing. I went around and up on the knoll with him and took three shots at about 75ft. Wishing to get better pictures and nearer views I commenced working sideways up to him, keeping my snowshoes pointed down the hill, in case I had to run from him. At first his head was turned from me, but as I got closer he faced around, shaking his head now and then. I cut the focus down to 50ft., and was just about that distance from him when he showed decided objections to my coming closer. Dare said, "Look out, he's getting mad!"

I said, "Yes, and I'm going, too!" I pressed the button just as he started for me and then made a break for the deep snow. He came up to within 25ft. by short, quick jumps, but by this time I was where the snow was 4ft. deep. He then turned and made for higher ground, passing Dare, who had moved out of the way. I don't think the buffalo intended to attack me; he was only running a bluff. But I did not care to stand there. I thought his bluff enough for me. There was too much buffalo behind it.

ELWOOD HOFER.

[TO BE CONCLUDED NEXT WEEK.]

## Natural History.

### COUGARS IN THE NORTHWEST.

OKANOGAN, Wash.—*Editor Forest and Stream:* In your issue of Oct. 23, in the foot note to my article, you ask what is a cougar as distinguished from a panther in the Northwest.

The cougar is shorter both in body, neck, tail and legs; his head is broader and his legs larger and more muscular; he is gray and has not a red hair on him, and his tail has a black tuft on it. The habits of the two are the same. Either will kill a cow when hungry.

Jim Curley and I were riding along on Clearwater once when I noticed, a short distance ahead of me, a cougar crouched down behind a pine log watching a cow which was feeding only a short distance below. The cougar was so intent on its prey that it had not noticed us.

We stopped and watched it for a few minutes, while the unsuspecting cow kept feeding toward the log. Jim proposed to wait until it made its spring, but I told him I was afraid it would kill or cripple the cow before we could prevent it, and that we would put my dog after it.

We started to ride to it, when it soon saw us and started for a thicket up the mountain. I put my dog after it and he soon treed it. We hitched our horses and went up near the tree. I called the dog to me and Jim shot the cougar in the head. As soon as it quit kicking I let go the dog and urged him to fight it, which he did until we made him quit. We skinned it and had the skin tanned for a rug.

LEW WILMOT.

[The characteristics of the cougar given by Mr. Wilmot are not such as naturalists regard as of specific value. We have seen panthers which were stout so as to seem short-necked and thick-bodied, which had broad heads and were gray in color. These we have believed to be old individuals. The younger ones are much more slightly built and seem to be longer. They are red in color, often nearly as red as a deer in the summer coat. There are only two species of long-tailed large cats known in North America; one is the cougar, panther or puma, and the other a southern form, the jaguar, which is spotted somewhat like a leopard, and just crosses the Rio Grande into Texas. No doubt our correspondent has seen grizzly bears of many colors, but we do not imagine that he regards color as a good specific color in the bears. The deer is red in summer and gray in winter, yet although he has a coat of two colors at different seasons of the year, he is still the same animal. So, a panther may be spotted—as it is when new born—red for the next three or four years of its life, and after that, if it lives so long, gray, and it would naturally grow more muscular and heavier as it grew older.]

## A TIME WITH A LEOPARD.

[Being the conclusion of the paper "Some Tricky Leopards," in issue of Nov. 18.]

I ONCE had under my care a leopard called Lucy, and she was one of the most singular animals that I ever saw. Lucy knew no one but the party who fed her, and he could do about as he wished with her. In order to test her I changed keepers, and Lucy invariably transferred her allegiance, taking every opportunity to try and claw her former boon companion. On returning to his old post the original keeper hadn't the slightest difficulty with her after the first meal had been received from his hands. I was so fortunate as to breed from her, and in the adjoining den a lioness had two whelps, which she refused to suckle any longer when they were about two weeks old. I ransacked the entire neighborhood trying to find a bitch in milk, but was unsuccessful, and while standing in front of the cage worrying and fretting, I ordered the keeper to take one of the whelps and hold it in front of Lucy, to see how she would act. He picked it up and held it far enough away to be out of her reach. She walked up to the grating, gazed fixedly at it, but made no attempt to reach for or harm it. I then directed him to advance it slowly toward her; when it reached the grating she gently thrust her nose through the bars and began to lick it. Giving a gulp of relief, I ordered it placed inside the cage, when she picked it up and softly placed it alongside the two youngsters belonging to herself. The second young lion was treated in precisely the same manner, and henceforth she acted as their foster mother, giving them the same care and attention as her own whelps.

During my connection with the Zoological Garden, Philadelphia, I received the following telegram from the city office: "Leopard loose on one of boats of the Clyde Line from New York. Send head keeper down to catch it." I obeyed the order literally by sending the head keeper, while I remained in the garden. From my previous experiences with leopards, I was perfectly willing that the head keeper, or anybody else, might catch the animal, and was delighted that the task had been passed to another party. But my self-gratulation did not last long, for later in the day a second dispatch arrived saying: "Come down, as Nash can't catch the leopard." On getting down on the river front, I found the pier-heads filled with people looking out at the barge Chesapeake anchored in mid-stream. Taking a small boat, I was soon alongside, and found that Nash, the head keeper, was completely at his wits' end and unable even to locate the brute's whereabouts on the craft. All that he knew was that on the night previous, while the longshoremen were unloading the barge, they came across an empty cage, and shortly afterward a leopard appeared in the midst of them. There was an instant stampede, hatches closed, and the craft towed out and anchored in the middle of the river. As it was late, I determined to make no attempt at a capture until the next day, and returned to the Garden, where I ordered the carpenter to transform a shifting-den into a trap-cage. The next morning I ordered a little Alsatian to follow me as soon as he had completed his forenoon's work. I had picked him up in Batavia, Java, as a deserter from a Yankee whaler, and selected him, as I was sure from previous experience, that dependence could be placed on him if matters came to a tight pinch.

Calling at the city office before going on board the barge, I found a thoroughly demoralized board of directors, every one of whom had a plan for capturing the animal, a major portion of which had been suggested by some acquaintance. All were anxious to know what course I intended to follow, and seemed much disappointed when they were informed that I had no fixed plan, but intended to watch and take advantage of the first opportunity that might present itself, and sooner than run the slightest risk of injury to any one, would shoot the creature. Finally, I managed to get away, but not until the society's actuary had been ordered by a member, who generally carried things with a high hand, to purchase a large jar of chloroform, and accompany me. On arriving on board of the barge, I ordered some holes chopped through the hurricane deck, so as to try and locate the beast's position below. After several trials we managed to make one directly over him, lying well aft, on a mattress, among a lot of furniture. Gently covering the hole, my plan for capture was instantly formed, and to understand it one must recollect that the hurricane deck only reached from the stern to about three-fourths of the length of the barge, leaving the forward portion of the main deck entirely open. The main hatch ran completely across the boat and I knew that all the cargo on the main deck forward the hatches had been removed, with the exception of one or two hogsheds. Sending on shore I procured a lot of large tarpaulins and long strips of plank. Just as my arrangements were about completed for the first move, a chap with a fire annihilator strapped to his back made his appearance, and announced that the directors had sent him to capture the leopard. On asking how he intended to do it, replied:

"You just drive him into a corner, place some packages around him, so that he can't get at me, and I will turn on the gas, which will partly asphyxiate him, and then you can haul him into a cage."

"You just get him into a corner, as you describe, and I will catch him without any asphyxiation."

Whereupon the asphyxiator retired in a high dudgeon, and I prepared to go on with my own plan. Gently lifting back the hatches, so as to leave a slight opening for their entire length across the deck, I lay down on one side with the Alsatian on the other, both watching to detect the animal's move forward, when he would be disturbed, as I had planned. At a signal from myself a pole was thrust into every hole which had been cut through the deck, causing the leopard to spring forward, with an angry snarl, and seek refuge behind one of the hogsheds. Instantly the opening of the hatches was increased, the tarpaulins lowered as so many curtains, while the Alsatian and myself quietly dropped down and securely fastened them at the bottom and sides by nailing on the strips of board, while the parties on the hurricane deck secured the upper edges in a like manner. Climbing back on to the hurricane deck, I drew a long breath and mentally concluded that my spotted friend had allowed himself to be outgeneraled in the opening of hostilities.

I now began to watch for the arrival of the carpenter with the altered shifting den, when my attention was attracted to a boat coming alongside, containing a party with a terrier in his arms, who responded that he had been sent by the board to catch the leopard. His idea

was that the leopard, being a male, would go into a trap, in which was placed his dog, which was a female. I told him to go down below and set a trap, with the bitch for a bait, but he declined, saying that was my business and not his, and he went ashore threatening to report my stubbornness to the board. In the meanwhile the carpenter arrived, and taking him down on the main deck forward, I showed him a door which opened directly into the division occupied by the leopard. It hung on T hinges and swung outwardly, making an easy job to loosen the hinges, hoist it sufficiently for an entrance into the trap cage and then refasten it. So soon as the hinges were unscrewed and the door hoisted high enough to let the light flash in, the brute charged, and it took all of my strength to hold it against him. The carpenter clambered up the hurricane deck, and it was some time before I could induce him to return and complete the job. I then sent a messenger ashore to the agent's office, requesting the attendance of one of the tugs for a short time.

While waiting for it I received two more visitors, who had been sent by the board to catch the animal. They belonged to some wandering menagerie and professed to know all about capturing escaped leopards. They were to go down alongside the tarpaulins, and by carefully pulling aside the laps could see just the position of the animal, and lay their plans accordingly. Just as I expected, as soon as a ray of light showed through the opening there was an angry roar and a charge, which tested the strength of the tarpaulin partition, and the would-be catchers never stopped until they dropped into their boat alongside. I then warned them that if they attempted to come on board again they would be pitched into the river, and I immediately wrote a note to the directors saying that if I was bothered any more I would exercise my prerogative and shoot the animal.

On the arrival of the tug I got the engineer to rig his steam pump and pass me the hose pipe, which was inserted in the laps of the tarpaulins and the entire apartment thoroughly wetted, so as to make it as uncomfortable as possible for its occupant. During the operation he, again charged, but catching the full force of the stream in his mouth, darted behind the hogsheds. So soon as the head keeper came from the garden for the purpose of remaining on board all night, I went ashore and informed the agents that the leopard was secured forward, so that the barge could be hauled in and the balance of the cargo discharged without danger. This was immediately done and the barge again towed out and anchored.

During the night the keeper did not lack for company, as nearly every newspaper had a reporter on board. They made the pilot house their headquarters, and shortly after midnight a dull thud was heard, when there was a rush down the ladder to the main deck forward, where they soon saw the eyes of the captive flashing behind the bars of the trap cage. The next morning on stepping into the agent's office I learned of my success and that the keeper had loaded the animal on a cart and started for the garden.

On going to the office of the Society to report and receive expected congratulations, I found only one director present, who gave me a fearful blowing up because the chloroform party would not be present at the transfer in the garden. It seemed that he had expressed such a wish, and was apt "to lay down the law" if matters did not go just as he wished. Inwardly chuckling at my success and the expected war of words, I hurried back to the garden and found that the animal had been shifted before my arrival. The day after the capture was Sunday, and the Society's receipts were largely increased by the notoriety given to the escape by all the city papers.

FRANK J. THOMPSON.

## Game Bag and Gun.

## WASHINGTON NOTES.

SQUIRREL shooting in the woods around Washington furnished recreation for quite a number of gunners during October and November. Two boys were out in the woods near Woodley very early one October morning, and it was not quite day when they were met by a gentleman, who asked them how they were making out. The reply was, "Oh, very well, sir." The gentleman, gun in hand, walked with the boys to a corner of the woods. On the way he received much advice on the subject of shooting squirrels, which was taken very good-naturedly from the youthful wisecracks.

The corner of the woods was barely reached, when the gentleman shot a squirrel, which one of the boys stopped to pick up. Just as he was stooping over, the light fell upon the gentleman's face, and the boy, still in a stooping posture, was fairly paralyzed on recognizing the President of the United States. He seemed quite unable to regain his perpendicular, and the President noticing the boy's embarrassment, cheered him up, said the advice he had been given was good, and wishing the boys a most successful hunt bade them good-morning.

Hundreds of gunners from this city spent Thanksgiving Day in the country, some going to Virginia, Manassas being one of the principal points—others into Maryland. Quite a number of turkeys were killed. Grouse (pheasants) were scarce. Quail unusually scarce. More rabbits were bagged than anything else.

One of our younger friends secured his bird in a very unusual, though not unheard of, way a few days since, just north of the city. With gun and Sport, this namesake of the father of ornithology in America started out. The dog got up some birds and the shooter missed. Presently more birds were gotten up, and notwithstanding the bad aim of our nimrod, one came to bag. It was one of the plumpest quail of the season, and was taken by the hand from the briars and tall grasses in which its feet had become badly entangled.

BART.

## A White Deer.

A SHORT time ago mention was made that a white deer was seen by hunters in the vicinity of President, this county, and afterward at Clough's Dam, near Marionville, Forest county. What is thought to have been the same deer was shot near Foxburg, Forest county, Wednesday morning by H. A. Gilson of that village. It is the first albino deer that has been shot in this vicinity for the past quarter of a century, and visitors from all parts of the country have called at the DuBois House to get a sight of the freak of nature.—Oil City (Pa.) Derrick, Dec. 11.

## MODERN SPORTING GUNPOWDERS

In the Light of the Public Powder and Primer Tests Carried out at Chicago and Carney's Point, New Jersey.

BY ARMIN TENNER,

Expert in Gunpowder, Guns and Ammunition.

[Concluded from page 524.]

## The Summary of the Powder Tests.

Although the various tables embodied in this report and their annexed explanations afford to every gunner an opportunity to draw correct conclusions as to what powder made the best showing, it can nevertheless be assumed that a great number of sportsmen, who are not thoroughly versed on the subject at issue, and who are not sufficiently acquainted with all ballistic questions, may still not be able to follow these figures in all directions, and, therefore, expect me to express an opinion on this subject.

I am fully aware that this is not an easy task and that such an attempt is coupled with a great deal of responsibility. Yet, I must admit, that although I have tried to make my report as comprehensible as possible, the average reader can hardly be expected to digest all the figures as readily as those who have conducted the experiments and were thus able to follow the behavior of the different powders in every particular.

In performing this duty I shall endeavor to exercise the same impartiality and good will toward all interested, which have marked the powder and primer tests from beginning to end, and wherein every step could be and has been witnessed and controlled by disinterested, competent persons.

I am far from intending to wound any one's feelings or to harm any persons, from a business point of view; this the more so, since I am convinced that all directly concerned in the outcome of these tests are, without exception, endeavoring hard to impart to their article of manufacture the highest possible degree of perfection.

But if I wish to remain true to my original intention to serve the cause of my American fellow-sportsmen, I can hardly avoid awarding, in view of the result of these tests, a higher figure of merit to one powder than to another, because it is but natural that in such a comparative trial one kind of powder should display properties not possessed in such a high degree by others.

In judging a powder from a strictly ballistic standpoint, one is compelled to pass an opinion frequently not in accord with the taste and opinion of a particular individual or a certain class of gunners, of whom many have their hobbies, and among them the force of habit and theory, unfortunately, still reigns supreme. I am further aware that my deductions will likely find opposition here and there, and that one possessing a greater degree of ballistic knowledge and experience on matters of shot shooting than I can claim for myself, even if he should speak with angel's tongue, would hardly succeed in removing with one stroke the confused ideas prevailing now in regard to what a propelling agent can do and should do, and on the point of the best method of loading cartridges, etc. But I hope I shall meet with the concurrence of all intelligent gunners if I adopt for judging the ballistic qualities of a gunpowder the following basis:

The bursting strain of a powder should be in proportion to the effect achieved; that is, when the penetration is satisfactory, the gun should not be subjected to an extraordinary strain. The bursting strain should, under all conditions, be as uniform as possible; it should be about the same in wet as well as dry weather. The velocities should always conform to a certain degree of uniformity and should move between the limits representing on one side a sufficient penetrative power, and on the other a guarantee against wild shots or bad pattern. The pattern, too, ought to be quite uniform. The powder should not be susceptible to moisture in the air or dry heat; it should not foul the barrel to a great extent nor cause corrosion if the gun is not cleaned immediately after use; it should produce a light recoil only; should develop little or no smoke; should not react too violently to highly increased charges; and ought not to heat the barrel too quickly in case of rapid and continuous shooting.

Translating these several qualities into figures or points of merit, they should be valued as follows:

	Points of merit.
Comparative lowest bursting strain.....	30
Evenness of the bursting strain.....	15
Highest velocity (penetration).....	20
Evenness of velocities.....	10
Best pattern with a sufficient corresponding velocity.....	25
Evenness of pattern if accompanied by a sufficient velocity.....	14
Non-susceptibility to moisture.....	15
Non-susceptibility to dry heat.....	15
Least fouling of barrels.....	8
Least recoil.....	8
Least smoke.....	8
Least heating of barrels.....	5
Least liability of causing a corrosion of gun barrel.....	15
Least degree of reaction to highly increased charges.....	8
Total.....	300

By awarding the corresponding figures in every division on the face of the result of the tests, we obtain a pretty correct and just gauge of values.

In the comparing and judging the qualities of the several powders in regard to bursting strain, velocity or penetration, and pattern in direct conjunction with one another, all velocities of less than 750ft. have been thrown out.

To place all powders on an equal footing, only the results obtained from the Smokeless and Nitro Club shells have been taken in consideration, for the E. C. American wood, S. S., DuPont's smokeless, both of the Schultze powders, and for the Walsrode powders only these obtained with the special shells adapted for these powders. As basis for comparing the velocities and patterns, the mean values obtained with the standard (3drs. powder, 14oz. shot) and the increased charges—8½drs. of powder and 14oz. of shot, of the Walsrode powders 29 and 31 and 31 and 32grs., have been taken, with due consideration of the behavior of the several powders in general.

The relation of the strain upon the gun to the effect achieved is, with the different powders—taking the mean values in both cases as a basis for comparison—as follows:

DuPont's black powder, bursting strain 6,997lbs., velocity 918ft.; American wood powder, bursting strain 6,371lbs., velocity 835ft.; E. C. powder, bursting strain 7,625lbs., velocity 883ft.; S. S. powder, bursting strain, 8,319lbs., velocity 900ft.; Schultze powder (Pompton), bursting strain 8,970lbs., velocity 890ft.; Schultze powder, bursting strain 8,970lbs., velocity 846ft.; DuPont's smokeless powder, bursting strain 10,810lbs., velocity 872ft.; Walsrode leaf powder, 31grs., bursting strain 8,009lbs., velocity 836lbs.; Walsrode grain powder, 29grs., bursting strain 8,066lbs., velocity 847ft.

Dividing now the sum of the bursting strain by that of the velocities, we obtain the best showing for the black powder and then for American wood; they are entitled to 30 and 29 points of merits respectively; then follows E. C. powder, to which 28 points are awarded; next in order are, with about the same values, S. S. powder and the two Walsrode powders, which accordingly are awarded each with 26 points; then follow the two Schultze powders, each credited with 24 point, and DuPont's smokeless receives 18 points.

In reference to the evenness of bursting strains, it should be remembered that the powder showing the best uniformity under all conditions, ought to receive the highest recognition.

Table M.

THE RELATION OF THE SEVERAL POWDERS IN REGARD TO EVENNESS OF GAS PRESSURE.

Powder.	Lowest bursting strain.	Highest bursting strain.	Variation.	Mean bursting strain.	Under influence of moisture.	Under influence of dry heat.	Greatest difference between lowest and highest bursting strain.
	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.
American wood.....	4,468	7,986	2,947	6,682	2,214	4,777	3,458
DuPont's smokeless.....	7,952	13,127	5,175	10,539	6,129	4,161	10,290
S. S. ....	7,303	10,249	3,046	8,726	4,228	1,536	5,751
Walsrode leaf.....	6,953	10,054	3,101	8,503	2,109	.....	3,101
Walsrode granulated.....	6,806	8,878	2,072	7,842	703	1,389	2,425
Schultze.....	4,988	10,378	5,440	7,909	2,499	1,499	5,968
Schultze, Pompton.....	5,688	10,787	5,099	8,237	3,827	4,302	8,121
DuPont's FFF.....	6,850	7,554	704	7,202	2,175	706	2,881
E. C. ....	5,203	8,217	3,014	6,716	2,301	2,301	4,601

Taking the figures quoted in Table M as a basis, Walsrode grain powder is entitled to 14 points of merit, and DuPont's black powder to the same figure (14 points); Walsrode leaf powder is credited with 13 points; American wood powder with 12 points; E. C. powder with 11 points; S. S. powder and Schultze powder each with 10 points; Schultze (Pompton) with 8, and DuPont's smokeless powder with 6 points.

For comparing and judging the penetrative power only these values are taken in consideration which were obtained in each case with the best adapted shells. DuPont's black powder is credited with 20 points of merit; S. S. powder received 18 points; Schultze powder (Pompton) is rated with 20 points; DuPont's smokeless powder with 19; Schultze powder with 18; Walsrode grain powder with 18; E. C. powder with 18; Walsrode leaf powder with 17, and American wood with 17 points.

Table N.

SHOWING THE FIGURES TAKEN AS BASIS FOR COMPARING AND JUDGING THE POWDERS IN REGARD TO EVENNESS OF VELOCITIES.

Powder.	Lowest velocity.	Highest velocity.	Variation.	Mean velocity.	Loss through effect of moisture.	Increase through effect of heat.	Greatest difference.
	Feet.	Feet.	Feet.	Feet.	Feet.	Feet.	Feet.
American wood.....	713	878	165	795	145	7	235
DuPont's smokeless.....	802	891	89	846	196	106	150
S. S. ....	779	1,089	200	924	274	113	387
Schultze.....	782	875	93	828	178	203	381
Schultze, Pompton.....	802	1,093	291	947	297	86	443
DuPont's FFF.....	772	1,041	269	906	115	60	269
E. C. ....	780	885	96	837	187	71	258
Walsrode leaf.....	818	885	67	857	66	...	67
Walsrode, in grains.....	785	891	106	838	32	57	110

In accordance with the results shown in Table N, points of merit are awarded as follows: Walsrode powder grained and Walsrode leaf powder, each 14 points; E. C. powder 13 points, DuPont's black powder, DuPont's smokeless and American wood powder each 11 points; Schultze powder and S. S. powder each 10 points, and Schultze powder (Pompton) 9 points.

For comparing and judging the pattern, the corresponding velocities must be taken in consideration, and this done, we obtain the following gauge of rating: Schultze powder receives 23 points, DuPont's smokeless 24, Schultze powder (Pompton) 24, DuPont's black powder 21, Walsrode powder in grains 25, E. C. powder 24, Walsrode leaf powder 21, American wood 28 and S. S. powder 23 points.

Evenness of Pattern.

In regard to evenness of pattern the powders are classified as follows: Schultze powder (Pompton) is credited with 14 points, Walsrode leaf powder 14, S. S. powder 14, American wood 13, E. C. powder 11, Walsrode powder in

grains 11, DuPont's smokeless powder 11, DuPont's black powder 10, Schultze powder 10.

When a powder is tested with a view to ascertain if and to what extent it is hygroscopic, such an examination must be extended in the direction of establishing as to what a degree the powder is capable of absorbing moisture and at what point the influence of moisture begins to exercise a detrimental effect, for the reason that one powder will show these signs at a lower point or percentage of moisture than will another.

The following table shows how far the several powders meet the demand made upon a propelling agent in this respect from a ballistic standpoint:

Table O.  
RESULT OF MOISTURE TEST.

Powder.	Percentage of moisture in normal condition.	Percentage of moisture after having been subjected to influence of 85% humidity 24 hours.	Increase of moisture.	Loss in velocity when subjected to 70% humidity.	Loss in velocity when subjected to 85% humidity.	Total loss through effect of moisture.
	Per c't.	Per c't.	Per c't.	Feet.	Feet.	Feet.
DuPont's FFF.....	1.5	2	0.5	None.	146	146
DuPont's smokeless.....	1.69	2	0.31	20	over 222	242
S. S. ....	1.7	4	2.3	121	" 250	371
Schultze.....	1.78	3.5	1.72	64	" 196	260
Schultze, Pompton.....	1.76	3.4	1.73	78	" 240	318
E. C. ....	1.19	2.5	1.31	53	188	241
Walsrode, in grains.....	1.68	2.25	0.57	5	38	43
Walsrode leaf.....	1.66	2	0.34	None.	44	44
American wood.....	2	7	5	112	185	297

On the basis of Table O points of merit have been awarded to Walsrode leaf powder 15, Walsrode grain powder 14, DuPont's black powder 11, E. C. powder 7, Schultze 5, Schultze (Pompton) 5, DuPont's smokeless powder 5, S. S. powder 4, American wood 0.

Dry Heat Test.

The powders increased their velocities as compared with the mean normal velocity as follows: Walsrode leaf powder 22ft., credited with 15 points of merit; American wood powder, increase 50ft., points of merit 13; DuPont's black powder, increase 56ft., 13 points of merit; Walsrode grain powder, increase 55ft., 13 points of merit; DuPont's smokeless powder, increase 79ft., 11 points of merit; E. C. powder, increase 70ft., 11 points of merit; S. S. powder, increase 130ft., 9 points of merit; Schultze powder, increase 185ft., 9 points of merit; Schultze (Pompton) powder, increase 197ft., 8 points of merit.

Test for Ascertaining In What Degree the Several Powders Will React to Highly Increased Charges.

This trial established for the different powders the following basis of rating: DuPont's black powder, 8 points of merit; Schultze (Pompton) powder, 7 points of merit; Schultze powder, 8 points of merit; Walsrode leaf powder, 6 points of merit; E. C. powder, 6 points of merit; Walsrode grain powder, 5 points of merit; S. S. powder, 5 points of merit; American wood powder, 5 points of merit; DuPont's smokeless powder, 4 points of merit.

Heating of Gun Barrels.

Result of test as follows: DuPont's smokeless and Walsrode grain powder, each 5 points of merit; Schultze, Schultze (Pompton) powder, wood and Walsrode leaf, S. S. and E. C. powders, each 4 points of merit; DuPont's black powder, 3 points of merit.

Fouling of Gun Barrels.

The result of this test warrants the following schedule of rating: Walsrode grain powder, Walsrode leaf powder and DuPont's smokeless each 8 points of merit; Schultze powder, Schultze (Pompton) powder and S. S. powder each 7 points of merit; wood and E. C. powder each 6 points of merit; DuPont's black powder 1 point of merit.

Recoil Test.

The recoil test furnished a result justifying a classification as follows: DuPont's smokeless and Walsrode grain powder each 3 points of merit; E. C., Schultze, Schultze (Pompton), wood, S. S. and Walsrode leaf powders each 6 point of merit; DuPont's black powder 3 points of merit.

Smoke Test.

This trial showed that the various powders should be rated in the following rotation: DuPont's smokeless and Walsrode grain powders each 8 points of merit; Schultze, Schultze (Pompton), Walsrode leaf, E. C. and S. S. powders each 6 points of merit; American wood 4 points of merit and DuPont's black powder no points of merit.

Now, if we apply the gauge of value somewhat different from the rule laid down herein for judging the various powders, and follow in this respect the views and fancies of the individual gunners, the ballistic properties of a particular powder will appear in a different light from that established by our standard of merits. If, for instance, a gunner lays no stress upon the question whether or not a powder is influenced by moisture or dry heat, if he does not care for smoke, recoil and heating of gun barrels, then the several powders will be credited each with points of merits as follows: DuPont's smokeless 113, Schultze and S. S. each 124, Schultze (Pompton) 125, Walsrode leaf 126, DuPont's black 130, E. C. and Walsrode grained each 133. When we pay no attention to the bursting strain and the behavior of a powder toward highly receive charges, then the powders would receive this rating: DuPont's black 117 points of merit, American wood 108, Schultze and S. S. each 112, Schultze (Pompton) 115, E. C. 121, DuPont's smokeless 122, Walsrode leaf 127, Walsrode grain 125,

To some gunner the smoke may appear particularly objectionable, he may consider the penetration of the highest importance, and he likely may regard the sums allotted for these qualities as too low. Let us see how the powders will rank if we follow his inclinations and views. Suppose we multiply the respective figures in each case by three, the result will then be as follows: American wood 194 points of merit, DuPont's black 199, S. S. 201, Schultze 202, DuPont's smokeless 204, Schultze (Pompton) 206, E. C. 214, Walsrode leaf 218, Walsrode grain 232.

For particularly timid souls the question as to what a powder will likely do when the charge is considerably increased, may be preëminent of all. He may conclude that the figure allowed for this quality is insufficient. Very well. Suppose we multiply this figure in every case by ten and see now how the powders will show: DuPont's smokeless would receive 186 points of merit, S. S. 198, American wood 199, Schultze (Pompton) 217, E. C. 220, Walsrode in grains 225, Schultze and Walsrode leaf each 226, and DuPont's black 229.

With the foregoing examples the different views nourished and presented by the individual gunners may be considered as exhausted, and it now remains to recapitulate the result of the judging from a strictly ballistic standpoint.

RECAPITULATION OF POINTS OF MERITS AS AWARDED TO EACH POWDER.																
Powder.	For least bursting strain in proportion to velocity.	For evenness in bursting strain.	For penetration or high velocity.	For evenness in velocity.	For best pattern.	For evenness in pattern.	For least causing corrosion in gun barrels.	For least susceptibility to moisture.	For least susceptibility to dry heat.	For least fouling of barrels.	For least recoil.	For least smoke.	For least degree of reaction to highly increased charges.	For least heating of gun barrels.	Total number of points of merit.

50 BROADWAY, ROOM 103, New York City.

Deer and Skate-Straps.

APPLETON, Wis., Nov. 27.—A singular incident occurred last Saturday afternoon about a mile down river from the city limits. My sixteen-year-old boy with others about the same age were skating on Fox River, when they saw a good-sized buck trying to cross on the ice, which was very smooth. Of course he got down, and the three "kids" surrounded him and in some way succeeded in tying him head and foot with skate-straps. How they did it beats me, as they said he "kicked like a mule," and "his feet were so sharp." After they had him fast they did not know how to manage him. They dared not kill him, as my boy knew enough about the game law to know that it was close season on such game. Finally a man living near by suggested that they take him home alive, which they thought was a good idea. They got a handsled and loaded him up, but he would not stay loaded. After repeated trials they gave it up. The man then offered \$5 for it. This the boys thought a good offer, but when they found he proposed killing it they told him he would be fined \$100 at least, so he withdrew the offer. The boys then towed the deer ashore, cast off their lines (or straps) and bid him good-bye. He slowly ascended the river bank and then skipped. Of course he had been driven on to the ice by dogs. Thus it appears that deer are not yet all driven out of this country, when they can be found within a mile of a busy city of 15,000 inhabitants.

Hunting parties did not succeed in killing the usual number this fall. October for the open season instead of November is what beat them. Had shooting deer been allowed this month the hunting conditions would have been fine, and no doubt many deer would have been killed.

C. V. Y.

Green Mountain Deer.

SPRINGFIELD, Vt., Dec. 15.—It will be welcome news to many readers to know that deer are increasing rapidly in this part of the Green Mountain State. Two were seen within two miles of here this summer, and last Tuesday a fine buck was seen on a farm by the Connecticut River, by one of the men who gather cream for the local creamery. Twenty-five miles north of here they are quite plenty, and the trout streams are lined with tracks. A wildcat was shot by one of our farmer boys last Wednesday. The animal came into the yard. The heavy snows evidently made foraging a hard matter, for it was very poor,

W. W. B.

## EXPERIENCES WITH DEER AND MOOSE.

THIS is for the season of 1893 in northern New Hampshire. Jacking, still-hunting and hounding are all practiced and sanctioned by law.

Mr. Bumford, proprietor of the Connecticut Lake houses, came in to Second Lake with guests for a day's hunt. Going up the long dead-water of East Inlet in mid-day they paddled slowly, silently, back toward the dam for a twilight shot. They had made nearly the whole distance, and having neither seen nor heard any game, began to tire of the monotony. The ubiquitous kingfisher was seated on the stub of a tree, and our friend, to test his skill, fired and missed. At the instant they rounded the last bend, three deer, a large buck and two does, startled by the report, as they stood quietly feeding in the stream, were springing up the bank, and sooner than it takes to tell it were lost to view behind the thick woods. They were saluted in their retreat by a couple of shots, but no damage was inflicted. It was a sad ending for that twilight shooting.

But the day, or rather the night, was not yet done. Wending their sorrowful way to the shore of the lake, the coming darkness made necessary a change of programme. Wrapped in overcoats and blankets, and seated under a brilliant head light, the guide sent the frail, but steady Indian Rock boat noiselessly along the east shore toward the foot of the waters. Shotgun had replaced rifle, as a close encounter was to be courted. The jack was closed, the ears were strained to catch the faintest sound. Several boats, in fact, were at this moment hovering about the shores in the darkness bent upon the same errand. A few ducks went scurrying through the gloom, a nocturnal water rat disturbed the surface and caused a sudden tingling of the nerves in expectation of something bigger. Boats narrowly escaped colliding in the blackness, still our redoubtable host held to his work. Finally, about midnight, after careful maneuvering in the neighborhood of a suspicious splashing and stamping, the cap of the headlight was suddenly, but noiselessly removed, and there, not eight rods away, the body and antlers of a noble buck were outlined against the sombre woods. A quick, sure aim, a loud report, a crashing in the underbrush as the quarry plunged away for a few rods, and all was still.

Yes, it was noble game—the meat alone weighing 265 lbs. It was photographed, and visitors another season will see the picture if they peep into the showcase in the office, and Mr. Bumford will tell you the rest, and assist you to find as many more of the same sort, if you have the patience and the steady nerves to match.

Occasionally a moose is found roaming in these parts, and hardly a year passes but one or more are killed. One day in September Mrs. Farnsworth, whose house is situated on the shores of First Lake, while about her household duties, had her attention attracted to what she at first supposed to be a tree with roots attached floating upon the surface of the water, but on closer inspection she discovered that a bull moose was making for the east shore. Her husband, Josh, as he is familiarly called, and the most redoubtable hunter in these parts, had just gone from the premises, but the hired man was at once informed of the presence of moose. Seizing Josh's Marlin magazine rifle, which was always supposed to be loaded to the full, and the boat being at hand, he lost no time in overhauling the great animal. A moose is a swift and powerful swimmer, but he is no match for a man in a boat that is supplied with good oars. The surface of the lake was not a little ruffled by a high wind blowing at the time, but coming alongside the beast and within a few rods, he dropped the oars and taking the rifle commenced a lively fusillade. One missile lifted a tuft of hair from the back of the animal's neck, and had it gone an inch lower would have proved fatal. Another struck one of the huge antlers, which so stunned the moose that for a moment he sank well out of sight, and Mrs. F., who was an interested spectator, supposed the game was killed; but the hired man knew better, for he distinctly heard the hum of the lead as it went on its deflected course across the lake. The moose was not long in recovering from the concussion, and was soon up and at it, more determined than ever to make the bank, which he soon did with his pursuer not far behind him. When once his huge hoofs felt the solid ground beneath him he seemed in no haste to retreat further, but actually faced about, and with his ugly, fiery eye bent on his enemy stood stamping, as much as to say, "Come on if you dare." Surely his majestic form offered a sufficient target, but unfortunately the hammer fell with only a dull thud, when the further attempt to shoot was made, and no spare cartridges had been taken along. It was a bitter disappointment, but had to be borne, and the great woods of the Dead Diamond region into which he plunged still continue to be pastures new and inviting, where no doubt he has found congenial companionship, and with truth can tell of at least one "hair-breadth" escape!

Messrs. Dudley, Eustice and Shurtleff (Fish and Game Commissioners for New Hampshire) while on their annual camping expedition up the Magalloway River earlier in the season, counted fifty-seven deer during their three weeks' sojourn.

Diamond Ponds, justly celebrated for its fine trout, where a hotel is kept by our genial friend "Mort" Noyes, is also the home of the deer. The excellent marksman and veteran hunter, the Clerk of the Court, had a little vexatious experience here this season. The dogs had been put out as usual, and our friend had stationed himself on his favorite runway, standing well back in the shadow of a friendly tree, and at the time resting his rifle in the crook of the same. Great good fortune seemed to favor him, for a great buck broke cover and stood irresolute for a moment on the shore of the pond. The opportunity was not lost; the deer, at the report, confused as to the whereabouts of his enemy, plunged in and swam directly toward the Clerk of the Court. Again and again the rifle spoke, while the game, after much tacking, finally gained the shore near where the hunter stood, only to be shot at again. When the magazine was emptied and the buck was gone, it was discovered that the sights had been raised by a fiend who had borrowed the piece to use at a long distance target and had forgotten to lower them, and Mr. Clerk, not having given a close inspection before going into action, made a sad botch of the whole business. Moral: Be sure your sights are right and then go ahead.

Speaking of moose reminds me of the experience of two hunters who got lost while on an outing, but this was further down in the country; and much nearer the White Mountains. After wandering about aimlessly for

a time, they came to the shores of an unknown pond, evidently seldom frequented. On the further shore they descried the bulky form of a moose, well down in the water, nibbling at his favorite moss growing on the bottom. Being hungry, and tired of the monotony of long-continued tramping, they cautiously skirted the shore, hoping to intercept him. When they reached a position sufficiently near as they supposed to secure a good shot, cautiously they crept out to take a look, but found that the animal had spirited himself away. For a time they were greatly mystified, and began to think that their long walk and fasting had deranged their vision, but they could not account for the fact that both had seen, or supposed they had seen the moose. While they were engaged in these unpleasant reveries, their ears were saluted by a loud snort that seemed to come from above them. Hastily glancing up, sure enough, there stood the moose on the brink of a high bluff not forty rods distant. Our lost friends did not dare risk a shot; indeed, it is doubtful if they could have hit it even if they had fired. Quietly they betook themselves to the woods again, not knowing just what ought to be done next. Not a long time had elapsed when one of the hunters, happening to look off on the water, saw the moose again feeding in almost the identical spot where it had first been observed. It was great good luck, for a careful shot or two brought the moose to bag. The gentlemen were not only fortunate in killing the big game, but in bringing it into the village of Lancaster. It is not always that men getting lost are so fortunate in hunting and killing big game.

But time and your limited space would forbid the narration of the many experiences that night to be chronicled. Suffice it to say, we were fortunate in our shooting. It was Sept. 1, a twilight shot. A deer had walked up our run and fell shot through the head not 30 ft. away.

These moods of killing, jacking, still-hunting and hounding, will be permissible, at least, another year. Whether the supply will hold out against the modern rifle, coupled with the keen-scented and swift-footed hound, is a question our legislators will do well to ponder.

C. H. GLEASON.

## NATIONAL PARK RAILROAD.

Editor *Forest and Stream*:

It has become quite the fashion with the advent of winter and the near approach of the annual assembling of Congress, for the people of Montana, and indeed the whole United States, to be treated to lengthy newspaper articles (purporting to be written by persons of more or less prominence, and representing the Cooke City people) advocating the segregation of the northwest corner of the Yellowstone National Park for the purpose of building a railroad to that mining camp, and, in support of that project, asserting that this is the only route by which a railroad can possibly be constructed to Cooke City.

The present year, 1893, is no exception to the rule, and already several articles have found their way into print on the subject, one of them written by Col. Brackett, sympathizing with the miners of Cooke and predicting dire results to the Park unless Congress shall, this winter, consent to the aforesaid segregation. I do not doubt Col. Brackett's sincerity in the matter, but hope that he is as much mistaken in his predictions as he is in his idea that Cooke City is accessible only via Gardiner and the Yellowstone route. I sympathize as fully as he does with the miners and property owners of Cooke, but I think the time has come when the people of Cooke, as well as all outsiders who are in any way interested in the development of the camp, should stop talking about it as a place accessible only by balloon or by rail over a route that necessitates passing a bill through Congress which has always, when presented, called up the most violent opposition of a large part of the people of the United States. I do not pretend to say whether or not the demand for segregation is just, or whether or not the route is feasible. These points I do not intend to discuss. But I do think that by constantly insisting on this one proposition (*i. e.*, the impossibility of reaching the camp with a railroad, except by this one route from Gardiner) the people who do so are (unintentionally, perhaps) actually injuring the camp, by impressing Eastern capitalists and railroad men to some extent with false ideas as to the inaccessibility of Cooke City and the surrounding mineral country. As a matter of fact Cooke is much more easy of access than several important mining camps in the United States to which railroads have been built, at several times the cost of building to Cooke, and it seems to me that those interested would do much better by reaching out a hand toward the East and inviting some of the roads now pointing in this direction into their camp by way of Clark's Fork, than to sit down and pin their faith to the one idea of segregation (with all the trouble and uncertainty it entails) and by loudly and repeatedly asserting that it is the only way a railroad can possibly be built to Cooke, injure, perhaps, to some extent their chances of obtaining a proper consideration of other routes.

I do not propose to discuss in this article the merits of the Clark's Fork route as compared with any other, but having some years ago made a survey of it from Billings, I can say that it presents a route by which Cooke City can be reached by rail, which is devoid of any serious difficulties in construction, and can be built at a reasonable cost. From Billings to Cooke it is 123 miles and my estimate on its construction from a careful survey was \$2,000,000, and now that the Rocky Fork Railroad is built, this distance from the mouth of Rock Creek is reduced to less than 100 miles that would be necessary to build, which would bring the cost of uniting Billings and Cooke by rail down to about one and three-quarter millions, and when constructed, the road would never be troubled by snow, would have no heavier grades than any other mountain road, and outside of about ten miles in the Clark's Fork cañon, no grades to speak of at all. This is by no means a bad proposition to present to any railroad company for their consideration, and the people of Cooke would do well not to lose sight of it in their zest for segregation, for even if successful, what assurance have the Cooke City people that the road would be built and who is going to build it? The Northern Pacific, who now control the Yellowstone route as far as Cinnabar? Certainly not. Let any one who thinks so look up the testimony of President Oakes on this subject before a Congressional committee last winter. Who, then, is going to put two or three millions of dollars into this road? Let the people of Cooke consider the query, remembering that the day of private railroad enterprise is past and that nowadays

only big railroad companies build railroads. Let them consider also the present financial condition of the Northern Pacific, remembering that they are the only people likely to want to build over this route, and they must see that in all human probability it would be a long time before the line would be constructed, even if they obtained the desired segregation.

Why then not stop talking of Cooke City as being accessible only by way of Gardiner, and instead of devoting their energies entirely toward obtaining segregation assist us in publishing the fact that the Clark's Fork River offers an excellent route for a railroad and in getting some of the big railroad companies now building westward to investigate it. Both the Northwestern and B. & M. systems are within easy reach of Cooke now, and to the writer's personal knowledge both have considerable knowledge of the large resources of the region in which Cooke is situated, as well as of the country to the east, and are already much interested. Let the people of Cooke, therefore, co-operate with those of Billings and eastern Montana in endeavoring by a just representation of the Clark's Fork route to get some of these new roads to make a thorough examination of the route. They are building after business and Cooke people ought to show them that by building a branch to their camp by way of Clark's Fork business can be obtained. In my humble opinion the Cooke City people have very much more to hope for from these new roads, ready, eager and prepared to build whenever a good route and plenty of business present themselves, than they have from the Northern Pacific, burdened as it now is and probably will be for years with a ruinously heavy debt.

We invite the co-operation of our neighbors across the range. Many of our people have interests in and around Cooke, and all have confidence in her hidden resources and desire to see them developed, and to that end will endeavor to direct the attention of the incoming roads toward the camp via Clark's Fork River. There is everything necessary along this line to make a good showing. The fertile and extensive valley of the Clark's Fork, with abundance of water and the best and most extensive coal fields in the Northwest (at Bear Creek), the vast empire known as the Big Horn Basin country, now entirely destitute of railroads, and the fine mineral showing in and around Cooke, is sufficient inducement to any railroad to call for a most careful investigation. Then let the people of Cooke promptly repudiate each and every insinuation that they can only be reached from Gardiner (no matter from whom it comes), and co-operate with us in bringing the Clark's Fork route into prominence. Work for segregation if you like, and if you obtain favorable action on your bill well and good. Eastern Montana has never in any way opposed it, but we object to the assertion so repeatedly made that Cooke can only be reached from Gardiner. It is not true, and the effect is bad and handicaps us in our endeavors to unite Billings and Cooke, without really aiding the segregation project in the least.

PHILIP M. GALLAHER, C.E.

BILLINGS, MONT., DEC. 5.

## BOSTON AND MAINE.

BOSTON, DEC. 16.—The weather has disappointed two or three Boston hunting parties, the members of which have been planning for trips into the woods of Maine for big game. December has proved to be a rough one thus far. The latest reports mention snow 1 ft. and even 2 ft. deep in the woods in the best deer sections. Then the mercury has been indicating 30° below zero in some of the towns in that State, to say nothing of the woods. Such reports have made the would-be hunters shiver, and they have quietly been "backing out." Dr. S. W. Green, with a couple of friends, was to have started for Maine on the 14th, but that morning the mercury in Boston was down among the zeroes, with reports of 1 ft. of snow. The trip has been abandoned. Mr. W. T. Farley, of Farley, Harvey & Co., with a friend, has been planning for months a hunting trip for deer. Andover, Me., and the woods beyond was to have been the hunting section, with George H. Cutting as guide. But the winter has shown too bold a face, and the hunt has been abandoned. All along the line there are reports of late hunts abandoned. Well, it is a great thing for the game. So much the more will be left to breed. The annual close season on moose, deer and caribou in Maine being on Jan. 1, and the "reign of terror"—to the game—is about over. Said one of the hunters above mentioned the other day: "On the whole I am not sorry. Hunting is butchery after all. Perhaps the deer we should have killed will bring forth a number more for next year. Then we will go earlier. I hardly think that I should like to be either Nick Boylston, of Boston, or one of his friends. I see by the papers that they have lately returned from the Maine woods with twelve deer, three deer apiece, all that the law allows. I have not yet found out where they are going to sell their venison. They should go into the meat business. It does seem as though a deer to a hunter ought to be enough."

At the meeting of the Massachusetts Fish and Game Protective Association the other evening Mr. Wm. Minot, Jr., made the suggestion that the Association petition the Legislature for a close time on quail during all of the year 1894. He suggest that the quail, having suffered almost extermination by the terrible winter of 1892-3, should be given at least one year to recuperate. Gentlemen who have hunted sections of the State repeatedly this fall, where quail were fairly plenty a year ago, have not seen a bird this season. Mr. Minot's proposition was received with favor, and, doubtless, will be acted upon. It is a feature worth noting that remarkably few native quail have found their way into the Boston markets this season. There is a complaint, however, that large numbers of snared ruffed grouse are coming into the market.

The Massachusetts Fish and Game Protective Association has grown steadily until it numbers nearly 500 members, and has a fund of nearly \$3,000 in the treasury. The sister organization recently formed at Lewiston for the protection and propagation of game in Maine, has started off with a good deal of vigor.

The report of the directors of the Inglewood Club, just issued, shows the affairs of that organization to be in excellent condition. Cash receipts for the year have been \$4,373.10; disbursements \$3,992.13; cash on hand \$380.92. During the year a valuable fishway, 276 ft. long, has been constructed at Knight's Mill. An addition has been made to the club house, furnishing dining and sleeping accommodations for the help. Other improvements have been made in the club house, and a good deal has been done in

the way of furnishing. A new shelter has been erected at Britain Steam Landing, and eight boats have been added to the fleet. Fifty thousand young sea salmon have lately been received and distributed. The club expects to receive sufficient aid from the Government to build the remaining needed fishway upon the east branch of the Musquash River, thus securing free ways for sea salmon to and from the ocean. The membership of the club is increasing rapidly, and larger and larger parties are visiting the camp, and it is suggested that it may soon be necessary to enlarge the main club house. A party visited the preserve as early as May 12 this year, and another very large party was there on the 27th.

One season is scarcely done when the other begins. Boston trout parties are already forming for the spring of 1894. A Boston party has just written Mr. O. A. Dennen, proprietor of the Kineo House, Moosehead Lake, to engage one of his steamers for May 20, 1894.

Mr. Walter S. Hill, of John P. Squire & Co., has a letter from President C. A. Woodward, of the Ragged Island Club, Currituck Sound, saying that game is remarkably plenty there. The letter is written from Norfolk, the home of the business firm of which Mr. Woodward is the head. He urges upon Mr. Hill the importance of his again accepting the hospitality of the club for a few days of shooting. The readers of the FOREST AND STREAM will remember the account of the splendid shoot Mr. Hill had with Mr. Woodward last year at the same place. Mr. Hill will accept of the invitation if business can be made to permit, and he will urge upon Mr. Woodward the absolute necessity of his accepting an invitation to try the trout in Maine waters another season, something they planned for last season, but were both hindered by circumstances that could not be controlled.

A strenuous effort has been made this fall by the Maine authorities to break up the practice of setting nets in Jack Stream, which flows into Cobbosseecontee Lake, at the southern extremity, between Winthrop and Monmouth. This stream is the outlet of all the large Winthrop ponds, their waters flowing into the Cobbosseecontee, and thence to the Kennebec. The stream is the natural resort of vast quantities of trout and other game and food fish, especially in the autumn, and poachers have been in the habit of driving over from Lewiston and stretching a net clear across Jack Stream, at one of the narrowest places, thus capturing every fish going either up or down. They have been very cautious in their movements, setting their net by night only, and laying in camp in the daytime. Their fish they have taken to Lewiston by wagon loads, and sold them. Complaints came to the ears of Sheriff Berry, of Winthrop, recently, and he had reasons to believe that the net was set. He drove down to the stream by night and at daybreak he saw three men hauling the net and taking out the fish. Unfortunately he was on the other side of the stream, with no means of getting over, but he identified the men to the extent that he arrested subsequently Richard Sabourin, Henry Lezotte and John Denison of Lewiston. They were taken before Justice Woodward of Winthrop, who discharged them. But they were afterward arraigned in the Supreme Court at Augusta, and they have been indicted by the Grand Jury. F. L. Noble, Esq., has appeared for them and has succeeded in getting them bound over to the April term of court. There is a great deal of indignation against this illegal fishing. Cobbosseecontee Lake is one of the finest fish preserves in the State. The Fish Commissioners have endeavored to keep it stocked, while local fishermen have labored in the same direction. Several of them have contributed money to maintain a hatchery at Belgrade to supply Kennebec ponds, and are taking much pains to improve them.

SPECIAL.

#### NIAGARA COUNTY DUCK SHOOTING.

LOCKPORT, N. Y., Nov. 29.—A New York gentleman, visiting friends in Lockport this summer, was afforded an opportunity in company with a jolly party of local anglers to try his skill on the black bass of Lake Ontario, and the monstrous pike and pickerel of Tonawanda Creek. Having fully demonstrated his prowess with the rod and reel, he confessed to his hosts that the remarkably good fishing afforded by Niagara county was (very fortunately for the home brothers of the angle, and unfortunately for the Gotham lovers of the sport), a fact unpublished in New York. Otherwise, he said, "the beautiful shire bounded on the west by the Niagara River where the most exciting black bass fishing on the continent could be had, by Lake Ontario on the north with its well stocked tributaries, and Tonawanda Creek on the south, the haunt of the great lake pike and pickerel, would be overrun by sportsmen from the metropolis."

A few days ago the same enthusiast ran up to Lockport just to renew acquaintances and to talk over the fine catches of black bass off Fort Niagara at the mouth of the rapid river in which he was an appreciable and appreciative factor. In a future number of FOREST AND STREAM perhaps the editor will permit me to tell his readers what the reminiscent gentlemen had to talk about.

The hosts, Messrs. F. Howard and Arthur L. Leich, were not content with recounting deeds which made the blood of the true angler tingle at the mere relating. To the astonishment of the New Yorker they proposed a duck hunting trip. Their guest said he would enjoy nothing better, but could not take the time necessitated by a trip to Canada.

"Not at all necessary to carry the war into Africa," exclaimed the genial Art, "we have the feathered enemy almost at our very doors. I call the teal and mallards 'enemies,' because they so often disturb my peace of mind at the thought that they fly over the old tracks and haunts in lines unbroken by my Parker. No, the birds come to our shores free of duty from the Northland by the trillions.

Mr. Leich's graphic narration of the beauty of scenery possessed by Olcott harbor and the Eighteen-Mile Creek, and of its sister harbor, Wilson, into which flowed the Tuscarora Creek, given a touch of life these bleak November days by long lines of ducks limned on the gray horizon or dipping lower until they found a background in the dark blue water of the lake, made their guest eager for the fray.

The New Yorker must have decided to go. Either that, or his friends decided for him. At any rate, he made part of the load of a two-seated wagon, well filled with the hunters' paraphernalia, which started the next evening for Olcott. The portable larder was not at all pretentious,

for although all the ephemeral hotels were closed for the season in the romantic village, the local hunters had unlimited faith in Ed. Martin's hospitality. The guest felt rebuked, when demurely asking, "Who's Ed. Martin?" the reply came, "My untraveled friend, you do not know Lake Ontario; he is not the genius of a locality, but the friend of all who travel the Lakes."

Along the famous Eighteen-Mile Creek the spirited horses hurried the hunters, and after an hour's drive they were landed at their destination. Ed was soon found, and asked as to the prospect for ducks, that worthy replied, "Mornings and evenings there's no prospect for ducks—there's nothing but ducks in sight."

The sportsmen were told that the high winds made shooting out on the Lake impracticable, and were much disappointed thereat. Along the lake from Youngstown to Thirty-Mile Light excellent sport is afforded the hunter in the fall at a distance of a mile to two miles from shore. A favorite method in pursuing the waterfowl is something like this: The ducks for any one given day seem to have a fixed aerial route which they follow in flying back and forward parallel with the shore. Sometimes these paths are three-quarters of a mile out, and then again more than two miles out, varying with the weather and the more capricious birds. These routes are soon located by the shooters. By placing their boats a short distance on one side or the other of the invisible line excellent shots are afforded as the ducks come sailing along. In this way a party of four men in two boats last fall succeeded in using up 528 shells in one day, securing nearly 200 ducks. Perhaps one of the most interesting features of the sport in this locality is the variety of game that comes to the bags of the floating batteries on Lake Ontario.

But to return to our friends. Consolation was contained in Captain Martin's statement to the effect that the storm made grand hunting up the creek. Thus reassured, the two turned in for the night to dream of ducks in marshalled flight.

The morning, true to prophecy, proved windy. But in the gray dawn the Lockportians and their friend could see long lines and heavy V's of birds blowing inland on the wings of the storm. They wanted no ride in the lake so long as the game came inland. Soon the boats were ready and they pushed up the creek. The stream at no point is wider than 120 yds., with high banks on either side. In coming in and going back to the lake the ducks very accommodatingly follow the creek's course. In the majority of instances, moreover, the flight is low enough to afford possible and, to the accurate shot, probable targets. So it was that the gentlemen found themselves in a shooting alley, as it were, with flying targets almost constantly before them.

Not five minutes after pushing off along came an alternated column of redheads, flying as if in great haste to reach the feeding grounds further up. As they came opposite the boatman, a broadside from three polished pieces saluted the feathered tourists from the north. They veered slightly away from the hunters just before reaching them, or perhaps more than one of the flock would have tumbled. As it was, a single shining crest only came down into the water. This first trophy was awarded to the metropolis unanimously. A quarter of a mile up stream a flock of teal were sighted feeding around the wild rice and cat-tails. The boats were pushed forward quietly but swiftly. The flocks rose hurriedly before the hunters were within range, all except one tardy drake, who seemed bewildered for a moment. This proved fatal. Truth to tell, however, both Lockportians surprised themselves by missing. They generously applauded when Mr. Drake was easily taken by Metropolis as he came down on the back track below the east bank to rejoin his rapidly disappearing comrades. This time there was no award, but the visitor took the bird by the divine right of conqueror.

And so the sport continued as late as 10:30 A. M. Again in the afternoon the sport reopened and the guns were kept busy. The specimens were not numerous, running into the second score, but the range of varieties quite wide. Besides redheads and teal several sheldrakes and sleepyheads were bagged. Just about sundown Art made his comrades justifiably curious by bringing down the tailender of a flock of mallards. Although a half-sized gale was blowing on the lake, Capt. Martin dogmatically asserted, "The mallards hev their powder noses on to-day, and they're keepin' out on wide waters in the teeth of the wind, restin' by spells on the rockin' waves. No use goin' after 'em; we've no yacht in the harbor that could be handled to any purpose for ducks to-day."

At 5 o'clock the hunters started for home, reaching the city of Locks two hours later, tired, it is true, but with a happy weariness. The day's sport had been uninterrupted, fine, and they felt well repaid for their trip in every respect.

After a hearty dinner Metropolis took up the New York papers, which had left the presses at 4:30 A. M. and reached the State's remotest city twelve hours later, with a gratified air.

"Well," said he, "this is all like a fairy tale. I have spent the day on a most romantic steamer, enjoyed the invigorating breezes of the lake, and at the climax found myself surrounded with as many aquatic birds as the coasts of Labrador could afford. After a day of superior pleasure, such as only a sportsman may know, I return to find in my friend's house the New York papers of the day at my service. All this within twelve hours' ride of my home. Astonishing!"

In a measure, old residents of the country this year, however, can share the New Yorkers' astonishment at the plentifulness of wild ducks and geese. They seem to visit this section this fall in countless numbers. Burt Green of Lockport and Will Windsor, United States plumber at Ft. Niagara, one day this week secured eleven large Canadian geese in the Niagara River. A Wilson hotel keeper, whose place is charmingly located on Wilson Harbor and overlooking the mouth of the creek and Lake Ontario, writes that on Monday morning of this week, rising at daybreak, he went outdoors to attend to his chores. He looked out upon the stream and rubbed his eyes with astonishment. He could not believe what his optics told him. The water as far as he could see was covered with ducks. That day he and a local attorney secured fifty-seven plump birds. The lawyer employed no legal entanglements with which to ensnare the game, either, but he says he used a very superior smokeless powder. No. 3 shot did the business.

A town of Wheatfield farmer sent word to a Lockport

friend on Tuesday that the ducks were so thick on Tonawanda Creek his young boys were trying to knock them down with poles as they flew back and forth to the lake. Never within the memory of the present generation have the different varieties of waterfowl been so plentiful in Niagara county. This section is happily located anyhow as relates to the migratory game birds.

In the Niagara River, the county's eastern boundary, Lake Erie and Lake Ontario seem to come to a focus. The great bulk of northern waterfowl in seeking a southern home for the winter, spend at least a month along the shores and creeks of these bodies of water. The wild and almost tempestuous grandeur of the Falls, the rapids and the cliff-bound rivers undoubtedly appeal to the untamed natures of these wanderers from the North. It is a touch of nature for which these swift-winged birds whose flight simulates the speed of Niagara's falling waters have an unmistakable liking. Great eagles soar above the whirlpool and mighty eddies, gulls skim along the waves, and far out in the more placid stretches a loon or a grebe may be seen to rise, and again as he rises on the crest of a wave. Pleasant indeed is this section in summer to the tourist, delightful is it to the angler in June, July or August, but to the fowler Niagara county is grandest in November. The noblest stanza Bryant ever penned has been answered. He presents to a waterfowl this query:

"Whither midst falling dew,  
While glow the heavens with the last steps of day,  
For through their rosy depths dost thou pursue  
Thy solitary way?"

Although not seeking a summer home, the bird doubtless is on his way "to scream among his fellows," for a brief season in the paradise for duck hunters is not for ducks, on old Ontario's shores, the land of the Niagaras.

M. H.

#### Emotions Aroused by a 10in. Track.

DEC. 12.—*Editor Forest and Stream:* I send you extracts from a letter just received from a guide with whom I have hunted in the Rockies, a man who has been in at the death of a large number of bears; and though a veteran at the game, he vividly describes a feeling that I have often experienced, and one which I think is generally shared at times by most hunters of dangerous game. It is a sort of very anxious-for-a-fight feeling, but as the time seems to draw very close for the scrimmage, the feeling seems to take possession of one's soul that you are getting very near your game at an unnecessarily rapid pace.

H. N. M.

Dear M.: I made a trip this fall with Mr. E. of Switzerland. We hunted in the Jackson Lake country. There is a big grizzly bear in that country that makes a track of about 7 in. in width. I have had an eye on him for several years. This trip I thought to get him. It had been snowing all night. We started early in the morning, and found the track about 8 o'clock, and followed up the mountain, where we got close to our game. He had been making his breakfast of pine nuts. I had already taken three cartridges from pocket and put them between my fingers, for I knew from the signs we were very close to our game; and what a track! Did you ever notice when one gets close to a big grizzly how much larger the track is than it was a mile back, where you measured it? Well, this fellow's track was 10 in. wide and getting wider every step, but at this stage of the game something happened, of course it did, otherwise we would have got the bear—provided, always, that the bear did not get us. Now right here, my good friend, let me tell you—of course I would not have anyone else know—that I was seriously thinking of the latter case, for there was poor D. worse than killed (I suppose you have heard all about it—an account of this brave fight was printed in FOREST AND STREAM last spring) and Jones, about the same time, was completely knocked out by a single stroke. I wondered if those bear made tracks like this one I was following. Then the new double-barreled rifle, suppose that should go back on us! That bear is just sure to be above us when we see him, and if—and if—and if—

When a man is seeking diligently for a thing, it is, at least, fair to suppose that he wants to find it. But I think there are times, especially when the track is very large, that such a presumption would be very far from the truth.

But something happened! A wolverine suddenly jumped across the track—stopped, of course, to look at us—bang! went E.'s gun. Kicked? You bet I kicked. It would not have looked well if I had not. We got the wolverine, and as we already had a very fine bear's skin in camp, Mr. E. was happy, and, of course, I was resigned. \* \* \*

E. W. R.

#### Length of Barrels.

CAZENOVIA, N. Y., Dec. 15.—*Editor Forest and Stream:* The writer was somewhat surprised at "Wanderer's" article in your excellent paper. Questions may have been settled, as he remarks, long ago in the minds of those who have answered them, and given their answers as they supposed correctly, and later investigations, and more complete and exhaustive experiments prove them far from correct. I once owned a 10-bore, 9½ lbs gun that had 24 in. barrels, and while I have shot hundreds of others with a weighed amount of powder and a counted charge of shot, I never saw its equal for regularity and evenness. But I would not advise any one to use such a short one, as the distance between the two sighting points is too short, and with all due respect to Mr. Tenner, I would recommend the 25 in. tubes instead of the 26 in. for the same reason. We all ought to thank Mr. Tenner for his useful and instructive articles.

WILL H. CRUTTENDEN.

#### Pennsylvania Game.

MUNCY, Pa., Dec. 14.—Reports of successful hunters reach us every day, from the Loyalsock, Little Pine, Big Pine Creek and their tributaries. In the vicinity of Barber's Mills one man killed three deer last week. Two deer were killed about three miles below English Center, on Little Pine Creek, during the first three days of this week. Another was killed in Carson Run last week. Since writing up that big flock of turkeys that were seen opposite this place, we learn that a hunter near Nesbit killed two at one discharge. Undoubtedly they were of the same flock, as the killing was done some miles up the river, on the Bald Eagle. Hunters say there is too much crust for good easy work. Mr. James Lose, the ablest angler of us all, continued to make fine catches of pike (we guess they were pickerel though) up to the first of this month. Last year he caught over 200 in October and November.

J. M. E.

## THE CARLIN PARTY.

We recall nothing in recent literature of sport which parallels the experiences of the Carlin party of sportsmen who were lost in the Bitter Root Mountains as those experiences are related by Mr. Carlin himself in the Tacoma Review.

Following is Mr. Carlin's account given to the Review: "We pitched our camp on the Clearwater Sept. 26, between two warm springs. The camp was comfortably appointed, the fishing was good, and the hunting magnificent. We stayed there until Oct. 10, and then decided to return home. We packed everything and started up the little trail toward the Lo Lo. Two-thirds of the way up we found the snow 2ft. deep. Colgate, who had been sick some time, was on a strong horse, but faring badly. Our guide, Spencer, estimated that the snow would be 4ft. deep on the main trail, and so we returned to the old camp. We found timber two miles and a half below there, at the lower lake and began the task of building rafts. In the mean time we had bought out Ben Keeley, an old trapper who had a cabin there stocked with provisions for the winter, and we hired him to come down with us. The party then numbered six in all. The rafts were 4ft. wide and 26ft. long, made of strong timbers, with bulkhead forward. We made a chair on one for Colgate to sit in, as he was by that time almost helpless, and embarked, dividing our provisions and utensils evenly. Himmelwright and myself were on the raft with Colgate. Pierce, Spencer and Keeley were on the other.

"Then began the most difficult and hazardous work that I ever heard of. We let the rafts down gradually, using ropes sometimes and then our poles, holding on with our hands to the slippery rocks along the banks. We were constantly obliged to have one man going forward to reconnoitre the river, and in places all five of us would work to let the rafts down one at a time. We made twenty-five miles that way, and then spent four days examining the river below us. It was impassable. It was then necessary for us to cross the river, and we were two days doing that. We had first to fell a tree 44in. in diameter out into the current. With ropes we let one raft out into the center of the stream. Then we paid out the line and let the raft swing against the other bank. We unloaded everything and cut the raft loose to see where it would go. It was whirled swiftly down stream 200yds. and swung into a clump of rocks. That was the last we saw of it.

"The trip that far had been attended by innumerable risks. All of us had many narrow escapes from drowning. Once when we ran on the rocks Colgate's end of the raft was submerged and he fell into the water. Himmelwright happened to be standing close enough to save his life. I was nearly drowned another time, and I guess nearly all of us owe more to good luck than anyone will know of. We started out on foot, after crossing the river, marching slowly in the hope that Colgate would keep up. We were then down to 40lbs. of flour, 4lbs. of bacon, 5lbs. of beans—a mere handful—and a little coffee. The whole question was talked over seriously.

We saw that to stand still meant sure death, while it was doubtful if we could be saved by going ahead. We finally decided to keep on, and determined that whoever fell behind must bear his own misfortune. All that was explained to Colgate early one morning. He seemed to have only a general idea of what was going on. Once he said to me, 'Well Carlin, I guess I'll be the first one to fall.' All of us were in a deplorable fix. We divided our provisions, discarded all our blankets and arms except a dozen rounds of ammunition each and two guns. Colgate could scarcely walk. Then we made the start. He soon fell behind and that was the last we saw of him. Two and a half miles further on we camped. We waited the next day until 10 o'clock, thinking it barely possible that the old man might come in, but he never overtook us. He died that night, I am sure. In fact he was dying when we left him and he couldn't possibly have put in another night. He was demented and in a stupor, and seemed hardly to realize what was going on when we left him. He weighed fully 200lbs. and we were so weak that it was out of the question to carry him.

"We traveled on that way, still suffering, slipping down at every step almost, three days and a half before we reached the cañon. Vertical walls of rock from 200 to 1,000ft. high, towered above us. I shall never forget the scene. The Clearwater River rushed into the cañon with a tremendous roar, and those great walls seemed almost to meet at the top. They cast a deep shadow on the stream, and the liquid took colors that a Tavernier could not produce. The worst part of our journey was before us. The cañon was eight miles long, and it is impossible to travel down it along the river bank on either side. We made the best of our way up and down the ridges, hanging on to clefts and protuberances on the face of the steep sidehills. In one place we were forced to go back from the river three miles to get around a little cliff that jutted out over the stream. Another day we tried to go to the top of the range and walk along the mountain tops. But the sides of the hill were lined with moose brush weighted down with snow. When you stepped on it your feet were taken out from under you, and the brush, relieved of its weight of snow tripped you, as it flew back again. The snow was slippery and we soon found that method of traveling harder than any other. We were three days and a half doing that eight miles of cañon. One day we only advanced a mile and a half.

"We did not wait when we struck the mouth of the cañon. The walking was bad enough then, but it was an improvement on what we had endured. Our provisions gave out and we stumbled along the best we could, eating berries whenever we could find them. The hills were lower and the country more open, but there was no sign of game. It rained pitchforks all one night, and the next day it was cold enough to chill us to the bone. Later we happened across some pheasants and shot three of them. Three dogs followed us all through our journey. When we shot a pheasant in the more open country all three dogs were on it in an instant. One got the breast, another the head, and the third was pulling on the legs. We had to fight hard to save part of the bird from the clutches of the starving animals.

"Three more days of that kind of progress, in which we gained perhaps two miles a day, and then we met the rescue party in charge of Lieut. Elliott. It was the dogs who gave the first sign of its propinquity. Himmelwright and I were half a mile behind eating hawberries.

The dogs were in advance of our main party, when one of Lieut. Elliott's dogs saw them and barked. Spencer was in the lead, with Pierce close behind him. Spencer heard the strange barking and climbed a high rock, from which he caught sight of Rory Burke, a rancher from Smith Creek, who had been employed by Elliott to help navigate the boat. Soon afterward we met a soldier, and I recognized him as an old chum of mine, Sergeant Guy Norton. We soon joined Lieut. Elliott and his men, and I found him the kindest hearted man I had ever met. He was just in time, for we were almost starved and very weak."

From this point the return of the rescued and rescuers to civilization was accomplished without an accident. Lieut. Elliott and his command had a desperate time fighting their way through the snow until they found the hunters. When he heard about the plight of Colgate, he determined to send the hunters back and keep on in search of the cook. The members of the Carlin party explained that it would be an impossibility to find him. They talked over the situation for hours with the Lieutenant, and their weak condition and the difficulties which they described persuaded him to give up the idea of further search.

Mr. Carlin sends us the following note:  
*Editor Forest and Stream:*

I wish to state that the newspaper reports to the effect that Martin Spencer, our guide, was responsible for our being caught in the snow in the Bitter Root Mountains are entirely incorrect. Not a shadow of blame rests with Mr. Spencer, and all through our trip he proved himself a man in every sense of the word. WM. E. CARLIN.

## CHICAGO AND THE WEST.

[From our Staff Correspondent.]

## A Bad Prospect.

THE weather continues severe all through this section of the country, with alternate thawing and freezing, and a gradual increase in snowfall. It seems doubtful if the few birds left over from last season will have a fighting chance for their lives unless the elements take early a kinder disposition. Should this winter be as hard on quail as last, the stock will be sadly cut down all over what is naturally a great quail country, namely, northern Illinois, Indiana and Ohio, with a large portion of Iowa.

## Would the Shooters Join?

Chicago is full of unemployed men, many of whom would have starved to death had it not been for the organized efforts of the citizens and the city to take care of its honest poor. To be out of work, to be able and willing to work, and yet to be unable to find work to do—there can be no situation in life as terrible as this, and no problem in society so hard of solution. For the thousands of the poor fellows so situated there can be but one feeling, that of the sincerest sympathy. Thousands of such men crowd the corridors of the City Hall every night, and pack like sheep into any vacant building where the authorities will allow them to spend the night undisturbed. In the daytime these men get what they can to eat, many of them depending altogether on the places where food is dispensed free. The relief association of the city constantly solicits donations of food for use in these open kitchens for the destitute, and many thousands of loaves of bread and tons of food of all sorts are given weekly to this purpose by those more able or more fortunate in life.

One of the city papers the other day called upon the merchants of South Water street (the great produce and game market) to contribute supplies to this charity. The gravity of the situation is such that all the papers and all the people here talk of nothing so much as of this question of how to feed starving and half desperate men who throng the city this winter to so extraordinary and alarming extent. Food, of almost any sort, is the great need, the quality being not so much the question as the quantity. As most of the food of the city comes in through South Water street, the papers call on the South Water street merchants to supply food. They are no more able to do than any one else of equal income. And yet there seems to be a little suggestion in this call on South Water street, which I offer with much diffidence but with equal sincerity.

There is no sort of game in the country so abundant and so cheap in the market as the cottontail rabbit. Often they go begging at five cents apiece, the market being loaded down with them. Five cents is a small sum, but if one had a family and did not have five cents left with which to feed them, the food possibilities of five cents would look large. For the man so situated even a cottontail rabbit would have a value, for it would mean a meal. These men of whom I am speaking are hungry, so that food of any wholesome sort seems a blessing to them.

Now, I am not posing as a solver of economic problems and I fear ridicule for the idea I propose. Yet every one can best work along the line of activity in which he is engaged and all one can do is to do his best. The premises are that any wholesome food which can be laid down for nothing at the door of the Chicago relief association in carload loads is worth the having; that thousands of big-hearted men read FOREST AND STREAM, and that these thousands of men could kill and ship, perhaps prepaid, thousands of the cottontail rabbits which in many parts of the country swarm in such numbers that sportsmen do not shoot them. For instance, in lower Indiana, say about Bicknell, of which point I have spoken before, a party of half a dozen guns could load a wagon with rabbits in a day's shoot almost certainly. This would be a wagon load of wholesome food. The game supply of the country would not be injured, neither could the game be put to better purpose than to give it to the poor who can not afford to shoot and who are anchored by their poverty in the mid-channel of adversity.

I do not say to the shooters of the country, Go out and kill this game and ship it to Chicago, nor do I advise a shot being fired to that purpose. But I do say that should the relief association of Chicago express itself as desirous of having this sort of food sent them, then I know these FOREST AND STREAM men so well that I am satisfied that they would send in to this city tons of this wholesome food and be glad to do it. The shipments could be made nominally to some well known sportsmen, say to Carter H. Harrison, Jr., editor of the Chicago Times, he not to

be troubled by it, but to act simply as nominal consignee for the association. This idea at first may seem whimsical, but study the streets of Chicago these cold days and it will not seem so whimsical, but may appear to have foundation. For the man who will not work when he can, contempt and starvation; but for the man who wants to work and cannot, all the sympathy and all the help in the world. None will help more willingly than sportsmen, for none are kinder-hearted. Sporting papers do not deal with flour and beef, but can only give as they possess. The mission of the sporting papers is not to kill off game in quantities, but to protect it. Yet I submit that the sporting papers possess here some game which they can spare, and that while the readers of these sporting papers retain strength and skill and leisure enough to kill a few rabbits each this winter, the game which they kill does not belong to them, if the poor of Chicago want and ask for it.

It would be a pleasure to hear from the relief association, and also from the sportsmen of the country on this point, and as this is written on the first thought and submitted with deference, please let us have only charitable comment. The magnitude of the existing necessity for food cannot be exaggerated. There are over 100,000 men in Chicago who are going hungry every day. It is our duty as men to turn aside from mere pleasure long enough to do some of the thinking about these men.

## The Ke-sk-ee F-h St-y.

There still lives a gentleman who seems to have a notion that the Kekoskee fish story is a fiction. This is Mr. Horace Wilson, of Columbus, O., who says he is "an old man in the seventies now, and has to hunt by proxy," but is still able to fish, read FOREST AND STREAM, and believe the believable fish stories. He incloses a weird story about a man who killed an Indian, an elk, a grizzly bear, a mountain lion and a rattlesnake all at one shot, and suggests that that is a pretty stiff story itself. Mr. Wilson really mustn't believe everything he sees in the papers, except what he sees in FOREST AND STREAM. That is always so. Meantime let us hope that the writer of his kindly letter will hunt and fish and read a great many years yet.

## Rejected the Governor.

It is stated currently that at their private business meeting this week the members of Swan Lake Shooting Club of this city declined to admit into membership in the club Governor John P. Altgeld of Illinois, the high-handed beliefs and practices of the latter in game law matters disqualifying him from association with sportsmen.

## Dame Bang Dead.

A letter from the friend with whom I lately shot in Indiana tells me that Dame Bang is dead, the property of Mr. Peabody, of Cincinnati, O., died last week at Bicknell, Ind., of what appeared to be rabies. The information came through Mr. John Barker, who could give few particulars. The owner of Dame Bang was disappointed that the judge could find no place for her, and now death makes the final disappointment. At the time when Mr. LaRue, Mr. Organ and myself shot over Dame Bang she was as perfect a shooting dog as one ever saw. Then came her weak run at the U. S. Trials, possibly due to the disease that later resulted fatally, and now at last, and all too soon, Dame Bang has gone to join Molly O'Brien, Roll Organ's favorite, late deceased.

## Good Deer Trip.

Mr. Roth, with the John Wilkinson Co. of this city, had a successful trip after deer with a number of friends this fall. They hunted on the Flambeau, and had nine deer hung up at one time.

## Fashions in Guns.

Friends in the gun trade tell me there is a tendency this fall toward the light half pistol-grip or the straight-hand stock of older times. The inquiry probably can be traced to the elaborate gun exhibits at the World's Fair, which showed such forms in light and graceful guns. The pistol or half pistol has its good features, but probably for a while we will have a run to the English fashion of straight-hands. American shooters also shoot straight-stocked guns every year. This is much of a matter of habit, as if one shoots a gun with small drop he must form the habit of bending his neck and getting close down on his stock. If he shoots with a high head, he must have high barrels, and that is all there is to the question. The English habit is to drop the head. I confess I cannot see much to the modern notion that you want a gun straighter than you can sight, that is, one in which the barrels slant up full view in front of you when you throw up the gun. Yet a gun can be so built that it will "carry high" at 40yds, and still allow direct alignment by the rib, so that you can still see your bird and have a per cent. of allowance furnished you by the gun maker for the rise of the bird and the drop of the shot. But if we should admit even so much as that, there would still be fashions in gun stocks as much as fashions in hats. Just now the fashion for high and narrow bids fair to boom, with a smattering of Monte Carlo cutaway and an occasional humpbacked "rational stock," the latter a much better thing than it looks. Chan, Powers, of Decatur, Ill., shoots a "rational stock." The shooters and the makers will continue to keep each other guessing, we may depend. E. HOUGH.

909 SECURITY BUILDING, Chicago.

## Winter and the Game in Michigan.

CENTRAL LAKE, Mich., Dec. 12.—Our lake froze over on the 2d inst. The winter has set in with unusual severity; that is, the snow is deeper than for some years, being nearly 2ft. in the woods. The temperature, however, has not, I think, been as low as zero, which is more than can be said of Central Illinois. We had last week a thaw, with rain, and when it froze the snow was left in a very solid condition, which I think unfavorable to the game. We have, however, no quail here, and the other creatures may manage to worry through the winter, especially as the sentiment against deer killing out of season is becoming yearly more patent as a factor in the preservation of these animals. KELFIE.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## More About the .22cal.

## Editor Forest and Stream:

Here we have four articles in your issue of Nov. 25, in which one man, a "gunsmith," as much as acknowledges that he knows practically nothing regarding the .22, where the other three adherents to the little cartridge are very enthusiastic and support my statements regarding the .22's work.

In reply to Mr. Fellows I may say that the air is not "thin" here, but I have put a .22 short through that thickness of pine at 200yds., and can do it at any time for all the money he can raise in his county. The yards are also three feet here. And again, he must be "loco" when he says a prairie dog cannot be seen at 303yds. This dog I shot in South Dakota, and any one who has been in that country can post him on the purity of the air there. He may be the champion of his county and hold the medal for it, but that don't go to show that the .22 short can't be champion also and get the medal—not a Kekoskee medal like Mr. Hough's. I am coming East next fall on a visit, and I intend to drop in on him and take that hat and his \$10. I will not take any advantage, but will give him \$5 every time I miss if he gives me \$5 every time I hit that hat at 303yds. I will also give him a chance to put up from \$50 to \$500 that I can put eight shots out of ten in an 8in. bullseye at 303yds. with my .22 short, off-hand.

Again he says the .22 long rifle is the proper thing over 100yds. I still hold that the .22 short is good up to 325yds., and to kill at that distance. Please note where "Autokee" shot a .22 through both sides of his barn, boards being 1in. in thickness, at 330yds.; does that look as if the .22 long were the only one to use over 100yds.? Again, look at the statement of "Telilla," how about the .22 short there?

Mr. L. D. Von Iffland says he killed an osprey at 120yds. and a friend of his who stood 200yds. further distinctly heard the little ball singing past and going at a lively rate. He also states that he has shot a .22 short through 4in. of pine, also that he made some very creditable shots with a .22 long at 600 and 700yds.

I think if we lovers of the little .22 keep on we will convince in time the doubters as regards the .22 cartridge. I have used the .22 short of different makes, but find the .22 U. M. C. gives the best results. I am eagerly waiting for Mr. Von Iffland's report regarding his tests with felt.

Where is "Tode" that we hear nothing from him and his .22?

In Iowa not long since a man was cleaning a .22 short Colts repeater which was accidentally discharged, the ball going completely through his body and out through the side of the house. I can cite numerous incidents that have come under my notice where the .22 short has done equally as good work as the larger calibers.

DIAMOND WALT.

EXETER, Neb., Dec. 5.

## An "Arabian Spike Buck."

HERE is a curious account of a deer that was shot lately in the Upper Peninsula woods. I would like the readers of FOREST AND STREAM to know about it, that some of them, perhaps, may elucidate the puzzle, if puzzle it is. The clipping is from the Sault Ste. Marie (Mich.) News, and was written by the editor, Chas. S. Osborn, an enthusiastic hunter and cracking good newspaper man, who knows as much about the fauna of the North Woods as any man living. This is what he says:

"Thos. Graham, postmaster, storekeeper and expert hunter at Rosedale, killed an 'Arabian' spike buck near his home and the skin, head and legs are at Taxidermist Lines, to be mounted life size. The deer is a freak and difficult, if not impossible, to classify. It is the size of an average three-year old buck and has the mysterious 'spike' or two straight horns like the antelope, which give to the hunter or naturalist no idea of the age of the animal. The eyes were pink, like those of an albino, and the upper jaw is decidedly prognathic, while the lower jaw is equally prominently opisthognathus. The back is almost solidly a brownish gray, the sides are pure white and the legs are spotted reddish and white. It does not answer the description of the dama or fallow deer, which is smaller, and its spots are regular; neither is it like the spotted deer, or axis, of East India. In fact nothing like it has been seen by local hunters, except one killed near Naubinway a year ago by James Walker. The freak is even more unusual and prettier than the albino or pure white deer, several of which have been killed in northern Michigan and Wisconsin."

W. H. J.

## Birds in Connecticut.

MERIDEN, Conn., Dec. 4.—I read with much pleasure of the plan of importing foreign game for the Maine woods as set forth in your issue of Dec. 16, and let us hope it will be taken up in the States as well. Near my home in Connecticut, a few miles below Willimantic, the Liberty Game Club have been importing English pheasants, which seem to be doing well. They also have the California plumed quail, and I think that if we could get started a few more clubs like the Liberty Club we might in a few years have good shooting in Connecticut. I am sorry to say there are many who call themselves sportsmen around these parts who will oppose a game club and say that all they want is to shut out the majority of the hunters, but they themselves will go out, and if they find a flock of quail will follow it up until not one is left, and then wonder why there is not quail in the same spot next year.

I think that we need more game wardens to look after game interests in winter time. Only one flock of quail has been started in this section this year, so far as I can learn, and all that were left at last report were four birds. Let every true sportsman persuade some farmer friend of his to sow a patch of oats next spring to leave for the quail in the fall, and I believe he will feel better for it. A couple of dollars is a good persuader among farmers.

JIMSEY.

## A Connecticut Swan.

REUBEN HILL killed a handsome swan below Saybrook, Conn., recently. This is the first bird of this species that has been shot in this vicinity for over fifty years. Capt. O. N. Brooks, the famous taxidermist, has mounted the swan.—*Providence Journal*.

## Bears in the Catskills.

HUNTER, N. Y., Dec. 10.—Game has been somewhat scarce during this last fall and winter, although some fairly good bags of partridges have been made. Woodcock shooting was quite below the average. But bears! A perfect bear hunter's paradise! Never before in the history of the "oldest inhabitant" have so many bears been shot in this section, as during the past few days. It is nothing at all uncommon for hunters to strike the trail of from one to four bears in a bunch. Only two days ago two hunters succeeded in driving into a den and dispatching near the opening a fine fellow. One of them suggested the propriety of examining "that hole" before leaving it. Crawling cautiously in, he was almost rattled to see six balls of fire gleaming at him. A rapid fusillade, and the hunters returned to town with four splendid fellows—three yearlings and one old one. The supervisor of Hunter told me had this day issued five certificates for bounties on presentation of the skulls, as required by law. A conservative estimate places the number killed within a radius of 10 miles at 25 to 30 in two weeks. The enormous amount of "shack," beechnuts, etc., in the mountains makes them exceedingly fat. J. K.

## Do Long Close Seasons Increase Game?

EASTON, Md., Dec. 14.—*Editor Forest and Stream:* There is a subject that will be taken up at our meeting next week that we would much like to be enlightened upon, and upon which there is a difference of opinion among the sportsmen of this section. In view of the scarcity of partridges (quail) in all this section, owing to the severity of the past winter, we are considering whether it would be best to prevent shooting altogether for say two years, or to shorten the open season to say twenty or thirty days. The advocates of the short open season claim (and I am disposed to agree with from an experience of a good many years) that if birds are not shot at all they grow very tame and become an easy prey for their enemies, and that if the coveys are left entirely undisturbed they do not break up readily and pair off in the spring. I know that in several estates here where shooting has not been allowed birds do not increase, and where some shooting has been done birds seem to keep up breeding and are more numerous. Cannot we get the opinion of some of our large family of sportsmen through our family paper?

SINKBOAT.

## Central New York.

ITHACA, N. Y.—Reports from almost every town in Tompkins county indicate that the ruffed grouse supply is larger than for several years past. The game supply houses of Ithaca are abundantly supplied with the birds, and sportsmen unite in saying that good grouse shooting may be obtained in most any part of the county.

The rabbit crop is big, but almost every third man you meet afield carries a ferret concealed about his person, so that it is perfectly reasonable to infer that an enormous inroad on the supply will be made.

Duck shooting on the Ithaca marsh has not been up to the average, I am told. A good many birds have been in the neighborhood, but they have invariably flown high when making their morning and evening flights. While a large number of birds have been shot by the several score and forty odd duck shooters of the town, the bags have been light compared to those of last year.

The water in the lakes and streams hereabouts is almost unprecedentedly low, and sportsmen entertain fear for the safety of trout and other fish spawn should winter set in without a good fall of rain.

M. C. H.

## A Word About "Von W."

COLT'S NECK, N. J.—*Editor Forest and Stream:* I was glad to become acquainted, as one might say, with "Von W." through the columns of your paper last week. I think his article on "Forests and Streams" was one of the best that has been written on the subject, and greatly enjoyed reading it, as it hits the nail exactly on the head. Have also enjoyed reading other articles published in your paper and contributed by him, one of which was a short poem entitled "A Midsummer Paean," published some three years since. It was one of the grandest that I have ever had the pleasure of reading, and I have preserved it among my literary treasures.

A. L. L.

FRED SAUTER, the taxidermist, 3 North William street, New York, has been very busy executing orders for mounting large game, heads, etc., shot by his friends in the Eastern and Western States. It is very interesting to visit his establishment and see specimens from sportsmen to be prepared as trophies. Mr. Sauter has on hand a large collection of choice game heads, rugs, mats, etc., suitable for Christmas presents.—*Adv.*

## Where Montgomery Fell.

QUEBEC, Dec. 2.—*Editor Forest and Stream:* Many of your readers in the United States have doubtless visited our ancient city in summer while en route to the many rivers and lakes of this district, but a very small percentage of these sportsmen have seen Quebec in its winter garb. An opportunity to do this is in prospect as related in that admirable and interesting letter of J. U. Gregory, Esq., in your issue of Nov. 25, inviting brother sportsmen to come to Quebec's carnival this winter. The white mantle of the Côte de Beaupré, with the dark background of the Laurentide Hills and the blue foreground of the mighty St. Lawrence, its surface sometimes clear but oftener dotted with flocks of ice, mark the contrasts of our winter landscape as seen from the windows of Chateau Frontenac. The climate is variable, but the clear, cold, bracing air is nothing any one need be afraid of. Peradventure a snowstorm may rage, and then the cosy rooms of the chateau will be comfortable refuges till the blizzard has passed, but these very things make the visit more interesting. The river is crossed half-hourly by the winter steam ferry, but if so inclined our visitors may try the *ancien mode* in large strong canoes navigated by experienced men. This trip is varied by paddling through the clear water and being dragged in the canoe over the ice floes, making the voyage a novel and exciting experience.

As friend Gregory has dipped somewhat into the history of Quebec, I would correct a grave error in both he and some others, notably City Engineer Baillargé have fallen into relating to that memorable night of Dec. 31, 1775. The latter gentleman, who certainly should be better informed, has published an egregious blunder on a placard which he placed on the walls of his residence in St. Louis street, built on the site of the old house in which the body of General Montgomery was laid after the battle. This placard states:

"The body of General Montgomery of the United States Army, mortally wounded while scaling Cape Diamond, endeavoring to plant the American flag on the heights of the plains of Abraham, was laid out here the 31st of December, 1775. In an old house dating 1669, demolished and rebuilt in 1890."

There is a sign board placed at a certain height on the rocks over Champlain street, so as to be visible from the river, whereon is inscribed: "Here Montgomery fell 31st December, 1775," and underneath a hand pointing downward. The action of this inscription is certainly misleading, as the sequel will show, but not such a barefaced untruth as the Baillargé placard. This old sign still remains, seeing its renovation is nobody's business in particular.

In 1775 Champlain street was only a narrow beach road, and at this particular spot, under Cape Diamond, was a barricade and guard-

house, defended by one cannon and a detachment of Canadian militia and British sailors. Gen. Montgomery being all the time in the possession of the plains of Abraham, crossed them with his command and descended the cliff, doubtless near where Wolfe ascended sixteen years before, and advanced toward the city by this narrow beach road, during a howling snowstorm on the night of Dec. 3.

The barricade and guardhouse were in darkness, seemingly unoccupied, giving no sign, and whatever the officer who went to reconnoitre it reported to his chief is not recorded, but Montgomery at once advanced at the head of his column.

The liveliness of the post was then announced by a terrific discharge of grape and musketry, instantly killing him, two officers, McPherson and Cheeseman, a sergeant and nine men. The balance of the command fled, and next morning thirteen bodies were found buried in the snow. Montgomery's sword was taken by a drummer boy, and purchased on the spot by James Thompson, Royal engineer and overseer of works, whose grandson placed it for safe keeping in the Museum of the Literary and Historical Society of Quebec, where it remained for many years, until he disposed of it to the Marquis of Lorne, who presented it to the Montgomery family, residing, I think, in New York.

From this misleading sign and placard, all strangers visiting Quebec are led to believe that Montgomery fell in attempting to climb the cliff, which is totally incorrect. One visitor is said to have remarked that if Montgomery fell down that cliff it is no wonder he was killed. Hoping that many of your readers will visit Quebec, this writer remains, etc.

F. C. WURTELE.

## Sea and River Fishing.

## FISHING ON SUNDAY.

Full Text of the Opinion of the Court of Appeals.

THE PEOPLE OF THE STATE OF NEW YORK, Respondent,  
v. ROBERT H. MOSES, Appellant.

(Decided November 28, 1893.)

Matthew Daly for appellant.

M. H. Hirschberg for respondent.

EARL, J. The defendant was convicted in a court held by a justice of the peace in the county of Orange, of the crime of Sabbath breaking. The conviction was affirmed upon appeal to the Court of Sessions of that county, and upon appeal to the General Term of the Supreme Court. He has now appealed to this court, claiming upon the undisputed facts that he was not guilty of the crime charged.

The act claimed to be a violation of the Sunday laws was fishing from a boat upon Clark's pond, in the county of Orange on Sunday. The pond is a body of water about a mile in length, and over half a mile wide. It does not distinctly appear in the evidence whether the pond is public or private property, but it may be assumed here, as it was in the court below, that it belonged to a club of which the defendant was a member. The pond is not a secluded body of water as there are public highways and occupied residences in its vicinity, and the act of the defendant was committed within the observation of a number of people. He claims that he was not guilty of the offense charged because the pond was private property, and his acts were not, therefore, public, and did not constitute "serious interruption of the repose and religious liberty of the community."

The Christian Sabbath is one of the civil institutions of the State, and that the Legislature for the purpose of promoting the moral and physical well-being of the people, and the peace, quiet and good order of society, has authority to regulate its observance, and prevent its desecration by any appropriate legislation is unquestioned. (*Lindenmuller v. People*, 33 Barb. 548; *Neundorff v. Duryea*, 69 N. Y. 557.)

We have, therefore, only to construe the statutes and ascertain whether they prohibit the act complained of. Section 259 of the Penal Code provides that "the first day of the week, being by general consent set apart for rest and religious uses, the law prohibits the doing on that day of certain acts hereinafter specified, which are serious interruptions of the repose and religious liberty of the community." It is not the meaning of this section that every act which is claimed to be a violation thereof must, in fact, be a serious interruption of the repose and religious liberty of the community; but the Legislature in subsequent sections specified certain acts which are declared to be serious interruptions of the repose and religious liberty of the community—acts, necessarily described in general and comprehensive terms, which the law-makers believed had a general tendency to interfere with Sunday as a day of rest and religious worship. Section 263 prohibits all labor on Sunday, excepting works of necessity or charity, and it matters not whether the prohibited labor be public or private, wherever it is performed it is prohibited. In Section 265 particular acts are specified which are prohibited, as follows: "All shooting, hunting, fishing, playing, horse racing, gaming or other public sport, exercises or shows upon the first day of the week, and all noise disturbing the peace of the day, are prohibited." In Sections 266, 267 and 268 other acts are specially prohibited. It is thus seen that among the acts specially prohibited on Sunday is fishing. That is absolutely prohibited on Sunday everywhere and under all circumstances. It may be done in a community where it does not offend the sensibilities of any one; it may be done in such a manner as not to disturb the peace or interrupt the repose or religious liberty of the community, and yet the law is violated. It is quite unreasonable to suppose that the Legislature meant that whenever any of these acts are charged as a violation of the law an issue can be framed and tried as to their public, offensive or disturbing character. The Legislature has settled that matter by prohibiting them absolutely.

In reaching this conclusion we are not embarrassed by the decision in the case of *People v. Demin* (35 Hun, 397), because we do not think that case was correctly decided. There the defendant and two other persons, played ball on Sunday, in private grounds, with the consent of the owner thereof, creating no disturbance and making no noise, and it was there held that to constitute a violation of Section 265 of the Penal Code the playing prohibited must seriously interrupt the repose of the community on Sunday. That playing ball by several persons in a place open to the view of the people who may be in the vicinity, or who may pass by, is condemned by the principles which lie at the bottom of the Sunday laws, and is an act of playing within the meaning of the statute cannot be doubted.

We think the judgment should be affirmed.

All concur, except FINCH, PECKHAM and GRAY, JJ., dissenting.

Judgment affirmed.

A copy.

H. E. SICKELS, Reporter, C.

## ANGLING NOTES.

## Fishing Conditions and Prospects.

DURING the autumn I received a number of letters from anglers in Great Britain in regard to the fishing of the past season, and all agreed that it had been bad; very bad. The following extract from a letter written by an English clergyman, known to anglers by his pen name of "Cotswold Isys, M. A.," will serve as a sample: "I have been away up in the North, fishing; but a lamentable experience my friend and myself had there, the rivers being dead low from the long drought we had had in England, and the fish absolutely refusing to rise or come out of the lakes in which they were trying to find a little water. Well, it was no use fishing under those untoward circumstances. I hope you have had a more enjoyable time and that you had good sport."

"I presume you will have heard what a terribly disappointing time our anglers have had in England, and Scotland too. We never remember anything like it. I never do. I do not remember ever looking forward to my fishing holiday in the more hope or desire. Yet I never had such a trying and disappointing one. I fished on the Yorkshire Eden, on the Yore and on the Derbyshire Wye, but all were low and wrong, and it was little more than vexation of spirit. It was enough to make one smash all one's rods and give up angling altogether. But what could we do without hope? So I did not smash mine, but said, 'It is a long lane that has no turning,' and who can tell but what, if spared to see it, 1894 may improve upon its eight predecessors?"

When I read of the conditions existing over the sea that fishermen had to contend with, I thought how much more fortunate we, in this big country, are in that respect. The fishing may be off in one section because of drought or flood, but generally there is fishing to be found in some other section, and as for a whole season of drought, throughout the country to ruin all the fishing, we know nothing about it. To be sure the conditions obtaining in the two countries are altogether different, and I need not go into that, but lately a thought has come into my mind that possibly we are not so highly favored of the gods as I had supposed, and perhaps we have reason for some slight alarm about our future fishing prospects in some parts of this country.

## What will the Harvest Be.

"Cotswold Isys" means by fishing, fly-fishing, and this in turn means, as a rule, stream fishing. Let us look at our own streams in northern New York. A year ago the streams were extremely low, when winter came with frost and ice and her white fall, and later she made a record for herself for severe and long continued cold that stumped the oldest inhabitant and laid him out stiff and stark when he tried to recall a similar winter. Mountain brooks, feeders of large trout streams, and the nurseries for young trout, were frozen solid to their beds, and I know of trout of spawning size being caught in pools and frozen into the ice. This must have destroyed a number of fingerling trout and the eggs in many spawning beds, but its effect on the fishing will not become apparent for a year or two or more yet.

Now winter is on us again. After an autumn to be long remembered—an autumn without rains, the frost and the ice have "shut pan" and the snow has covered the earth, and it looks as though it had come to stay. Again the streams are low and constantly running lower, so that a water famine is threatened in some northern towns. Many trout spawned two months ago, and it is not unlikely that some of the spawning beds have become easy prey to frost and ice. There is no prospect at this writing that we will have more rain at present, and more spawning beds may become exposed to destruction. It is true that all trout do not spawn in the small mountain streams, but they are the feeders of other waters and the havens of safety for the newly-born fry that find an enemy in their own kin of larger growth. Many trout spawn in ponds and lakes where springs bubble from the bottom, and others spawn in streams where even extreme cold cannot reach their beds, therefore, the prospect is not all dark, but injury to the spawning beds in the small brooks must, it would seem, have its effect on the fishing of the future.

## The Remedy.

There is a remedy for this state of affairs which can be applied to a certain extent, and that is the planting of artificially-reared trout, trout fry or older fish to fill the void that nature has made or may make, and under these circumstances we more fully understand and appreciate the value of artificial fish propagation. As it is many of the State waters owe their present supply of trout largely to plantings made by the State, and the stock is kept up in part, at least, by annual contributions from the same source. With this work of restocking trout waters there have been, in the past, some experiments looking to the making of new trout waters, or converting waters filled with predacious fish into trout ponds. Next spring will not be a good time for experiments of this kind. The Fish Commissioners will not permit it if they know it, but they cannot watch every plant. Only waters that now contain trout should be planted with trout, leaving all other waters until another time to be experimented upon.

The State is supposed to furnish fish only for public waters, open to fishing by the public. In years past many State fish have been planted by authority of the Fish Commission in private waters, owned by clubs, from which the general public had been excluded, but this custom I believe is no longer practiced by the State. Private fishing clubs, and those who lease waters for private fishing, and do not hatch fish to keep up the stock, can buy trout fry very cheaply; one trout breeder having written me within a few days that he should furnish strong, healthy trout fry in lots of 10,000 and upward at \$3.50 per thousand, and he adds that he always turns out large fry. Any falling off in the natural increase of trout owing to destruction of fry and eggs caused by low water and the severity of the cold last winter, or any falling off that may be caused by similar conditions this winter, will not be felt for from two to four years hence, but those who wish to exercise good judgment will make every effort to obtain a supply of artificially reared trout for planting in the streams in the region where the drought and cold have combined to do injury, and thus discount any possible scarcity of trout in the future.

## "Tilts or Set Lines."

A correspondent in West Gardner, Mass., writes that he desires to come to New York State this winter "for a few days fishing for pike and pickerel, if I have the right to use tilts or set lines. I shall attend them myself and I shall go merely for the pleasure I derive from fishing; but I do not wish to violate the law and so ask about it before I start."

The correspondent will find in *Game Laws in Brief*, to be obtained at the office of FOREST AND STREAM, that in New York angling only is permitted, and that angling is defined to mean taking fish with hook and line, and by rod held in hand, and does not include set lines. The lake he inquires about is mentioned specifically in *Game Laws in Brief*, and I would prefer that he should read the law for himself, as there is a difference of opinion about what it really does mean in regard to taking fish through the ice, but the set line clause is clear enough. There is one point that I wish to make. The correspondent mentions "tilts or set lines" as if they were different names for the same device, and I contend that they are not. The lines used in pike or pickerel fishing through the ice with the "tilt," "tip-up" or "bush" accompaniment are not set lines any more than a rod with line attached that one rests on the side of the boat while he eats his lunch is a set line. A set line is an entirely different device distinct and separate from the lines attached to tilts or tip-ups. I have referred to this on a previous occasion in these columns and then said that the Supreme Court of New Hampshire had decided that fishing for pickerel through the ice with tilts was fair angling and consequently the lines used in such fishing were not set lines.

A. N. CHENEY.

## Buzzards Bay Fisheries.

IN its report for the year the executive committee of the Southern Massachusetts Fish and Game League says: "The great object for which this and kindred organizations were formed was last winter accomplished, and an act of the Legislature was passed prohibiting the setting of stationary apparatus for catching fish in the waters of Buzzards Bay, and so long as the law stands unrepealed no licenses can be granted to set weirs, pounds or traps in the waters of the bay."

"The question now is whether it is worth while to attempt to keep what we have worked so hard to secure, for there can hardly be a doubt but that those who oppose restrictive legislation for the protection of the fisheries will spare no effort or expense to have the statute repealed, and leave us just where we were before—at the mercy of the selectmen of towns."

"It is unfortunate that the law as it stood gave the selectmen of towns the right to grant licenses to set pounds and weirs for a term of five years, so that the value of the legislation of last winter cannot be fully realized until the longest term license shall have expired. It is understood that while the bill of last year was under consideration and appearances began to show that it would become a law, the selectmen of Dartmouth, and perhaps some other towns, granted licenses to several persons for the full term of five years, which licenses have now four years to run."

"The bay is now protected against the use of all seines, net weirs or pounds, except where there are unexpired licenses. And we trust their use will never again be permitted, for we are more than ever convinced that they are destructive of the fisheries and productive of evil, and that continually. It is a monopoly and a benefit to nobody except to those who own them or are engaged in a business dependent more or less upon them."

Unless these associations are kept up by those who are most interested in the preservation of the fisheries, and best able to bear the expense, it will be useless to hope that the protection now given to us by law will be continued. It is idle to suppose that the menhaden fishermen and the trap and pound men will give up a battle upon which their business depends, and which they are so abundantly able annually to renew. If it is worth while to gain the victory it would be the height of folly to abandon the field we have so hardily won."

GEORGE H. PALMER, Sec'y.  
ARTHUR RICKETSON, Pres.

NEW BEDFORD, MASS.

## The Pennsylvania Association.

ROOMS, 1020 Arch street.—There was a large attendance at the meeting of the Pennsylvania Fish Protective Association on Dec. 9 at the rooms, No. 1020 Arch street, Philadelphia. The conference to be held in New York on Dec. 13 to discuss the subject of the exhaustion of food fishes along the Atlantic coast was considered and consumed nearly the entire evening. The following delegates were appointed to represent the association: Mr. A. M. Spangler, Henry C. Ford, Cyrus S. Detre, Charles B. Reynolds, James H. Miller, Bernard L. Dorendore, Harry W. Quick, Alfred A. Hand, H. O. Wilbur, H. A. Chase, Dr. Bushrod W. James and William F. Thompson. Mr. Cyrus S. Detre favored the meeting with an able and interesting address upon the destruction of food fish by pound nets along the coast.

Nominations as follows: President, A. M. Spangler, H. O. Wilbur; Vice-Presidents, Edwin Hagert, William H. Burkhardt and Dr. B. W. James; Corresponding Secretary, J. Penrose Collins; Secretary, M. G. Sellers; Treasurer, Wm. S. Hergesheimer. Executive Committee—Henry C. Ford, H. A. Chase, Collins W. Walton, R. M. Hartley, C. H. Fitzgerald, J. A. Sypher, George T. Stokes, H. A. Ingram, Col. John Gay, Robert Coleman, Jr., Wm. P. Thompson, H. O. Wilbur, Cyrus S. Detre.

M. G. SELLERS, Sec'y.

## Souvenir Spoons.

WE have left a very few solid silver FOREST AND STREAM souvenir spoons made expressly for the World's Fair at Chicago, which we wish to close out. These we will send to the first applicants by registered mail on receipt of price, \$2 each. Forest and Stream Pub. Co.—Adv.

## A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## Fishculture.

## Iowa Fish Commissioner.

JOHN G. SMITH's name has been associated with the State fish commissioners for some weeks, but his candidacy has not been publicly announced until it appeared in the *State Register* Sunday morning. But before it was announced Mr. Smith had assurances of support which warrant him in feeling very hopeful of appointment. His wide acquaintance gained in the last session of the legislature and his recognized qualifications for the office have won him a very cordial and hearty encouragement from the beginning. There is not probably a man in Iowa who has had more opportunities to acquaint himself with the work that such an office would require, or whose tastes and interests have been more in line with his official duties than Mr. Smith. As president of the State association for the preservation of fish and game he has for many years actively interested in the work of the society all over the State. In the legislature he introduced several bills reforming our game laws, and took a special interest in all legislation relating to fish and game. His writings in various periodicals and books on hunting and fishing have attracted attention, and he is well known everywhere in the West for his intelligent interest in these matters.

Should Gov. Jackson appoint Mr. Smith as Mr. Griggs's successor, the good work of protecting the fish and game of the State will be continued, and the efforts already well begun for stocking our lakes and rivers will receive special attention. Mr. Smith will give the office his undivided attention, and bring to it the fruits of long study and experience, and a lively interest in the success of the work. He has every needed qualification for the position, and if chosen will give it a still higher degree of importance to the State than it has yet held.—Upper Des Moines, Nov. 29.

## The Sacramento Salmon Egg Record.

BAIRD, Shasta Co., Cal., Dec. 5.—*Editor Forest and Stream:* The actual number of salmon eggs taken at this station of the U. S. Fish Commission this year is 8,000,000. The number that appears on the record is 7,761,450, but such liberal measure was given in placing the eggs in the hatching troughs that the actual number easily reaches 8,000,000. This exceeds the average of the most prosperous years of the station, and may be directly traced to the efforts which the Commissioner of Fish and Fisheries has been making since 1885 to restore the salmon fisheries of the Sacramento.

LIVINGSTON STONE.

## A Delightful Trip South.

LEAVE New York via the Pennsylvania R. R. 4:30 P. M., Richmond & Danville's Limited, a strictly Pullman vestibuled train, composed of dining and sleeping cars, operated solid. New York to New Orleans via Washington & Atlantic, also carrying Pullman sleeping cars. New York to Asheville, Hot Springs, Augusta, Ga., and Washington to Memphis. Another train, Richmond & Danville, fast mail, leaves New York at midnight, first through sleeping car service to the South. Announcement of the opening of the new short line to Florida will be made within a few days. Schedule will be so arranged as to leave New York after business hours, 4:30 P. M., arrive in Jacksonville next evening for dinner. Write Alex. S. Thawatt, Eastern Passenger Agent, P. O. Box 1287, New York city, for rates and excursion tickets on sale to Southern winter resorts.—Adv.

## The Kennel.

## FIXTURES.

## DOG SHOWS.

Dec. 20 to 23.—Northern Ohio Pet Stock Association, at Akron, O. H. F. Peck, Sec'y.

1894.

Jan. 23 to 26.—New Orleans Fanciers' Club, at New Orleans, La. G. W. Scully, Sec'y.  
Jan. 16 to 19.—Saratoga Poultry and Kennel Club, at Saratoga, N. Y. L. W. Clute, Ballston Lake, N. Y., Sec'y.  
Feb. 20 to 23.—Westminster Kennel Club, at New York. James Mortimer, Superintendent.  
Feb. 27 to March 2.—Columbus Fanciers' Club, at Columbus, O. G. F. Mooney, Sec'y.  
March 7 to 10.—City of Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.  
March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y.  
March 20 to 23.—St. Louis Kennel Club, at St. Louis, Mo.  
April 3 to 6.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 2 to 5.—Pacific Kennel Club, at San Francisco, Cal. H. W. Orear, Sec'y.

## FIELD TRIALS.

1894.

Jan. 1.—Southern California Field Trials, at Ontario, Cal. H. C. Hinman, Los Angeles, Cal., Sec'y.  
Jan. 15.—Pacific Coast Field Trial Club, at Salinas, Cal. J. M. Kilgariff, Sec'y, San Francisco, Cal.  
Feb. 5.—Southern Field Trial Club's Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

## CHICAGO KENNEL CLUB SHOW.

ONE always associates a spirit of progressiveness and go with the Windy City, and this seems to be carried even into the realms of dogdom. Most, in fact all other cities content themselves with giving one dog show in a year, and far from feeling any great desire to repeat the venture are often glad to rest on their laurels, and sometimes, we regret to add, count their losses and vow never to give another. Not so with the World's Fair city. Somebody once said Chicago could give a show every month and still make it pay. Be that as it may, the show held last week did not seem to be affected in any way by those that had recently gone before, and though the crowds that we have seen in late years were not so evident this time, the attendance was quite large enough to place the management in a good humor.

The show opened on Wednesday morning last with a very fair lot of dogs, though it must be said there was in many breeds a falling off in quality and numbers, too. There were about 430 entries, the catalogue numbering 460, but of these thirty-six were N.F.C. The building in which the show was held is known as the West Side Armory and was situated in quite another part of the city to that in which the previous shows have been held. That the move was a happy one we are not prepared to say, but that it did not suit the dogmen so well is very certain. Hotel accommodation is not good in this neighborhood, and though the building is in the midst of a residential part of the city the crowds were not so large, nor were there so many "smart" people to be seen strolling through the aisles as we were wont to find in Battery D on the lake front. The light was not at all good and the unfavorable condition of the weather added to the gloom so much so that the lights were turned on most of the day. The judging was carried on in a rather desultory manner, but this was caused in some part by the inability of Mr. George Wilson to be present the first day, owing to an accident, he having fallen on the icy pavement on Tuesday and sprained his arm. On Thursday, however, he turned up in fair condition and got through his classes in good order. The

rings were not served as well as they might have been; in fact the management was not such as one could wish in a show of such pretensions. The attendants were not looked after as well as they might have been, and though the aisles were kept reasonably clean, there was a lamentable lack of cleanliness in some of the stalls. There is no one in a better position to judge of this than the reporter who has to take dogs out of their stalls to examine them, he sees all of them nearly, one by one, and makes his notes accordingly. One day not ten dogs were taken off their benches in the early morning hours as they should have been, and clean straw put in where needed. In some stalls we found wet straw and "dead" feed to the depth of several inches, and the attendants, when spoken to about it, covered them up with a handful of clean straw and the eye was relieved, but not the olfactory.

The rings also were not cleaned up as they should be after exercising hours. It is no good sprinkling disinfectant when the cause for ill odors still remains and is not removed. These are the little points which when properly attended to proclaim good management. Mr. John Read, a man who knows this part of the business well, was on the ground, but as he simply attended to Spratts contract in the affair, it was not his place to interfere. Enough of grumbling. We do not like the task, but feel constrained to allude to one other feature that should be abolished, and that at once. We allude to the row of puppies that stretched across one end of the hall, opposite the pet dog cages, a direct and unseemly insult to the feminine element that usually have to put in most of their time with their pets. In this row of stalls were pointer, dachshund, great Dane, fox-terrier, St. Bernard, Irish terrier and cocker spaniel puppies, and any show-goer may imagine the atmosphere that pervaded their vicinity when not properly attended to. This was a direct menace to the health of the show, and if serious mortality does not result from it we are out in our reckoning.

To turn to more pleasant features, we were agreeably surprised to find that rotation of numbers in the stalls had been insisted upon, and the visitors and others had no difficulty in finding the dogs they wanted to see. This might just as well be done at every show. Mr. Goodrich, Mr. Hagans, Mr. John Munson and Mr. Joe Locke seemed to have control of affairs, and gave the show their continual attention, Mr. Locke acting as superintendent, though we could find no official badges to guide us as to who was who. Mr. L. F. Whitman was the "vet.," and attended well to his duties.

We cannot commend the auction sale adjunct to the show, it brings a class of dogs, for instance those puppies, into a show whose presence can well be dispensed with. Another thing, sick dogs should be removed from the main building, and not become an eyesore to passers-by. We allude here more particularly to a field spaniel sent down from Canada that was chained on a heap of old straw in one corner of the building, and one lady we know fed the dog and bought meat for it for pure charity's sake. It was in wretched condition, and had every appearance of having distemper, though an old dog.

A number of Western fanciers were to be seen round the benches. Among them we noticed C. E. Bunn, H. A. Johnson, C. A. Pratt, A. Trickett, F. S. Anderson, F. Bedad, Mr. Elliott, T. G. Davey, R. E. Fishburn, H. L. Goodman, G. A. Buckstaff, C. G. Hawley, G. S. Siddons, W. I. G. Massey, Dr. Oliver, Dr. Withers, A. Marshall, W. Potter, H. Jarrett, H. L. Hairmount, C. A. Taylor, E. A. Woodward, George H. Whitney, Tom Blake, Mr. Collins, Mrs. Lees, Mrs. Meachem, Miss McCleary, Mrs. S. E. Davis and friend, etc., etc.

The catalogue was neatly arranged. H. C. Tyler gave a fair trick dog performance. Spratts Co. fed and benched, and Sanitas was used as a disinfectant. A marked catalogue was issued on Friday, and was a good work.

**MASTIFFS (E. B. Elliott, Judge).**—Once more has the West demonstrated its strength in this breed, and I think that the display this time was even better on the whole than that of February last. As at that show so in this, the burden of distinction lay with Mr. Bunn's team, and while most of his older lot have settled themselves in the challenge classes he has some good young ones to take their places. In the challenge classes Ormonde in dogs and Caution's Own Daughter and Lady Coleus, and Sinoloe and Ethel, in the other sex were the entries. Ormonde looked well, and C. O. D. and Lady Coleus were both very much improved in appearance since I last saw them. C. O. D. has been almost completely cured of the unsightly warts and sores she had in February, and Lady Coleus is once more in her proper form and the sore in her back dried up. It is an oft told tale between these two bitches and the decision was about rightly given. In open dogs (13), a new one by Beaufort's Black Prince out of Sinoloe came up from the Peoria Kennel, Leamington, a splendidly made dog, nice length of body, good legs, especially the hind ones, good depth of chest and loin and a little more flesh on the latter would have equalled Marquis there; his head has much volume of skull and general massiveness, good square deep muzzle, nice ears and quite enough wrinkle, in fact he is a very good mastiff and between him and Ingleside Minting there will be a struggle when they meet, though the latter is a bigger dog. Marquis is also a good one, but loses behind and in head to the other, he was at Indianapolis; third went to Webster's Judge, a big plain dog that was decidedly lucky, having little but bone and size to recommend him, as his faulty ears and plain long head though deep enough lacks character and he was out of class with the other, besides, his forelegs are out at elbow and not straight. Rossington, reserve, can lay all over him for type; he is a brother of the first prize winner and has a head built much after C. O. D.'s, but with black facings, his head is scarcely strong enough for a dog, but exquisitely modeled and very short in muzzle, his feet are a bit open and he is a little slack behind the ribs, but should be easily third. Baby Bunn is misnamed, as he is a coarse-headed, very big-eared, light-eyed dog, with little to recommend but skull, and was not well shown. Ilford Dates, also vhc., is another big, plain dog, ears not close to head, long, plain head. Alarm, that did not get anything, but can beat either of the mentioned dogs except Rossington, has a dark head, but with a little less stop his head is a good one, deep and square, stands a little straight behind, but good forelegs and body, his rather smutty color is against him at first sight. The bitch class (5) was scarcely so good. The well-known Minna Minting had all she could do to beat Eole in the ring, as she carries her ears faultily and does not move well behind. Eole has a good head if it had a little more breadth in skull, nice body, with capital breadth of hips and nice legs. Persia, third, is rather long-faced, but a fair bitch take her all round, should be deeper and heavier in body. In puppies there was but one and the judge was a bit hard in withholding first and second, as the pup is a well-grown one all round; nice skull and legs, but ears faulty; he should have been higher up. Balderman was entered in open dogs, but the "vet.," strained a point, I think, and ordered him out for mange; the dog was not in very good shape, but could pass. If not fit to show he should have been removed from the benching. There were no specials.

**GREAT DANES (E. B. Elliott, Judge).**—One can always depend upon a good entry of these dogs in the Windy City, though there is a lamentable lack of quality in the local entries take them altogether. Many of the dogs are heavy, coarse, and without the symmetrical and agile appearance so much admired in great Danes of the type that should obtain. Real great Dane admirers must be pained at the advance made in the breed lately, for there are now a number of dogs that can be pointed to as exponents of the better type; especially is this so in the matter of head and neck. There are several men now coming into the great Dane fancy who are

starting right and who are bound to exert an influence on the breed if they stick to the style of dog they are commencing with; such a kennel is Mr. Lawrence's. Still there are a great many bigoted notions to be eradicated before the enthusiasts attain their object. For a first appearance as a great Dane judge Mr. Elliott had a task set him that has appalled more than one. To decide upon the merits of Melac and Imperator has always been a touchy subject, and that Mr. Hagans should have waited in late years until his dog was almost crippled before pitting him against Melac was inexplicable. He simply courted defeat this time. Melac, Major McKinley and Imperator furnished the challenge dogs, and they were placed as named, the verdict being a popular one. Imperator has an advantage in head over the other two but Melac was put down in such superb condition, better than he ever looked in his life, and hard as nails, that he simply made a show of Imperator's stilty and crippled action in loin and hind parts; the dog seems all broken up there though seemingly healthy as far as flesh and coat conditions go. In open dogs (18) there was but really one in it, Earl of Wortemburg, a dog that Mr. Lawrence imported last spring from Mr. Max Dietsch; his head is a capital one, nice length and cleanly chiseled on a good neck well set, body excellent had it a shade more swell of rib, capital legs, forefeet not quite true, but an active mover and stylish withal; he is a light brindle. In him the Kennel Lawrence should have an excellent sire, especially when mated with the same type, in which the kennel is strong in the female division. Second went to the well known Hepburn Hero, who, of course, lost from his faulty shoulders and front; this dog has a capital jaunty hind action, an action that is peculiar to the breed. Lawrence Leopard is well named; he is a harlequin, faulty in feet, which are too open, and a bit narrow in chest, is about all that can be said against him in an all round notice; very nice head, but perhaps a little too much stop, very nice eye, not a wall, like most of the color, beautiful ribs and body and good front, barring the feet spoken of. Reserve went to King William, whom I thought rather lucky, as his head is not of correct shape, too much stop, almost dish-faced, short neck and not clean enough in shoulders; his good forelegs probably influenced the judge in his favor. Anderson's Sandor, in the vhc. lot, is not improving. He is not true at elbow, stop too defined, and with his faulty loin and poor tail he could not hope to do better. Hero's body is his best part; he is not clean enough in neck, and head too short and thick. Prince, hc., is too broad in skull for correct type. The others need no mention. In bitches (17) the judge had the hardest task yet assigned a judge in this breed over here, but that he acquitted himself well cannot be gainsaid. One may have a difficult task to decide when all are very moderate, but here the winners were all very good and competition very keen. With seven vhc. cards the judge evidently thought so, too. The prize fell to Neverzell, she of the beautiful head; of course there is ample defense for the decision, for her head is a model; still, I think, considering the good lot of similar typed bitches that followed her, body and condition should have played a more important part in the result, as it evidently did in Flora Belle's case. Neverzell is showing age; her body was all too matronly, and had lost the beauty lines, and her bag hung down to her hocks nearly. Portia Melac, the New York winner, is not so clean and refined in head as Neverzell, especially in skull, but she is a well-made bitch all over if her shoulders were a trifle cleaner. Then came Santa, that we spoke so well of at Toronto; she is getting a little faulty in skull, looks too short between eye and ear; this is more apparent when excited, as her ears are too heavy and she is putting on a little cheek; here is where she loses to the winner, but behind that I think I like her better than Portia, and much more so than Neverzell in her present shape. Flora Belle loses a bit in front and tail to the others, but had she not been in whelp she might have changed places with the winner. As it is, I think Portia Melac should have won, with Santa second and Neverzell third, and Flora Belle in same place, reserve, as a penalty for showing a bitch heavy in whelp. Among the carded lot, some of which could have been left with a c. at most, when the style of the winners is considered, I liked Norimburger's nicely formed body and fair head. Bella and Phoebe both deserved their vhc.; so did Nellie B., whose head is very fair, but neck not clean enough, and her bone is light and pasterns faulty. Nearly all these were coarse compared to the winners. Flora A. was absent, Flora, hc., certainly did not deserve anything in a class like this. Ruth is another that deserved her letters, as her head approaches the correct shape. In dog puppies, Fritz, a fair one, if he didn't turn his feet out and was not faulty behind, took the prize from three others. The winning bitch, Cinderella, will scarcely get another first with any sort of proper competition. All in all the classes were well judged.

**ST. BERNARDS (E. B. Elliott, Judge).**—Excepting in the rough bitch class, there was scarcely so good an all-round lot as last spring, but competition in that class was very keen. In challenge roughs the king, Sir Bedivere, made another appearance, though I scarcely see the reason of allowing a dog to fall from his mighty estate in this way. A horseman would not think of showing a hackney, for instance, unless his coat was in perfect condition, then why should a dog, just because it is a crack, be trotted out because it isn't sick. St. Bernards, that are a fancy breed, should be shown in full war paint, and it does positive harm to a show dog to show it as some of the cracks of the breed have been shown lately. There is nothing in the prizes to call for this anxiety to bench, and no crack, not even Sir Bedivere, will draw the crowd if he is out of shape, nor add anything to his reputation. Sir Bedivere is a much improved dog over his Mt. Holly form, his coat is short yet, but looks started for something better, he is well and strong looking, and Arthur Trickett has evidently been at work on him. Aristocrat was outclassed in head and had not his full coat either. In open dogs (11) competition was not very exhilarating, except between Lord Dante and Grand Master, placed as named; there is little between them, Dante loses to the other in loin and depth of body and straightness of forelegs and feet and skull, but is slightly squarer and deeper in muzzle, and I think Grand Master shows a little more character. Prince George, third, has an excellent front, but head should be shorter, and lacks shadings; his body is a little lathy, he is of good size, but out of coat; Sir John II. is a short dog with poor expression. American Caesar was lame, but should certainly have had vhc.; he shows lots of character and his head is improving, great depth and fairly well formed, he was also well shown in coat. In bitches (10) there was a little more trouble for the judge, and I don't think, all things considered, he did right in putting Rustic Beauty first. One can excuse a lack of coat to a certain extent, but a show dog's bones should be covered with a fair amount of flesh according to the breed. The placing of Rustic Beauty first in her present shape was a black eye for condition. That she excelled the rest of the class in shape of head, expression and general quality, and forelegs is easily allowed, but she is dead out of coat and ragged at tail and very that, her good frame was there and that's all. I know it was first or nothing, and in justice to the others it should have been nothing. Sunray rightly came in for second, stout of frame and deep of body it is difficult to tell when she is in whelp, and this time she stole a march on her owner and whelped the third night of the show. Alta Berna, third, is faulty in muzzle and stop, too much of it, was scarcely in good shape but passable as far as coat went, just over nursing a litter. Jo, vhc. reserve, had an unusual experience; she looked tumbled in coat, curly behind, stood all over the ring and is going very "bowy" in front, while she never had a good head as far as type and expression go, she must be at her best when she wins. Brighton Violette, vhc., shows some character, good legs that might be stronger in hocks,

tail curls over and shown in poor shape. Fernwood Rose II should have more stop and depth of muzzle, is light in pasterns, good depth of body, a nearly all white bitch, showing some type. Lady Cavan, hc., is a little bouny, not straight in front, a low set, small bitch with a fair head if it was broader, nice coat. Princess Hesper is light in body, but has a good head, nice type and markings, and taken all round should have had another letter. Pilgrim Noble, third in puppies, the other prizes being withheld, might just as well have been placed higher, as he is not a bad youngster.

Smooth coat challenge dogs was another walkover for Scottish Leader and as usual he was well shown. In open dogs (4) Alton II., another of the wonderful Judith litter, an improved dog and looking much better in body than his brothers usually do, won nicely in size, type and all round quality from Billy, who lacks blaze and is faulty in ear, good legs and bone, should be deeper in muzzle and has not much type. In bitches nothing touched Lady Judith, though she has too much coat for a smooth and is too white; she gets her tail up, nice legs and bone. Columbian Queen loses very much in head, too flat-faced and fine in muzzle, is slack behind the shoulder, thin, and tail curls up. Fernwood Goldy is the truest and really only smooth in the lot, and is much superior in shape of head and type to the second winner; ears do not lie close enough, otherwise she is a nicely made bitch all round, only losing in bone and breadth of skull to Queen; she should have been second. There were no specials so far as we could learn, at least not in the catalogue.

**DEERHOUNDS (E. B. Elliott, Judge).**—There was only one full-grown one, the well-known Douglas and two very likely pups were shown by Mr. Potter in dogs and two in bitches. Lorne, third to Rob, loses in ears, which are too big and drooping.

**GREYHOUNDS (George Wilson, Judge).**—Considering that Mr. Wilson is at home in this breed and a club judge, if we rightly remember, there should have been a stronger entry. Master Rich, not well shown, was trotted out once more and walked over again in challenge dogs. Competition in the open dog class lay between Grand Fashion and Cheeky Charley—by the way, we would like to see this dog's pedigree set forth in the catalogue. We were told the pedigree had been received, and the dog was said to be by Greentick, etc. If this is the case let the dog receive his due. At Newark we passed it over, though it is two months since the pedigree was said to have been received. Fashion rightly won; better in ribs and loin than Cheeky in his present off condition; Fashion might stand over more ground, but is a well put up dog; good legs and feet; bit strong in skull. Little Climber won again in bitches; she is getting loaded in shoulders, and unless well held up stands back on pasterns more than she used to; from shoulder back she is, however, capitally made, with a great spread of quarters and good muscling. Hasty Pudding, second, loses very much in front and feet; she is well ribbed, but falls away a little too sharp in loin and quarters, coarse tail; she was put down in excellent hard shape, and is well muscled. Chesterford Frederick, third, has bad feet and pasterns and is faulty behind, is nicely ribbed up, but should be cleaner in shoulders. I liked Lady Glendyne for the place; though faulty in front, she is better than the other, and excels in hind parts, though she falls away in loin too sharply. Queen, vhc., would do with more rib; nice neck and shoulders.

**AMERICAN FOXHOUNDS (George Wilson, Judge).**—Mr. Pooler, owner of the noted Pooler strain, about farmed these classes, and showed a nice stamp of hound with a good deal of bone and depth, but still having the distinctive type of American hound. A little more attention should be paid to head formation, and I don't think that they would come far from what, as far as I can make out, would about suit the idea prevalent in forming a standard for American foxhounds. Commodore, well-known and well shown, proved superior in front, shoulders and texture of coat to Pooler, he being a little too fine in this respect. Ranter, vhc., turns his feet out, but has good bone and body, modeled after the English form, good brush well carried. Rowdie, third, is too full and coarse in skull, excellent forelegs, but a bit straight in stifles, nice bone, but soft in coat. Colonel II., who was not mentioned, I liked quite well, a good exponent of the type, barring a snipy muzzle and too broad a skull. In bitches (5) Jennie won; her muzzle is snipy and she is a little long cast, but stands on good legs and feet, and is a nice stamp. Victor, second, is another good legged one, with a better than average head, but not so good behind as the winner. Kitsey, third, Mr. Pooler says is the fastest bitch he owns; she stands lower on the legs than the others, is faulty in ears, her body is deep and low set but well put together. Dart, unnoticed, is more on the English type, and was the winner last spring under Mr. Davidson.

**SPANIELS (E. B. Elliott, Judge).**—In open dogs the entries are well-known, Echo being at Newark show, while Newton Abbott Torso has been repeatedly noticed. In bitches (2) Dorothy, the winner last spring, again came to the front, beating the other in coat, head and bone.

In cocker challenge dogs champion Middy had only the rough-looking Red Dock to beat; he might be in better coat and flesh, still looked well and polished. Lady Oho was absent. Open dogs (7) was a fair class and first went rightly to Pickpania, who beats Woodland Count considerably in quality and head, rib and coat. Count, as stated before, is too coarse in head. King Raven, Jr., was shown a little thin, but I thought he should have come in second; has a better head. Arnold's Dan, hc., is a little long cast and light in eye, but his bone, shape of head and coat deserved another letter. Hindoo II. has a long slack back, crooked front, a ragged curly coat and is not the type at all. In bitches I can scarcely indorse the placings. Topsy S., the winner, is too high in brow and forepart of skull, and so falls away too much at base of skull, she has good bone, coat and body, and looks as if she would show sometime a much longer coat than cockers have nowadays. Lady Dufferin, second, has a nice front, but shows too much stop, and I don't like her weak hind action, hocks too close together. Rideau Rhea, third, was at Newark and should have been second. Ruth S., vhc., with fair head and sweet expression, nice coat, good straight forelegs and action, and general cocker type, I thought, should have been placed at the top though she is a red. La Diana, reserve, is more on the field order, excellent front, nice height, but a bit too big all round. Woodland Kitty, hc., is too full in eye and was not in very good shape, she is faulty in muzzle, too.

**COLLIES (George Wilson, Judge).**—Quite a fair lot of these but the prizes chiefly went to the Chestnut Hill and Chesterford Park Kennels. The former had Wellesbourne Charlie, looking as fit as he could be made with loss of his usual good coat, and old champion Luella was again to the front in her class. In open dogs (6) there was a great diversity of type. Toronto Wonder, looking simply elegant in coat and mane, was well shown by his owner, who makes the most of his good points and leaves the rest, such as faulty front, to luck. Chesterford's Marvel and Hero were also out, and Mr. Wilson plumped for the smaller of the two for second, probably carried away by his better head, but Marvel is the better all round dog as Hero is faulty and weak-looking behind and altogether too small; these two looked much better than we have ever seen them shown before. Prince Wilkes came in for third, but if Toronto Wonder was right P. W. should have been second. Marvel took reserve. In bitches type was a little mixed, Adela Wonder, short of coat, top and under, nice carriage of ears, but rather small-sized, won from Chesterford Hattie, too big in ear, nice head but a little too much stop, light in bone, coat fair, of nice texture but no undercoat. Blossom, third, I think was entitled to first, Wonder beating her only in skull and strength of muzzle, but considering coat, ears, quality and legs and body she has it. She

is a seven-months-old bitch and only needs a little filling up before the eye to make a good one; she is a compliment to her sire, Christopher, as she is out of a very inferior bitch. Chesterfield Lilly, vhc., has gone thick in skull and is long cast but was in excellent coat; she is an almost white bitch. Nancy Taylor, hc., is prick-eared but has rather nice type of head; out of coat. Donna should certainly have got some letters. Little Wonder won in puppies, beating a dog from Seminole Kennels not named in catalogue. Little Wonder has the "dingo" ear and is full in brow yet, excellent coat, in fact the densest in the show, had a trifle short; the other is short-faced, big in ear and almost white in color; nice coat. The kennel prize of three game chickens went to Chestnut Hill somewhat easily, the Chesterford dogs are nearly all too small; they should get more size and substance; they have plenty of quality. The special was not marked in the catalogue.

**BULLDOGS** (George Wilson, Judge).—Only two on hand and this we wonder at as we supposed Chicago and neighborhood a little stronghold for the breed. Duchess of Parma easily outclassed her solitary opponent, Miss Sally Brass II., too long faced and not broken up enough and as long as a door in body. The Duchess was in fair condition.

**BULL-TERRIERS** (George Wilson, Judge).—Not by any means so good a collection as we have seen before out here. In challenge dogs Crisp, looking in anything but the shape he has usually been seen in might well have been turned down, as he was bare and red all down one thigh. Open dogs (4) saw Jack, second here last year, carry off the blue, from Roscoe and Sir Monty II., the latter is heavy in shoulders and too full in skull. The other two I could not find, but they seemed of fair stamp when in the ring. Lowe and Duchess was first in bitches, her round full skull and weak muzzle spoil her head as may be supposed; her body is a bit long too, but she stands on good legs; she was in whelp, or seemed to be. White Gypsy was also in poor shape, is cheeky and too much out before the eye, heavy in shoulders and was also in an interesting condition. Burston Kit, vhc., has a short square head, too full in eye, good legs and body. A promising youngster in Croyden Monarch won easily in dog puppies, nice eye and head, good legs, but a little faulty in pasterns and feet. The winning bitch pup Fay, has a capital nice long head with small dark eye, good legs and feet and body, but will probably get cheeky and thick in neck as she is scarcely clean enough there now.

**DACHSHUNDS** (George Wilson, Judge).—There was really nothing in these classes to merit much space. In dogs Tapszur Horst, second last spring, took the blue from Knirps, the winner stands over in front, bad feet, has too much stop, a short ear and a bad tail; Knirps has a better head, but is shorter in body, and not so low in chest nor so good in skin; Hundesport Zaenker is coarse headed and out at elbow, knuckles over, is coarse in coat and not loose enough in skin. In bitches there was nothing to touch the well-known Lina L., better in length of head and body than Alma, who is a weedy, broad-skulled, short-bodied bitch, flat in ear and of no quality.

**BEAGLES** (E. B. Elliott, Judge).—Not many on hand, and these not up to form. Doctor and June M. furnished the challenge entries, and the verdict fell to Doctor, who is beaten in head by the bitch, but is better in front and shown in better shape, June M. being too gross. Adam, that ran at the N. B. C. trials, was easily first in open dogs (3), better legs and feet and far better body—cobbler than Pomp, second, who is too long in body, but excels the winner in shape of head; Mr. Winkle, looking heavier than I have seen him before, came in for third, he is bad at both ends, Jenny Lind proved the winner in bitches (4). She was second at Detroit, and is rather a nice bitch, too long in body though; Snow, second, is well known and has scarcely got back to show condition yet, I like her better as a field bitch than a show. Snowflake is another old friend that belies her name—she is not without reproach. Spot is too long in body and coarse in skull. Our Western friends should remember we want a cobbler body, shorter, deeper and squarer muzzles than those that seem to obtain in the West. We would like to see one of the good Eastern kennels take a team out there, and if the management had seen fit to be a little more liberal in the classification Mr. Wixom would have sent on ten, but the Chicagoans would not do it, though urged.

**FOX-TERRIERS** (George Wilson, Judge).—We have seen much better displays of this breed in Chicago than were benched last week; in fact, we never saw a worse lot. Lansdowne Poverino was easily the best in the lot. No challenge dogs and in open dogs (8) Lansdowne Poverino had only Glendon Spark to beat; this he does in head and front and condition. Jack, third, is bowed in front and out at elbows, and has big, coarse ears. Black Rock, vhc., is light in body and loin, short head. Chesterford Flurry won in bitches (13). This is the best I can say for the class. Flurry has put flesh on and is much improved thereby, and was nicely shown. Lansdowne Tim, that was at Mount Holly, runs her close, though she is weak in muzzle and full in skull. Venus II. has gone to pieces, is coarse in neck and shoulders. Glendon Dixie is snipy in muzzle, round in skull, looked dirty and is light in bone. The other call for no comment, just "ordinaries." The puppies showed no future winners. In novices Columbian Vietsess won; she throws a nice ear, but skull is too broad, and she is a little loaded in shoulders.

**ROUGH AND WIRE TERRIERS** (George Wilson, Judge).—Galtees, the Irish terrier, and Colored Preacher, the Scotty, both ordinary specimens of their breed, won in this mixed class for dogs (5) such as we do not want to see become general. Shaun Rhue's thick skull could not hope for more than vhc. In bitches that very ordinary Scotch, Glen-shea, won without let or hindrance. Having this class was poor policy.

**YORKSHIRE TERRIERS** (George Wilson, Judge).—A pretty fair show of these, but there is no improvement to be noticed. Minnie York, getting light in color, but in fair coat, was alone in challenge class. In open dogs (2) Ben, getting much lighter in tan, in fact he has lost entirely that brilliant hue he had at Mount Holly, beat Prince Harry, who was short of coat. Dr. Oliver had his revenge, for he was ahead of Lady Nell, with Pinkie York, who is better in size and coat. Nell is quite smutty in tan and has only a remnant of her once brilliant coloring; it takes a little circuit business away from home to bring a Yorkshire down to its true form. Verb sap. We shall expect to see this dog look very different next show. Maud, vhc., is very mixed and smutty in tan, dark body color, but fair length of coat.

The King Charles spaniels Calumet St. Cyr and Calumet Alice, both winners here before, were the only two toy spaniels, and they were not in very good shape as regards coat—too curly.

**BLACK AND TAN TERRIERS** (George Wilson, Judge).—Things are not always as they seem, and in black and tans less so than in some other breeds. Thus Ben Lewis reasoned when for once in a long while he handled Broomfield Sultan and did not take the blue ribbon away with him. Mr. Wilson did not know a black and tan, and unless the Chicago atmosphere has dimmed his vision he knows one still. He put Queen III. over Sultan. This sterling good bitch has scarcely been accorded her due meed of praise. She was shown too gross here; she is a little on the coarse side for a bitch, at least of the type that Maiden started over here, and should be shown a little light. There is no getting over her good head, in which she excels Sultan and her general terrier character; she has a richer tan than Sultan, but not so clearly defined. Sultan beats her in body, but the bitch gets it in forelegs, bone and head, especially in skull, besides, Sultan was not in the best of shape, but showed himself well. In open dogs Rochelle Oolah, never a good one, took first, beating Rochelle Sultan in body, but loses in clearness

of markings. A nice one in Canada Queen, a daughter of Queen III., by Salisbury, won nicely in the bitch class, she excels Chesterford Betsy in condition, head and markings, which are particularly bright and rich. Lotta, a little goggle-eyed runt, should not have been mentioned, though in poor shape Chesterford Mab should have had the card. The toys need no mention, they were just toys, with little type of any sort.

**PUGS** (George Wilson, Judge).—Here Mr. Wilson was not so happy. I. C. P. Sprake, properly entered this time, beat Bob Ivy, as usual, though shown too fat, and Bo Peep II., decidedly obese, was placed over Sateen, who has lost an eye. In open dogs (4) first went to a clever little fellow in Drummer, rather too dark in head and body. Uncle Bob, second, loses in head and ears. In bitches (4) Toadie in her obese condition should not have been considered with Miss Decima, who has a better, deeper, squarer muzzle, nice cobby body well carried and nice curl. The other, Bess, deserved mention. Uncle Bob was the only pup on hand. In Italian greyhounds Sprite II. had little difficulty in beating Tagliani, especially in head, size, forelegs and carriage of ears.

**POODLES** (George Wilson, Judge).—These, with Skyes, had been evidently tacked on the end of the list. Berri getting into shape again won easily over the white Blanchet.

**SKYE TERRIERS** (George Wilson, Judge).—Ben Lewis had five of these terriers in hand, all from the Quaker City, and the dogs were divided by sex and a challenge class made for Sir Stafford. In open dogs Sir Thomas, the above-dog's good son, won nicely from Elphiston, superior in length of body and coat. Princess May excels Lady Stafford in strength of head, length and coat.

In the miscellaneous class, judged by Messrs. Wilson and Elliott, there was nothing to attract attention but the Newfoundland Carlo, improving in condition. Second went to a curly, big fat dog that approaches a Landsdowne Newfoundland in color only, being white and black. H. W. Lacy.

**POINTERS** (Tim Donoghue, Judge).—The pointer classes were not large in numbers, but the quality of the entries as a whole was quite good. That popular judge, Mr. Tim Donoghue, handled his classes well and satisfactorily. There was no division of classes by weight. Glamorgan, in the challenge dog class and in bitches Lady Gay Spanker, had a walkover. Five dogs faced the judge in the open dog class, of which Ridgeview Comet, an excellent young dog, took first easily. He is symmetrical, stands on good legs and feet, has a well-ribbed and well-shaped body and good head, neck, shoulders and stern; a pronounced throatiness somewhat mars his appearance. Second went to Molton Banner, of heavy, stocky type, well built but entirely too heavy of limb and body; he was out of condition and bore the marks of field work. Bruce D., third, was thin and long cast, yet quite a good, large dog with a chance of improvement by better conditioning. Mack and Bob o' Naso, each hc., were coarse and not noteworthy for any special excellence. Out of the five bitches in the open class Miss Rumor was an easy winner of first. Fan Fan II. won second; she was recently described in these columns. Third, went to Brighton Leda, not in good condition. Polka Dot vhc. reserve, was short in muzzle, plain in head and of average merit. There were two large puppies in the dog class, both rather lanky in make-up. Ferris Tramp, first, aside from a tendency to coarseness, is a fairly good puppy, extremely large for his age, while much the same holds good with respect to Zip G. Rene was the only bitch in the puppy class. She was quite ordinary.

**ENGLISH SETTERS** (Tim Donoghue, Judge).—There were nine competitors in the dog class. King Gladys and Paul Bo fought their battle over again. The latter was not in good condition. He won second. King Gladys, first, is light in bone somewhat, has a fairly good head, body, legs and feet. He moves badly behind. Third went to quite a fair dog in Roy of Colshill, cobby in build, a well shaped head, a patch of black on one side of his face marring his expression, good loin, legs and feet. Washtenaw Grouse, the reserve, is a good dog, a bit coarse. Cincinnati, vhc., was shown extremely thin in flesh and out of condition. Surprise well deserved the vhc. letters. The bitch class had twelve competitors. Esmeralda, a symmetrical bitch, well shaped head, body well shaped, legs and feet good, won first. Katie Noble II. was out of feather and coat. She won second. Third went to Liberty II., a bit heavy in skull, good neck, back, legs and feet. Brownie, the reserve, was too fat. The rest of the class was but average, except Monk of Furness Lill, vhc., a remarkably good little bitch, a bit plain in head. Puppies were but average.

**IRISH SETTERS** (Tim Donoghue, Judge).—The classes were not up to the quality commonly shown. Pride of Patsy was in good condition, as was also Elfreda, each of which had no competition in the challenge classes for dogs and bitches respectively. Montauk, Jr., was an easy victor over Conaire, the latter his only competitor; light in muzzle and thin and flat in body. Rosamond, a remarkably good bitch of excellent muscular development and symmetry, was easily first in bitches in a class of seven competitors. Lady Cleveland, second, is lacking in symmetry, muzzle pinched, neck too short and she carried too much flesh. Nona, third, is light in bone, was shown too thin, but is quite a good bitch. Nellie M., the reserve, shows some coarseness and is faulty in pasterns. Bessie Fenmore was the only puppy shown.

**GORDON SETTERS** (Tim Donoghue, Judge).—Leo B. and Lady Gordon were the winners in the challenge classes, both looking in good condition. In open dogs there were six to face the judge, of which Duke of Wellington won first. His head is a bit coarse; neck, legs, body, feet and general symmetry are good. Heather Lad, second, is somewhat heavy in shoulders, short neck and not first-rate in pasterns. His head is fairly good, and he has a well-shaped and ribbed body. Neither had first-rate tan markings. Highland Kent, third, is a fair average dog. In bitches, Lady Waverly took first over her four competitors. Her head is rather heavy. Highland Yola, a fairly good small bitch, took second, third going to Katherine, short in muzzle and a bit lathy in build. Except Heather Lad II., the five puppies were an ordinary lot. Lad is a large, rather coarse puppy.

**IRISH WATER SPANIELS** (W. H. Colcord, Judge).—Open dogs had two entries. Jack A., a large dog, a bit leggy, won first. Willy Kelly, second, is light in body, out of coat and lacking in muscular development. Biddy Malone was easily first in bitches; she is quite good in type and was in the best coat of any in the class though far from being in good coat herself. Swan Fly was fat and gross, poor head and lacks coat. The other two were ordinary specimens.

#### LIST OF AWARDS.

**MASTIFFS**—CHALLENGE—Dogs: 1st, Charles E. Bunn's Ormonde. Bitches: 1st and reserve, Bunn's Caution's Own Daughter and Lady Coleus.—OPEN—Dogs: 1st, 2d and reserve, Bunn's Leamington, Marquis and Rosington; 3d, Albert J. Gai's Webster's Judge. Very high com., C. E. Patterson's Hford Dates and J. P. Corrin's Baby Bunn. Com. Frank Godley's Nero. Bitches: 1st and 2d, Bunn's Minna Mating and Eole; 3d, Collie C. McLean's Persia. Puppies: 1st and 2d withheld; 3d, A. B. Dickinson's Webster's Judge, Jr.

**GREAT DANES**—CHALLENGE—Dogs: 1st, Cumberland Kennels' champion Melac; 2d, J. M. Studebaker's Major McKinley; 3d, Imperial Kennels' Imperator.—OPEN—Dogs: 1st, 2d and 3d, Kennel Lawrence's Earl of Wurttemberg, Hepburn Hero and Lawrence Leopard. Reserve, Emil Esberg's King William. Very high com., W. Rodgers's Hero and Frank S. Anderson's Sandor. High com., Oscar Seeger's Prince. Com., John Huredson's Oscar II., Charles Schinketh's Melac II. and John G. Weeks's Caesar. Bitches: 1st, Osceola Kennels' Neverzell; 2d, 3d and reserve, Kennel Lawrence's Portia Melac, Santa and Flora Belle. Very high com., Oscar Seeger's Pattie, John Altonbach's Nellie B., T. G. Konitz's Ruth, Bay City Kennels' Norimburger and Cumberland Kennels' Zella and Phoebe. High com., Berich Horro's Belle, Anton Koehler's Flora and Frank Hurita's Bello. Com., F. O. McDonald's Fanny M.—PUPPIES—Dogs: 1st, Frank Hurita's Frita; 2d, A. Gernhofer's Tell; 3d, Charles Schinketh's

Hero. High com., Charles H. Bromann's Nero. Bitches: 1st, A. Gernhofer's Cinderella; 2d, Julius Blaschke's.

**ST. BERNARDS**—ROUGH-COATED—CHALLENGE—Dogs: 1st, Argyle Kennels' Sir Bedivere.—OPEN—Dogs: 1st, Bay City Kennels' Lord Dante; 2d, Alta Kennels' Grand Master; 3d, Argyle Kennels' Prince George. Com., T. J. Taylor's Sir John II. Bitches: 1st, Argyle Kennels' Rustic Beauty; 2d, Swiss Mountain Kennels' Sunray; 3d, A. C. Shallenberger's Alta Berna. Reserve, J. B. Lewis's Io. Very high com., Camilla Roadford's Brighton Violette and Sergt. F. A. McDonald's Fernwood Rose II. High com., J. J. Maloney's Lady Cavan and Kennel Lawrence's Princess Hepsy. Com., Florence M. Rockwood's Lady Clave.—PUPPIES—Dogs: 1st and 2d withheld; 3d, G. H. Gil's Pilgrim Noble.

**ST. BERNARDS**—SMOOTH-COATED—CHALLENGE—1st, Swiss Mountain Kennels' Scottish Leader.—OPEN—Dogs: 1st, Argyle Kennels' Alton II.; 2d, F. S. Anderson's Betsy. Bitches: 1st, Alta Kennels' Lady Judith; 2d, F. Rommel's Columbian Queen; 3d, J. B. Lewis's Fernwood Goldie.

**DEERHOUNDS**—Dogs: 1st, Chestnut Hill Kennels' Douglas; 2d and 3d, Wm. Potter's Rob and Lorne. Bitches: 1st and 2d, Wm. Potter's Madge and Lassie.

**GREYHOUNDS**—CHALLENGE—1st, F. S. Anderson's champion Master Rich.—OPEN—Dogs: 1st, H. C. Lowe's Grand Fashion; 2d, Phil J. Walsh's Cheeky Charley. Bitches: 1st, H. C. Lowe's Little Climber; 2d, Mrs. B. Hayman's Hasty Pudding; 3d, Chesterford Park Kennels' Chester. Very high com., W. J. Massey's Lady Glen-dra and J. W. J. Worth's Queen.

**AMERICAN FOXHOUNDS**—Dogs: 1st, R. D. Williams's Commodore; 2d, 3d and very high com., R. H. Pooler's Pooler, Rowdy and Rauter. Bitches: 1st, 2d and 3d, R. H. Pooler's Jennie, Victor and Kitsey.

**POINTERS**—CHALLENGE—Dogs: 1st, L. A. Biddle's Glamorgan. Bitches: 1st, T. G. Davey's Lady Gay Spanker.—OPEN—Dogs: 1st, T. G. Davey's Ridgeview Comet; 2d, G. O. Smith's Mollin Banner; 3d, J. Dunfee's Bruce D. High com., F. Gaul's Mack and C. Sparre, Jr.'s Bob o' Naso. Bitches: 1st, T. G. Davey's Miss Rumor; 2d, C. E. Connor's Fay; 3d, T. G. Davey's Brighton. Reserve, Luzbo Kennels' M. Munson's Polka Dot. Very high com., G. F. Mooney's Luck's Own Daughter.—PUPPIES—Dogs: 1st, F. Canfield's Ferris Tramp; 2d, J. Dunfee's Zip J. Bitches: 1st, J. Dunfee's Rene.

**ENGLISH SETTERS**—Dogs: 1st, L. T. Ward's King Gladys; 2d, R. Merrill's Paul Bo; 3d, T. G. Davey's Roy of Colshill. Reserve, J. Mandt's Washtenaw Grouse. Very high com., A. Vandendale's Cincinnati and Chesterford Park Kennels' Surprise. High com., Wm. Schroeder's Count Napoleon. Bitches: 1st and 2d, T. G. Davey's Esmeralda and Liberty II.; 2d, Taylor & Mencke's Katie Noble II. Reserve, Mr. Dix's Brownie. Very high com., T. G. Davey's Monk of Furness Lill, H. R. Meyer's Phoebe and Mr. Hunter's Bessie. High com., J. Johnson's Belle, Wilson, W. S. Follett's Lady Sprite and John Holm's Bonny Pegmatite.—PUPPIES—Dogs: 1st, W. A. Preshomere's Duke. High com., L. T. Ward's Bonny Gladys. Bitches: 1st, M. E. Morgan's May Belle; 2d, South Shore Kennels' Minnie Noble.

**IRISH SETTERS**—CHALLENGE—Dogs: 1st, Seminole Kennels' Pride of Patsy. Bitches: 1st, Seminole Kennels' Elfreda.—OPEN—Dogs: 1st, Seminole Kennels' Montauk, Jr. Very high com., Muskerky Kennels' Conaire. Bitches: 1st, Dr. W. Jarvis's Rosamond; 2d, Dr. S. C. Dixon's Dr. S. Dixon's Maid of Waverly and Katherine; 3d and high com., J. Johnson's Belle, Wilson, W. S. Follett's Lady Sprite and John Holm's Bonny Pegmatite.—PUPPIES—Dogs: 1st, W. A. Preshomere's Duke. High com., L. T. Ward's Bonny Gladys. Bitches: 1st, M. E. Morgan's May Belle; 2d, South Shore Kennels' Minnie Noble.

**GORDON SETTERS**—CHALLENGE—Dogs: 1st, Dr. S. C. Dixon's Leo B. Bitches: 1st, Dr. S. C. Dixon's Lady Gordon.—OPEN—Dogs: 1st, Dr. S. C. Dixon's Duke of Wellington; 2d and very high com., J. R. Oughton's Heather Lad and Heather Lad II.; 3d, Highland Kennels' Highland Kent. High com., Frank S. Anderson's Dan. Bitches: 1st and 2d, Dr. S. C. Dixon's Maid of Waverly and Katherine; 3d and high com., Highland Kennels' Highland Yola and Highland Heather Nell. Very high com., J. R. Oughton's Dwight Elffe.—PUPPIES—Dogs: 1st and 2d, J. R. Oughton's Heather Lad II. and Dwight Don. Bitches: 1st and 2d, J. R. Oughton's Dwight Elffe and Dwight Rose.

**IRISH WATER SPANIELS**—OPEN—Dogs: 1st, English Lake Kennels' Jack A.; 2d, Thomas W. Mills's Lily Reilly. Bitches: 1st, Sea Moss Kennels' Biddy Malone; 2d, very high com. and high com., English Lake Kennels' Swan Fly, Queen Vic and Meg.

**FIELD SPANIELS**—OPEN—Dogs: 1st, R. F. Keasbey's Echo; 2d, Tim Donoghue's champion Newton Abbott Torso; 3d withheld. Bitches: 1st, Jack Borden's Locuthy; 2d, Bert Borden's Baby Flirt.

**COCKER SPANIELS**—CHALLENGE—Dogs: 1st, Swiss Mountain Kennels' Midway.—OPEN—Dogs: 1st, Concord Cocker Kennels' Pickpania; 2d, Luckwell & Douglas's Woodland Count; 3d, Swiss Mountain Kennels' King Raven, Jr. High com., English Lake Kennels' Hindoo II. and Molawak Kennels' Arnold's Dan. Bitches: 1st, 3d and very high com., Swiss Mountain Kennels' Topsy S., Rideau Rhue and Ruth S., 3d and reserve, Concord Cocker Kennels' Lady Dufferin and La Diana. High com., Luckwell & Douglas's Woodland Kitty.

**COLLIES**—CHALLENGE—Dogs: 1st, Chestnut Hill Kennels' Wellbourne Charley. Bitches: 1st, Chestnut Hill Kennels' champion Luella.—OPEN—Dogs: 1st and 3d, Chestnut Hill Kennels' Toronto Wonder and Prince Wilkes; 2d and reserve, Chesterford Park Kennels' Chesterford Hero and Chesterford Marvel. Bitches: 1st, Chestnut Hill Kennels' Adela Wonder; 2d and very high com., Chesterford Park Kennels' Chesterford Hattie and Chesterford Lilly; 3d, Thos. Godland's Blossom. High com., G. Tarbell's Nancy Taylor.—PUPPIES—Dogs: 1st, Chestnut Hill Kennels' Little Wonder; 2d, Seminole Kennels' Bessie. Bitches: 1st, Thos. Godland's Blossom.

**BULLDOGS**—Bitches: 1st, A. Woodward's Duchess of Parma; 2d, T. W. Mills's Sally Brass II.

**BULL-TERRIERS**—CHALLENGE—1st, Luzbo Kennels' Crisp.—OPEN—Dogs: 1st, J. H. Waddock's Sir Jack; 2d, F. L. Dever's Roscoe. Very high com., Chas. F. Dever's Lowland Duchess and Burston Kit; 3d, Chautauqua Kennels' White Gipse.—PUPPIES—Dogs: 1st, W. F. Clarkson's Croydon Monarch; 2d, Chautauqua Kennels' Admiral. Bitches: 1st, Geo. A. Whitney's Fay; 2d, Chautauqua Kennels' Sensation.

**DACHSHUNDS**—Dogs: 1st, A. Froembling's Tapszur Horst; 2d, G. Riel's Knirps. Reserve, Chas. F. Gentz, Jr.'s Hundesport Zaenker. Bitches: 1st, Chas. F. Gentz, Jr.'s Lina L.; 2d, A. Bielenberg's Alma.

**BEAGLES**—CHALLENGE—1st, B. F. Lewis's Doctor.—OPEN—Dogs: 1st, Middletown Kennels' Adam; 2d, G. D. Weldon's Pomp; 3d, Oakview Kennels' Mr. W. B. Bitches: 1st, C. A. Perkinson's Jenny Lind; 2d, Middletown Kennels' Snow; 3d, Oakview Kennels' Snowflake. Com. F. D. Swain's Spot.

**FOX-TERRIERS**—Dogs: 1st, Lansdowne Kennels' Lansdowne Poverino; 2d, R. E. Fishburn's Glendon Spark; 3d, Wm. Rodger's Jack. Very high com., Kempton Park Kennels' Black Rock. Bitches: 1st, Chesterford Park Kennels' Chesterford Flurry; 2d, Lansdowne Kennels' Lansdowne Trim; 3d, R. E. Fishburn's Glendon Dixie. Very high com., Wm. Potter's Fly and Flirt, and R. E. Fishburn's Venus II. Puppies: 1st, Wm. Potter's Paddy; 2d, R. E. Ashby's Nancy Hanky. Reserve, Wm. Gilbert's Paddy. Novice, 1st, F. Rommel's Columbian Vietsess; 2d, W. F. Reuder's Richmond Lill; 3d, R. E. Fishburn's Glendon Dixie. Very high com., Kempton Park Kennels' Richmond Lill.

**ROUGH AND WIRE TERRIERS**—ANY VARIETY.—Dogs: 1st, H. O'Connor's Galtees; 2d, Chesterford Park Kennels' The Colord Preacher. Very high com., Thomas Wise, Jr.'s, Shaun Rhue. Bitches: 1st, F. H. Garlio's Glen-shea.

**SKYE TERRIERS**—CHALLENGE.—1st, C. A. Shinn's Sir Stafford.—OPEN—Dogs: 1st, Samuel Barr's Sir Thomas; 2d, C. A. Shinn's Elphiston. Bitches: 1st and 2d, C. A. Shinn's Princess May and Lady Stafford.

**YORKSHIRE TERRIERS**—CHALLENGE.—1st, Dr. N. Ellis Oliver's Minnie York. Open—Dogs: 1st, James Foster's Ben; 2d, Dr. N. Ellis Oliver's Prince Harry. Bitches: 1st, Dr. N. Ellis Oliver's Pinkie York; 2d, James Foster's Lady Nell. Very high com., A. McGregor, Jr.'s, Maud.

**TOY SPANIELS**—Dogs: 1st, Mrs. A. M. Goldsmith's Calumet St. Cyr. Bitches: 1st, Mrs. A. M. Goldsmith's Calumet Alice.

**BLACK AND TAN TERRIERS**—CHALLENGE.—1st, Charles Wilson's champion Queen III.—OPEN—Dogs: 1st, Chesterford Park Kennels' Rochelle Oolah; 2d, McLean & Eardman's Rochelle Sultan. Bitches: 1st, Chas. Wilson's Canada Queen; 2d, Chesterford Park Kennels' Chesterford Betsy. Very high com., McLean & Eardman's Lotta.

**TOY TERRIERS**—OTHER THAN YORKSHIRES, UNDER 7 LBS.—1st, Louis Stein's Fairy; 2d, C. A. Woodruff's Dinkie.

**PUGS**—CHALLENGE.—Dogs: 1st, Mrs. S. E. Davies's I. C. P. Sprake. Bitches: 1st, Cumberland Kennels' Bo Peep II.—OPEN—Dogs: 1st, German Howard Park Kennels' Drummer; 2d, Cumberland Kennels' Uncle Bob. Bitches: Mrs. S. E. Davies's Toadie; 2d, German Howard Park Kennels' Miss Decima.—PUPPIES—Dogs: 1st, Cumberland Kennels' Uncle Bob.

**ITALIAN GREYHOUNDS**—1st, Kennel Lawrence's Sprite II.; 2d, Hugh E. Keough's Tagliani.

**POODLES**—1st, L. A. Biddle's Berri; 2d, Alphonse Vandendale's Blanchet.

**MISCELLANEOUS**—OVER 30 LBS.—1st, Phil J. Walsh's Carlo; A. H. Bremer's Jeff.—UNDER 30 LBS.—Withheld.

### A Day at Hempstead.

ANY one who is fond of animals, whether horses, cows, dogs or even chickens, may find many worse places to spend a day than at the Hempstead Farm, over whose destinies Mr. Jas. Mortimer presides.

One Thursday a short time since we felt the need of a little unofficial outing, and accepting an invitation "almost gray with age," so long and often tendered, we found much to interest one the day through. It is not our purpose to go into any description of the Hempstead Farm Kennels, as it is an oft told tale by this time. A four-mile drive from the station and we arrived at the farm, where Conrad II. and Woodmansterne Trefoil and a very likely looking dachshund pup by Jay, rushed out to welcome us. The collies mentioned are well known on the bench, and their victories have earned them the freedom of the farm, seemingly. They were not in full coat, but looked in good health.

It would be needless to describe all the dogs we saw. The kennels shelter a little of almost everything canine, though pointers and collies are the mainstays. There are, besides a number of Russian wolfhounds, among them some promising pups by Groubian out of Zmekia and a few fox-terriers, Irish terriers, poodles, etc. In a yard of pointers we picked out Hempstead Blossom, second at Providence, as an improving sort. Another good youngster is Hempstead Luck, especially from the head back. Then Mr. Mortimer took us to what may be well termed the nursery, letting out a yelping, tearing crowd of wolfhounds, collies and smooth and wire fox-terrier puppies from two to four months old. Out of the din we picked a couple of nice three-months-old collies, by Conrad II., one especially being very promising. Of course we saw the "pillars of the stud," Duke of Hessen, Robert le Diable and that good bitch Woolton Game, whose son, Hempstead Duke, was that day running well down at Newton, N. C.

Jumping into the trap Mr. Mortimer winked his "alter ego," intimating that he had a surprise in store very soon in the shape of some puppies out at walk. A drive of a mile or two and stopping at a farmhouse he whistled up some pointer and collie puppies. The pointers are by Sandford Druid out of Hempstead Kit, four months old and as handsome a lot as one need wish to see. Two of them are especially promising, and if they go on as they have commenced they will prove winners. The two collies are by Woodmansterne Trefoil out of Green Mountain Lass, and are six months old. They are well grown, and while one shows a splendid, long, thick coat, the other is the better looking and is quite a nice one. Knowing how a man continually seeing certain dogs becomes a little sweet on individual specimens, we held our peace when Mr. Mortimer intimated that we were drawing near to a *chef d'œuvre* in the way of collies. Arriving at another farmhouse, however, it did not take us the space of a wink to pick out the apple of his eye from the three young collies that rushed up to us. This is a sister of those we saw at the first place, and she is a beauty, especially well grown, in fact, a large, lengthy bitch for her age, beautiful head and expression, ears carried properly, nice coat and good loin. She is bound to be a winner if she keeps her head. The other was fairly good, and a younger one by six weeks, by Conrad II. out of an inferior bitch, is very promising. Coming home we stopped at another place, when the last one of this good litter jumped up to greet us. It has a capital head and coat, and excellent bone showed good raising. At another place we came across a very likely Irish terrier pup by Larry.

The wisdom of putting puppies out at walk was very apparent in the way these youngsters looked compared to the others who had to take pot luck in the crowd at home. Returning to the farm we saw a pack of beagles and among them Glory and Millard, that did so well at the N. B. C. trials of 1892. These are to be used as a subscription pack and hunted by several of the hunting set around Hempstead. In the house we were introduced to a well-made young greyhound, Norway Cross, by Norwegian out of Bueniterito, and therefore a brother to the noted Buenarita. Since writing the above this dog won first at Newark show.

After dinner we drove to Mr. German Hopkins's place, about a mile from the village. On the way we called at Mr. A. D. Lewis's stables, where a capital litter of beagles, by Jester, was shown. Two of them I think have a future.

Driving on we found "Our only German" up to his knees in terriers of all ages and degrees of quality. We have already described Mr. Hopkins's place and how well adapted it is for a boarding kennel with its excellent exercising grounds and range of box stalls. Here was Baby Trigger, looking in fine trim, and also the Forest and Stream pup (champion Baby Mixer—Burlington Diadem) had evidently found a good home, as he had grown almost out of remembrance in the last three months. Some likely cockers were also running round. They are by Red Jacket, we believe. One black and white is above the average. After a lively scrimmage between the whole crowd of terriers that at one time promised to be serious for one or two old bitches, and that reminded us when we all tried to part them, of a Thanksgiving football match when Yale tries the Deland wedge, we adjourned to the house where with terrier gossip and an examination of "German's" old country relics and mementoes train time came all too quickly, and bidding a hasty good-bye we felt that one day at least had been well and enjoyably spent.

### Providence Dog Show.

[Special Report.]

THE fifth annual dog show of the Rhode Island Poultry Association came to a close on Friday last. One hundred and twenty-four dogs of good quality were entered, English setters and cocker spaniels being the strong classes. C. H. Jenks and Dr. L. Burt officiated respectively as superintendent and veterinarian. The benching was of a poor sort and the dogs lacked the room they should have had owing to the poultry taking up the greater part of the hall. This was, perhaps, because the committee were chickenmen and not dogmen. This state of affairs they mean to alter next year. The attendance was not bad considering the weather, which was very far from pleasant. J. Otis Fellows judged all classes and seemed to give general satisfaction.

Among the fanciers I noticed were Mr. Geo. W. Lovell, W. Burke, German Hopkins, Dr. H. T. Thurber, H. S. Babcock, A. H. Wakefield, J. P. Willey, F. W. Chapman, R. L. Keach, W. F. Kenney, M. D., Mr. and Mrs. Spink, J. H. Boutelle, F. Otto, Mrs. J. R. B. Hill, Miss S. A. Nickerson.

Mastiffs did not draw. Abe, the only mastiff who turned up, is not a bad dog, head fair and showing good wrinkle, feet and legs fair, coat too long and coarse, ears large, body good, and if shown in good condition would be greatly improved.

In St. Bernards the puppy Eulalie was alone in her class, and the only entry made in this breed. She is not a good one, although she is fair in feet and legs, coat and color good, but is too short in body, very snipy in muzzle and head too flat; shown in good shape.

In beagles the Glenrose Beagle Kennels had it all their own way. Diamond Tartar won first in puppies; has a bad-shaped skull, is not straight in front, but may develop into a fair dog, as he is only seven months old. Parthenia and Gypsy A. are both prize winners and have been described many times.

In smooth fox-terriers, open dogs, only one turned up, Beverwick Bobbin, a terrier showing lots of character, is light in eye, uncertain carriage of ear and a bit snipy. In wire-hair terriers Oakleigh Bruiser and Suffolk Tassel are well known. Hill Hurst Rose is too wide in skull and coat soft; she was the only puppy shown.

Mr. J. P. Willey showed a strong team of cocker spaniels,

as did Mr. F. W. Fiske. Jersey Obo, who won first in challenge dogs, is better than Bambo, but too long in body. Bambo, second, is cloddy and bad in legs. Black Duchess is well known and needs no comment.

The balance of the classes require no mention as the winners are generally known. The English setter classes were well filled, and Miss S. A. Nickerson showed her Gordons Janet, Count Noble and Lady Noble, who all looked in the pink of condition.

Mr. Geo. W. Lovell, who had a nice kennel of pointers, had it all to himself, among them being Wild Lily and Prince Pontiac. Glen Rock Kennels showed Duke of Kent II. and Twinkle, the former a many time winner. Twinkle is a fair-looking dog, winning over Dan. Dan is a big dog and was shown in splendid condition.

### AWARDS.

MASTIFFS.—Dogs: 1st, E. Redman's Abe.—PUPPIES.—Dogs: 1st, W. H. Addison's Philip.

ST. BERNARDS.—SMOOTH-COATED.—PUPPIES.—Bitches: 1st, G. W. Patterson's Eulalie.

GREYHOUNDS.—Dogs: 1st and 2d, D. B. Lemley's Imperator and Vigilant; 3d, Wm. F. Warner's Springbok. Bitches: 2d, D. B. Lemley's Wild Idle.

AMERICAN FOXHOUNDS.—CHALLENGE.—Dogs: 1st, Dr. H. T. Thurber's Elite. Bitches: 1st, Dr. H. T. Thurber's Femur.—OPEN.—Dogs: 1st, Dr. H. T. Thurber's Deacon; 2d, Parson. Bitches: 1st, A. H. Thresher's Daisy.

BEAGLES.—CHALLENGE.—UNDER 13IN.—Bitches: 1st, Glenrose Beagle Kennels' Butterly.—OPEN.—Dogs: 1st, Glenrose Beagle Kennels' Paderewski; 2d, Little Lee. Bitches: 1st, H. Hanson's Lady of Denmark.—PUPPIES.—Dogs: 1st, T. Shalross's Diamond Tartar.—OVER 13IN.—CHALLENGE.—Dogs: 1st, Glenrose Beagle Kennels' Parthenia.—OPEN.—Dogs: 1st, Glenrose Beagle Kennels' Sir Thomas. Bitches: 1st, Glenrose Beagle Kennels' Gypsy A.

POINTERS.—HEAVY-WEIGHT.—CHALLENGE.—Dogs: 1st, Glen Rock Kennels' Duke of Kent II.—OPEN.—Dogs: 1st, Glen Rock Kennels' Twinkle; 2d, J. E. Lawrence's Dan.—LIGHT-WEIGHT.—CHALLENGE.—Bitches: 1st, Geo. W. Lovell's Wild Lily.—OPEN.—Dogs: 1st, Geo. W. Lovell's Prince of Pontiac.—PUPPIES.—Dogs: 1st, Geo. W. Lovell's Prince of Pontiac.—NOVICE.—Dogs: 1st, Geo. W. Lovell's Neal of Pontiac.

ENGLISH SETTERS.—Dogs: 1st S. B. Allen's Dad Monarch; 2d, J. Whipple's Gaseau; 3d, A. J. Lewis's Prince L. Very high com. Reserve, Mrs. L. K. Peck's Norman. Very high com. D. J. Peters's Robin Goch. Bitches: 1st, T. J. Dunn's Dunn's Flora; 2d, L. N. Hamblin's Blue Dawn.—PUPPIES.—Dogs: 1st, A. J. Lewis's Harry L.; 2d, W. Regester's Pop Monarch; 3d, J. Dubuque's Reverdy II. Reserve, T. J. Dunn's Rowdy Monarch. Very high com. and high com. H. Joachim's Dan and Dick. Bitches: Equal 1st, A. J. Lewis's Lily L. and J. M. Whipple's Reverdy's Leah; 2d, F. J. Capron's Dot Monarch; 3d and very high com. reserve, A. D. Fiske's Gladys Kent and Sing-ld. Very high com., C. A. Starin's Rose S.

IRISH SETTERS.—Bitches: 1st, N. McIntosh's Maid of Borstal.

GORDON SETTERS.—CHALLENGE.—Bitches: 1st, Miss S. N. Nickerson's Janet.—OPEN.—Dogs: 1st, Miss S. A. Nickerson's Count Noble. Bitches: 1st, Miss S. A. Nickerson's Lady Noble.—NOVICE.—Bitches: 1st, Miss S. A. Nickerson's Lady Noble.

COCKER SPANIELS.—CHALLENGE.—Dogs: 1st, J. P. Willey's Jersey Obo; 2d, Edwin W. Fiske's Bambo. Bitches: 1st, J. P. Willey's Black Duchess.—OPEN.—Dogs: 1st, Edwin W. Fiske's Jay Kay; 2d, J. P. Willey's Jake W.; 3d, Mrs. H. Brownell's Smuts. Reserve and very high com., Wildfire. Bitches: 1st, J. P. Willey's Flossie Butter; 2d, C. G. Browning's Flush B.; 3d, Chas. E. Shean's Nora. Reserve and very high com., Cocktown Cleo.—OTHER THAN BLACK.—Dogs: 1st, Brantford Rufus; 2d, J. P. Willey's Little Ben II.; 3d, J. R. B. Hill's Spot. Bitches: 1st, J. P. Willey's Miss Bow Wow; 2d, Red Noble. NOVICE.—Bitches: 1st, C. G. Browning's Daisy B.; 2d, Edwin W. Fiske's Ginger.

COLLIES.—CHALLENGE.—Bitches: 1st, Lambert Stansfield's Highland Fred.—OPEN.—Dogs: 1st, Lambert Stansfield's Highland Bobbie; 2d, Fred. J. Gregory's Mountain Rover; 3d, John R. Howe's Royal Chief. Bitches: 1st, Lambert Stansfield's Highland Rose; 2d, Al De Ber Collie Kennels' Maritana; 3d, Flurry.—PUPPIES.—Dogs: 1st, Lambert Stansfield's Highland Bobbie. Bitches: 1st, I. C. Felch & Son's Sweet Russet.—NOVICE.—Dogs: 1st, Lambert Stansfield's Highland Bobby; 2d, Fred. J. Gregory's Mountain Rover. Bitches: Equal 1st, Lambert Stansfield's Highland Rose and L. K. Felch & Son's Sweet Russet.

BULLDOGS.—OPEN.—Bitches: 1st, Robert F. Keach's Charmion.—PUPPIES.—Dogs: 1st, Dr. J. W. Bond's Judy B.

BULL-TERRIERS.—Dogs: 1st, Daniel J. Mahler's Lord Nelson; 2d, William H. Hunt's Major. Bitches: 1st, Perry A. Fuller's Loumont Kit.

FOX-TERRIERS.—SMOOTH.—Dogs: 1st, Andrew Hopper's Beverick Bobbin.—PUPPIES.—Bitches: 1st, Dr. W. G. Kendall's Fleur.—NOVICE.—Dogs: 1st, Andrew Hopper's Beverick Bobbin.—WIRE-HAIRED.—Dogs: 1st, H. H. Hunnewell, Jr.'s, Oakleigh Bruiser. Bitches: 1st, G. M. Carnochan's Suffolk Tassel.—PUPPIES.—Bitches: 1st, H. M. Hunnewell, Jr.'s, Hill Hurst Rose.

IRISH TERRIERS.—CHALLENGE.—Dogs: 1st, W. F. Kenney's Crib.—OPEN.—Dogs: 1st, Barney Boy.—OPEN.—Bitches: 1st, Robert L. Keach's Nancy.—PUPPIES.—Dogs: 1st, Dr. W. F. Kenney's Bravely; 2d, James Flinn's Leinster. Bitches: Dr. W. F. Kenney's Belle of Shannon.

BOSTON TERRIERS.—Dogs: 1st, E. C. Spink's Paddy. Bitches: 1st, S. D. Spink's Bridget; 2d, Esther Deffley's Buzz.

FRENCH POODLES.—CURLY COATED.—BROWN.—Dogs: 1st, H. M. Hunnewell, Jr.'s, Diamond; 2d, Poo-Bah. Bitches: 1st, Hill Hurst Kennels' Vivette.—BLACK.—Dogs: 1st, Meadowmere Kennels' Milo. Bitches: 1st, Meadowmere Kennels' Dinah.

CHESAPEAKE BAY DOGS.—Dogs: 1st, Rough; 2d, M. B. Alton Smith's Cleveland; 3d, Marengo. Bitches: 1st, Rose; 2d, M. B. Alton Smith's Minnie.

MISCELLANEOUS.—Dogs: 1st, Jason E. Lawrence's Pete.

### Flaps from the Beaver's Tail.

TORONTO, Can.—At the annual meeting of the Sheep Breeders' Association, which is taking place in Guelph this week, I see by the programme that two of our well-known dogmen are down to read papers. Mr. Richard Gibson, who is at home in any department of live stock, has prepared an essay on "Breeding to Type" and Mr. W. Mole's, V.S., paper is on "Goiter in Sheep."

Mr. F. S. Wetherall, of Compton, Quebec, proposes attending New York show, and any Canadian breeder who has an entry or two to send could not do better than communicate with Mr. Wetherall, as he will have time to look after a few others in addition to his own.

Dr. James Lawrie, of Quebec City, is getting together a nice little kennel of dachshunds and a few months ago bought three reds, a dog and two bitches, from Mr. A. D. Smith, Beamister, Dorset, England. They are all of the one litter, June 19, 1893, and are by Snapdragon II. (Snapdragon—Zenica) out of Nettlebury Sheila (Jackboot—Duckmanton Dina Belle). Back of this are champions Yerga and Jackdaw, and others as good.

Beverwyck Ray, a neat smooth fox-terrier bitch, by Dobbin out of Beverwyck Moonray, has been added to Mr. A. Macdonald's string. She was bred to champion Blemton Trump before he left for California.

Lord Aberdeen, the first prize rough-coated St. Bernard puppy at the late Toronto show, has been disposed of by the Bowmanville Kennels to Dr. Manes, of Sheffield, Ont. His dam, Maypole, first open and first novice at same show, goes to Detroit, Mich.

Mr. E. H. Caddy, Bedington, Ont., is getting a nice dog from C. H. Akery, of Tonawanda, N. Y., in Lord Huappa, by Alton out of Keepsake. Mr. Caddy has also made one or two recent purchases from local breeders.

H. B. DONOVAN.

The Cumberland Kennels will sell their dogs by auction at Nashville on Dec. 21. Mr. Goodman, the manager, was busy at Chicago securing bids and, we believe, was quite successful. Mr. Goodman will sever his connection with the company Jan. 1, 1894.

### English Kennel Club Show.

WE add to our remarks of last week on this great English event:

The English setter judge, Rev. W. Serjeantson, after complaining of the lack of feather and condition of many of the exhibits explained by their keepers by "You see, sir, he has only just come down from the moors," that "Small and light-boned bitches continue too much *en evidence*—scarcely the sort to produce big-boned offspring with size and substance."

In retrievers he acknowledges that he was caught napping. One of the dogs, Sapper, an excellent one, but throaty, was put second to another good one, Blizzard, on this account, but unfortunately the judge remarked to his handler that he ought to pull the collar up more. This the individual was smart enough to do when he came in again, and the judge, forgetting his previous decision and its cause, placed him first over Blizzard, who had beaten Sapper in the previous class. "How his keeper must have chuckled!" remarks the reverend judge.

Mr. Moses Woolland in writing of the spaniel entry congratulates himself on the number shown—125—and after remarking that the exhibition on the whole was excellent, but not up to last year's form, touches on the question of judging novice classes first. He says: "This is an innovation I for one do not like. Often a forward puppy stands out very prominently beyond the other juvenile competitors, the result is an easy win, and it is not at all unlikely the impression then made is calculated to give him a higher place in the other classes than he would have otherwise obtained." There is some sense in this.

Mr. Geo. R. Krehl, who handled the collies, gives us some good advice on the "Fancy—Utility" question that should prove interesting reading and valuable if heeded: "There was an exceedingly satisfactory gathering of the clans, and upon making a calm review of the exhibits after the busy judging day had passed over, I was gratified to observe that the collies at the Kennel Club bore evidence to the success of the recent crusade against Barzol heads. The fancier was pulled up just in time, and had the sounding of the danger note been postponed, the movement in favor of long and narrow heads, with prick ears, would have gained a momentum almost impossible to arrest. However beautiful we may breed our collies, let us always bear in mind that they are sheepdogs, a working breed, and let us resist the efforts of the lucre-led crew who seek to reduce the collie to the level of a fancy breed. We can breed a good collie and show him honestly, and so have no need to acquire the petty wiles and paltry artifices that do not elevate the exhibition of some 'fancy' dogs. With pups it is different, their narrow skulls develop with age and assume the proper shape, but in the old dogs I think I was able to find winners with brain-room and intelligent collie expression. Breeders, in their craze for a very small and highly-carried ear, have nearly lost the characteristic ear of the collie, which should not be too small and only semi-erect with the tips carried sideways."

Speaking of the novice winner Gold Dust he makes use of a good expression, "Dingo ear" in describing his fashionable ear that is almost pricked. Putley Don, the new crack, is spoken of as being too short in the coupling—not having liberty enough—otherwise he would be near perfection. When Great Gun, Southport Pilot and Stracatro Ralph met in the winners' class the latter was palpably out of it, did not show himself properly—too lethargic. "Southport Pilot is a very lovely little creature, but his vanquisher has the better of him in working qualities. Great Gun's flag was afterward lowered by Chorlton Prescilla, who surpasses him in collie character and is better in front."

The dachshund judge, Mr. Montague Wooten, gives a voluminous report on his classes, but space forbids our giving more than his comments on the breed generally. He writes: "In commencing my review of this breed, I wish to point out that, as far as possible, I give the preference to dogs that are sound, and at the same time of the correct type, rather than to those that, while perhaps excelling in head properties, are such cripples that they can hardly stand still, let alone walk. I believe that knocking over is hereditary, while being out at elbows is to a large extent dependant on rearing. Consequently the former, in my opinion, is a worse fault than the latter, though an out-at-elbows dog is not much use for a dachshund's work."

About Jackdaw he says, "I have only the usual thing to report—he was present and he won. Despite his seven years the little marvel is as sound and fresh as ever he was, and romped in later for the championship and challenge cup."

Mr. Pybus-Sellon gives a good report of his bulldog classes, and when he comes to the winners' class delivers himself of a little screed on the question of whether Dockleaf is a cripple or not. We remark, however, that he has nothing to say about this dog's failure to negotiate much distance in the recent walking match. He says: "Winners' class under 45lbs., only contained Dockleaf and Forceps. The latter looked like a dying dog and had to be taken out of the show. The winner, Dockleaf, became famous because on his first appearance the *Field* wrote that he was a cripple, deformed in forequarters, and should never be admitted to the prize list. The value of this reporter's eccentric notices can be gauged from the fact that the dog has since had an unbeaten record, has won all possible honors under seven different club judges of the highest standing, all of which have been emphatic in condemning this extraordinary and misleading report. Whatever failings the dog may have, I unhesitatingly say that his gait, swing, roll and action are perfect, and the judge who can find any fault in this respect must indeed be hard to please. Talking of cripples, I have heard British Monarch, Diogenes and Cervantes stigmatized as such by certain fanciers and more than one well known judge. With such men it is useless to argue. These are the stamp and type of dog to be bred up to and encouraged, and long may they flourish to the discomfiture of the coarse, cabbage-eared, haw-eyed, pointer-legged, terrier-bodied specimens which were so pushed to the front and held up as 'models' by the *Field* reporter a few years ago."

The most notable new appearance in smooth fox-terriers was High Spirits, the winner in novice dogs, puppy and limit classes. Mr. F. Redmond speaks highly of him, but hardly thinks he is enough terrier, and his head should be longer. In the winners' class Venio and Vice Regal came together and we let Mr. Redmond explain his decision: "Winners' class brought out Vice Regal and Venio; both were put down in the pink of condition, but the old dog, although he lost points in size, scored decidedly in feet, pasterns, shoulders and quarters, which gave him the award. Vice Regal is not the dog he was; he has deteriorated most decidedly in feet and pasterns, and he has not improved in shoulders and chest."

In wires Prompter beat Jack St. Leger and took the challenge cup also. In Irish terriers the show was a record one, and Mr. Pim speaks very highly of a new one, Brunby's Briar Paddy Malone: "First very easily; grand head, coat, color, body, legs and feet, he has only one fault, a lightish eye, but if he gets over the ills of puppyhood he may win all before him."

Mr. Clear's Breda Nuxis was the particular star of the show and won all before him. Space does not admit of our noticing the other breeds this week.

Mr. E. B. Elliott sold the well known Chesterford Flurry, first in open bitches, to a new foxterrier fancier, Mr. W. H. Collins, of Chicago, who has a small kennel of sixteen already and is getting more from the East. A good fox-terrier kennel should do well in Chicago.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

## Dogs, Game and Texas.

From Mr. J. Leight, Beaumont, Texas, I received a letter recently in which there are some items of information which are interesting to the public. Mr. Leight is a dog trainer, therefore his reference to the game seasons, etc., are mostly from his professional standpoint. He says:

"Kennel matters are at a low ebb here, because very few sportsmen in this State own, or have seen well bred or well trained dogs at work; and they are not willing to pay just prices. Besides, fleas, screw-worms, and most of all, ticks make sad havoc among both young and old dogs."

"Then, in the southwestern section of this State, rattlesnakes are bad. But the shooting is grand. I know of sections where I have worked dogs on chickens, quail, jacksnipe and woodcock in the proper seasons, and also where geese, ducks, deer, sand-hill cranes, squirrels, cotton-tail and swamp rabbits could be found, also some bears and turkeys, and all within a fifty-mile circle. Fair bags of any of the above-mentioned kinds can be made almost any time, except when excessive rains or droughts scatter the birds or animals or cause them to migrate to the water courses. The rains are generally the most troublesome in East Texas, and the drought the most troublesome in this section or Southwest Texas, although this season drought was as bad in East Texas as here, an uncommon occurrence. The ground became so parched and dry that great openings or cracks formed on the black sand prairies. We could not work the dogs on chickens for fear that the horses would break their legs, or that the wagons would be broken."

"The weather in this State is a great factor in the shooting and fishing. For instance, I recall a little trip I once took with a friend on or about Christmas Day. We were fishing for black bass (called trout here), about five miles out from town. We were comfortable in our shirt sleeves. To the east of us we could hear the guns of parties who were shooting quail. To the west were parties shooting squirrels and mallards in the woods among the acorns. We could hear the music of a pack of hounds in the distance running deer between us and town. Some of the deer crossed the road in front of our team on the way home. Thousands of mallards could be seen passing overhead to and from the lakes and ponds on the prairies, to their feeding places in the timber where the ground was covered with acorns. Within about two miles of town, we drove along a large marsh and hundreds of the longbills rose. A half mile further on, we passed by our best woodcock ground, but the big-eyed brownies were not there that day, the weather northward not being cold enough to drive them to us. In five or six days afterward, when the ground was white with a slight fall of snow, a friend and myself bagged nineteen woodcock there. The perspiration ran from every pore as we endeavored to keep up with and find the pointers after they had located the birds among the vines and thickets. We must have fired over fifty shots. Such is the weather and shooting in Texas."

From a gentleman who owns a kennel of setters for his own pleasure in sport afield, I received a letter which contained many kind words for FOREST AND STREAM, and a request to myself to write something on handling dogs afield for the benefit of owners who are amateurs, which request I will keep in mind, and comply with it at the first opportunity.

But the paragraph in his letter which I most desired to bring into notice is as follows: "I did not write this letter for publication, but if you desire to make use of it to bring out expressions from others, you may do so, although I prefer not to see my name in print, fearing that it might bring about some unpleasant and uncalled for criticism, such as has been going on in the columns of — and which is so very detestable."

The columns of FOREST AND STREAM are weekly in evidence that a writer whose governing impulses are malice, ill temper or spitefulness has no place in them. The gentlemanly writer can express his thoughts without fear of attacks from vulgarizers. The Western office receives, now and then, effusions which are considered good literature by some papers I could mention, but here they go expeditiously into "innocuous desuetude."

While at Newton, N. C., I had, in company with Messrs. Titus and Arnott, a most pleasant two-hour shoot over Maid of Kent during the midday hours, while Rip Rap was laid by till the hour came for his afternoon work, he having a bye in the Subscription Stakes. To Mr. C. E. Buckle's invitation and supervision we were indebted for the pleasure. Two beaves were found by Maid, and except that she lost some of her youthful dash, she showed the abilities which had made her such a formidable competitor in field trials. As it was, she proved to be a most charming, shooting dog, and no plug either at that.

Mr. Arnott, who was shooting a strange gun, with much execution nevertheless, wounded a single bird, which flew with unsteady wing into a small thicket close by. Suddenly a hawk appeared. Whence he came no one knew. He flew swiftly to the wounded bird, grasped it in his talons, and with labored flight started away with his prey, whereupon Mr. Arnott paid him special attention with a well directed shot, which made a great opening out and detaching of feathers, and the next moment the hawk dropped his prey and departed hurriedly. The poor quail was badly mutilated by the hawk's talons. High up in the sky, a mere speck floating about, we saw another hawk. We presumed that its companion had from the great height seen the wounded quail and darted down to it in a twinkling.

On my return I stopped over a day at Charlottesville, Va., and was the guest of Mr. C. E. Buckle. His home—a most homelike place it is—is just without the limits of the city. I had expected to find a home such as the dog trainer of nomadic tastes generally has; that is, one which can be left for a new one at a few moments' notice, but instead there was a neat modern house of pretty architecture, a barn with good horses in it and skilfully arranged kennel building with a large yard neatly fenced in, which ran an eighth of a mile or thereabouts into the woods. Everywhere the most scrupulous neatness prevailed. Besides his penchant for dogs, Mr. Buckle is quite a chicken fancier and has some valuable specimens.

In the afternoon we drove over to Capt. McMurdo's place, which is three miles from town, and which proved to be a nicely equipped farm with several acres of vineyard which produced tons of grapes the past season. I remember my stay in Charlottesville as the pleasantest part of a pleasant trip.

Mr. Geo. E. Gray will endeavor to perpetuate the line of breeding which has resulted so successfully. He has purchased Pearl's Dot of Mr. R. L. Shannon, and has sent her on to be bred to King of Kent. These two dogs, it will be remembered, are the sire and dam of Strideaway.

B. WATERS.

909 SECURITY BUILDING, Chicago.

Mr. Reick returned on the s.s. Gasogne from Havre last Saturday but did not bring anything new over with him in St. Bernards. He saw nothing at Birmingham that pleased him much excepting Lady Mignon, who is held absurdly high. The day for very high prices for St. Bernards is past as far as Americans are concerned, and, considering everything, it is better that it should be so.

## DOG CHAT.

## Roche Tacit Arrives.

Mr. A. C. Bradbury has received Dec. 9, per s.s. New York, the wire-hair fox-terrier bitch Roche Tacit. She is due to whelp Dec. 24 to Roche Talma, winner of the fifty-guinea grand challenge cup at Oxford and many other prizes. This bitch should have come out before, as noted in our columns last June, but owing to the dilatoriness of the Kennel Club in sending certificates, she whelped before she could be shipped. Therefore she stayed over for another visit and the pups were sold in England. Mr. Bradbury is also in treaty with Mr. J. W. Taylor, of Oldham, of whom he purchased Tacit, for several other dogs, the wire Daylesford Bush, winner of nearly thirty firsts and cups; Tormentilla, a breeder of winners and a winner herself, and another bitch bitch called Torture. An offer has also been made for Roche Talma. There seem to be lively times ahead for the wires, and we are sure that those who own the best over here at present will welcome the competition in store. The noted greyhound Jenny Jones is being nibbled at, and if she comes over she is sure to live things up among the longtails. The Maybrook Kennels are also devoting some attention to Irish terriers, and some importations may be looked for shortly.

We alluded some time since to the purchase of the Irish terrier Hazard by Mr. Weld, owner of the Huguenot Kennels, New Rochelle, N. Y., and this gentleman sends a list of his winnings, which, unfortunately, we cannot find space for here. The dog won thirty prizes in England and was whelped July 4, 1889. He is said to be a good little terrier, of the racy type, nice head, legs and feet, with perfectly carried, small drop ears. His coat is red and of the proper texture; weight 23lbs. Mr. Weld will show him in the spring and place him at stud.

## Raby Trigger Sold.

Raby Trigger has left the Grove Kennels, at Hempstead, L. I., and will chase cats, or otherwise indulge his game terrier propensities, in Germantown, Pa. His new owner is Mr. H. E. Cook, who is starting a kennel in a quiet way.

Mr. John H. Congdon, of Providence, R. I., sends in a capital picture of his new purchase, the bulldog King Lud, which shows this dog's grand head off to perfection. By the way, the bulldog article printed in these columns recently has created very favorable attention to the breed, and from letters received, inquiring where good ones can be obtained, we presume there will be some recruits to the fancy very shortly.

There was not much news stirring at Chicago. Sales were slack and many of the exhibitors were disappointed in this respect. Mr. Tim Donoghue sold his young English setter Monk of Furness Rap, to T. G. Davey, of London, Ont.

Mr. Jarrett, as he could not sell began to buy; a nice white setter pup out of Mr. Davey's lot took his fancy. There may be some deep scheme on foot in Chestnut Hill. Mr. Jarrett had repeatedly said he would like to breed some white collies, and this may be a move in that direction.

Seminole Kennels, through Ben Lewis, sold the collie pup, second prize winner, to a Chicago gentleman; also an Irish terrier to Gen. Miles.

Mr. Schallenberger, the owner of the St. Bernard Aristocrat, has purchased Melrose, the noted smooth, from Mr. Moore. It was entered at Chicago, but did not arrive in time.

## No Let-Up.

Wearied by the damnable iteration of a certain chronic growler's outcry against FOREST AND STREAM, some one has been beseeching him to "let up on it." To this the howler very properly makes reply, "Why should I let up? Men have rights as well as dogs. A dog bays the moon, and I may howl about FOREST AND STREAM if I want to. I propose to howl." And he is quite right. No one has any call to interfere. The case finds a parallel in the story told by Henry Ward Beecher about his father's dog, Noble, which, "having once seen a woodchuck disappear down a hole, was accustomed whenever he had an afternoon off to go and bark at that hole for hours at a time." It was a perfectly harmless proceeding. It did not hurt the woodchuck; the neighbors got used to it, and it pleased Noble so much that no one ever thought of interfering with the old dog's exercise of his franchise or asking him to "let up."

We regret to learn that Dr. N. Rowe, of Chicago, is so seriously ill that he no longer has any direct hand in the journalistic work with which he has so long been connected.

A regular meeting of the Boston Terrier Club will be held at Young's Hotel, Wednesday evening, Dec. 20, at 7 P. M. Members are earnestly requested to attend.

Dr. Kenney, of Providence, not content with his Crib first at Providence and Newark, is getting another "Irishman" from the other side.

There has been considerable speculation among bulldog fanciers as to who had imported the noted bulldog Found It. We are now in a position to state that Miss Maie Byrne of New York city imported the dog. Becoming charmed with the breed while on a visit to England this summer, she commissioned a friend to buy a good one, and, to make a cheap joke, he found it, and Miss Byrne paid \$400 for her fancy. Found It is a brindle and will be shown at New York. He arrived last Saturday.

Rinada Kennels, we understand, have purchased the pointer bitch Hempstead Kit since the Newark show.

The Akron show, which is on this week, closed with 130 entries.

The entry fee for Saratoga show has been reduced to \$2 and for selling class the fee is now \$1.

The auction sale at Chicago was a failure. Mr. Tim Donoghue was the auctioneer and tried his best. The sooner such affairs are discontinued the better it will be for breeders.

Gaining the consent of exhibitors the Chicago management kept the show open on Sunday. Several exhibitors did not agree with this innovation and left Saturday night. It is a practice that must be discontinued. Kennelism has enough to contend with without flying in the face of public sentiment in that way.

The great Dane Fannie M. slipped her collar during the Chicago show and made good her escape from the show building at Chicago. Up to the time we left she had not been recovered.

We are sorry to have missed Mr. Samuel Jagger when he called at this office last week. Mr. Jagger is a St. Bernard

man, and the owner of the celebrated Lady Mignon, who has already won twenty-six first prizes and nineteen specials and one championship prize since April last. The parents of Marvel, Maplecroft, etc., all came from Mr. Jagger's kennel. If this gentlemen could stay over for the New York show, it would be a good move to get him to judge. It would afford an interesting change. Mr. Jagger will visit the principal kennels during his stay of several weeks.

Mrs. Smythe's St. Bernard bitch Sunray stole a march on her owner and whelped Friday night at the show. It is scarcely necessary to say that she showed little sign previously of any such untoward conduct or her owner would not have exposed her to the danger in making such a long trip. Sunray will probably remain at Mr. Elliott's kennels at Maywood, Ill., till she recovers. The poodle bitch Blanchet also became a mother during the show.

On Friday night the management had information that thieves would endeavor to raid the building and steal some of the dogs. So every precaution was taken to prevent such an occurrence and the order to shoot on sight was given the watchman and additional help was secured. This was the report, but we can scarcely understand what advantage such an attempt at theft would be or how the dogs could recompense the thieves for the trouble and risk.

Ben Lewis has bought Sall II, pointer, and Newton Abbott Torso, field spaniel, of Mr. Tim Donoghue, La Salle, Ill.

## Saratoga Dog Show.

Editor Forest and Stream:

I regret the unavoidable delay in getting out our premium list, and I trust those who have not been supplied will write at once. The following specials have been received since the premium list went to press. American Spaniel Club offers \$5 for best brace field spaniels, \$5 for best brace climber spaniels, \$5 for best brace Irish water spaniels and \$5 for best brace of cockers; also the "Bell" cocker cup for the best cocker spaniel, any color, to be won four times before becoming the property of any one member; donor not to compete. Beverwyck Kennels offer \$10 for the best fox-terrier owned in Albany county, \$10 for the best fox-terrier whelped in Beverwyck Kennels or sired by one of their stud dogs; donor not to compete. J. Otis Fellows has been engaged as manager of the kennel department. This, of course, will gain the confidence of old exhibitors.

The Delaware and Hudson Canal Company have made special rates from all points on their line between Albany, N. Y., and Rutland, Vt. I again appeal to all foxhound breeders and fanciers to be present and help organize an American Foxhound Club. This breed has been neglected too long, and we should move at once in the right direction by framing a standard for this noble breed.

LYNNAN W. CLUTE, Secretary.

BALLSTON LAKE, N. Y., Dec. 12.

## KENNEL NOTES.

(Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.)

## NAMES CLAIMED.

Prepared Blanks sent free on application.

*Lady Ruth.* By Rivermont Kennels, Brooklyn, N. Y., for orange and white rough-coated St. Bernard bitch, whelped Nov. 9, 1893, by Ridgewood Don (Supurbis—Thibbe) out of Princess Vic (Leicester—Princess Jura).

*Duke of Rivermont.* By Rivermont Kennels, Brooklyn, N. Y., for orange and white rough-coated St. Bernard dog, whelped Nov. 9, 1893, by Ridgewood Don (Supurbis—Thibbe) out of Princess Vic (Leicester—Princess Jura).

*Al De Ber Blizzard.* By Al De Ber Kennels, North Attleboro, Mass., for white and sable rough coated collie dog, whelped Aug. 25, 1893, by Bendigo (The Squire—Bertha) out of Patient (Charmagne—Patience).

*Al De Ber Bendigo.* By Al De Ber Kennels, North Attleboro, Mass., for sable and white rough-coated collie dog, whelped Aug. 25, 1893, by Bendigo (The Squire—Bertha) out of Patient (Charmagne—Patience).

*Lucy Blade.* By James McAleer, Emsworth, Pa., for black, white and tan English setter bitch, whelped March 13, 1893, by Toledo Blade (Roderigo—Lillian) out of Rod's Bessie (Count Roderigo—Bessie Ray).

*Madam Raven.* By the Handsome Obo Spaniel Kennel, Omaha, Neb., for black cocker bitch (King Raven—Lady Raven).

*Madam Obo.* By the Handsome Obo Spaniel Kennel, Omaha, Neb., for black field spaniel bitch (champion Broome—Topsy).

*Handsome Obo Kennel* (formerly the Omaha Cocker Spaniel Kennel). By B. B. Mather, Omaha, Neb., for kennel of cocker and field spaniels.

## BRED.

Prepared Blanks sent free on application.

*Madam Raven—Chancellor.* The Handsome Obo Spaniel Kennels' (Omaha, Neb.) black cocker bitch Madam Raven to Raven Cocker Kennels' Chancellor (King Raven—Lady Raven), Oct. 8.

*Champion Winnie II.* Kildare Beverly. Kildare Kennels' (Allegheny, Pa.) Irish setter bitch champion Winnie (Frisco—Grouse II) to their Kildare Beverly (champion Elcho, Jr.—Ruby Glenmore), Nov. 24.

*Nellie Trissler—Kildare Beverly.* M. N. Fowler's (Foxburg, Pa.) Irish setter bitch Nellie Trissler (Tipton—Patterson's Polly) to Kildare Kennels' (Allegheny, Pa.) Kildare Beverly (champion Elcho, Jr.—Ruby Glenmore), Nov. 27.

*Dusky Diamond—Blondin Ratlier.* W. R. Mack's (Rochester, N.Y.) fox-terrier bitch Dusky Diamond to L. B. Banks's (Blondin Ratlier) (champion Venus—champion Rachel).

*Tivoli—Marengo II.* Dr. W. S. Bigelow's (Boston, Mass.) Chesapeake Bay bitch Tivoli (Don—Net) to his Marengo II. (Boatswain—Glady's), Nov. 25.

*Lala—Moses K.* F. W. Otto's (Providence, R. I.) cocker spaniel bitch Lala (Black Petal—Miss Nance) to J. M. Brown's Moses K. (Obo II.—Black Bess II.), Oct. 1.

*Candour—Romulus.* Chestnut Hill Kennels' (Chestnut Hill, Pa.) Irish terrier bitch Candour to Hempstead Farm Kennels' Romulus, Nov. 3.

## WHEELS.

Prepared Blanks sent free on application.

*Princess Vic.* Rivermont Kennels' (Brooklyn, N. Y.) rough-coated St. Bernard bitch Princess Vic (Leicester—Princess Jura), Nov. 9, eight (five dogs), by J. Wagner's Ridgewood Don (Supurbis—Thibbe).

*Patient.* Al De Ber Kennels' (North Attleboro, Mass.) rough-coated bitch Patient (Charmagne—Patience), Aug. 25, six (five dogs), by J. Brett's Bendigo (The Squire—Bertha).

*Rose.* Dr. Bigelow's (Boston, Mass.) Chesapeake Bay bitch Rose, Aug. 19, nine (four dogs), by his Marengo II. (Boatswain—Glady's).

*Chicago Fawn.* J. B. Wickery's (Pittsburgh, Pa.) English setter bitch Chicago Fawn Nov. 9, nine (four dogs), by Manitoba Shot.

*Prairie Belle.* James McAleer (Emsworth, Pa.) pointer bitch Prairie Belle, Nov. 25, ten (seven dogs), by his Rip Rap, Jr. (champion Rip Rap—Lionie Bijou).

## SALES.

Prepared Blanks sent free on application.

*Nod—Prairie Belle whelps.* Pointers, whelped April 13, 1893, by James McAleer, Emsworth, Pa., one lemon and white dog to E. W. Baston, Syracuse, N. Y.; one orange and white bitch to W. T. Brainbridge, Fairbairn, N. Y.; one orange and white dog to E. Seager, New Waterford, O.; one liver and white bitch to J. R. George, Wilkinsburg, Pa.; one orange and white dog to J. D. Bush, Peoria, Ill.; one liver and white bitch to Dr. J. G. Senour, Troy, O.; one liver and white dog to Chas. E. Fuller, Sidney Center, N. Y.; one orange and white dog to R. S. Belcher, Vienna, N. Y.; one liver and white bitch to Wm. Seager, Fair Oaks, Pa.

*Buff.* Lemon and white pointer dog, by Speculation out of Signa, by Red House Farm Pointer Kennels, New London, Conn., to E. H. Potter, same place.

*Rip Rap, Jr.—Shenango Patch whelp.* Black, white and ticked pointer dog, whelped July 12, 1893, by Rip Rap, Jr., out of Shenango Patch, by James McAleer, Emsworth, Pa., to Ed. Gibson, same place.

*Lucy Blade.* Black, white and tan English setter bitch, whelped March 13, 1893, by Toledo Blade out of Rod's Bessie, by Dr. J. G. Senour, Troy, O., to James McAleer, Emsworth, Pa.

*Prairie Belle II.* Lemon and white pointer bitch, whelped April 13, 1893, by Nod out of Prairie Belle, by James McAleer, Emsworth, Pa., to Wm. Morgan, Reading, Pa.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

J. B. W., Mayfield, Pa.—You will find some of the best Gordon and English setter strains advertised in our business columns. We do not make selections.

A. B. M., Worthington, Ind.—We do not advise where to buy dogs. Consult our business columns or better still, advertise in *FOREST AND STREAM* for what you want and you will be sure to get answers.

K. G. B., New York City.—You need not draw the milk from the teats. Unless there are signs of fever simply rub them morning and night with camphorated oil and keep the bitch warm and free from draughts afterward.

H. A. R., Schenectady, N. Y.—I have a black cocker bitch, five years old; she had pups Sept. 29, and weaned them when they were four weeks old. I want to bench her next month but she has two teats which are very large. Now what can I do to draw them up? In fact her whole bag hangs; she is not raptured but very fat, and very ravenous in her eating and drinking. Ans. Rub them night and morning with camphorated oil, and keep the bitch free from draughts afterward. Hot vinegar is also another good remedy.

E. J. H., New York.—Please give pedigree or registered number of the rough-coated St. Bernards Sents, Cora and Solo or Zola. If none of these are registered give number of St. Bernard bitch also. Ans. Sents cannot be found. Cora (20,467), by Zeno (9005, Vol. V.) out of Mayo, by Mingo out of Psyche, by Bruce out of Bess; Mingo, by Mico out of Mica. We can find no mention of Solo or Zola; perhaps you mean Zora (20,400, Vol. VIII.), by Prince out of Greta (13,321); Prince, by Alp II. out of Flora, by Barry out of Righi, whelped Nov. 20, 1890. Also is not registered, but she is by The Baron out of Paw Paw.

Hunting and Coursing.

FIXTURES.

Jan. 15.—Brunswick Fur Club's winter trials. Bradford S. Turpin, Sec'y.

Finish of the Great Meeting at Newark.  
Second Day.

SUNDAY, Dec. 3, was one of California's glorious days; indeed, no other clime on the earth can produce such weather at this season of the year, warm, brilliant sunshine, with sufficient soft, balmy air to prevent the rays of the sun from being oppressively hot. Such a day, surely, is the coursing man's delight, and accordingly the turnout for Newark was immense. All the surrounding cities and towns were well represented, and before the coursing commenced there could not be far from 400 on the grounds. The ladies, too, came out in full force, and it is evident that the sport of the leash has many enthusiastic admirers among the fair sex of California.

There was a big day's work before the club, for thirty-two of the seventy-four dogs listed on the card were still in, besides a puppy stake of twelve dogs, and the most sanguine never dreamt that both stakes could be finished. But the field officers made up their minds to work, and after a few minutes were spent in getting photographs of the dogs and the assembled crowd, Mr. Grace went into the saddle and precisely at 11 o'clock the first pair of dogs were handed to Mr. Wren.

The first two courses were not equal to the trials held on Thursday, and fears were at first expressed that the hares were not so good as those on the first day, but this was soon seen to be an error as course followed course. No finer sport could possibly be seen, even in the open, and many of the dogs would have thought that they were chasing an old time flyer from the San Joaquin or Merced plains. The course between Coomassie and Sting was a brilliant one, and well did the beautiful little bitch try the powers of Mr. Nelson's strong and speedy dog, but ultimately she was outworked by her powerful rival.

Great interest, too, centered in little Pride of the Park, as her overthrow of Sir John on the first day was so clever that many believed she could repeat it with the great San Jose dog Short Stop, and she went to the slips with only a slight shade of difference against her in the betting. She fell, however, after a gallant struggle.

Another fine course, too, was that between Queen of the Valley and Dark Rustic, and eventually when the white flag flew out for the Queen there was great cheering, for she won a fine course and defeated a good dog.

Another great surprise was the fall of Fairy before White Cloud in the third round, Fairy in her two previous courses showing an extraordinary dash of speed. But White Cloud literally smothered her—didn't even allow her a point. This bitch is full sister to Jack Dempsey, the runner-up for the final.

Another great course was the one between Vida Shaw and Ban Boy, and again Vida's course in the third round with Wee Lassie was a great one and brought forth rounds of applause when she sent the white flag for the third time up to her credit.

Indeed, no finer coursing could possibly be witnessed, and the fact that during the six hours it lasted no less than forty-five regular courses and four undecideds were run, is in itself a proof of the management of the whole affair. In the big stake there really were no more than three or four dogs which were out of place; all the others were fit to go into any company. The following is a description of the running:

Second Round.

JACK DEMPSEY—SWANEE.—The course was a short one, Jack getting it all, including the kill.

MARY ANN—DEPEND ON ME had a pretty run to the hare, but Mary Ann got there first, then the dog had a point and a wrench, but Mary Ann killed and won.

WHITE CLOUD—GLENFARROW.—White Cloud outpaced and outworked the old veteran Glen Farron, and most assuredly he did not show up half as well as he did on Thursday. The Cloud won easily.

FAIRY—LONGFELLOW.—This was a beautiful course, but Fairy had the best of the run up. Longfellow took the hare once or twice, but the bitch forced the work so keenly that she drove her opponent to the outside and won a fine trial.

STING—COOMASSIE were about equal favorites, and when slipped it was impossible to tell for the first 200yds, which was the fleetest. The work, too, was very close, but Sting showed great determination and beat his beautiful opponent after a great effort.

SHORTSTOP—PRIDE OF THE PARK.—A great course, the little bitch kept stride for stride with her big opponent nearly the whole length of the field, he only getting the turn by half a length. She shot in quick for a share of the work and disputed inch by inch possession of the game, but the big fellow shouldered her off several times and eventually won. On coming back to the stand the little one was cheered to the echo.

QUEEN OF THE VALLEY—DARK RUSTIC had a great race to the hare. The Queen got there first by a length, but Rustic made it warm for a time and showed up well in all the movements of a fine trial, but the Queen proved too much for him and won in fine style.

VALLEY QUEEN—GARRYOWEN.—Valley Queen showed that Garryowen got into the second round by some accident, as comparatively from this course that he was in very strange

BARNY F.—WARATAH.—Barny F. and Waratah were equal favorites, and on being slipped the Australian showed at once in front and opened a wide gap, but after traveling 200yds. he seemed to let go and Barny passed him and got one or two turns, when Waratah came up again, but puss fell before he could even things up.

SPOKANE—BLUE JACK.—The former beat the latter point-lessly.

MAGPIE—SCULPTOR.—Magpie led Sculptor from the slips, to the surprise of all the beholders, and won a good course, though not without some good work by Sculptor before the hare fell.

DOTTY DIMPLE ran a bye. Her opponent got lost the day previous.

WEE LASSIE—TOM HAYES.—Tom is only 13 months old, but he has a great dash of speed. He led the Lass to the game, but then he was done, as he did not know what to do when he got there.

VIDA SHAN—BAN BOY.—The Boy was suffering from a broken toe, the result of his Dakota experience, and could do comparatively nothing against this clever bitch, and of course lost.

NATTY—RUSTIC MAID.—Natty picked up the game after a run of about 200yds. The Maid was never in it.

LITTLE BANSHEE—OLDEN W.—This was a splendid course. The blue dog had the run up by a short length but immediately the hare turned the little bitch shot in, and before her opponent knew that she was near him she sent puss around twice with a vim and made things so short that Olden W. must have been frequently in doubt which was the hare and which the dog. She killed and won.

Third Round.

JACK DEMPSEY—MARY ANN.—Jack led Mary Ann to the hare, but she soon got to work and made things warm for both Jack and the hare for a few seconds. Jack then came in turn a couple of times and killed, getting the verdict. It was a close thing and had it been undecided no one would be surprised.

WHITE CLOUD—FAIRY.—White Cloud ran away from Fairy and picked up the game in a run.

SHORTSTOP—STING.—Shortstop beat Sting with comparative ease. They had a great chase, too, but it was one-sided.

QUEEN OF THE VALLEY—VALLEY QUEEN.—The course between Queen of the Valley and Valley Queen was a surprise, as the old favorite seemed utterly unable to cope with the Queen from the Petaluma region. She was suffering, however, from sexual causes.

BARNY F.—SPOKANE.—This was a one-sided course, the former doing all—running, working and killing, but it was no easy job for Barney as the hare was a flyer.

MAGPIE—DOTTY DIMPLE.—This was a surprise to all as Dotty is considered one of the flyers. She fell without a struggle.

VIDA SHAW—WEE LASSIE.—Vida Shaw led Wee Lassie to the hare in a long spin and got first turn, and again served herself before Wee Lassie could get a show for a point. Vida killed and won a long and severe course.

LITTLE BANSHEE—NATTY.—This was another pretty course. Natty fought well for his name, but the singular cleverness and the dashes of speed shown by this little black beauty was astonishing and she cleverly outworked Natty as she did Olden W. in the previous course.

Fourth Round.

JACK DEMPSEY—WHITE CLOUD.—Jack Dempsey smothered White Cloud both in running and working. The bitch was evidently not able to keep up the strain, as it was but two months since she had a litter of pups.

SHORTSTOP—QUEEN OF THE VALLEY.—In this course Skyrocket's brother showed that he was still a great dog, for he outpaced and outworked the Petaluma Queen that up to this point put all opponents to the right about.

BARNY F.—MAGPIE.—A poor hare and scrambling course. Barney F. won.

LITTLE BANSHEE—VIDA SHAW.—Little Banshee beat Vida Shaw at all points; the hare escaped from the dog. In this course was clearly shown the value of good training, Vida evidently failing from this cause alone.

Fifth Round.

JACK DEMPSEY—SHORT STOP.—Jack Dempsey and Short-Stop had a short, undecided course. They were drawn out the till after the next course, but in the next attempt Jack led and beat him handsomely.

LITTLE BANSHEE—BARNY F.—Little Banshee beat Barney F. but not without a struggle of considerable merit. This left Jack Dempsey and the handsome Little Banshee to fight out the final.

Final Course.

LITTLE BANSHEE—JACK DEMPSEY.—After the usual half hour the dogs were called up, and, amid considerable excitement, were handed over to the slipper, who, after his hard day's work, was as nimble and seemingly anxious for another run as the pretty little hound on which he had just placed the white collar. Both dogs were equal favorites in the betting. A hare was sent out from the upper end of the field, and the dogs slipped. Jack shot out to the front and led the bitch a clear length to the hare, but she instantly shot in, and before Jack Dempsey could look around him, the little bitch sent the game around, and again she drove him from his course, and just as Jack made a snap at puss she cleverly snapped up the hare from under his very jaws, killed and won unquestionably the greatest coursing match ever held in America.

SUMMARY OF THE RUNNING.

T. J. Cronin's wht. d. Jack Dempsey	beat	Dowling & McCormick's b. and w. b. Little Rose.
W. Creamer's b. and w. b. Swanee	beat	George Dougherty's br. b. Swanee
P. Tiernan's f. b. Mary Ann	beat	D. O'Connell's bl. d. Jim.
P. Tiernan's r. d. Glenfarrow	beat	D. J. Healy's br. d. Salvator.
T. J. Cronin's w. and b. d. Depend on Me	beat	R. E. de B. Lopez's f. b. Wattle Bloom.
A. Seale's w. and br. b. White Cloud	beat	E. Geary's w. and br. d. Electric.
J. Ferrigo's b. and w. d. Longfellow	beat	D. J. Healy's br. d. Moondyne.
P. S. Reilly's f. b. Fairy	beat	Dr. Proctor's b. and w. d. Blackstone.
W. Perry's w. and br. b. Coomassie	beat	M. Culligan's w. and br. d. Overland.
P. D. Nolan's br. d. Sting	beat	Jas. Byrne's f. b. Nellie Bly.
J. J. Edmonds's br. b. Pride of Park	beat	P. Tiernan's br. d. Long John.
P. C. Curtis's br. d. Shortstop	beat	H. McCracken's "ns" f. d. Captain.
P. D. Nolan's blk. d. Dark Rustic	beat	P. C. Curtis's w. and blk. d. Skyrocket.
J. Dowling's br. b. Queen of Valley	beat	H. McCracken's w. and b. b. Lady H. Glendyne.
J. Buckley's w. d. Garryowen	beat	E. Rush's b. and w. d. Rambler.
J. J. Edmonds's w. and b. b. Valley Queen	beat	Dowling & McCormick's br. d. Sir John.
Jas. Byrnes's b. and w. d. Barney F.	beat	Jas. Wren's f. b. Governess.
R. E. de B. Lopez's imported b. and w. d. Waratah	beat	P. Tiernan's f. d. Glenade.
P. Ryan's bl. and w. d. Blue Jack	beat	J. Dowling's br. d. Chief of the Valley.
P. Carney's w. d. Spokane	beat	Wm. Dalton's f. and w. b. Lady Napoleon.
P. Ryan's b. and w. d. Magpie	beat	Jas. Grace's b. and w. d. Roll Along.
Thos. McCue's ns. b. and w. d. Sculptor	beat	Dowling & McCormick's w. d. White Rustic.

T. J. Cronin's w. and f. b. Dottie Dimple	beat	D. J. Healy's b. and w. b. Active.
P. Tiernan's br. d. Olympic	beat	Dr. Proctor's bl. and w. d. Bhestone.
J. Ferrigo's f. b. Wee Lassie	beat	Jas. Byrne's f. d. Occidental.
P. Tiernan's b. and w. d. Tom Hayes	beat	John Lucey's br. b. Lazy Girl.
T. McInerney's b. and w. d. Ban Boy	beat	T. Cooney's br. and w. d. Home Rule.
J. J. Edmonds's w. b. Vida Shaw	beat	H. M. N. Spring's b. and w. d. Domino.
Dowling & McCormick's w. and b. Rustic Maid	beat	A. Seale's w. and bl. d. Presto.
M. Kerrigan's bl. d. Natty	beat	H. McCracken's ns. blk. b. Twilight.
T. McInerney's b. b. Little Banshee	beat	J. Mooney's br. and w. d. Swede.
D. J. Healy's bl. and w. d. Olden W.	beat	A. Merrill's f. and w. d. Red Prince.

First Ties.

Jack Dempsey beat Swanee. Barry F. beat Waratah. Mary Ann beat Depend on Me. Spokane beat Blue Jack. White Cloud beat Glenfarrow. Magpie beat Sculptor. Fairy beat Longfellow. Dotty Dimple a bye. Sting beat Coomassie. Wee Lassie beat Tom Hayes. Short Stop beat Pride of the Park. Vida Shaw beat Ban Boy. Queen of Valley beat Dark Rustic. Natty beat Rustic Maid. Valley Queen beat Garryowen. Little Banshee beat Olden W.

Second Ties.

Jack Dempsey beat Mary Ann. Barry F. beat Spokane. White Cloud beat Fairy. Magpie beat Dotty Dimple. Short Stop beat Sting. Vida Shaw beat Wee Lassie. Queen of Valley beat Valley Queen. Banshee beat Natty.

Third Ties.

Jack Dempsey beat White Cloud. Barry F. beat Magpie. Short Stop beat Queen of Valley. Little Banshee beat Vida Shaw.

Fourth Ties.

Jack Dempsey beat Short Stop. Little Banshee beat Barry F.

Final.

T. J. McInerney's black and white bitch Little Banshee (Benelox II.—Banshee) beat T. J. Cronin's white dog Jack Dempsey (Killarney —Pheasant Girl) and won the stake, \$100; Jack Dempsey \$50. Barney F. and Short Stop take \$25 each; Queen of the Valley, Magpie, Vida Shaw and White Cloud \$10 each.

The Puppy Stake, which of course was run in its place, between the ties for the All-Aged, produced three fine specimens of the greyhound, and are sure to be heard from again. Mr. Pitmah's Lady Grissel is a most promising youngster and is very handsome, and had she been entered in the All-Aged Stake she would most assuredly have attained a very forward position; her running in the final of the Puppy Stake was wonderful and stamped her as an All-Aged greyhound. Lady Grissel is by Freestone out of San Jose Maid.

So also was the running of Mrs. La Cunah's dog Lion, and it is certain that when he has more age he will be a dangerous opponent. The first of Skyrocket's stock were seen in public in this stake; they are mere saplings as yet, but the way in which Rocket shot from the slips shows that she has in her composition the vim and dash of her sire and will yet make a name for herself.

Lady Grissel took first money, Lion second.

GAZEHOUND.

HUNTING AND COURSING NOTES.

Mr. Chapman has declined to accept Mr. Smith's challenge to run a beagle against Louie Fitz Lee.

Mr. Sam. W. Vidler, the secretary of the club, writes us that Mr. W. Green, better known to English coursers as "Goldborough," will judge at the inaugural meeting of the Albear Coursing Club, of Colorado Springs. Mr. Ralph Taylor, who proved himself an expert at the Kenmore meet, will again handle the slips. The meeting will be held either Feb. 20 to 22 or March 6 to 8. Letters are coming in by every mail for information regarding the meeting, and it looks as if it will be a great success.

We have received a handsome photograph of the well-known foxhound, Rock, which shows this good dog off to great advantage. Our foxhound owners seem particularly happy in getting their dogs to stand well.

Yachting.

Lake Yacht Racing Association.

The annual fall meeting of the Lake Yacht Racing Association, of Lake Ontario, was held at Hamilton, Ont., on Nov. 11. We are indebted to the *Canadian Yachtsman and Canoeist* for the following report:

The following delegates were present:—From the Royal Y. C. Messrs. W. J. Grant, E. S. Ambrose and J. F. Monck; from the Royal Canadian Y. C., Vice-Com. Brown, Rear-Com. Dick and Mr. Emilus Jarvis; from the Queen City Y. C., Com. Schofield and Messrs. W. Q. Burroughs, D. D. Thomas, from the "Dog Rigging," or a fixed mast, being a proxy for Mr. J. H. Wallbridge.

The President of the association, Mr. Malloch being confined to his house Mr. W. J. Grant was elected chairman.

The Secretary, Mr. Geo. E. Evans, was absent on a visit to Ireland, so Mr. E. S. Ambrose was asked to act as secretary of the meeting. After the minutes of the first meeting had been read and approved, and the reports of the treasurer and the association timekeeper presented, a telegram was read from J. T. Mott, of the Oswego Y. C., stating that they were unable to send delegates, and that their proxies were in the hands of Mr. T. B. Pritchard, of the Rochester Y. C.

A committee appointed a year ago, to report on the measurement question, was disbanded, the proposed amendments to come before the meeting taking the place of any report they might have made. Mr. E. S. Ambrose then introduced the amendments proposed by the Royal Hamilton Y. C. The first was to define a yacht, but there being a similar amendment from the Royal Canadian Y. C., the two were considered together, and the following definition adopted: "A yacht, as defined by this association, must be a vessel of at least 16ft. load-water line, and must carry not less than 300lbs. of ballast permanently stowed, or have a beam of not less than one-third of her load-water line length. She must have strong rigging, or a fixed mast, and must be kept permanently on the water during the season, and must not be engaged in trade."

The next amendment referred to the postponement of races, and the rule will read as follows: "No race shall be postponed merely because of lack of wind, if any of the competing yachts shall have sailed round the course once within the allotted time." This reserves to a regatta committee the right to postpone a race in the event of heavy weather disabling the fleet after the start, even when one yacht has succeeded in making a round of the course.

The next amendment carried limits the crew in the 21ft. class to three hands all told, except when the regatta committee decide to add a scrutineer.

An amendment was carried to the rule enjoining yachts to render all possible assistance in case of a capsized or man overboard, extending the list of mishaps to any that involve danger to life at all.

The next amendment referred to the rule compelling a leading yacht to give an overtaking one room to pass a buoy, provided the latter has an overlap. Mr. Ambrose wanted an exception made in the case of the leading yacht being so situated, owing to a sudden shift of wind, or any other cause, as to make it impossible for the leading yacht to give way. After discussion the amendment was lost, it being considered that such cases are very exceptional, the proposed alteration would only lead to confusion and protests.

An amendment to merge the 30 and 35ft. classes into a 32ft. class was laid over until next year, when the whole question of classification will come up for discussion.

This ended the list of amendments proposed by the Royal Hamilton Y. C., whereupon Mr. Jarvis introduced the amendment of the Royal Canadian Y. C., to adopt the principle of actual instead of approxi-

mate measurement of sail area. Before this was discussed Mr. Monck (Royal Hamilton Y. C.) drew attention to another amendment further on, proposing that in the event of the new system of measurement being adopted, and the corrected lengths of existing yachts increased, they were still to be allowed to sail in the same classes as heretofore, giving time, however, according to existing measurements, providing these measurements have not been increased since 1893. Mr. Monck pointed out that this would be unfair to any new yachts built, in their having to come within the class limits, and yet compete against the older craft above the class limits, with the prospect of these limits being increased next year, to suit the new ratings of the fleet. After much discussion it was agreed that any new yacht might be allowed to show the corrected length, and that the measurements, provided such yacht did not exceed the corrected length (under the new rule) of the largest existing yacht in a class. This matter being settled, the principle of measuring actual sail area was adopted unanimously and the details of the new system carefully considered clause by clause.

The percentage allowances to yawls and schooners will in future apply only to yachts exceeding 25ft. corrected length.

On motion of Mr. T. B. Pritchard, a diagram of the sail plan was ordered to accompany each yacht's certificate of measurement, to aid in checking the figures, if required.

This cleaned up the amendments to sailing rules. A motion by Vice-Com. Brown, seconded by Mr. Monck, expressing the loss felt by the association in the death of Mr. Matt. Carbywright, of the Rochester Y. C. and referring to his many quiet and unobtrusive services in yachting on Lake Ontario, was carried by a standing vote, and a copy ordered to be sent to the Rochester Y. C.

The question of next year's programme was then considered. In response to a generally expressed desire for a change from the usual annual circuit, a committee was appointed, consisting of Messrs. Jarvis, Monck, Fitchard, Pritchard, and Com. Brown. The committee was to meet for a rendezvous at some suitable port and several days racing. This committee will communicate with Buffalo, Cobourg and other places which have been anxious for a regatta, and report by April 1. The election of officers was proceeded with, and resulted as follows: Pres., Com. Boswell, Royal Canadian Y. C.; Vice-Pres., W. H. Bigger, Bay of Quinte Y. C.; Hon. Sec.-Treas., E. H. Ambrose, E. H. Ambrose, Fitchard, and Com. Brown. The committee was to meet for a rendezvous at some suitable port and several days racing. This committee will communicate with Buffalo, Cobourg and other places which have been anxious for a regatta, and report by April 1. The election of officers was proceeded with, and resulted as follows: Pres., Com. Boswell, Royal Canadian Y. C.; Vice-Pres., W. H. Bigger, Bay of Quinte Y. C.; Hon. Sec.-Treas., E. H. Ambrose, E. H. Ambrose, Fitchard, and Com. Brown.

There being no further business, the meeting adjourned. Next year, by rotation, Toronto will be the place of meeting.

Although Dr. Malloch, Vice-Com. of the Royal Hamilton Y. C., was confined to his house, he very courteously invited the delegates and a number of members of the Royal Hamilton Y. C. to dine at the Hamilton Club. Rear-Com. Lucas ably filled the chair, and after discussing an excellent and tasty menu, a very pleasant time was spent over the champagne and cigars. Great credit is due to the Royal Hamilton Y. C., and to Dr. Malloch in particular, for the handsome way in which the delegates of the association were entertained.

### The Sloop Eudora.

Editor Forest and Stream:

This deep centerboard sloop now building in the yard of Elmer A. Ely, the boat builder, of Middletown, Conn., is from an original design by the owner, Mr. D. T. Haines, the secretary of the Middlesex Banking Co., and is interesting as being very different from any other boat that has been built on the Connecticut River. She is to be used by her owner as a cruising yacht on the river and on the Sound, and is to have all the accommodations necessary for the rational enjoyment of life afloat.

The Eudora differs from other yachts built here in being a combination of the keel and centerboard type, and therefore has an especial interest to those who desire a deep boat but object to the narrow beam of some boats of that class. Extreme depth and displacement have undoubtedly been reached on the beam of the Eudora. More difficult dimension could scarcely exist, yet in spite of their exceptional proportions the yacht presents a clean-cut fairness of body. The dimensions are as follows: Length 31ft., beam on l.w.l. 24ft., beam on l.w.l. 24ft., greatest beam 9ft. 6in. depth of deck to keel 5ft. 8in., draft without board 3ft. 3in., least freeboard to plank-sheer 2ft., displacement 12,000lbs., ballast inside 4,500lbs., area lower sails 675sq. ft., mast deck to cap 29ft., boom over all 23ft., gaff 16ft., bowsprit outboard 10ft., topmast over all 16ft., hoist of mainsail 19ft., jib on keel 21ft., jib on foot 14ft.

The keel is of white oak 12in. amidships and tapered to each end, the forward end being steamed and bent up to conform to the curve of the stem. The frames are white oak steamed and bent 2½in., and spaced 1ft. apart at centers. The stem and stern post are of white oak, planking is in selected cedar fastened with galvanized iron nails. Deck 2in. white pine. Cabin roof is of three layers thin boards, and has no carlines on the inside. Sails of 100z. Woodbury duck, double top light, and the lightest sprucing of the end to conform to the shear of the deck. Decks and interior of bright finish. The cockpit floor is 1ft. above waterline, caulked and scuppered. The sill to the cabin is kept high, so that in case her cockpit should take in water none could get below. She has an overhanging bow with figure-head, and an overhanging stern of 6ft., making her deck room very large for the size of the boat. Underneath the deck, at the stern and along the sides of the cockpit, she is filled with zinc air tanks sufficient to float her ballast in case of accident by collision or striking a rock, so that she will be an absolutely safe boat. Her stern post and deadwood have been made with an extra thickness and arranged for a propeller shaft to pass through, and it is the intention of the owner to equip her with a gas or naphtha engine of four horse power to be used whenever it is desirable, so that she can always make her harbor at night.

Her cabin trunk will be 12ft. long and 7ft. wide, with nearly 6ft. head room, so that any person of ordinary height can walk upright in it. The after part will be partitioned off, making a cabin of 10ft. in length with 2ft. of floor each side of the centerboard well, and will have extension couches, upholstered in plush or leather, making sleeping rooms for four, with curtains to draw down above the centerboard.

The forward part of the cabin and the space under the trunk will be used as a forecabin, with room for an extra man to sleep, and fitted with all stove, ice box, pantry and dishes, water tank, wash bowl and water closet, with access to it through a hatchway in the deck. She will have large anchors and chain windlass, etc., as well as necessary lights for use at all times. The well known excellence of the work of the builder will insure a most comfortable and able boat with which to enjoy the pleasures of cruising.

MIDDLETOWN, Conn.

### The Measurement of Sail Area.

At the annual fall meeting, held last month, the Lake Yacht Racing Association, in addition to some minor changes, made a very important alteration in its measurement rule, adopting the British or Y. R. A. method of measuring the sail area in place of the American or Seawanhaka method in use by the Association since its formation in 1884. While it has been frequently urged that the former method measures the "actual sail area" and the latter does not, we have never yet met with any demonstration of this proposition, and as a matter of fact, the aims of the two methods are identical and the results compare so closely that there is perhaps little choice between them. What plan that we are at a loss for the reason of a change to the other, as in the present case. While both methods assume to measure the sail area with such a degree of convenience and accuracy as is necessary in connection with the waterline for purposes of measurement and classification they are based on different principles; the Seawanhaka rule measures the area of the sails, while the British or Y. R. A. rule, though using some spar measurements, relies largely on actual—or assumed—measurements of the sails themselves.

So far as the headsails are concerned, there are practically but two points of difference. The Seawanhaka rule provides for the measurement of one-half of the horn outside of the crane iron for the topmast stay, as on all American yachts, while the Y. R. A. rule measures to the topmast stay, which is brought down to the crane iron. The short outside horn not being used in British yachts. The other point of difference is in the measurement of the perpendicular, the Y. R. A. rule, by measuring to the main boom gooseneck for the perpendicular of the fore triangle, offering an inducement to move the gooseneck high above the deck, thus lessening the measurement of the headsails, but making an awkward sail plan. Under the Seawanhaka rule there is no tendency to raise the gooseneck to an abnormal height.

The main point of difference between the two methods lies in the measurement of the mainsail and working topsail or jibhead; the Seawanhaka rule constructs one approximate triangle from the spars, including all headsails, mainsail and working topsail; while the Y. R. A. rule, first measuring the head triangle separately, then assumes to measure the separate sails by dividing the topsail into two triangles, the true sail area, fully sufficient for the purpose, and also to make this measurement dependent only on points so definitely located that they may be referred to in the case of a disputed measurement. Ten years of practical use have proved the merits of the rule; changes have had to be made to correct defects in the original details, to meet various changes in spar and sail plans, and to enlarge its scope to include catboats and odd rigs, and even yet there are a few odd rigs which the

rule fails to measure; but so far as all ordinary yacht rigs, including the cat, are concerned, the rule is probably as close to actual truth as is practicable or necessary. No doubt changes will be needed in the future, but the correctness of the principle seems well proven.

The Y. R. A. rule, on the other hand, assumes to give the actual measurement of the sails, or at least of the mainsail and topsails, but that this is only an assumption must be clear to any one who has tried to verify the measurement of a large sail. Practically the rule ignores the fact that a sail changes in dimensions from day to day, according to use and state of the weather, and that there can be no such thing as an accurate measurement of a thing which is constantly changing in size and shape. This method cannot give the "actual area," and further there can be no fixed points for reference in case of a dispute.

These disadvantages are serious, and quite outweigh those attributed to the Seawanhaka rule. As we understand the real working of the rule in Great Britain, the sail plan, and not the sails and spars themselves, is the real basis of measurement, and while this may be satisfactory in practice, it is in fact as far from the assumed "actual area" as the Seawanhaka measurement. The difficulty is decreased in Great Britain by the fact that nearly all yacht sails are made by one firm, Laphorne & Ratsey, and the sail plans of this firm are accepted as the basis of measurement. In this country a similar system would result in endless confusion, owing to the number of sailmakers.

The requirements of a system of measuring sail area for use in a measurement rule are that it shall measure all ordinary first class sails, with a small margin of error that this margin shall be practically the same for all rigs, putting no premium on any one over another; that the measurement can be conveniently taken from the vessel, and that all points of measurement shall be definitely located for future verification. The Seawanhaka system of spar measurement seems to meet with these requirements very completely, better in our opinion than the Y. R. A. rule.

It has been urged that the Y. R. A. rule is the better in that it measures the club topsail, but this is an entirely different question, and has nothing whatever to do with the merits of the two methods of measurement. Opinion is divided as to the desirability of measuring the club topsail or not, the custom in America has been to omit this sail, while abroad it is measured and carried at any time. There is much to be said on each side, but so far as the method of measurement is concerned, if it be decided that club topsails should be measured, there would be no difficulty in providing for it in some way in connection with the Seawanhaka rule.

The Lake Y. R. A. has always used the original form of the Seawanhaka rule, devised for the old sloop and cutter rigs, and has had no experience with the present form, which is of wider application. Such difficulties as have arisen in practice could, we believe, have been removed more effectively by improving the Seawanhaka rule than by substituting the Y. R. A.

In making the change, the Lake yachtsmen have taken the rule, word for word, with no effort to correct several defects. The measurement of the head triangle could be improved by measuring the perpendicular from the deck instead of from the gooseneck, as is done by the Nova Scotia Y. C., thus removing the inducement to raise the main boom; and also by adopting the same forward point of measurement as in the Seawanhaka rule, midway between the topmast stay and the jib tack, or line of luff of jib.

Another point that must work unfairly to the smaller craft is the restriction of the spinnaker boom. This is all right in large, decked yachts, but puts a penalty on too long a spinnaker boom and on the placing of the mast in the eyes of the vessel, both undesirable features. In the case of a 28-footer or smaller boat, racing craft only, and not intended for sea going work, there can be no objection to the forward position of the mast, which has been found essential for speed, and no reason for penalizing it. For this class of small racing craft a special provision is made in the Seawanhaka rule, the spinnaker boom being placed not to the base of the fore triangle, but to the sailing length of the boat, 25ft. for the 25ft. class, 21ft. for the 21ft. class, etc. This is a liberal allowance, but the spars are light and easily handled, and nearly all of the boats are intended for racing, with no thought of sea going or even cruising. We shall watch with interest the result of the experiment of the L. Y. R. A., but we doubt whether it will be more satisfactory than the past experience.

### The Origin of the Centerboard.

WATKIN, Wash., Dec. 1.—Editor Forest and Stream: The interest recently revived in the origin of the centerboard may warrant the publication of the following facts:

The centerboard was invented in the United States by Jacobus Swain, Henry Swain and Joshua Swain, of Cape May county, New Jersey, in the year 1811, and letters patent granted to them by the United States, dated April 10 of that year. The centerboard thus invented was designed to take the place of the leeboard, then in use. This patent brought a little revenue to its owners, as it was soon found to be advantageous in larger boats to place the centerboard at the side of the keel, rather than through it, and thus avoid weakening the keel. I am unable to state whether or not the centerboard had been used before the date of this patent in any foreign country; but, inasmuch as either foreign or domestic use would have, if known, prevented the issuance of the patent named, it is a reasonable presumption that the invention was not at the date of the patent. The following is a full copy of the patent:

THE UNITED STATES OF AMERICA.

To all to whom these Letters Patent shall come:

Whereas, Jacobus Swain, Henry Swain and Joshua Swain, citizens of the United States have alleged that they have invented a new and useful improvement in the leeboard, which improvement they state has not been known or used before their application, and have affirmed that they do verily believe that they are the true inventors or discoverers of said improvement, have paid into the Treasury of the United States the sum of \$9, delivered a receipt for the same and presented a petition to the Secretary of State, signifying a desire of obtaining an exclusive property in the said improvement, and praying that a patent may be granted for that purpose. These are therefore to grant according to law, to the said Jacobus Swain, Henry Swain and Joshua Swain, their heirs, administrators or assigns for the term of fourteen years from the tenth day of April, 1811, the full and exclusive right of making, constructing, using and vending to others to be used, the said improvement; a description whereof is given in the words of the said Jacobus Swain, Henry Swain and Joshua Swain themselves, in the schedule hereto annexed and is made a part of these presents.

In testimony whereof, I have caused these letters to be made patent and the seal of the United States to be hereunto affixed.

Given under my hand at the City of Washington this tenth day of April, in the year of our Lord one thousand eight hundred and eleven, and of the Independence of the United States of America the fifty-fifth.

By the President, JAS. MONROE, Secretary of State.

City of Washington, to wit:

I do hereby certify that the foregoing letters patent were delivered to me on the tenth day of April, in the year of our Lord one thousand eight hundred and eleven, to be examined; that I have examined the same and find them conformable to law; and I do hereby return the same to the Secretary of State, within fifteen days from the date aforesaid, to wit: on this fifth day of May, 1811.

C. A. RONNEY, Attorney General of the U. S.

The schedule referred to in these letters patent and making part of the same containing a description in the words of the said Jacobus Swain, Henry Swain and Joshua Swain themselves of their new invented leeboard:

"The vessel that is intended to be built with a leeboard through the bottom, the keel must be worked wide in the middle so as to give sufficient strength to the mortise is through the keel, and the keel must be thick enough to receive the mortise, and the mortise must be worked the same thickness that the mortise is through the keel, and wide enough to be sufficiently strong and one set at the forward end and the other at the after end of said mortise and let down into the keel two-thirds of the depth through so as to stand on a square from the keel and bolted into the keel; then a rabbit is to be cut on each side of said mortise in the shape of the same width of the thickness of the plate that is intended to plank up the sides of the sheath for said leeboard and deep enough into the keel to spike into the frame; then fit down a plank on each rabbit and spike them in the first mentioned timbers then the lower part of the sheath is formed, then after the fore ribbands of the vessel is run then fit in knees enough on each side of said sheath to make it sufficiently strong running from the floor heads to the fore ribs, and then a plank is to be fitted in between the ribs, and a coming fitted into the beams then when the deck frame is in fit up plank on each side to the deck fitting the frame tight to beams; then in planking up the intermediate space plank may be trunneled on every other one, leaving one end of the opening an inch or two wider than the other end, and then when the shutters are put in by working them large and strong in the end and foremost it may be made sufficiently strong without any caulking.

The leeboard is made as follows: It is to be made of two thicknesses of plank, laid together crossing each other enough to make it sufficiently strong and thick enough to play through the aforesaid mortise and haul up into the said sheath whenever necessary, and wide enough to fill up said sheath from near the bottom of the keel to the top of the sheath, and the length of the sheath and the length agreeable to the length of the said sheath with the after end of the sheath on a true sweep from the bolt hole that it hangs on, said bolt hole to

hang it by is to be about four-fifths from the after end and near enough to the bottom for a true sweep that strikes, the forward end to strike the bottom and worked off to the same, it is to be hung on a bolt sufficiently strong, passing through one pair of the aforesaid knees with a head on one side and a forelock on the other, high enough to fetch the bottom within the keel with a clasp and thimble riveted on the top side of the after end for the purpose of a lanyard or tackle to be made fast to hoist it into the sheath when necessary the top of the sheath, the after part to pass through the deck with a check fitted at the after end of the frame, with a sheave in it for the lanyard to pass through for the purpose of hoisting it up, and to make the said sheath sufficiently strong there must be a keelson run on each side of the frame and bolted through the aforesaid knees into the keel.

HENRY SWAIN,  
JOSHUA SWAIN.

Witnesses: Elijah Townsend, John Townsend.

C. B. LEAMING.

The use of a wide, flat board through the bottom of a craft to prevent leeway may be traced back well into the last century, and is probably still older; but when the "sliding keel" first assumed the form of the present centerboard we cannot say. Our correspondent seems to have fixed the definite date so far as this country is concerned, but Mr. Dixon Kemp, who is authority on matters of nautical history, mentions a slightly earlier date in summing up the subject in a recent issue of the *Field* as follows:

"The *European Magazine* for 1792, in discussing Captain Schank's 'invention' of the three sliding keels, as fitted to H.M.S. Trial, Lady Nelson, &c., says: 'If the discovery of the sliding keels is great the public are indebted for it to the Indians of South America, whose balsas, described in Ulloa's voyage (A.D. 1735), have these sliding keels; and from these the idea has been taken and very ingeniously improved upon.' But these sliding keels of the South American Indians were seen by Pizarro two centuries earlier (A.D. 1535). In Prescott's 'History of the Conquest of Peru' we read: 'As he [Pizarro] drew near he found it was a large vessel, or rather raft, called balsas, consisting of a number of huge timbers of a light porous wood, tightly lashed together with a frail flooring of reeds raised on them by way of deck. Two masts, or sturdy poles, erected in the middle of the vessel sustained a large square sail of cotton; while a rude kind of rudder, and a movable keel made of plank and inserted between the logs, enabled the mariner to give a direction to the floating fabric, and to steer it as far as the current would permit. Whether a Chinese boat got blown to Peru, or whether a Peruvian was blown to China, and so communicated the idea, there is no doubt that the British have no more claim to the invention than any of the United States citizens have. Captain Schank, it is evident, as remarked in the *European Magazine*, merely adapted the South American sliding keels to the hulls of sea-going vessels; while Capt. Schank drew out the device further into the form of a centerboard in 1809 by pivoting the board at one corner, and it was at the time termed a revolving keel. It is also worthy of note that Evelyn, in his diary (November, 1663), records that Sir William Petty invented a 'vertical keel hung on hinges for the improvement of the sailing of ships.'"

The patent quoted by Mr. Leaming is particularly interesting on account of the method of construction given in it, and the device may have been already invented in England by Capt. Shuldham, it is quite probable that it was original so far as they knew with the American patentees, the dates being very close together. The real "centerboard," as used down to the present time, is a combination of two devices comparatively well known at the dates mentioned, 1809-11, the Dutch leeboard and Capt. Schank's sliding keel, and is a mechanical detail of the invention of the American patentees independently at about the same time. The American patentees have certainly worked out the details with a completeness which shows that they had carried the device beyond the mere experimental stage, and presented it in a practicable working form. The placing of the slot on one side of the main keel, an auxiliary keel being used to complete the foundation of the trunk, is merely a variation of the mechanical detail of the invention of the American patentees of the main keel, and would probably be covered by the above patent.

### Yacht Building.

MESSRS. CHAS. L. SEABURY & Co. of Nyack, N. Y., are now busy in all departments of their works, the largest craft under construction being a twin screw steam yacht 75ft. long, 11ft. beam, 4ft. 6in. draft. The bulwarks will be 10 to 12in. high, there will be a cabin trunk 22in. high arranged to extend from after end of the saloon, over the saloon and engine room, to the forward end of galley. The deck is flush. The saloon, which will be paneled in white and gold, is 14ft. 14in. long. Wide lockers and lockers are arranged in after and of saloon. A state-room is arranged directly forward of the saloon, with a large double berth, with drawers, dressing case with drawers, mirror, &c. This room is on the port side of yacht, the toilet room being on the starboard side forward of the saloon, with entrance from stateroom and saloon. Directly forward of the toilet room is arranged a small room with shelves, hooks, etc., with a sliding door connecting with stateroom; this apartment is fitted up as a lavatory.

The machinery will consist of two Seabury triple expansion engines of the latest design, and a Seabury patent safety water tube boiler, fitted with all necessary appliances.

The galley is forward of the engine room, fitted with range, sink, pump, smoke pipe connected with main smoke funnel, etc. Directly forward of the galley is the crew's quarters, with accommodations for six people. Forward of the crew's quarters is the toilet room for crew. All the rooms, including galley and forecabin, will have good ventilation. The speed is to be fourteen to fifteen miles per hour. The yacht will be schooner rigged and carry two boats on davits. Her owner is a New York city yachtsman.

The firm also have in course of construction a very fine and complete cruising steam launch for Mr. W. B. Higgins of New York, 30ft. overall, New York City, 11ft. beam, 4ft. 6in. draft. The cabin and engine room combined will be 31ft. long, the forward cabin 8ft. long, fitted in mahogany with plate glass windows, the forward end round, fitted with a buffet, also ice box, with a mirror in after bulkhead with rack under. The after cabin is 6ft. long; in the after end is a toilet room in separate compartment; on the opposite side is a wash basin. There will be a deck around house, from forward aft, with 6in. bulwarks.

The machinery consists of a Seabury triple expansion engine, and a Seabury patent safety water tube boiler. The speed is to be about nine miles per hour. She is intended to be the most complete boat of her size and style afloat.

The 35ft. stern paddle wheel steamer building for Southern parties, to be used in connection with a railroad, is well advanced.

The 75ft. twin screw steam yacht, Hironelle, owned by Mr. C. C. Evelyn of New York, is being fitted with two triple expansion engines in place of the compound engines now in her. This change will make the yacht faster than she is now.

The yacht Zayda, owned by Dr. H. A. Mandeville of New York, is being lengthened, also having a deck put on, on either side of her cabin house. She will also be schooner rigged.

The high speed steam launch, owned by Mr. Jarvis B. Edson, will be fitted with a new Seabury patent safety water tube boiler. The high speed steam launch Imp, belonging to Mr. J. L. Hutchinson, a duplicate of the Palos, is being thoroughly overhauled for next season's use. Mr. Frank Bement of Philadelphia is having a Seabury boiler built for a steam yacht he is having built. Mr. John S. Muckle of Philadelphia is also having a Seabury boiler built, to be arranged to burn kerosene.

News of new yachts comes in very slowly, and thus far no sailing yachts of any size are announced, or even rumored. Messrs. Waterhouse & Chesbrough, of Boston, have completed the plans for a cruising steam yacht 16ft. over all, 18ft. l.w.l., 23ft. beam and 10ft. 6in. draft, for an unknown owner. She will have good accommodation and be fitted out in the most complete manner. The contract has not yet been given.

In addition to the British 10-rater and other smaller work, the Harshoffs have an order for a steam yacht 10ft. over all, 13ft. 8in. beam. Messrs. Stewart & Binney have completed a design for Don Romero Lopez de Mendoza of Havana, for a schooner yacht to be built in Cuba. She will be 90ft. over all, 65ft. l.w.l., 21ft. beam and 8ft. draft, a centerboard vessel of modern type, and with a large sail.

The new yacht for Mr. W. A. Slater, to be named Eleanor, is now building at Bath, Me., from designs by C. E. Houscom, of the Bath Iron Works, and will be ready by next summer. She will be 23ft. over all, 20ft. l.w.l., 23ft. beam, 17ft. 6in. depth, barkentine rigged, with engines 15, 28 and 45x30in.

Lawley & Co. are building a stock schooner of 55ft. l.w.l. from their old stock of materials, and will be ready by next summer. She will be 23ft. over all, 20ft. l.w.l., 23ft. beam, 17ft. 6in. depth, barkentine rigged, with engines 15, 28 and 45x30in.

At Frisbie's yard, Salem, the schooners Hope Leslie and Pastime are out for alterations, the former for new bulwarks and rail and general repairs.

At the Atlantic Works some repairs have been made on the Duck and the new Fabyan steam yacht is in frame.

### A Florida Cruise.

(Continued from Page 532.)

March 1.—We are steering straight for Cape Sable, the southernmost point of the main land of Florida, which we reach at 2 P. M. and anchor behind a sandbar that protects us from any gale that may come from the south or southwest. We take the dinghy and go ashore, where we find an abandoned house and coconut grove. The land was too poor and the owner or squatter gave it up. In coming back to the schooner we saw two large blue man-eaters—we bathe on board to-day.

March 2.—We left Cape Sable at midnight, with a light but fair wind, and when we boys came on deck we found ourselves out of sight of land, which the "Landsmen" did not enjoy; for he was never happy unless the land was in sight and the Bianche in shallow water. We are making four knots sailing over long swells steering N. W. by N. Occasionally we see a skip-jack, a small fish that gets up on top of the water and with a peculiar motion of its tail fairly flies over the surface of the water for 300 or 400 ft., probably fleeing from some larger fish. We often see the sportive porpoise as they come to the top to breathe and blow. They belong to the mammal species, are warm blooded and come to the surface to breathe and blow like whales. The finest watch oil is taken from their jaws, and the best shoe-strings now in use are made from the skin of the same fish. Four or five times we have seen monster loggerhead turtles. Sometimes we see the much sought for kingfish, that will jump 6 ft. into the air. Then we see the but hard to catch.

Then we always have the sea gulls, with their plaintive, chicken-like cry hovering around us, ever ready to pick up the crumbs that are thrown overboard. But most interesting of all are the pelicans. They generally fly about 50 ft. above the water, looking for any stray fish that swim near the surface. The pelican will poise over such a fish, and suddenly throwing up its wings will fall like a stone, straight at the fish, strike with the water with loud report, stunning the fish, which the bird quickly secures and stows away in its immense sack—usually under the lower jaws—and sails off in search of another victim.

March 3.—We arrive at Cape Romano at 4 P. M. We caught some fish, hunted shells, bathed in the surf and retired for the night.

March 4.—We have a fair wind and go booming along with the bow-sprit pointed for Sanibel fishing house, which stands at the mouth of Sanibel Bay, but the wind shifts about 10 miles eastward to Naples, the Gulf. Made fast to the long dock and proceeded to look the town over.

Of all the resorts along the west coast of Florida, Naples takes the first prize. The land is high, dry and healthy, and the beach is wide, with the sand pounded down by the surf so hard that horses and carriages can be driven for miles either north or south. The great rollers come in with a sweep of 1,000 miles and break on the beach with a roar that can be heard many miles away. For purity of air for beauty of beach and majestic grandeur of the breaking surf, it is the Long Branch of the South.

It was founded by a stock company from Louisville, Ky., but it cost so much to maintain it that the stockholders became weary of the expense and sold out for a song. The proprietor of the Louisville Courier now owns the beautiful resort. In fee simple. Of course they have no doubt but that the long dock that the largest ocean steamers can land at even at ebb tide. This dock is made very substantial in order to withstand the heavy seas that come from the west and southwest. A large steamer lands semi-weekly, for which luxury the editor owned is said to pay \$300 for each landing, or \$400 per week. They had about twenty-five guests at the hotel. We said to the owner, "To us this resort would be a large 'white elephant'." He said, "Oh, of course it is, but it is a great resort, as every one knows, and the beach with a road that can be heard many miles away. For purity of air for beauty of beach and majestic grandeur of the breaking surf, it is the Long Branch of the South."

It is a delightful place for bathing and fishing. One of the guests told us that in one day they caught two large sharks, one large jewfish and a great variety of smaller fish. "Indeed, you can catch anything but a cold," which coincided with our experience, for we have no colds since coming on the coast. The resort was peopled with Louisville folk.

We again put to sea with a fair wind and steered N. W. We soon saw a large loggerhead turtle, which the captain said would weigh at least 400 lbs. We arrived at St. James again and were glad to receive letters and papers from home. We had only made the harbor when a N. W. gale commenced to blow. But we were in a snug harbor and proposed to remain here until the gale subsided.

There were many fishermen on the beach, and they threw the entrails into the bay from the shore and end of the dock where the water was about two feet deep. A large shark—a blue man-eater—was drawn to the spot by the smell of fish blood and became partially stranded in the shallow water. The "Chief Marine" soon appeared with a grange, which he drove into the monster's back, and then there was an exciting fight on land. He called for help. The commodore went to the assistance and both held on to the handle of the grange with all of their strength. The shark made the water and mud boil in his frantic efforts to escape.

He finally made one fearful jump straight up out of the water, and when he fell back the pole of the grange struck the dock and broke short off, leaving about four feet of said pole sticking in his back, which we could see above the surface as he made his escape out into the bay. He was twice as long as the pole, and the head of the ugliest shark we had seen on the coast. We never saw such black, wicked and vicious-looking eyes as this monster had on each side of his broad, flat head. In his struggle with the boys he constantly opened his great semi-circular mouth, filled with sharp teeth, that were set with a slant backward, so made for tearing flesh and fish to pieces; and he would close this mouth with a snap, that made each particular hair of our head stand on end. We took water in the bay.

The chief marine was too hard for us to haul up the Caloosahatchie River, where we expect to catch some tarpon. The commodore and the chief marine are on the dock catching sheephead. They are a gamy fish and give the sportsman great fun. They have two rows of double teeth that are the envy of any man on the shady side of forty-five. They use these strong teeth in cravaching the coon oysters that cling to all salt water piling in these latitudes. For bait we still blow the crab. The commodore showed me his hook when he was through fishing. The sheephead had knicked, bent and utterly ruined said hook in one hour's fishing.

Many vessels are coming in for shelter from the northwest gale, among them being the Oriole, owned and sailed by Commodore Coit, of the Larchmont Y. C. He has a fine yacht, ketch rigged, fitted up with all the modern improvements and carrying a naphtha launch, which can tow the yacht in case of a dead calm about three miles per hour.

March 6.—We got under way this morning and ran to Punta Rassa, a cattle station, where we anchored to wait for the tide to turn in our favor. Punta Rassa consists of a small hotel, steamboat dock and cattle sheds, all of which belong to one man, who is the cattle king of Florida. He ships from this point by schooners, which he owns, from fifty to three hundred tons per week to Key West and Havana. These cattle are grown and ranged on a large tract of land in the interior of the lower peninsula.

There are a few tarpon fishermen stopping at the hotel, waiting for the tarpon season to open. In the mean time they are catching Spanish mackerel, bluefish and now and then a large shark from the dock. They catch many fine fish, but throw nearly all away, as they have no place to preserve the catch. No small part of the pleasure of catching fish is in the fact that they are of some value to somebody. To kill fish (except shark) for the sake of killing alone is ignoble sport.

We are now on our way up the Caloosahatchie River. In many places the channel is very crooked, so much so that the captain is much of the time at the masthead to con her through the rocks.

We arrived at noon at Fort Myers, a town containing about 200 people, who say they live up on land and sick. There are no sawmills, the houses being badly made and in need of repairs. The whole is balled up in nearly every lot offering to sell out cheap. They have fine trees, and their gardens contained ripe potatoes, tomatoes and strawberries. Indeed, we at the North can grow no vegetable that Florida cannot grow in midwinter. Fort Myers is said to be the healthiest place in Florida. In the last census the Government sent back the death rate, thinking the official had made a mistake. The last year the town left the town in debt, for they had no practice, and were absolutely starved out.

The county court was in session and the town was full of crackers, who had on their store clothes, and all had on broad-brimmed felt hats, though the temperature was 89 in the shade. Mr. Edison, the electrician and inventor, has a cottage and laboratory here, which his father cared for in his absence. We went over his grounds, which we found laid out in good style. Among the things we saw was a large ball, the which grows in one season that is 2 in. in diameter at the ground, running straight up in a gradual taper to its tiny tip 30 ft. in the air.

We took a tarpon guide on board and steered for the tarpon ground to try our luck for the famous fish. We anchored and baited our tarpon hooks with large pieces of mullet—the tarpon bites at nothing else, which we proceed to cast as far as we can and lay the bait line on the ground with the line left slack. We fish from two small boats made up to the schooner.

9:30 A. M.—No bites, but every man on duty, eager and expectant.

10:00 A. M.—All are on duty, but the nerves and muscles are somewhat relaxed, and time is now taken to get into easier positions, but no bites.

10:30.—The Distinguished Landsman comes on board the schooner, the pilot to the tariff, retires to the cabin to read a late paper containing the inaugural of President Cleveland.

11:00.—One bite reported, causing great excitement, but after a critical examination the guide comes to the conclusion that it is a catfish. Soon after this catfish bite the guide sang out, "Cast off my painter!" He had a bite and after a few moments he strikes, and the tarpon, finding himself fast, makes frantic efforts to get away. Down the river goes the fish, with the guide holding the line just taut enough to give the boat headway, then the fish turns toward the boat and the tarpon, in rapid motion, then he jumped clear out of the water and shook his head, trying to get rid of the hook; but the guide held him steady.

For full one hour did the guide work him, until, from sheer exhaustion, he was towed quietly alongside the boat and pulled in with a strong gaff hook. Our trophy was 6 ft. long and weighed 100 lbs. The Distinguished Landsman had him set up, and we saw the taxidermist in his preliminary work.

Laying the fish down on its side he proceeded to cut out the body of the fish, leaving about one inch of the muscle all over the inside; then the cavity was packed full of soda, which hardens the tissues until they become like a piece of bone. After about six weeks this filling is taken out and another put in, and the fish is again hung up for six weeks longer, or until there is no odor from the carcass, when the glass eyes are put in and after mounting on a board the tarpon is ready for shipping. The meat is good to eat, and is red and beefy, something like a North River sturgeon, and not used for food.

We are on our course steering for Tampa Bay, where we shall end the cruise. There is a heavy swell rolling from the N. W. the remains of the late gale from that quarter. We swing gracefully over these swells, with the shore on our right whitened by the breaking surf, which we can see and hear plainly, though four miles away. The lively wind-jack and the sportive porpoise keep us company by water, and the pelicans and sea gulls are ever near us on the wing, ready to pick up any crumbs that may be thrown overboard.

Sometimes the captain would take a piece of a string and tie a small cube of salt pork to each end, and throw it to the gulls, one of which would soon have one of the cubes in its stomach and fly away with the other piece dangling in the air, when another gull would swoop the other cube, and the tug of war would come when both birds would fall to the water. The strongest bird would capture the string and pork and fly away only to have the same thing repeated until the pork was torn from the strings.

March 14.—We arrive at St. Petersburg at 2 P. M., pack our dunnage, haul down our flag and end the cruise. We have sailed 1,000 nautical miles without an accident, and have returned healthy and happy. We have been gone 30 days, and the expense has been just \$2 per day per man.

To people who wish to get rid of the blizzards of the North, and especially those who are suffering with bronchial or catarrhal troubles during the winter months, the west coast of Florida is the place to go for relief. The time is not far off when this west coast will be appreciated by all people seeking pure air, sunshine and soft, balmy breezes.

R. P. BELL.

### YACHT NEWS NOTES.

The "Yacht Racing Calendar and Review" for 1898 is a compact volume of nearly 600 pages, compiled by Mr. Dixon Kemp from the yachting pages of the *Field* during the year. American yachtsmen will find it interesting as a record of Navahoe's races abroad. The price is \$1.25.

The annual meeting of the North Shrewsbury River Ice Yacht Club was held on Dec. 13, the following officers being elected: Com. S. W. Morford; Vice-Com. F. H. Ball; Sec'y-Treas. J. B. Weaver. Regatta Committee—C. E. Throckmorton, A. W. Haviland, Charles Curtis. Reception Committee—Dr. Edwin Field, W. A. Cole, C. D. Warner, T. S. Hubbard, Joseph Burrows, Sr., J. B. Weaver. House Committee—A. W. Haviland, W. T. Conover, Walter Sutphin. The club has accepted a challenge from the Burlington I. Y. C. for its centennial and has decided to put but three yachts in defense against the challenging yacht.

On Dec. 14 the Orange Lake I. Y. C. of Newburgh, elected the following officers: Com. H. C. Higginson; Vice-Com. J. William Kidd; Sec'y-Treas. A. N. Chambers; Meas. C. A. Dixon. Regatta Committee—Dr. E. O. Mitchell, chairman; B. B. Moore, George Beggs, Willett Kidd, Jr., and W. P. Rayland.

The Pavia Y. C. has elected the following officers: Com. David W. Kohn; Vice-Com. Frank M. Randall; Treas. Benjamin McClain; Cor. Sec. James B. Fiskel; Fin. Sec. Wm. F. Tobin; Fleet Captain, Louis W. Forbell; Fleet Surgeon, Dr. Louis Baumann; Meas. Albert C. Curtis; Trustees, W. J. Kent, N. B. Pritchard, Enoch J. Smith, W. R. Adams and has decided to put but three yachts in defense against the following committees: House—Norman L. Rowe, Louis Mittelsdorf, W. Willis, J. J. Leonard and Dr. Van Meter. Anchorage—A. F. Roe, A. J. Kreymer and R. H. McFarland. Delegates to New York Yacht Racing Association—F. M. Randall, N. L. Bowe and A. J. Kreymer.

An ice yacht club has been organized at Red Bank, N. J., under the name of the Junior Ice Yacht Club.

The first lecture of the season before the Seawanhaka Corinthian Y. C. will take place on Dec. 21, the lecturer being Dr. Frederick A. Cook, an officer of Peary's first Arctic expedition, who, during last summer, made an independent expedition to the polar seas in a schooner yacht.

The members of the New Rochelle Y. C. are endeavoring to obtain an appropriation for improving New Rochelle Harbor by removing the reefs and rocks and constructing a breakwater.

Valiant, steam yacht, Mr. W. K. Vanderbilt, was reported at Alexandria on Dec. 12.

The annual meeting of the Douglaston Y. C., was held on Dec. 4, in New York, following officers being elected: Com. Hazen L. Hoyt; Vice-Com. Charles A. Gould; Rear-Com. George N. Holl; Sec'y, James Hixon; Treas. George A. Corry; Board of Governors: G. Howland Leavitt, C. F. Ahlstrom; Meas. R. F. Corry. After the election the club sat down to the third annual dinner.

Nirvana, steam yacht, a new vessel owned by W. R. Sands, of New Hamburg, sailed for Cuba, via Charleston. She was designed and built by Dr. C. D. Miller, of Poughkeepsie, and is 100 ft. over all, 18 ft. beam, 5 ft. draft, with engines 10, 16 and 22½ in, and a Roberts boiler. Capt. G. W. Eaton is in command.

Columbia, Mr. J. H. Ladew's new steam yacht, has taken a berth at Tebo's, the attempt to make a speed trial being postponed until spring. She is not yet fully completed.

Clermont, steam yacht, Mr. Alfred Van Santvoord, is now undergoing alterations in New York.

The Many Model Y. C. held its annual meeting on Dec. 13, electing the following officers: Com. Dr. W. Evans; Vice-Com. J. G. Rosegarten; Treas. W. A. Worth; Sec'y, J. Hart. On motion of Dr. Evans the measurement rule of the club was altered so that it reads, "the length shall be taken between the perpendiculars, that is, from the fore side of the stem to the after side of the sternpost. The length so taken shall be multiplied by the extreme beam and again by the mean of the three measurements to be taken forward, aft and amidships, counting from bottom of keel to deck, the mean of the three measurements shall constitute the depth for measurement purposes." After a short discussion the rule was adopted with only one dissenting vote.

White Lady, steam yacht, has been rechartered by Mr. Ogden Goebel, who will use her in the Mediterranean this winter.

### Christmas Vacation Outings via Pennsylvania Railroad.

FOLLOWING its yearly custom, the Pennsylvania Railroad Company proposes running a special holiday tour to Old Point Comfort on Dec. 26, leaving New York at 8 and Philadelphia at 10:30 A. M. \$18 from New York, \$15 from Philadelphia, and proportionately low rates from intermediate and contiguous points will cover hotel accommodations, railroad fare, meals en route, and, in fact, all necessary expenses during the period of four days which will be spent on the trip. This outing appeals strongly for the consideration of those desiring to spend a few days pleasantly and profitably, and apart from the attractiveness of the jaunt a decided educational benefit is to be derived from a familiarity with this historic spot. The Hygeia Hotel, famous through out the land as one of the finest hostleries of this country, will be the resting place of the tourists. At the same rate will be sold another ticket going with tour proper, including but one day's board at Hygeia, but good to return via Richmond and Washington, and valid for stop-off at those cities until Jan. 4, 1899.

Two other trips deserving attention are those to Washington on the 14th and 28th of the month. Three days will be occupied on each, affording ample time for an inspection of the most beautiful of American cities, with its wealth of interesting features. The wonderful architectural studies, and the glamor always surrounding the capital of a great country, will more than repay a visit. \$18 from New York, \$11 from Philadelphia, and corresponding rates from other points, are certainly low enough for the most modest purse. These last mentioned tours will leave New York at 11 A. M., and 1:50 P. M., stopping at the principal stations between New York and Wilmington.—*Adm.*

### Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings) descriptions of boats and fittings, and all items relating to the sport.

### THE LOG OF THE FRANKIE.

The '92 Cruise of the Shenandoah C. C.  
BY THE COMMODORE.

(Continued from Page 531.)

We found the old dam at Mount Meridian quite broken out, as had expected, and after portaging the remains of an old pile dam above, we easily shot it. Beall's bad luck for the day was not yet for in shooting a small but ugly fish dam just in front of the village Mount Meridian, his canoe brought up all standing with a crash in the middle of the shoot, and an investigation revealed the fact that the fin. bolt of an old ploughshare had stabbed his canoe to heart!

There were no Scriptural quotations or ejaculations of a derogatory character this time; the subject was too deep for utterance, and merely remarking that he wished the nigger who had tied his fish-net to this particular ploughshare and left it in this particular place was elsewhere, he quietly stepped overboard up to his waist, lifted his canoe off the ground, and that same night he and without a word, towed his waterlogged craft to the bank, where he bailed her out and hauled her ashore, and for the second time that day hung himself and belongings out to dry.

We had intended making Rippeto's, five miles below—for our evening camp, but of course further progress was out of the question, so the other canoes were soon out alongside of Beall's and camp was made, after which the old canoe to Beall's camp was easily repaired in the usual manner by pasting a canvas patch over the wound, and he and Lacy took advantage of the opportunity to repair a badly smashed bilge keel in the bottom of the Clyde, while the Colonel and I again went fishing. I used flies this time and did not get a rise, while the Colonel, with his helgramites, took a couple more fine bass.

We spent a pleasant, quiet evening in camp enjoying our after-supper pipe, and then the camp was placed on a limestone ledge at the margin of the water, which flashed musically over the fish dam just above us, while the tiny wavelets lapped up against the ledge at our feet, and sparkled brightly in the rays of the full moon, which smiled benignantly overhead. The murmur of voices was brought to us on the light breeze in a subdued undertone from the village store 100 yds. away, which, with the twinkle of a light here and there in the little hamlet on the bank above us gave pleasant assurance of human companionship and dispelled that sense of loneliness and solitude so often felt in our night camps along the mountain rivers.

Saturday, July 30.—We didn't have fish for breakfast this morning, as an impression seemed to prevail in the party that I was to clean the fish along with my other privileges as expeditionary cook, and as this impression was not shared in by me they were left on the stringer all night and were spoiled by this morning. We got a good start and had a pleasant trip to Rippeto's.

This final mile and a half stretch of Middle river from Mt. Meridian to where it mingles its waters with those of the North River is peculiarly interesting to me as well as to the rest of the party, and we dallied along the still, deep reaches, overarched with great sycamores and varied by an occasional short, steep rapid, loth to leave the little stream behind us, although fully aware of what the Shenandoah had to offer in the way of its silvery rapids, and its invitingly before us, with its miles of miles of swift, rocky rapids, down whose rough and rugged chutes we would soon be plunging and tossing in an exhilarating manner unknown to the Middle River.

The big fish dam half a mile above the mouth of the river detained us an hour, as we had to portage it, and took advantage of our stop here to enlist the services of a troop of ragged and picturesque little colored urchins to secure us a good supply of helgramites for bait to use at Rippeto's. We had a rest of an hour, and then we started on until Monday and enjoy the fishing to be had there this morning. Our secured, we re-embarked and paddled down the last long still reach of the river and out upon the broad bosom of the united streams, which here at the confluence of the two make quite an imposing river in size. A heavy rain caught us as we were leisurely paddling through the mile and a half backset from the Rippeto's dam, but with closed hatches and the canvas drawn water was kept over our breasts under our oiled capes we rode the storm out without shipping a drop of water or wetting a thread of our garments.

We found the dam quite badly broken out at the left end, leaving a large but very hazardous-looking shoot. The temptation to run it was great, but as we did not like to risk wrecking a canoe or two in the operation, we decided not to attempt it, but to let the canoes down it carefully by hand, so we took our stations along the edge of the shoot, and the canoes, lightened of our weight, were easily and safely passed over.

Before being passed over the canoes were lying strung out along the inner face of the dam some little distance from the break, just as we left them when we disembarked to reconnoitre the shoot, and Lacy was detailed to bring them down to us, one at a time, which he did by gingerly making his way along the steeply sloping and very slippery shore, and then he turned the canoe over a small ledge of rock, and made the operation of passing back and forth a very tedious one.

The canoes were all over but the Frankie, and Lacy had gone back after her, when the Colonel, who was stationed at the head of the break, sung out, "Give her a shove, Lacy," supposing, of course that he would give the canoe a gentle push and send her along close to the face of the dam until within reach, when he would seize it and pass it over the dam, and then he would be on his way. The Colonel, however, when he gave the canoe a vigorous push struck it over the pool, and she sailed gracefully in a broad semicircle far out and then turned and came bearing down at her own sweet will upon the foaming shoot and entirely out of reach.

Lacy saw his error when too late, and came scrambling and splashing along the face of the dam as fast as the slippery and treacherous planks would allow him, and reached the shoot ahead of the canoe, and as she approached he dashed boldly after her, and when she took him in up to his waist, the second to his shoulders, and the third over his head, which final lunge gave him the boat, and they both came bearing down helplessly upon the yawning shoot, down which he would have slid like a runaway sled on a toboggan slide, but that the Colonel, striking out a step or two from the dam, extended him a helping hand, which he grasped as he was vigorously swimming for shore, and the canoe was saved, and the canoe was saved, and the canoe just as she made the plunge, and we eased her safely over.

We were soon nicely in camp at the big spring half a mile below Rippeto's, where Lacy took prompt advantage of the opportunity to ensconce himself in dry clothes, and after lunch the Colonel, Patrick Rippeto and I went fishing above the dam for a couple of hours, where we had fine sport, for the Colonel took five small bass, while I took a 2½ pound small one.

We hurried back to camp at 4 o'clock ahead of a heavy rain, which caused us no inconvenience of discomfort whatever, as our tents and dining fly were all in position and proved perfectly weatherproof. We had a royal fish supper as well as a good supply for breakfast, as with one accord everybody turned to with a will and cleaned fish.

Sunday, July 31.—It was a bright, beautiful morning, and we had a leisurely breakfast and a delightfully lazy time in camp, which, being under the bluff, is densely shaded; this, with the spring in our midst, and the rock floor under our canoes and tents preventing any possibility of mud, making an ideal camping place, and which we have frequently camped on before. We shaved, wrote letters, etc., and at 11 o'clock the Colonel and I borrowed a horse and buggy from an obliging neighbor and drove over to Shenando, where we took dinner at Wright's Hotel, and loitered around until 4 o'clock, when we drove over to Mother's residence, where we were secured for supper. We reached camp again at 7 o'clock, when I turned to and got up a supper for those two hungry mortals Lacy and George.

Monday, Aug. 1.—This morning by 8 o'clock we were again aloft and the cruise was resumed. We easily portaged the big fish dam in the bend of the river a mile and a half below our late camp, and had a successful and exciting run through the formidable falls that stretch for nearly a mile, and the remainder of the day we ran from the spring down to Port Republic. The run was made without accident, although collared with the rocks were not infrequent, and Lacy displayed marked and commendable agility in jumping overboard at one ticklish place in order to avoid a capsize. Also the Colonel broke his paddle squarely off just as he was awing around under the bridge at the foot of the falls in a tremendous endeavor to avoid snatching up on the final ledge of rock, and the canoe was detained here at Port Republic a couple of hours while George repaired the damage.

While here I renewed our supplies and we received and mailed letters. We took lunch on the old camp ground opposite Port Republic, and got off at 2 o'clock with Three Springs, seven miles down the Shenandoah as our evening's objective. There can be no more beautiful river in the country than the Shenandoah (which we begin here at Port Republic), with its rapid current, its beautiful, grassy tree-shaded banks, and most entrancing mountain scenery. The river strikes noon's cruise was a most lustrous and enjoyable one. The river strikes

me as being so different from either north or middle rivers above, that it is like taking a new start and beginning the cruise over again. The rapids and falls are much larger, longer and rougher than anything of the kind in the rivers above, with the exception of the mile and a half of falls in North River immediately above Port Republic, which have already been referred to, and we found our nerve, skill and address taxed in a most exciting manner in negotiating them safely.

I cannot say that we ran any great personal danger in shooting these falls, for when the water is rough and swift it is generally not deep, and as the rise is not large it would not involve much risk to wade ashore in case of serious mishap, but the principal risk is in getting our frail light canvas canoes through without shipwreck; which, with the consequent loss of stores, would terminate the cruise or seriously embarrass it.

At the present low stage of water we were unable to shoot the Port and Lewis mill dams, but portages were easily and quickly made. These obstructions did not long detain us. We passed a large row boat a little below the Governor Walker place, containing a couple of gentlemen fishing, who proved to be Messrs. Thomas and Avis, of Charleston, W. Va., who are stopping at Walkers. Mr. Thomas exhibited with much pride a sibs. bass he had just taken—it was the largest one I had ever seen.

We made a nice early camp at Three Springs and everybody went a fishing, but as the bass would not rise to our flies, nobody caught anything. After supper, Messrs. Thomas and Avis came down to our camp carrying between them a noble watermelon, a present from Mrs. Walker. They remained with us an hour, and then hurried back to escape the impending rain. It rained pretty much all night, but with the exception of a little spray which drifted in through the ventilators at each end, and the beat through the canvas roof, we were during a particularly fierce dash, our little tent proved dry and comfortable.

Tuesday, Aug. 2.—The rain passed over during the night, and morning dawned clear and bright and fully as hot as ever. We got a rather leisurely start this morning, as the day's run is to be a short one—only to Bear Lids Springs, some 12 or 13 miles below our camp. While at breakfast we observed old Mr. Kyzer, who lives on top of the bluff immediately above our camp, hobbling along the winding path down the hill, on his canes, looking more decrepit, feeble and rheumatic than last year, but as he approached the camp he set off a stentorian war-whoop of a hail such as not a man in our party could have delivered, and which spoke volumes for the excellent condition of his lungs, however his legs might be affected. The old gentlemen was glad to see us again, and we had a pleasant little visit with him while packing up.

We had an easy portage over the Shaver Mill dam, and in shooting the stiff rapids below I beached my canoe before reaching the foot, and, pike-pole in hand, prospected clear across the river in search of a practicable passage for the canoes over the fringe of rocks piled up at the foot of the dam; but, failing to find one, we all disembarked and led our canoes down the tail of the rapid and lifted them over the rocks without damage.

We next had an exciting shoot over the big fish dam a mile below, where we portaged last year, followed by a rather troublesome portage over the broken down Riverbank dam. The dam itself is easily shot, but the very heavy rapids below are not navigable at the present low stage, and we were forced to land and lift the canoes down. The dam a mile below it was easily portaged, and we landed just below it at the front of the bluff, upon which stood a large, fine-looking brick mansion and enjoyed our noonday lunch, smoke, etc., while George improved the brief stop to catch a few fine bass with his fly-tackle.

We had a fine run on down to Elkton, shooting the numerous rapids with ease, and deriving great sport therefrom, but were greatly disgusted to pass a couple of good-sized crabs coming in red and muddy from the rain of last night, which in the course of a few miles, entirely changed our beautiful, clear, blue-tinted water into an ugly red, turbid current, utterly unfit for fishing and completely spoiling the beauty of the stream.

We easily portaged the Elkton dam and had an exciting shoot down the wild channel through the rapids below, all receiving divers and sundry hard knocks and thumps from the sunken rocks with which the chute was plentifully strewn, and landed at the bridge below and went to the mill for water and to the store for a few minor supplies.

The two miles to Bear Lids were quickly accomplished, and after the usual exciting plunge over the remains of the dam, we were soon in camp on the old camp ground, and in due time we repaired to the Springs, where we took supper and spent the evening. We found our Staunton friend, Frank Yates, in charge of the Springs, and he gave us a warm welcome, both on our own account and because—as is usually the case—men are rather a scarce article at the Springs. They had a very nice little dance at the Springs, at which Lacy, George and the Colonel distinguished themselves. An impression seemed to prevail that skill was not much of an object, so what they lacked in grace they made up in agility. We had a little supper up in "No. 16" afterward, and it was after midnight before we finally reached our tents.

Wednesday, Aug. 3.—The river was still quite muddy this morning, so as the mud was coming in from so short a distance above, and also as Naked Creek was coming in muddy three miles below, we decided to remain over here all day to-day, and let the muddy water run off ahead of us, so after breakfast at the hotel we returned to the camp, accompanied by Willie Compton, Mr. Bear's son-in-law, and little Henry Bear, and spent a very pleasant day in camp, where our visitors took lunch with us. The canoes are lying in a very ugly place, just at the margin of the river, but just a few yards inland from them the ground is good and nicely adapted to lying-around purposes, and we read, smoked, talked and fished all day. We had no success fishing this morning, but by 4 o'clock this evening the water had cleared considerably and we made a very fair catch; the Colonel took three, while I took six. We spent the evening very pleasantly at the hotel again, and the boys made an engagement with some young ladies from Berryville and vicinity to meet us at Castleman's Ferry, on the lower river, in about ten days.

Thursday, Aug. 4.—The river is all right again this morning, and we congratulated ourselves on our presence of mind in stopping over a day until the muddy water all ran down ahead of us. After breakfast pretty much the entire population of the springs accompanied us to the river to see us start, and were all highly interested in the canoes and outfit. Our short stay here was a pleasant episode in the cruise, and the cordial, hospitable treatment shown us by both guests and management was a source of great pleasure to us.

We had a lively five-mile run to Shenandoah, as the river along here is very rough, but no one met with any mishaps beyond an occasional thump or bang on a sunken rock, and the run was most exciting. We landed at Shenandoah, where we met Compton and little Henry, who had preceded us by wagon, and the Colonel invited us to dinner with him at Brown's Hotel. Compton is much interested in canoeing, and to-day bought the frame of Gibson's old canoe with his tent and my mattress, and will fit himself out and join us next year. While here we exchanged mail and telegrams with the ones left at home. Much to the regret of all of us the Colonel was obliged to leave us here, as he must be in Staunton on Monday, and after leaving here we plunged into a wilderness remote from railroad stations, not to reappear on the surface again until we reach Riverton, along about the middle of the week. We were sorry to lose the Colonel and his genial, breezy, wholesome presence was sadly missed by us throughout the remainder of the cruise.

At 3 P. M. George, Lacy and I resumed the cruise without him, with Harper's Ferry as our starting point. We had an uneventful but pleasant cruise of a couple of hours, in which our colored glasses came out strong, as the western sun, reflected in our faces from the water, was unbearable, and went into camp at 5 o'clock at Grove Hill, alongside of a fine spring in the bank, and were speedily doing justice to a good hot supper of bacon, potatoes, onions and eggs. An early camp is desirable in many ways, and we always cruise to make one when possible.

After supper Lacy turned in early, while George and I remained up enjoying our evening pipes by a little blaze of a camp-fire and settling of the labor question with the foreman of a detachment of bridge builders employed on the railroad not far away, and quartered in the farmhouse on the bluff above us, who strolled down to have a chat, and who possessed decided views upon the great Homestead strike, which, coming from a wise, intelligent man, interested us, and struck us as being most practical and sensible, coinciding as they do with our own decided anti-strike views.

[TO BE CONTINUED.]

#### Connecticut River Canoeists' Club.

THE Hartford C. C. held its regular monthly camp-fire on Saturday, Dec. 16, and besides a goodly representation from the local club, Messrs. Knappe, Banks, Mathewson and Bielloch, from Springfield, Messrs. Schuster, Metcalf and Ladd, from Holyoke, Davenport and Cox from South Hadley, and J. R. Gillilan, of Northampton, were the guests of the club. Representatives from the up river clubs were invited to talk up the matter of arranging for an entertainment at each of the clubs on the river during the winter, and the C. R. C. is the result. Mr. Knappe was chosen chairman and Mr. F. W. Theis, of Hartford, secretary. The next camp-fire will probably be held at Springfield about the middle of January. This matter has been talked of for several years, as it was expected that the bringing together of the several clubs on the river would more fully develop the fraternal feeling which has always existed between them. Until now no action has been taken, but the representatives in Hartford last Saturday showed much enthusiasm on the subject.

## Rifle Range and Gallery.

### The Revolver Championship.

ROUNDSMAN W. E. PETTY is still in the lists awaiting a challenge for the Winaus Trophy, which he has now held for one year, or half the time necessary to make it his permanently. Since his three straight victories over Messrs. Jantzer, Walther and Heintz, would-be revolver

SOME TARGETS BY PETTY.

champions seem scarce. We present herewith three consecutive targets made by Mr. Petty in practice Sept. 25. They were shot on the regular 5 in. disk used in all the competitions, and on a 24 in. and 1 1/2 in. blacks at 50 yds. Mr. Petty used a .44 caliber S. & W. revolver, 10 grs. powder and 120 grs. lead, and shot these strings without cleaning. The targets are reproduced exact size.

### Pittsburgh vs. Iroquois.

PITTSBURGH, Pa., Dec. 14.—It is a long time since anything in the rifle-shooting line attracted so much attention in Pittsburgh as the 25yd. gallery match between teams from the Pittsburgh and Iroquois clubs, shot Dec. 12 at the range of the former club. Conditions were made to suit the visiting team, and for the evening the home men gave up their 40yd. distance and standard American (reduced) target, substituting the old Massachusetts target at 25 yds. Rounds were twenty-five per man, in five shot scores, two men (one from each team) shooting at a time. Stakes, a supper for the two teams. The Pittsburgh Rifle Club was organized in 1870, and three of its team have been members since that time, while the rest are almost all of much longer experience than their opponents; but in justice to Mr. Ittel it should be stated that he only joined the club this season, and in age and experience had no advantage over any one of the Iroquois team, yet he tied the old reliable Joe Huggins, a rifleman of far more than local reputation, and outshot every other man in the match. It is also fair to mention that the two captains had upon their shoulders entirely too large a share of the management of the contest to do themselves justice at the score. The striking feature of the evening was the large attendance of spectators, which seems to promise a revival of interest in the sport which is most desirable. Only the totals of the five-shot scores are available, and run as follows:

### Vernon Rod and Gun Club Tournament.

THE Vernon Rod and Gun Club held an open to all tournament on its new grounds, corner Enfield street and Atlantic avenue, Brooklyn, on Wednesday, Dec. 12, and had a fair turnout. The shooting was at bluecock targets under the rapid-fire system. Among those present were W. R. Hobart and J. R. Osterhout of Newark, Dr. P. J. Mason of Peekskill, Neaf Appar of Evona, M. F. Lindsley of West Hoboken, and J. W. Hoffman of German Valley.

The shoot was in charge of the following committee: F. A. Thompson, chairman; J. G. Wischerth, John Wright, W. H. Thompson, Wallie Dorr. The state of the weather had a great effect on the nerves of the shooters, as is shown by the fact that during the entire day only two clean scores were recorded. The results follow:

No. 1, 10 targets:					
Hobart.....	1111010111	8	F A Thompson.....	0101001111	6

### Coney Island Rod and Gun Club.

THE extreme cold weather which has extended over Long Island for the past week has had a depressing effect on the spirits of many of our local shooters. The monthly shoot of the Coney Island Rod and Gun Club fell on one of the extreme cold days of last week—Wednes-

day—and the result was that only ten members put in an appearance to contest for the Plate diamond trophy and the extra prizes. The Plate trophy, as we had occasion to remark in a previous report of the club's shoot, is a remarkably fine piece of the jeweler's handiwork, and naturally all the members have a strong desire to win it. The trophy will go to the member winning it the most number of times at the monthly shoots during the year. Thus far it has been won by the following members: Wm. Lair twice, Dr. Van Zile twice, Fred W. Pfander once, Fred McLaughlin once and Dr. Little once. The fact that the previous winning of the trophy is distributed among five men, two only of whom have won it twice, should make all future competitions to the end of the shoot decidedly interesting. On Wednesday when the members assembled on the grounds, four of the men present were previous winners of the trophy, and each of them, no doubt, had strong hopes that the much coveted prize would come his way. On the first round Fred McLaughlin scored a miss; the next one of the quartette to miss his bird was Wm. Lair, on the fifth round. Messrs. Pfander, Dr. Little and John C. DeFaine, the popular secretaries to the club, succeeded in making clean scores of seven birds each. On the shoot off DeFaine withdrew and left Messrs. Little and Pfander to contest for the trophy. The result was a victory for Pfander on the third round, he killing three to Dr. Little's two. Scores:

W Schumacher.....	1110231-6	Dr W A Little.....	112121-7
F W Pfander.....	112121-7	F W Pfander.....	1111021-6
W Schumacher.....	012121-6	H McLaughlin.....	0021230-5
Dr Lynch.....	020101-4	J C DeFaine.....	0121230-5
Dr Van Ord.....	002102-4	J C DeFaine.....	112121-7

### Onondaga County Sportsmen's Club.

THE Onondaga County Sportsmen's Club, who have splendidly equipped quarters at Maple Bay, on the picturesque shores of Onondaga Lake, about five miles from Syracuse, is one of the strongest organizations, financially as well as numerically, in the State. In 1892 it engineered the New York State shoot, which was one of the most successful ever held. Included among its members are a number of the most solid business men of the city, including A. C. Ginty, Harvey McMurchy, Daniel M. Lefever, A. G. Courtney, Chas. H. Mowry, Geo. H. Mason, Geo. E. Holloway, C. C. Spangler, C. Dugard and W. H. Harkness, all of whom are enthusiastic trap and field shots. The club holds regular weekly shoots, each member shooting at 50 targets, for medals. The last of these contests took place on Dec. 14, when the weather was miserably unfavorable, the day being extremely cold, with a heavy snow storm and strong wind. The scores, however, were fairly good despite the handicaps. A. G. Courtney, the general representative of the Lefever Arms Co., won the medal on a score of 44 breaks. The scores:

A G Courtney.....	11011111011011011111	21	Bennett.....	10101000011111	23-44

### North Side Gun Club.

THE last monthly shoot of the North Side Gun Club, at the Queens County Driving Park, Maspeth, L. I., on Dec. 12, unfortunately came on a very cold day. The atmosphere had that crisp Arctic feeling about it that unless one's circulation was in good condition, a few minutes' exposure was sufficient to make the most enthusiastic pigeon crank break for cover. But the personality of the North Side members is of that vigorous nature that a little frosty weather only adds to their vigor. The meeting on Tuesday was the last for the year 1896; their shooting year, however, extends to and includes April, 1897. The club event for the club medal and other prizes call for 7 birds per man, handicap rules. The shooting on Tuesday was noted for some good, clean kills on the part of the shooters and also for some instances of the usual hard luck that one will fall in with at times. C. M. Meyer, H. Heyer and M. C. Manning seemed to find the frosty weather just to their liking. For they shot in good form and re tired with clean scores to their individual credit. Messrs. Wahlen and Mencke each missed one bird. Of the others, Messrs. Smith, J. N. Meyer, Jennings and Duryea seemed to have a plethora of unfortunate circumstances to cut down their scores. Under more favorable weather conditions they will no doubt make a better showing. Scores:

Club shoot, club handicap:					
C M Manning.....	121221-7	A Duryea.....	1011011-5		
J G Sieme.....	0021223-5	C M Meyer.....	2122221-7

### Phoenix Gun Club.

EVERY member of Long Island's oldest organized gun club, known as the Phoenix, assembled at Miller's Dexter Park on Dec. 12 for its last quarterly shoot for the year 1896. To one who frequents the meetings of the many gun clubs organized and shooting under the rules of the present day, Hurlingham modified, etc., he longs to see a re-run of the style of the old sportsmen of a generation now fast passing away.

Barring the few brutes engaged in the trap and handle brutalities of those days, the trap-shooting fraternity used to consider that the birds had some rights which the shooter as a sportsman was in duty bound to consider, and one of the cardinal principles was that the bird should have opportunities to be on the wing and clear from the traps before the shooter was permitted to open fire upon his victim. But now, with improved guns, nitro-powders and Hurlingham rules, the poor bird has no show whatever. The moment the trap is open the gun is off, and in many instances the bird falls dead on the trap. This is called sport, and our experts of the present day are able to record full scores under the rules now adopted by 90 per cent. of our gun clubs.

A visit to Dexter Park on Tuesday last week to witness the shoot of the Phoenix Club brought us in contact with a small gathering of sportsmen who still cling to the old rules of pigeon shooting. We found the old club on the old stand and the old members on deck.

There was John Akhurst, who has been "Uncle John" to the fraternity of shotgun shooters for the past 25 years; he is now past his seventy-fourth year. Then there was Wm. Hughes ("Uncle Billy"), from New Jersey, a man nearly as old as Mr. Akhurst, and as full of interest in shotgun matters as the youngest member in the club. The eight members were divided into two teams of four, one under the leadership of President D. Frelich and the other marshaled under "Uncle" John Akhurst, with "Uncle Billy" Hughes guarding the rear of "Uncle John's" quartette. The race was at 15 birds per man, H and T traps, Long Island rules, both barrels allowed. The weather was fine, the westerly wind tempering the atmosphere to that degree which makes outdoor exercise a pleasure at this season of the year. The birds furnished by Mine Host Miller were a good lot, and under the rules in force gave the shooters plenty of opportunities for showing their skill. Scores:

Capt Akhu'01011121111111-13	Capt Frelich'01111112122111-14
E Madison'0111111120211-13	J Gardner'022022102101-9

### Unknown Gun Club.

THE monthly shoot of the Unknowns at Dexter Park on Dec. 14 brought together a number of members in competition for the club prizes. The weather was altogether too frigid for comfort when facing the traps, and as soon as a member had shot his turn he sought shelter in the shooting house, where a large stove and a hot fire made it possible to keep his body in a fairly comfortable condition. Of late Miller has been able to supply some rattling good birds to his patrons and as a consequence the live bird cranks have had opportunities to test their shooting abilities to their fullest extent. The birds furnished to the Unknowns were no exception to the general run, and some of the best shots of the club had to submit to the fact that the birds at times were a little fast for the gun and the shooter. Of the ten members engaged in the club event only two of them, Messrs. E. A. Vroome and Ike Hyde, made clean scores. H. Van Staden and G. Rankin were in hard luck throughout the shoot, each getting 2 birds out of 7. After the club event a sweep at 3 birds was shot off. Scores:

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

**The American Angler's Book.**  
Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

**American Fishes.**  
A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

**Book of the Black Bass.**  
Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

**More About the Black Bass.**  
Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

**Fly-Fishing and Fly-Making for Trout, etc.**  
By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

**Fishing Tackle.**  
Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

**With Fly-Rod and Camera.**  
By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9½ in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

**Fly-Rods and Fly-Tackle.**  
Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

**Game Laws in Brief.**  
Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

**Woodcraft.**  
By NESSMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

**Tricks of Trapping.**  
Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

**Log Cabins.**  
How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

**Hints and Points for Sportsmen.**  
Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

**Names and Portraits of Birds**  
Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

**Antelope and Deer of America.**  
A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

**The Gun and Its Development.**  
With Notes on Shooting. By W. W. GREENER. Breech-loading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

**The Art of Shooting.**  
An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

**Field, Cover and Trap-Shooting.**  
By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

**The Still-Hunter.**  
A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

**The Breech-Loader and How to Use It.**  
288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

**Uncle Lisha's Shop.**  
Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

**Sam Lovel's Camps.**  
A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

**Pawnee Hero Stories and Folk-Tales,**  
With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

**Blackfoot Lodge Tales.**  
The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

**Our New Alaska;**  
Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

**Dogs: Their Management and Treatment**  
IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 203 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

**Kennel Record and Account Book.**  
Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

**Dog Points and Standards.**  
First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

**Training vs. Breaking.**  
Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 166 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

**Modern Training;**  
Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

**House and Pet Dogs;**  
Their Selection, Care and Training. Paper, price 50 cents.

**Lee's Modern Dogs.**  
History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, \$7. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

**Kennel Secrets.**  
How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

**The Spaniel and Its Training.**  
By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

**Scientific Education of Dogs for the Gun.**  
By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

**Small Yachts.**  
Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½x12½. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

**Steam Yachts and Launches;**  
Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

**Canoe and Boat Building.**  
A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

**Canoe Handling.**  
The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

**Yacht Architecture.**  
By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

**A Manual of Yacht and Boat Sailing.**  
By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

# FOREST AND STREAM BOOK LIST.

## THE COAST FISHERIES CONFERENCE.

WE shall begin in our next number the publication of the full official report of the coast fisheries conference held in this city on the call of President Huntington of the New York Fish Commission. While the conference adjourned without having accomplished anything definite toward the object for which it was called, the proceedings demonstrated several things: First, a widespread and growing belief on the part of the rod and line fishermen that the supply of food fish along the coasts of the New England and Middle States is diminishing; second, a firmly expressed declaration on the part of the net and seine fishermen and fish dealers that food fish are as plentiful as ever.

Further, it was clearly shown that the rod and line fishermen believe in stopping the use of pounds in inland salt waters and the hauling of menhaden seines in bays, sounds and narrow waters, while limiting the use of pounds everywhere to the four months beginning July 1. The commercial fishermen and fish dealers oppose these measures as being too sweeping and destructive of the fishing industry, but declare their willingness to submit to any reasonable regulations looking toward the protection of the fish and the maintenance of the supply.

The great difficulties in the way of concerted action and satisfactory results of such meetings are immediately apparent. The interests represented are diverse and conflicting, the convention finds itself powerless to act effectively, and the data presented to establish certain important statements are found to be unsatisfactory. Few States have the means of collecting statistics, and many compilations offered in evidence are discovered to be faulty. Again, the States are usually unwilling to unite upon any legislation affecting the coast fisheries. If one of them has a temporary advantage of position it generally opposes a change of regulations. The same is true of interior waters and a case in point is the struggle on the part of the Pennsylvania Fish Commission to induce the Maryland Commissioners to unite with them in removing fish traps from the lower fifteen miles of the Susquehanna River.

Statistics are often misleading unless carefully handled and adequate. There is frequently a local diminution of food fish, although the general supply may be kept up by developing the waters. Again, the supply may be maintained by extraordinary increase of the nets and pounds employed in the fishery. The Spanish mackerel, for example, is rapidly falling off in Virginia, yet the market supply is kept up by shipments from new waters in the Gulf States. The catch of shad continues uniform, but the number of pounds in some regions has been enormously increased.

There is no question that inquiries into the actual state of the fisheries should continue to be made—as they have been made year after year by some of the States as well as the United States. It is neither necessary nor desirable that the inquiry should be limited to practical fishermen and fish dealers. These classes do not themselves desire a commission so restricted. No harm can come from a study of the life history of the fishes and of the methods employed in the United States and abroad. The relation of scientific research to public economy is too well known to require explanation or defense. Let us have all the information needed as a basis of proper legislation and as

a guide in the artificial propagation of useful fishes, and let all good men unite in supporting measures necessary to protect the inhabitants of the waters. Such protection may be secured without danger of destroying great industries and making fish a luxury which only the rich can afford.

## QUAIL STOCKING.

THE letter from our Canadian correspondent "Cinna," printed in another column, will be read with great interest, especially by those who have in view the restocking with quail of sections where no birds are now found. We have been hearing of the rearing of quail in confinement for lo, these many years, but the authentic cases where success has been had could be numbered on half the fingers of a single hand. From the tone of the letter which "Cinna" quotes, it would seem that Mr. Duncan had little or no difficulty in rearing his birds, and he looks forward to renewed success next season. If it can be shown that the quail can be reared in confinement, one of the shooting problems of the future will have been solved.

Reports from northeastern shooting grounds everywhere show that this autumn quail have been singularly scarce, and we have in mind more than one township, where birds are usually moderately abundant, in which the total bag for all the gunners this year does not number a dozen birds. If it is true that the severe winter of 1892-93 is the cause of this scarcity, it would seem that the prospects for shooting next autumn are dismal enough.

It is apparent that before long field shooters must take some action, either by importing foreign birds, as has been done in some cases, or by restocking with native species brought from long distances. This last method, while it has been extensively tried, cannot be said to have been successful, and of the many thousands of Southern quail turned out in the Northern States within the past few years, only a very inconsiderable proportion have been shot, or have lived over to reproduce their kind. The enterprise of restocking our coverts is as yet wholly in the experimental stage, and it is safe to say that we know very little about what should be done in the matter.

## PORTRAITS IN INK.

### IV.—THE PROFESSOR.

YOU anticipate great pleasure in meeting the Professor of some congenial branch of natural history, for you ichthyology, perhaps, for you have long been acquainted with him through his charming descriptive writings, wherein he discourses so eloquently and feelingly of the ennobling and refining influences of field sports through the close contact with nature to which they bring one.

In season and out of season he preaches the gospel of outdoor sport, which, if followed in the true spirit, must perforce make one reverent, wise, patient, generous, self-sacrificing, modest, while bestowing the grosser gifts of health and strength.

Hunt, Shoot, Fish and Be Good, is the grand precept of life that he continually exhorts you to follow, to be guided by, and in your humble attempts to follow this saintly teacher, you have felt condemned when you caught yourself uttering a naughty word over a fouled hook or a missed fair shot, and almost despair of complete sanctification when you detect yourself rejoicing more over a heavy bag and full creel than over sky and landscape, glorified by sunset or the twilight solemnity of the woods.

But he, serenely exalted above all such weakness and vanity, must be the ideal true sportsman and gentle angler, possessing all the virtues of each, which he has so admirably set forth, and as such you have limned a portrait of him.

It is a pity to meet him and have it spoiled by comparison with the original. There is no similitude in it to this gross, arrogant, selfish, egotistic man, who takes as of right the easiest chair and the warmest or coolest place, sorts the basket for the finest fruit, disparages the fare, asserts his theories, scoffs away opposite opinions, vaunts his achievements, patronizes nature with the air of being her chief proprietor and only interpreter.

If you should attempt a more truthful portrait than your ideal one, while you are in the reaction of disillusion, you would doubtless draw it in charcoal with very few touches of white chalk, and the result would be a caricature, not a portrait, with every ugly feature exaggerated and overshadowing the gentler ones.

Really, he is not an imposter, nor is he a bad man, but one with two sides. Your first picture was drawn from the better one, reflected in his writings; that it is poorly

exemplified in them does not prove that his teachings are false.

He must have felt or he could not so well describe the refining influence of intercourse with nature, though it has not perceptibly touched the baser of his two personalities. He is certainly none the worse for it, doubtless better than he would be without it.

If you have ever been intimately acquainted with a saint it is more than likely that you have found him very good and very disagreeable, the fine gold of a pious life strangely mingled with the dross of human frailties, but such a revelation does not make religion less true, nor the gold itself less precious.

A bad example does not invalidate a good precept, and if shooting and fishing have not made the Professor a perfect man it is no reason why you should forswear such pastime or cease to use the rod and gun as pretexts for going forth to nature.

## THE COLONELS ARE INCLUDED.

THERE are sundry think-themselves-better-than-other men who appear to be deluded with the notion that they enjoy special immunity from the game and fish laws. These statutes, they affect to hold, are all well enough in their way as restraints upon the common herd, but we, the possessors of handles to our names, are not bound by them.

And not only this, but there are never wanting others to proffer their friendly services to back up the assumptions by these men of special privileges. Let a Chicago Doctor of Divinity kill deer in Minnesota out of season, and his lawlessness will be defended not alone by himself but by apologists who hold that the Minnesota Legislature never intended to curtail the deer slaughtering inclinations of Doctors of Divinity. Let a Connecticut Adjutant General kill deer in Maine in the close time and be brought to book for it, and he will straightway appear at the head of a regiment of titled Nutmeggers demanding the exemption of Adjutant-Generals from the game law. Only the other day, when one of the district game protectors of New York brought suit against an individual who had been shooting wildfowl in a way forbidden by the statute, the offender, or his friends for him, set up the impudent claim that he should be let off from punishment because he was a Colonel on the Governor's staff.

Now is it not about time for all of us to understand and comprehend so clearly that we may govern ourselves accordingly, that there are no privileged classes in this country with respect to game and game fish statutes; but that we were all born free and equal before these laws; and that even the Colonels among us must conform to them?

## SNAP SHOTS.

The seventh annual dinner of the Megantic Fish and Game Club will take place at the Vendome, Boston, on Thursday evening, Jan. 11, at 6 o'clock. Treasurer Chapman writes us that it is proposed to make this dinner excel, if possible, all previous occasions.

A responsible and trustworthy Washington correspondent, who because of his interest in the preservation of wild ducks has taken pains to investigate the Treasury records of egg importation from the Northwest, sends us a statement which we publish in our shooting columns. It is to the effect that there is practically no such importation whatever. His investigation was prompted by the note of Commissioner Huntington of Ohio calling for a protest against a proposed modification of the tariff by which eggs would come in free; and unless the Treasury records can be shown to supply fallacious data, it would appear that the inroads of the eggers upon the wildfowl supply cannot be affected one way or the other by the Wilson bill.

Rev. Dr. Charles H. Parkhurst, who as president of the New York Society for the Suppression of Crime, has been engaged in a crusade against the vicious classes of this city, winds up the passing year with a complaint that he has found the District Attorney's office obstructive of his efforts. If Dr. Parkhurst has been an attentive reader of the FOREST AND STREAM he must be familiar with the Delmonico woodcock case; and we commend to him a review of that affair, for it will afford abundant evidence of the encouraging truth that the unwearied prodding of obstructive officials will in the end clear the way for bringing wicked men to the bar of justice.

# For the Waning Year.

## THE SINGING MOUSE STORIES.—IV.

BY E. HOUGH.

THE fire was flickering fitfully, and painting ghostly shadows on the wall. It was winter, and late in winter; indeed, the season was now at length drawing near to the end of winter, and approaching that dear time of spring, which, beyond doubt, will be the eventual front and closing of the circle in the land where winter will not come.

I had drawn the little pine table close to the heap of failing embers, and aided by what light the sulky candle gave, was bending over and trying to arrange a patch on my old hunting coat. It was an old, old hunting coat, far gone in the sere and yellow leaf. It was old-fashioned now, though once of proper form and comeliness. It was disfigured, stained and worn. The pockets were torn down. The bindings were worn out. It was quite willing, was the coat, to be left alone now, hung by upon a forgotten nail, and subject to no further requisition. Nevertheless, if its owner wished, it could still do a day or two. I knew that; and something in the sturdy texture of its oft-tried nature excited more than half my admiration, and all my love. So I was gentle as I might be with the needle.

Walpuris on the ceiling, gray coming on in the embers, symptoms of death in the candle, a blotch of tallow on the Shakspeare, and the coat not half done. It must have been about then, I think, that the thin-edged sweetness of the Singing Mouse's voice pierced keenly through the air. I was right glad when the little creature came and sat on my knee, and in its affectionate way began to nibble at my finger-tips. I was right glad when it sat erect, its thin paws waving with a tiny, measured swing, and in its mystic voice, so infinitely small, so sweet and yet so majestically strong, began a song which no pen can transcribe. Thrilled and spell-bound, knowing that the awakening must come, but unwilling to lose one moment of the dream, I, who with one finger could have crushed the little thing, sat prizing it more and more, as more and more its voice swept, and swelled, and rang; rang till the fire burst high in noble pyramids of flame; rang till the candle flashed its thousand crystals; swelled till the walls fell silently apart, and showed that all this time I had been sitting ignorant of, but yet within a grand and stately hall, whose polished sides bore speaking canvas and noble marbles; swept up and around, till every stately niche, and every tapestried corner, and every lofty dome rang gently back in mellow music, all for the Singing Mouse and me!

Thou small wizard! It was cunning of thee, I declare, to paint that old mill dam on the wall. How naturally the wooded hill slopes back beyond the mill! And how, with the same old sleepy curves the river winds on back! How green the trees—how very green! Ah, Singing Mouse, they can't mix that color any more, somehow. And nowhere now do wide bottom-lands wave and sing in such seemingly grace, so decked with yellow flowers, with odd sweet William and the small wild rose. And nowhere now on earth, I know, is there any stream to murmur so sweetly and so comfortably, to say such words to any dreaming boy, to babble of a work well done, to whisper of a high place earned, to hint of a good, clear conscience, and of a final happiness worth all the work and all the places. All that was in the river. If I listen very hard and imagine very high and very deep I can almost pretend to hear them, those old words, heard when I was young. But it is only pretense. I fear I have lived too long. The voices are there, I doubt not. There are other boys, God keep them boys always; and may they dream not backward, but ahead!

Now, that smooth, lazy pool beneath the east wing of the dam, how smooth it looks! Yet well I know the sunken log upon its further side. I have festooned it full often with big hook and hempen line, with spoon and swivel, with small hook and airy leaders. I have taken out of that pool how many hundred bass, I would not say, nor how multifold a band of fat and fatuous goggle-eyes, nor how great a store of bullheads, when the water was too high for better game. It was here my father first taught me to loosen a hard-snagged hook, working patiently, with deft droppings of the heavy sinker, and easy twitchings of the line. It was here my brother and I caught the painful of goggle-eyes. It was here we made that fellow throw back the bass we saw him catch out of season. It was here that we actually once slept all night, rolled upon the bank, and woke the next morning each with a sore throat, but with a heart full proud at such high deed of derring-do.

And there's the long wooden bridge. What a feat of engineering did that bridge seem to our untraveled minds! And there, at the other end of the bridge—swimming up! I declare, in the same old way—is the great silvery moon whose light served us when we used to stay late by the dam in the summer time. And those shadows of the bridge timbers are just as long and black; and the water over the middle break—out there where we speared the big sucker, you know—is just as beautiful and white; and here, right down under our feet, the moon is playing the same trick of painting faces in the water!

There are too many faces, Singing Mouse! Will you kindly make it clearer? Can you not bring them nearer to the surface? And will you not stop repeating those old lines about the "Corpus Delicti"? You make me shudder with your song about bodies coming to the surface!

What's that—what are you doing? I pray you, no Madonnas! This river is only make-believe, you know, and I'm not really a boy. There are no more angels on earth, I know, than there are bass in a meadow! That one—Pull it! Pull the slide, I say! Do you want to kill me, you heartless little wretch? You are so cruel sometimes that I know not whether most to love or hate you.

Now, that's rather a pretty picture you've got there. The autumn frosts have very beautifully touched the leaves along that winding little creek, and the cornfields sweep down to the banks in very gracious golden plenty. Do I know that little stream? Do I know it? Do I know—no wonder you are laughing, Singing Mouse. I should think I might well know that stream. Did I not shoot my first quail flying there? Have I not galled many a molly-cotton in those thickets? Did I not once knock a squirrel spinning out of that tree, with the rifle ball square under his ears? I'll bet the old rifle would do it to-day. That old rifle—Say, what are you painting in

that picket fence for? What do you mean by that house, with the little porch in front, and the green blinds and the new look, as if it had never been lived in? What's that got to do with the brown woods, whose doors stand always wide and welcoming to a fellow, and whose rooms have no ghosts in them? Pull it! Pull it, I say! What-ever has gotten into you to-night?

I thank you, wizard. After the solemn-fronted mountains, the solemn-fronted sea. If you will listen thoughtfully enough you will find that it is not all trouble that the sea is talking about. Much more than a petty excitement, fit to blot a weak man's momentary woes, it speaks of a sterner and stranger impulse; it throbs with the pulse of a further shore; it speaks of a quiet tide making out to the Fortunate Islands, and tells of a way of following gales, and to a new Atlantis. Those are pretty lines you have there, Singing Mouse:

Long time upon the mast our brown sail flapped;  
Our keel plowed bitter salt, and everywhere  
The ominous sky in sullen mystery wrapped,  
What side we looked on, either here or there,  
The welcome sight of land long sadly sought;  
And that Atlantis, hid within the sea,  
The city with our hope and promise fraught,  
We saw not yet, nor wist where it might be.

But as we sailed as wistful as we might,  
And counted not the sail more fit than oar,  
Lo! o'er the wave there burst a vision bright  
Of wood, and winding stream, and easy shore.  
Then by the lofty light which shone above,  
We knew at last our voyage sad was o'er,  
And we hard by the haven for which we strove,  
And soon all past the need to wander more.

Then as our craft made safely on the strand,  
And we all well our weary brown sail furled,  
We gazed as strangers might at that fair land,  
And hardly knew if it might be our world;  
Till some one took gently every weary hand,  
And led us on to where still waters be,  
And whispered softly, "Lo! it hath been planned  
That thou at last this pleasant place shouldst see."

And as those dreaming, so awakened we,  
And looked with eyes unhurt at that fair sky,  
And whispered, hand in hand, and eye to eye,  
"Tis our Atlantis, risen from the sea—  
Tis our Atlantis, from the bitter sea!  
Tis our Atlantis, come again, oh! friend, to thee and me!"

"Say, about that Atlantis, now, Singing Mouse?" said I. Well, well, how small the voice sounded! Bless my soul! how quickly it all snapped back to the pine table, and the dead fire, and the burnt-out candle, and the old, old coat!

## DANVIS FOLKS.—XIX.

### Misfits.

"It's terrible resky a-gettin' one thing 'at's a leetle cuter 'n the rest o' yer belongin's," Uncle Lisha remarked as he split some pegs off a block with his jack-knife.

"Oncet I got me a new awl 'at put me clean aout'n consait o' my ol' kit, an' cost me more'n a month's airnin's a-buyn' new tools 'at I didn't need, an' some on 'em jest useless consarns.

"I've knowed a feller tug 'at a patch sot on a boot 'at looked so much better 'n the rest on 't 'at he hed to git a new pair an' then a suit o' clo's to match, an' then his wome'n must up an' hev a new caliker gaownd. But the beatinest was Ros'l Drake's door, a bran new front door 'at he bid off to Amos Wilkin's vandue. Do' know haow Amos come to hev it, but he hed it, an' Ros'l he bid it off, an' took it hum an' sot it in the barn, and at fust his wome'n sputtered 'bout his buyn' of it, an' they hed a notion o' puttin' on 't in the place o' their ol' front door, but it wouldn't fit, an' they cal'ated if it did it 'ould make the hul haouse look humbler 'n ever. But it wouldn't du to waste that aire door, 'at was paneled an' hed a big brass knocker, an' so what d' they du finally but turn tu an' build them a new haouse to fit that 'aire door, which the ol' one was plenty good 'nough."

"Wal," he continued, after brushing the split pegs from the edge of the bench into his hand, "they hed to mortgage the place, an' finally lost it, ol' haouse, new haouse, front door an' all, an' went off over into Adams Gore tu live in a lawg haouse, an' glad 'nough tu git sech shelter.

"Over in the Gore, the rusters don't begin tu crow 'fore ten o'clock in the forenoon, an' the hens go to rust right arter dinner, an' you c'n allers tell Gore folks when they come daown here in dog days, by the 'stompin' the feet tu git the snow off on 'em. That's where the door landed them."

"Dat mek me remmber one man Canada," said Antoine.

"Consarn ye, Ann Twine, what in tunket's the reason ye don't never tell your stories fust?"

"Ah 'll save de pie an' kek for de en' of de dinny," said Antoine with a bland smile.

"Pies an' lies they be mostly," Uncle Lisha growled, and Antoine began:

"Dar was one man Canada gone off for work one mornin' heary, an' he 'll see it one leetly waum walkin' aout on de road for smell de mornin' hair.

"Wen dat mans see he 'll say, bah gosh, Ah 'll goin' feeshins, me. An' he 'll peek it up an' go raght off an' get hees hookin line an' go on de river an' 'trow hees hook, an' it an' more as two minute 'fore peckerel was took it, O, great beeg one. An' de log was slippy de man was stan' on, an' he was pull on de water an' all draown dead. "So you see, sah, boy, jns' for leetly waum dat mans was loss hees day work, an' dat beeg peckerel—dat was too bad—an' more as half hees laf-tam, for he 'll was be young man an' was goin' be marre nex' week, so he loss hees waf too, an' all de fums of de weddin'. Ant dat good many for one leetly waum, hein?"

Pelatiash sighed wearily as he thought of the crueler fate that had cheated him of his wedding day.

"But if yer story was true, Ann Twine," said the shoe-maker, driving a peg home with each blow of his hammer, "which it ain't anyways likely it is, bein' you tol' it, it don't agin a feller's goin' a-fishin' when he'd ort tu, an' I b'lieve I'd ort tu the fust good day 'at comes, an' I want you tu go along tew, Peltier."

As his abstracted gaze habitually sought the dusty window, the blurred panes did not shut out from him a vision of clear streams braiding the sunlight into the shadows of

copses and green brookside banks, inviting the weary heart and hand to rest and quiet recreation. He felt an almost painful heart-twinge that reminded him of long by-gone boyish anticipation.

"It can't quite tech the ol' spot," he thought to himself, "but thinkin' o' fishin' an' goin' a-fishin' comes nigher fetchin' on 't 'an most anythin'." Then speaking aloud: "It's a hopesin' 'at I won't never git so I can't go a-fishin' whilst I've got sense tu enjoy it. Lord, haow many times I think o' ol' Kit Jarvis a tryin' tu go a-troutin' arter he got blind as a bat. He was a master hand for huntin' an' fishin' an' a mate o' yer father, Jozeff, when I was a boy."

"But whilst he was a tough, hearty man, he begin tu git blind. It wan't fillums on his eyes, for they looked jest as nat'ral's ever they did, on'y when he was a-talkin' tu you, they wouldn't hit you, but p'int off tu one side mebbey an' be shut when he was a-listenin' tu ye. But he would go a-huntin' arter he got so 's 't he couldn't tell a barn from a haystack, an' they said he shot a pa'tridge by the saound of her quit quitin', an' he'd go kerwack agin a tree afore he see it an' cuss a spell an' then laugh an' make fun of hisself.

"But he gin up huntin' arter he'd shot Peltier's gran' ther's yullin' fer a deer. 'Never knowed my gun tu cut up sech a caper as that afore,' says he, 'an' I won't trust it no furder."

"But yit he would go a-traoutin', an' us boys, the Lord forgive us, uster laugh tu see him a-pawin' wi' one hand for suthin' 'at wa'n't there, an' a-pokin' his steek julluk a pismire feelin' its way 'mongst strange things, an' stan'in' harkin' for saounds julluk a hawg in a cornfel', an' mebbey tost his hook onto a lawg or rock, an' wait an' wait for a bite. I wonder the Lord didn't strike us mis'able leetle torments blind, but mebbey 'twas 'cause we uster onsnag his hook for him an' onsnarl his line, an' led him tu the best holes, an' mebbey 'twas 'cause he don't take much 'caount o' sech leetle onsignificant critters' duin's."

"Arter a spell he gin it up, just onct in a while tu sit by the mill pawnd an' fish for chubs an' dace. 'I c'n feel 'em bite an' pull, an' hear 'em flopping in the grass, an' they smell like fish an' it's better 'n nothin' if 'taint much fun,' says he, 'an' I spect it 'muses the minnies tu see sech a ol' dodunk a-tryin' to ketch 'em."

"When it come his turn tu die I guess he was glad on't. 'I ben the same as dead this ten year,' says he, 'the word a rattlin' round me 'thout no more 'caount on me 'an if I wan't in 't, my own flesh an' blood grown up 'thout my knowin' haow they look, or seein' my ol' wome'n's face or my nighest friend, or seein' the grass an' the trees leaf aout or shed the leaves, or ever pintin' a gun or hookin' a trout, on' just a-settin' an' harkin' in the everlastin' dark. It's lunsome, I tell ye. A blind man's uselesser 'n a dead man, an' you can't bary him aout'n the way an' be perlite."

"When he was dead he looked turrible contented, Jozeff, an' yer father says he, 'Kit, I wish 't I knowed whether you c'n see tu sight yer rifle naow.' An' I guess it's suthin' we'd all give consid'able tu know."

"Wal, it's hopesin' the dark won't overtake none o' us afore it's time tu go tu sleep fer good, an' naow I'm goin' tu shut up shop."

ROWLAND E. ROBINSON.

## AFTER TOIL RECREATION.

KALYPSO, the Concealer, I christened the Barnegat sneakboat which at one time it was my good fortune to own. She was 16ft. long, cat-rigged, and by far the most serviceable sailing craft that has ever come into my possession.

Often have I fled from the noisy, busy city to the little town on the lake shore where my boat was housed, and, having rowed out of sight of town, spread my blanket in the bottom of the boat (or a couch and basked in the bright sunshine on the glassy surface of the lake; or, with a favorable breeze, skirted along close to the shore, studying the birds in their native haunts, my presence never once suspected. For days have I drifted about in this manner, exulting in the freedom and in the beauty of the wooded hills and blue expanse of water—God's handiwork, unsullied by the hand of man.

In my kit were a half dozen wooden decoys, which I would drop overboard opposite the mouth of some stream, and, concealing myself on the reed-covered bank, await the approach of unsuspecting ducks, which were pretty sure to fall a prey to my 10-bore.

On one occasion, having been carried far down the lake by a strong south blow, I pitched camp in a thick clump of hemlock on a projecting headland. All night the wind moaned in the sheltering hemlocks, and day dawned dull and lowering. I was awakened by the weird honking of geese, and at length discerned them, an immense host, feeding. Piling hemlock branches on the fore deck of the boat, I concealed myself within, and allowed the wind to drift me down upon them. Nearer and nearer I approached, like a mass of driftwood, until at length the birds took fright and rose in their clumsy manner. Instantly I was on my knees, and selecting two of the largest of the flock, dropped them; one with each barrel. Those fellows are now two of the finest specimens in my cherished collection.

Never have I failed to derive the utmost enjoyment from any of my trips. But, best of all, I have returned to my work with zest redoubled and with a zeal that has well repaid me for my outlay.

BARNABY.

## The Wildfowl Egg Importation.

### Editor Forest and Stream:

In the last impression of your journal I noted a letter from Mr. R. W. Huntington, of Ohio, touching the destruction of wildfowl eggs. It said they were gathered for the purpose of selling the albumen or whites, to be used in the arts, and that there was great danger of the supply of waterfowl from the Northwest being cut short in this way. I inquired at the Customs Division of the U. S. Treasury as to this matter. I do not think there is any serious occasion for alarm upon this point. The entire importation of the yolks of eggs for the year 1893 from Canada and its northwestern provinces was valued at \$16. No whites were imported. The importation of the same class of products, viz., "the yolks or whites of eggs," from all sections for the current year had been brought down to November and was valued at \$14.42. I have taken some trouble to be accurate in relation to this matter, and the U. S. Custom House returns ought to be sufficient to assure sportsmen that there is no danger in this quarter and by this means of game and water birds' destruction.

WASHINGTON, D. C., Dec. 21.

W. H. R.

WOMAN ON THE STREAM.

SCIENCE vs. SUCCESS.

DR. DERBY, pastor of the First Church, in one of the Western cities, besides being a scholar of no mean reputation and a successful city pastor, is an ardent sportsman and a devout disciple of Izaak Walton, patron saint of all good anglers. No stream so tortuous that the Doctor can not thread the thicket-hung labyrinth, and no snug retreat of the wary trout is so close hidden but that he will send a fly fluttering temptingly through the smallest opening.

Last summer when the star of vacation rose above the horizon of expectancy, the Doctor began to harangue his wife after this fashion: "Marian, I truly believe that fishing is the recreation which has in it more practical lessons, for the minister at least, than any other. Now, in fishing I must use different bait for different localities and different days. It's just so in preaching. There must be different presentations of truth in order to reach minds of totally opposite types."

Or he would say: "I store up in my mind more beautiful pictures to illustrate my sermons, that I gather in my trout expedition, than I get from any other source."

Mrs. Derby was not so sanguine as to the exceptional virtues of her husband's piscatorial sport, and would sometimes remark that, to her, it seemed a cruel proceeding to drag a fish from the water by the mouth. This was enough to call down upon her head a lengthy scientific discourse, in which the good Doctor proved to his own satisfaction that the fish being of a lower order of creation had not the sensitiveness of nerve possessed by the higher types, and so the pain suffered was nothing, a mere trifle, etc. So when the first of July drew near and the exodus to the cooler country began the Doctor gathered together his old clothes and rubber boots, his mackintosh and slouch hat, and with what would have seemed to the uninitiated an endless array of rods, lines, reels, floats, sinkers, fish baskets and bait boxes, hooks of all sizes, and flies of every kind known to an entomologist, set out for the region of Michigan where trout do most abound, accompanied by Mrs. Derby.

They found a pleasant boarding place at an old farmhouse which was conveniently near a beautiful trout stream. The afternoon of their arrival the Doctor spent in getting his equipment in perfect working order, and by sunrise the next morning, clad in a nondescript garb that would have wrung with sorrow the hearts of his fastidious parishioners, he started on an all-day's expedition, returning at nightfall, tired but triumphant, with a basketful of scarlet and orange mottled fish.

For the next week or two he scoured the trout brooks for miles around. No day was too long that he spent engaged in his favorite sport. He made it a rule that if the fish did not bite he would stay until they did, while if they bit, of course he must stay until they stopped. The result was that his wife spent many anxious hours after nightfall awaiting his return. And there was this peculiarity about the Doctor's constitution, when he was able to report a good catch he was never tired, but if fortune had not smiled upon him, and he returned with an empty basket, he was well-nigh exhausted, and, naturally, wifely pity for his fatigues overcame any disposition Mrs. Derby might have felt to rally him on the result.

The vacation was drawing to a close, when he began to urge his wife to join him in an expedition which he promised her to be one long afternoon of delight. They would get a horse and carriage and drive to a farmhouse nearest the best fishing point, and from there follow the little river through the field to "the holes" where lurked the biggest fish. He was sure she would catch something, but if not he would show her how to catch trout scientifically!

After some cautious inquiries about snakes and mosquitoes, Mrs. Derby consented, and one afternoon when the temperature was perfect, the wind favorable, and the water "just right," they started fully equipped to play havoc with the denizens of "the holes."

A short drive and a shorter walk brought them to the desired point, and the Doctor began to fit up a cane rod for his wife with line, hook and a tempting bait of writhing angleworm. Then he drew an old log to the bank for a seat, showed her where to cast her hook, and proceeded to prepare his own outfit, an elegant steel rod, with automatic reel and braided silk line, talking all the time in this exultant strain: "Couldn't have a better day. Just cloudy enough. Water not too clear. Had a bite yet? O, well, be patient. Watch me, and I'll show you how in a minute. Here we go!" And pulling up his high rubber boots, he waded across to a favorite spot on the opposite side.

Mrs. Derby at this time thought it fitting to re-cast her

bait, and in her effort to throw it as far as possible into the dark eddy that swirled under the boughs of a fallen tree, succeeded in winding her line two or three times around a dead branch that overhung the stream.

There was nothing for the Doctor to do but to wade back, and with one unceremonious jerk reclaim the rod from its unfavorable connection, leaving 20 ft. of line, an Aberdeen hook and two very uncomfortable worms swinging high and dry above the water. He accepted the situation very gracefully, however, and in reply to Mrs. Derby's apology for causing him the trouble, said cheerfully: "O, that's no matter, my dear. I've done that before, myself. Only I didn't suppose you could throw so far."

Then, without causing an unnecessary ripple, he waded cautiously to the other shore and resumed fishing.

Then there was silence for a few minutes. Mrs. Derby was watching the beautiful changes of sunlight and shadow on the wooded bank beyond, and their reflection in the swift flowing brown stream at her feet; she noticed, too, the undulating flight of two yellowbirds that chased each other across the field. There was more of the artist than sportsman in Mrs. Derby's make-up. When she had occasion to think of her hook, lo, she drew it up bare and shining!

Then she called to her husband, "John." No reply. "O, John."

"Well?" came in muffled tones from the other side.

"Something has taken my bait. What shall I do?"

O, what shall I do with him? O, dear, how he wiggles! Ah-h-h, the slimy thing! I wonder which is the head. O, how it must hurt! John, I know this is wicked. Dear, dear, I'd rather not fish."

But she threw the object of commiseration into the stream, and in her relief began to chat with the motionless figure opposite, only to be interrupted by a low-voiced and ominously polite, "Marian, I must request you not to attempt to carry on a conversation just at this time. Any noise disturbs the fish."

After this left-handed compliment to her conversational abilities, Mrs. Derby maintained an indignant silence.

Presently the Doctor concluded to try fly-fishing. So he adjusted two or three gaudy specimens to his line, and standing knee-deep in the swift water, began casting to right and left with deftness and precision. Whirr-r went the lithe rod through the air with that peculiar hum that tells of an expert hand at the butt. One, two, three—five trout rose to meet the enemy that in time overcame their struggling, and slipped them into the basket at his side.

The Doctor was flushed with victory and exercise. He beamed at his wife who had been watching his prowess with pardonable pride.

"They're here, Marian," he announced, "only they're not biting worms to-day. Too bad you can't fly-fish. Now, there's a big fellow in this hole. I saw him the other day. I think he lies under that big cedar. I'll put on a Seth-Green and try him. How's your bait? All right?"

"Yes," answered

Mrs. Derby, as she lifted her rod enough to see that one or two tag ends of her angleworm still remained, "Go ahead, John," and the good man began to whip the stream with redoubled vigor.

Mrs. Derby was watching him when she felt a sharp pull at her line and lifted it a little, expecting to land another sucker. Not so. With a surge to the right and a plunge to the left a fish rose to the surface, showing a broad side of shimmering rose color, and then dashed under water again. Mrs. Derby grasped her rod in both hands and began the struggle to raise him, when attracted by the splash Dr. Derby turned toward her. He took in the situation at a glance.

"Let him have it!" he shouted, "Play him! Hold him steady! Give him his head! Don't give him an inch of slack! Play him, I tell you! Give him line! He'll get off! Tire him out! Bring him up now! Oh-h!"

The last exclamation was one of positive pain. Goaded to desperation by his unintelligible directions, Mrs. Derby had lifted the gleaming fish high

into the air, and with one mighty lunge it had broken the rod about a foot from the tip, and fallen again into the water. But all was not lost. The line held fast below, and with the energy of despair Mrs. Derby threw the line over her shoulder and ran up the bank, dragging her trophy beyond all possibility of escape.

Then the Doctor plunged into the stream regardless of ripples, and strode up the bank to where his wife stood, flushed and breathless above the shining fish. Not a word did he say until he drew a foot rule from his pocket and measured the splendid capture from nose to tail, and from back to belly. Then he straightened up and looked sternly at his wife. "Nineteen inches by five," said he, "Weights 3 lbs. if it weighs an ounce. Marian, that fish died of mortification at being handled so barbarously!"

And that was all the praise she got for her magnificent catch. And he never asked her to go fishing again.

IDA REED SMITH.

FISHERWOMAN.

HAPPILY we are not all alike in our habits and tastes, or I should make fishers of all women, and the streams would soon be cleared of the finny tribe.

In these days of ambitious womanhood it is a surprise to me that more women do not fish. They shoot, ride, drive all sorts of rigs, and practice many more quite as manly sports—not excepting cricket. Why not fish?

But they do fish, some one will say. Perhaps. Let us draw a picture. A bright, hot day in July when fish should bite—a pretty girl seated by a broad expanse of water—straw hat enough to cover two—a pair of gloved hands—and by her, lounging, trying to think he is happy, lies her best young man. Is not that a sorry sight, and yet I have seen it time and time again; and she, poor child, fancies she is fishing, and tells her inquiring friend, "I never could catch a fish if I sat here a week!" and unconsciously she will tell the truth.

Now, let us change the picture to a year later. In the interval this same girl has met a fisherman, who has told her how he has a rod that only weighs 5oz., and a book of flies. Oh! such beauties that she shall see and furthermore learn to use if he may be her teacher.

The girl with the rest of her family are just now in the mountains not many miles from the city of Brotherly Love, and the young man has come to fulfill his promise of the winter.

ON A CALIFORNIA TROUT STREAM.

Amateur photo by A. G. McFarland.

"Bait your hook," was the brief reply.

"But you know, John, I can't touch those worms. Besides, you have them all with you."

This argument was convincing, because, very unfortunately, true. So back he came, and with scant ceremony to the worms fastened them to the hook, returning again to his vantage on the other shore.

Quiet on either bank. Then Mrs. Derby called softly, "John, see how completely that grapevine has covered that old cedar."

"Yes."

"Just notice those cardinal flowers near you! What splendid color!"

No reply. The Doctor's eyes were fixed on his line, which had quivered ever so slightly. With a quick jerk he began to reel in a fish which plunged wildly from side to side and finally leaped into the air and with a vicious shake loosened the hook and was off like lightning for parts unknown. But the Doctor rebaited his hook and fished on with renewed courage.

Presently Mrs. Derby called excitedly, "O, John, I've got a fish! What shall I do with it? O, poor thing! What is it, John?"

"Sucker," was the curt reply, followed by brief directions how to remove the hook. Mrs. Derby followed them with many sighs and exclamations of pity, finally released the prisoner—and threw it back into the water.

"What did you do that for?" cried her husband, impatiently, "Why, Marian, they destroy more trout spawn than anything else! Kill them every time."

"O," said Mrs. Derby, meekly, "I did not know. I will next time." Presently she said, plaintively, "John, that fish took all my bait."

"Well," was the unfeeling reply, "put some more on. I left some worms for you in that little red box."

Mrs. Derby looked at him reproachfully, but finally decided that it was too bad to insist on his wading the stream again, and so providing herself with a small stick, she began poking around in the moist earth for a worm. They were rolled together in a snug ball and it was with difficulty she separated one from his squirming brethren. Him she held firmly to a smooth log with the stick, while with the other hand she worked the hook in as best she could, taking care that the wriggling thing should not come in contact with her fingers. This proceeding she accompanied by a sort of recitation: "Come out, there. What makes them stick together so? On, so; there's one!

But can this be the same girl? The very same, my dear people. Why, what has she on? Surely it is a bathing skirt. Too true. And an old one, too plain for the seashore. And look at the waders, and her shoes, twice the size of those she wore at the last ball. A dark blue Tain O'Shanter and double-breasted jacket complete the rig, and until one knows its usefulness it certainly is grotesque.

I could give a list here of things to wear under these circumstances, but the whole can be summed up in a few words—plenty of wool, waterproof foot covering, and last, but not least, a true love of the beauty and bounteousness of nature.

Then let the fisherman find some pretty pool, with the hemlocks dipping their odorless boughs and reflecting the soft new light of spring in its depths, and give into the hand of his fair companion a light bamboo or lancewood with a short line and a pet fly (each angler has his pet fly, I find) and give her her first lesson in the true sport; and I'll wager it will not be the last, and she will have many a good laugh over the experience of that hot day in July when she could not catch a fish.

J. B. A.

Mr. C. H. Gleason sends us an interesting photograph of an outing group, among whom is a lady attired in a dress specially adapted to the woods. Our correspondent writes: She is not strong, but delights in the wood life, and so is the sharer of these pleasures with her husband. It may be of interest to other ladies, who would like to go and do likewise, to know how a not-over-strong woman can so dress as to be able to take long tramps through the pathless woods, amid windfalls and slippery rocks and swampy ground without inviting a fall, getting the feet wet, and the like. The outfit consists of a soft felt hat, which will not catch in the limbs and dependent branches; woolen shirt over warm knit underwear; an all-wool knickerbocker suit much like her husband's, warm, comfortable and light withal; good Cordoban boots. These are made from horsehide, flexible, light, impervious to water (but need to be kept well oiled), bellows tongue and lacing, enabling the wearer to pull on and off easily, and so made as to fit tightly to the leg; also hobnailed (but not so many nails as to add much weight to boot), cost about \$10. Mrs. W., who is making a long tramp (10 miles) said: "I didn't slip once."

I wouldn't do without the FOREST AND STREAM for four times the amount of the subscription. I have been an almost constant reader of it ever since 1874, and now that I am living on Lake Champlain I simply couldn't get along without it. I am a physician and among my patients is a most enthusiastic fisherwoman and lover of FOREST AND STREAM. In fact, had it not been for the paper, we would no doubt still be living in Albany, I "chained to practice," she in bed or at most up in a big chair reading of the woods and waters, and both of us wishing we could "go a-fishing." So when her husband suggested leaving the city and we had talked it over we were all very glad to make the change, and so we came to Ticonderoga. Since being here I have been fighting the net fishing. At one time I could count 30 nets within five miles of this place, but with the help of Mr. Charles Barber, of Greenwich, N. Y., and John Polley, of Vermont, the number has been lessened, and I hope before long net fishing in this part of Champlain will be a thing of the past. During the summer months we spend almost all of our time on the water, and what fights we have had with the bass and pickerel! I would like to tell you how my patient with an 8oz. rod hooked and landed a bass weighing 5½ lbs. and a sheephead weighing ½ lbs. It was fun.

S.

## THE HOG THIEF OF CAMAS PRAIRIE.

OKANOGAN, Wash., Nov. 10.—*Editor Forest and Stream:* Having had a number of chases after bears, and my experience having been so different from those of my brother sportsmen who have given theirs, if it will not incur the displeasure of "Podgers," I will give you a sketch of a chase a party of us had after a grizzly in Idaho.

For two years a large grizzly had roamed along the base of the mountains on the east of Camas Prairie, and during that time he must have destroyed more than a thousand dollars worth of hogs, besides a good many sheep, and almost every farmer offered a reward for his capture.

The miller at Mt. Idaho had some forty or fifty large hogs which he was fattening for the China trade. Bruin found out where they were and paid them a visit; so the next night, the miller had two men watch for the bear. Along about 10 o'clock the hogs began to stampede, and then one began to squeal; but the bear soon stopped that. The boys were afraid to shoot, fearing that the bear would tear down their scaffold. The next morning one fine fat hog was missing. The miller changed his pig pen.

Then the bear changed to the other side of the prairie, and Ward Girton reported that a bear had killed one of his best sows. Ward not being very rich and having a family, Bruin let up on his hogs and began on Charley Horton's. Horton had lots of hogs, milked lots of cows, fed his pigs on sour milk, had lots of money and was an old bachelor. The bear camped near him until he cleaned him out of the hog business.

But Bruin served Bill Stilwell the meanest trick of all. Stilwell had a big family, three cows and one hog. This hog was a big fellow; he had eaten sour milk nearly all summer. One day a Chinaman came over to Stilwell's and bargained for the hog at 25 cents per pound; and they were to dress the pig in the morning. Next morning Stilwell got up early, put the water on to heat, ground his knife, took his gun and went down to kill his pig. When he got to the pen he found that a couple of rails had been knocked off from the top and the bear had left nothing but tracks. He had dragged the hog down into a thicket, and after eating what he wanted had buried the rest. When Stilwell went back and told his wife she looked and felt very blue, for it was just like losing \$75. "Well," said Stilwell, "I will go get Lew to come up and bring Jim, and we will kill that bear to-night."

Here let me say a word for Jim. He was a brindle cur. I don't know what breed predominated, but he had no equal for hunting big game or varmints. I never put him after a bear, panther, cougar, lynx or wildcat that I did not get up to. The night we were after the grizzly was our first and last defeat.

Stilwell came down, told me what happened and wanted

to know if I would come. "Certainly," said I, and a little before sundown I took my Winchester carbine, a .44cal. rim-fire with 24grs. powder—what I lacked in caliber and powder I made up in confidence.

When I got to his house I put my horse away, ate supper and went down to where the bear had buried the hog. Stilwell proposed to build a scaffold. To this I objected. I said that Jim would tree the bear if it could climb; if it could not climb then he would bay it.

After supper we went down. It had got quite dark when we came near the place. We heard the bear sniff. I told Jim to catch him. We had a lantern, which we intended to light whenever the chase began. The bear had started to run, but had not got more than 100yds. before Jim caught him and made it so hot for him that he had to stop. We lit our lantern and started on the run. Jim was barking. I got within about 20yds. of where they were when I fell over a log and knocked the light out. By the time I got the lantern lighted again the bear broke. But from the noise I knew that Jim had hold of him, for he soon stopped again. This time we got within less than 15ft. of him, and had a good look at him, but could not shoot for fear of hitting Jim. He soon broke again, but did not get 50yds. before Jim stopped him again, but when we would approach with our light he would break. We kept up the chase through thickets for nearly three miles, when we had to give it up. Jim was completely exhausted when I called him off. It was after midnight when we got back to the house, very tired and completely disgusted.

But we had worried the bear to such an extent that he changed his range. The next place he was heard of was at Donald McRae's sheep corral on Craig's Mountain. Here he became such a nuisance that the Scotchman changed his range. The bear then paid Jack Crooks a visit and killed one of his biggest hogs. Then he hung up for the winter.

That winter some one killed my dog, but I had raised a thoroughbred setter, given to me by an Englishman who had gone into sheep raising on Camas Prairie; he had brought the sire and dam from the old country.

On the 29th of March I went to Mount Idaho, where I met Harry Johnson. He had a rifle in each hand. I hailed him and wanted to know what was the matter. "Well," said he, "the old grizzly has come out and has paid Charley Horton a visit." Charley had bought a very big hog, said to weigh 590lbs. gross, and put him in a rail pen. One night he heard a row out at the pen. He said the bear chased him in to the house, then went back, killed the hog and dragged it over a ten-rail pen, knocking off but one rail. The next morning early Charley went down to Ward Girton's; they armed themselves and followed the grizzly up into the snow about half a mile and roused him out of his bed. But when he reared up he looked so big that Charley and Ward were afraid to shoot and they returned and went after Henry Johnson; and he came over to Mount Idaho to borrow a couple of rifles. Henry said to me, "Come along, we will have some fun to-morrow." Jim Curley was as eager for the chase as I. I had traded my carbine for a cayuse, but had a Remington long range in its stead, a .45-77. It was dark when we got to Charley's ranch, where we found him and Henry. They were glad we had come.

About 9 o'clock the dogs rushed out, but soon came back. We thought the bear had returned to get his supper. After a good night's rest, we were up early and had our breakfast before daylight, so as to have a full day for the chase. Each one took a lunch, and as soon as it got light enough for us to see we started. We soon found fresh tracks. Before starting the boys had put me in for boss, as I was the oldest. When we found the tracks they were going down toward where the bear had buried what he had left of the big hog. I told the boys to go up on to a point of rocks at the snow line; and I would take my dog and follow the tracks; but should they see where the bear had gone back into the snow they were to signal to me.

It was the first bear my dog had ever been after, but he tracked along as well as any dog could have done. The bear had dug up his cache, but he had eaten very little, and then had struck off east to Jake Crook's ranch, three-quarters of a mile distant. I followed on until within 300yds. of the house I saw where he had come back dragging something. I signaled to the boys, who came along the snow line, where we met. We had not gone more than a quarter of a mile when we found where he had cached his bacon. The snow was deep, the going heavy. We soon came to where Charley and Ward had jumped him, but he had made his bed under a big fir tree about 200yds. further up the mountain. We got within 50yds. of him when he broke; but as he failed to rear up or show fight we put the five dogs after him. Henry and I outran the other two. Henry was ahead of me, and we were running down a steep pitch, when Henry fell down and pitched into the snow almost out of sight. I passed him, and soon saw the bear; the dogs were baying him. I saw him throw Charley's dog more than ten feet. I could not shoot for fear of killing a dog. The bear soon broke, and the dogs wanted to quit. Henry had got the snow out of his gun, and had caught up with me; but soon he took a pain in his side and had to go slow. I kept on as fast as I could. The dogs would quit and come back to me; I would urge them on; then they would rush after the bear, then come back. I soon saw that the only chance was to keep after the bear until he was tired out, or reached the top of Mount Idaho. Then there were some open glades a half-mile wide and a mile long, and here I expected to get a long-range shot at him. But I intended to follow him all that day, and camp on his trail if necessary.

I had got very hot during the first part of the chase, but had gained my second wind and was making very good time. On crossing a fir flat I saw the bear nearly at the summit. He was wallowing through the snow; his tongue was out and he had all he could do to climb the hill. I raised my rear sight for 400yds. and fired at him. At the crack of the rifle he wheeled around and came lumbering down on his back track. I lowered my sight, put in another cartridge and started to meet him, for I thought he would bear off round either one way or the other. He soon left his back track and started around. When he got opposite to me I whistled. He stopped with his head behind a small fir and I shot him through the shoulders just a little forward of the heart. He rolled over dead. Four of the dogs piled on to him. My setter was as anxious as any of the rest. I let them wool him a little and then made them let go, fearing they

would hurt the robe. I think it must have been twenty minutes before Henry came up; the first word he uttered was, "Is he dead?" After a moment's survey he proposed we shoot a few times as fast as we could, to make Jim and Charley think we were having a battle. We fired a few shots, but the boys were so far back and so tired that they could not put on much of a spurt.

We built a good fire and stripped off some bark to lie down on before the fire. It must have been nearly an hour before the boys put in an appearance. We told them it had been dead more than an hour and we would have had it skinned had we not wanted them to see him in the original shape. As he had been out of his winter quarters but a few days he was very fat; I think the fat between the hide and carcass was from two to three inches thick. The boys took a fifty-pound flour sack full, which two of them carried on a pole, while the others carried the skin. We reached Charley's house between 3 and 4, tired, hungry and wet. The skin weighed 67lbs. and it was the finest robe I ever saw; the long claws were 5½ in., the tusks were 1½ in. long. The boys gave me the hide and gall; the gall I sold to a Chinaman for \$5, the hide for \$15.

Thus ended the career of the most destructive varmint that ever visited Camas Prairie.

LEW WILMOT.

## DUCK SHOOTING IN OREGON.

GEORGE plays the bass violin. In my travels over the United States I have met a great many musicians, and have observed this fact—the man who plays the big fiddle generally resembles his instrument—and George is no exception to the rule, a great, strapping fellow with a jolly red face and a kindly gray eye, a splendid shot and an honest sportsman.

When I first met him he was playing in the orchestra of the Portland Theater. I had been looking for some local gunner who knew the "lay" of the country thereabout in order to try the duck shooting, for which that section is famous, and some one sent me to George.

As we are both of the same Bohemian type it did not take long for us to know one another, and we soon arranged an expedition to his private ponds up the river.

A hunting boat left at about 2 A. M., so in order to make an early start I shared his room with him that night. A cosy little den it was, too, just such a one as a man fond of outdoor sports would arrange—nay, not arrange, for if there was anything the room lacked it was rigid order. A Parker hammerless, two Fox guns and a Marlin rifle graced the gun rack, a moose head, beautifully mounted, looked down from over the mantel, and scattered about upon the table were numbers of FOREST AND STREAM.

Over our pipes we chatted and yarned, and I must say I never met a keener or more observant sportsman. He has hunted all through the Northwestern country, fished in all its streams, slept in its mighty forests beneath the blue pines, and only accepts engagements in places where he may indulge in his favorite pursuit.

Half-past one found us trudging along through the drizzle, comfortably clothed in our waterproof hunting coats and rubber waders, loaded down with shells and with both pockets filled with canvas decoys.

The boat was late. Quite a crowd was waiting for it when we reached the wharf. They were the representative sportsmen of Portland, and when I looked at their magnificent hammerless guns I was glad that my battle-scarred veteran was in its case. At last the little steamer arrived and was soon wending its way up stream, past high banks of swaying pine and hemlock, skirting tiny islands and running in to the shore now and then to drop some gunner on his one preserve.

Breakfast in the cabin, although not served *à la Delmonico*, was excellent bacon and eggs with "steambot" coffee. (That is a brand you note in the issue of Nov. 11; it has a distinct individuality; in flavor it resembles none that I have ever tasted before, muddy brown in color, will not assimilate with milk, and it never gets too hot to drink—unless you are in a hurry—but with all its peculiarities it is good, and I have seen fastidious people drink it with apparent relish.)

Daylight was just showing, like frosted silver, in the east as we arrived at our landing, so hastily unloading some of our traps and leaving them in the care of the farmer from whom George rents his ponds, we climbed over the snake fence and after a short walk reached the blind, an old stump with a few branches artistically arranged before it. George took the punt, which leaked like the proverbial sieve, and poling out a good distance placed the decoys. They were mallards, and the most natural I ever shot over, as you will presently see; every tiny breath of air caused them to swim about as though they were alive.

On the return voyage the punt sank a short distance from shore, and George waded the rest of the way, towing it after him and making "remarks." Then we lighted our pipes and waited. At the extreme end of the pond a few teal and butterballs were feeding, and now and then a diver would appear from somewhere and straightway go back again.

They are curious birds; I watched one who swam about a short distance from the blind. It had an expression like Bret Harte's Heathen Chinee, "chilike and bland," and when it caught sight of me, elevated its alleged eyebrows, looked frightened, ducked and disappeared.

Three mallards circled in at the upper end of the pond, and, hearing George's call came swooping down to the decoys. I got the leader, a big greenhead. George dropped another, the third wheeled and quartered with a startled quack, and as we both fired, fell wounded into the water, skimmed swiftly across the pond and disappeared in the rushes, leaving a wake behind like a steamboat. The spaniel retrieved the birds, which were as fat as possum meat, indeed all the ducks I shot up in that country were in splendid condition.

A couple of bluewing teal were our next visitors. They settled into the water before we noticed them, and as we rose in the blind they started off, giving us a good shot; one fell, the other wheeled and came back to meet its fate from my left barrel. Then came a bunch of mallards; they circled and came in, and just as they were settling among the decoys we gave it to them. Three responded, George stopped a driver, I caught an incomer, and as the remainder flew off toward the upper end of the pond one left the bunch and, with fluttering wing, settled amid the rushes. George started around to secure it, leaving me alone.

Then one lonely bird came sailing over my head from behind, and as it started to turn in toward the decoys I met it with a charge of No. 6. When the dog brought it ashore I was puzzled to know what kind of a duck it was, its bill was broad and yellow, of soft, flabby material, and it had a smile like an Irish comedian. George called it a spoonbill—my first acquaintance with that species.

George found his mallard, and also the one that had been wounded out of the first flock. I stopped the latter as it was skimming across the pond.

All was quiet, I could hear George splashing around in the swale behind the willows and the drip, drip of the rain from the branches over my head. The bobbing decoys amused me. Suddenly I realized there were seven; I had only counted six before, so I counted again. Yes, there were seven, and not until one of the seven started to swim across the pond did I realize it was a genuine, real live bird, a big green-headed drake, and he came swimming along so close to the blind that I could have shied a stone with a fair chance of hitting him. As I rose he followed suit; I hit him with the right barrel, but he kept on flying until I sent the contents of the left after him, and down he came like a spent shot.

George returned with a mallard and a pair of butterballs he had killed in the neighboring pond, and we were just preparing to take a "wee nippie" when a couple of big ducks entered the pond. Down went the flask and up went the gun; three shots and we had the brace—canvassacks and as plump as partridges.

Later in the morning a large flock of geese went over, but, although we fired, they were too high up, and we never even disturbed them. Some of the boys below us were more fortunate, however, and managed to secure three. Shortly after we had a call from a few butterballs, and some of them remained with us. In the afternoon shoot we managed to add three more canvassacks, five teal and twelve mallards to our string.

As our little steamer pushed her way down the river through the dusk we counted twenty-three mallards, three teal, one spoonbill, eight butterballs and five canvassacks. The other gunners had fared even better, and we eyed the geese with envious longings.

Nearly a year has passed since that day. My business has called me to the East, and George—well, I suppose he still plays his fiddle in the West, where game is plenty. If this should meet his eye, perhaps he will be glad to know that he is not forgotten; and the vandal Time can never efface the memory of that day with the ducks in Oregon.

THE GENERAL.

## HUNTING WITH A CAMERA:

(Concluded from page 559.)

THE next day we packed up all our outfit and started for the northern edge of the valley, where I had seen the first large band. The day was very favorable for pictures, but the snow was crusted and rough, and our snowshoes made a great noise. We saw several bands of elk and bunches of buffalo at a distance. We were getting down to Alum Creek, when, turning a point, I saw eight buffalo moving away at a walk. I am not sure whether they had our wind or heard the scraping of our snowshoes on the crust. I took two shots at them at 150yds., as they turned a point going down hill they commenced to run. We waited for a while thinking that possibly they would stop on the creek further down. Soon we saw a long line of buffalo following a trail through the deep snow up and over a hill toward the hot country on Violet Creek. We counted eighty-five as they passed over the hill out of

BUFFALO CALF.

Photographed by John Fossom.

sight. To the east of Violet Creek, we saw a band of five hundred elk or more, making for higher ground and the same section of hot country. All these animals had been started up by the first eight buffalo. They had not seen us, but were alarmed by the movements of a few animals running.

Crossing Alum Creek and keeping to the west, we came to a high knoll, overlooking a hot creek basin. In the bottom I saw twelve large bull elk and three buffalo. We worked down as carefully as possible, but the elk saw us and left before I could get a picture. We got to the bottom and behind a grove of scrub pines without alarming the buffalo. There was no snow here except in the pines; I left my pack and shoes and walked out among some hot springs; two of the buffalo were rolling in the dust. Walking away from the steam I took three shots before they saw me. At first when they started I certainly thought that they were coming my way; they stood for a few seconds looking, while I walked slowly toward them. I wanted to get within 30ft. for a picture, and was willing to take chances on their charging me. Suddenly they broke into a run, crossed the hot creek, and were on their way up a hill in no time. I took a shot with snow for a back ground at 150ft., getting

a better picture than when they were close by with bare ground all around. They ran to the top of the hill and camped. They stood there for hours, and were lying down when I saw them last. Every animal I had seen so far, ran to some knoll or bare ground when disturbed, taking up a position where it could defend itself without being hindered by deep snow. They all seemed to fear being cornered on a side hill under a drift, or where they could not move about readily. I think too that they thought we were mountain lions.

We found all the hot ground cleaned of everything in the shape of grass or weeds that an animal could eat. Usually there is considerable green stuff growing all winter on these places, even to the edge of the hot water.

We now went around the hill, to Violet Creek Basin, and looking down the hill, I saw a long string of elk following up the main branch. I ran through a clump of

BULL ELK IN THE SNOW.

Photographed by John Fossom.

timber and got within twenty feet of the passing elk. Selecting an animal, I pressed the button. At the click of the shutter they saw me and jumped to one side. Those coming up behind took to the deep snow to get past the place where I was standing. When I started to turn in a fresh section of film I discovered I had not removed the stop. I had no time to swear, as the elk were going past very fast. I got two shots in and secured two fine cows, which repaid me for all my trouble. In one of the pictures the cow was running, the other was a trotting animal. I felt very much disappointed to think I had failed to get the first shot in. It was something like not having a cartridge in your gun when you pull the trigger for a good easy shot.

Dare and I put our shoes and packs in a tree and started afoot to examine this queer section of the country. We found the trail where all the buffalo and elk had gone through the basin, and on through other hot sections, leaving deep trails through the strips of snow. Thinking it useless to spend any more time here for a day or so, we left the packs up a tree, and with nothing but our camera and shoes struck out for the hotel. I expected the buffalo to come out during the night to the open country. At the hotel we found John Fossom with a new No. 4 Kodak.

The next day we spent looking at the Grand Cañon and Falls of the Yellowstone. There was an ice bridge across the cañon, filling it to within 100ft. of the top of the falls. The frozen spray had covered all the rocks and trees with beautiful ice formation. We could hear a muffled roar from Lookout Point. Fossom took a few pictures with his kodak to get the hang of the thing. Returning to the hotel, we made a trip to the highest hill back of it for a run down. Fossom shot down, while Dare and I slid down. I am afraid to tell how fast he did go. I timed him, and know that he went in half the time Dare and I did, and I went so fast I could not see. It seemed just a wild rush. I expected to get a fall and be mixed up with my snowshoes, but did not. I have and seen Fossom make some wonderful jumps, something I have not had the nerve to try.

Next day the three of us started for Violet Creek. We found our packs all right, where we had left them. Seeing two buffalo on a ridge, Fossom and I went for a picture, while Dare made a fire to lunch by on our return. We got pretty close to the buffalo. They were lying down, and when the animals got up from their bed of snow we shot. Great patches of snow were sticking to them, which made rather odd-looking pictures. The buffalo started off down-hill, and Fossom started first to head them off in the deep snow, while I brought up the rear. Fossom was soon near enough for an exposure, while I was some distance behind. While Fossom was looking on the finder for his buffalo, I made an exposure, taking man and animals, hurried up and took another picture, when Fossom was not over 30ft. from the buffalo. I got two very interesting pictures.

Fossom and I then went to the top of the hill east of where the buffalo had gone up, overlooking the Hot Creek Basin, where I had the fun with the three bulls a few days before. We saw a band of 25 buffalo, cows, calves and bulls. The two bulls in running across had started them up and the band had made a run to get up on the top of a hill. Half-way up they struck deep snow; the leaders could not break through. They tried for a while to go on, then stopped to rest, and seeing nothing to alarm them, they stood around for about half an hour and then moved to lower ground, where most of them lay down where we could not get near them for a picture. While I was looking in the finder to see how large the

animals would look on the plate I heard the click of Fossom's shutter. He had shot me when I was not looking, so I returned his fire. We thought that by letting the animals alone we might get a good chance at them in the morning or later in the day, so we returned to where we had left Dare.

I wanted a good place to camp for the night and began to hunt about for a sheltered spot. This I found over a low ridge—a little basin, sheltered on all sides from the wind, and where a camp-fire could not be seen. Noticing a square pile of snow I went to it and found some one had built a brush shelter, which was crushed down. On a tree close by I found the names of Ed. Wilson, Government scout, and two soldiers, members of K Troop, 1st U. S. Cavalry. They had camped here one winter night while on a snowshoe scout a few winters before. We left Dare here to make some kind of a sheltered camp, while Fossom and I took a trip through some of the hot country. We found a great many elk, but no buffalo, got one picture of a big elk, and walked about five miles. Where the ground was not hot enough to keep the snow melted off, we traveled along deep and well worn trails tramped through the snow by game; in places they were so deep that we could not see out over the snow. These trails lead from one warm basin to another, so that we had no trouble in getting about.

We only saw a small part of the hot country, but enough to know where the game gets part of its feed and why we had not seen more buffalo in the open country. The hot country is very extensive and is found all over the National Park where the volcanic heat comes to the surface. I wish I could describe the country for the benefit of your readers. A picture can do it better, though. If they will look at the photo by Fossom of the two buffalo cows and calves published in the FOREST AND STREAM a year ago they will see a bit of hot country. No matter how much snow falls it melts on the ground. Only on detached objects can it accumulate. In the picture it can be seen piled up on rocks, logs and stumps. Where the ground is not too warm, grass, moss and weeds grow all winter. In other parts this hot country is very much broken, full of dirty sulphur springs, pools and lakes, with ridges of burnt lava rocks, weathered into all kinds of queer shapes. Tourists going through the Park see a little bit of this at Sulphur Mountain and on the old road over Mary's Mountain about a mile west of "Larry's." It was there that the picture of the buffalo cows and calves was taken.

In traveling about we found that so much game was wintering in this section that they were hard pressed for food. All the lower limbs of the fir trees were eaten off as high up as an elk could reach; quaking aspens were stripped of their bark, even exposed sage brush was browsed down to stumps. Along some of the deep trails mentioned before we found patches of buffalo hair where they had hooked one another; this hair was very long and quite black.

Returning to Dare, we found he had fixed up a brush shelter, with a pile of boughs for a bed. We gathered a lot of dry stumps and logs, fixed up our camp with what little bedding we had, built a good fire, dried out our overshoes and leggins and used them for pillows. We had to melt snow for water, for, although there were several streams close by, they were full of sulphur, and the water was not fit to drink. The night was very cold, and we could hear trees popping in the timber. We had to keep the fire going all the time, and every little while one of us would be up putting on wood. We did not sleep very much, but rested well, so that by daybreak we were ready for another day's tramp.

We were early after the twenty-five buffalo we had seen the day before. Taking all our outfit with us, we struck the trail of the bunch we were after, and followed it carefully for about two miles, constantly expecting to see them over the next hill. They took a roundabout way to reach Alum Creek, but followed ridges and country where the snow was not deep. When they reached the

LIVE STOCK.

Mammoth Hot Springs.

creek they followed its bed most of the way, now and then cutting off a bend. When they reached the timber, they followed an old beaten trail to the hot country about Mary's Mountain. We were walking carefully, looking at some very large tracks recently made, when suddenly three enormous bulls started through the timber close by. Fossom and I had our cameras out as soon as one could a rifle, taking a snap shot as they rushed back down Alum Creek. This was the same place that, later in the season, Fossom got the picture of the two cows and calves. We were on the trail always used by the buffalo in moving through the hot country from Alum Creek, Mary's Mountain, down Nez Percé Creek to the Lower Geyser Basin. The old Howard wagon road follows the same trail part of the way.

After our shot at the bulls we moved very carefully for a mile, seeing fresh signs everywhere. We were on the bare ground all along this trail, carrying our snowshoes on our backs. When we crossed Alum Creek for the last time we left Dare with the whole outfit and started out for the high butte to the south of the road. We moved carefully along the edge, expecting every moment to see the buffalo, as they had gone along there only a short time before, and from the sign we were sure there were

more than twenty-five. We reached the northwest point without seeing anything but tracks. Fossom and I sat on a log talking over the situation. I had been here before with Dare and once with Scout Wilson, when I got my first pictures. I thought it useless to go further, as the light was wrong, and the wind would surely give the buffalo our scent. I was proposing that we go back and wait for the morning light, thinking the buffalo would not go far, when we were both startled by four buffalo rushing past us only a few feet away. We jumped up for a shot, but they were too fast for us. I ran one way for a shot, while Fossom followed, but I never saw the animals again. While moving down the hill I crossed the trail of two men going up. I was thinking at the time that the tracks were much larger than those Dare and I had made and of what had disturbed those buffalo to make them run so fast. They had not seen us, neither had they got our wind. I went on to where we had left Dare, got my snowshoes and pack as well as Fossom's, carried them to a good place for a night's camp, when we saw him coming.

He said he had come across a camp where two men had left their outfit. This was a surprise to us, we supposed there was no one nearer than the Lower Geyser Basin—eighteen miles or more distant. We picked up our stuff and went to the camp. There was a rude hand-sled, a pair of Canadian snowshoes and two pairs of common ones, some bedding, provisions and an ax. No gun or rifle did we see. While we were looking at it the two men came in sight. They were more surprised than we were. One was a large man, who looked like a hunter; the other proved to be a soldier from the station at the Lower Basin. I asked them what they were doing. The large man said he had heard that there were buffalo in the Park and that he would like to see them, so he had started in. One of the soldiers had found him on Gibbon River, took him to the station, and from there they had sent the soldier to see that he did not meddle with the buffalo. I sized him up and concluded he was in there for something more than the sight of buffalo. I proposed that we all camp together for the night, which we did, making a rude lodge that proved much more comfortable than the shelter we had the night before. The men told us they had seen a big band of buffalo on the Butte, that they had run down the mountain to the south. I knew then what had sent the last buffalo flying past us.

In the morning I took two good shots at the camp with the intention of getting a picture of the poacher, if such he should prove. I was quite sure he had a rifle, ammunition and provisions hid somewhere near there, but thought there was not much danger of his killing anything for a day or two, and by that time I could report to the commanding officer.

Fossom and I started out for a shot before the others were ready to move. Dare was to set out for the soldiers' station and hotel at the Lower Basin. We traveled around the Butte, found the buffalo had followed the men back to where Fossom and I had been sitting on the log the evening before, and that they had gone back by the Alum Creek trail over which we had just followed them. I saw it was useless to attempt to get a picture of that band, and so contented myself with what I had in the way of pictures of buffalo, hoping that at some other time I could have a better camera for that kind of work. Returning to the camp we found the two men away. While eating a bit of a lunch a Canada jay dropped on a chunk of bacon in the frying-pan and began to eat it. We kodaked him at 5ft. I thought it poor game, shooting at camp robbers where I had expected to be bagging whole bands of elk or buffalo at one shot.

Fossom and I went on to the Fountain Hotel, getting there before dark. We saw bluebirds, bluejays, robins and other birds, the names of which I do not know. We found the buffalo had not been able to keep the trail down Mary's Mountain open.

Next day Dare and I started for the Mammoth Hot Springs. My hunt was over with for the season. Fossom rested a day or two at the hotel and then started back for the Lake and Cañon, traveling through the buffalo country several times on snowshoes, and later on horseback. He was successful in getting some very fine pictures of buffalo and elk. In one, of a bull elk that he caught out in the deep snow, the animal was obliged to pass within 20ft. of him to get back over its own trail. He took several shots, in one case where it was very close. The bull was gritting its teeth and making a moaning noise as though in pain. At another time he rode up to some buffalo cows and calves lying down. They all ran off but one calf that tried to follow him. It was very young, not more than two or three days old. He had to push it away to get far enough off to get a good picture.

Fossom got many very fine shots, but most of the negatives had some defect, scratches in the film, dark, cloudy places, black and white spots, or were bad pictures because the object was moving too fast for the shutter.

I am convinced that I want a longer-focused instrument than any hand camera made, if I am to get first-class game pictures. Then, too, one has not to get so close, and he can take more time without trouble to himself or disturbing the game. One more thing and I'm through. I would like to know under what head a man who hunts with a camera comes—whether he's a "pot hunter," "sportsman," "true sportsman," "skin hunter" or just a "hunter" (without any handle). One who never kills for the pleasure of killing, but who can enjoy the sight of

game, likes to see it all about him and would rather have a picture of it than the finest set of antlers in the Park. E. HOFER.

### CAPTURING A BABY JAGUAR.

"Dat boy Ebat he cotch tigre negro, boss," exclaimed Queen as he stuck his head through the doorway.

"What's that? Ebat caught a black tiger?" I demanded. "No, tigre cotch Ebat. He ain't dead, on'y scratched on he haid."

"Where is he?"

"He here, boss," and Ebat came forward. He was scratched, in truth. The blood from the wounds in his scalp had run down his dark face and breast and dried in scaly streaks. I soon had him washed and patched up, and ready to tell his story.

"Dat John he go troo bush so," said he, bending low as he stiffly took a few steps across the room. As he did so he exposed four holes in each hip, where the hinder claws of the big cat had sunk into the thick muscles.

"I was go 'long so," he continued, "behine. Den I go down an' my nose was in de groun' so I see nothin'. Dat tigre debbil she jump on my back and strike my haid so, and cut dem slash in my hair like four knife. My machete, I can't do nothin' 'cause it gone out my han'."

"What then?"

"John he tu'n 'round quick an' push gun at de tigre an' shoot. Dat's all."

John told about the same story. Going along hunting for peccaries, his head bent to pass under the branches, he heard a noise from Ebat. He turned and was scared out of whatever wits he may have had. The tiger had jumped on the boy as he bent to pass beneath a vine. Her weight drove him, face down, to the carpet of damp

for nonsense, and the young ones may have been impressed by the example of their seniors.

Suddenly they bayed in that tone which says that a dog is in earnest. We tore through the woods as fast as the brush permitted. The Indians wore no clothing other than cotton pantaloons, and those were rolled as high as possible so that they were not much more than breech-clouts; therefore the men could slip around through thorny bushes much more quickly than I could. And many of those bushes were thorny. From root to top they were thickly set on every side, and on leaf stalks as well, with black thorns that were literally as slender and sharp of point as needles. When one touches those spines they enter the skin a little way, then break. It is well to keep away from them. The natives had quicker eyes than I had, and more skill in getting along in thorny places, and soon left me behind.

I blundered from the trail to cut off a detour, and stopped to rest and listen for the voices of the leading dogs. I leaned against the thin, wide roots of a ceiba—bushes that spread full ten feet from the great tree which they stayed. A nest of dry leaves was close to the base of the tree, and almost hidden by incurved folds of the roots. There lay two kittens as big as house cats. They were perfectly still, but their bright eyes were fixed on mine. They knew that some strange being, probably an enemy, had found them, but their mother had no doubt told them to not stir before she came back, and they would obey her orders exactly. Still, I had little faith in their remaining quiet if I should touch them, so I lifted up my voice exceedingly. Two or three such yells brought an answer, and in a few minutes Queen joined me.

"Look there, Queen."

"Hi! I fix um! I kill li'l dibbils quick," he cried.

"No. Can you catch them alive?"

"All right. I ketch um," he responded, as cheerfully as though I had merely asked him to capture a hummingbird.

He pulled down one of the slender vines that hung from a tree near by. In one end of his liana he fixed a running noose, which he dropped over the nose of one of the kittens. It brushed the loop aside with an impatient stroke of its thick and furry paw. The noose swung back against its nose, to be again brushed away. The paw was raised ready to strike when the vine swung back again; but this time there was a quick, disconcerting dip of the loop, and when it was instantly drawn up it firmly held that paw against the kitten's neck.

At once the temper of the little beast was awake and ugly. Its forepaw clutched at the liana, and its hind-feet came promptly up and scratched vigorously at the vine, which served only to draw the noose tighter about neck and forearm.

"Hol' um so that way," exclaimed the Indian.

I held the liana with the brute dangling at the end. It spit fiercely and clawed

desperately, but the thin root of the ceiba stood between those sharp, curved claws, so that they could not touch our legs. In fact we had the kittens at mean disadvantage. Queen made three other loops in as many bits of vines, and skillfully dropped one after another over the legs of the victim, until each paw was fast. Then he reached down and caught the kitten by the nape of the neck, and held it up until I made fast the lianas so that the little demon was securely bound. All this kept us busy a minute or two. Then my companion looked about uneasily.

"S'pose ol' mamma tigre come, boss, huh?"

"She's busy. She can't bother us. The dogs and boys are looking after her," I replied.

"Mebbe two old tigre. Who knows?"

I hadn't thought of that. It was possible that the male was somewhere in our neck of the woods, so I said, "Hurry, Queen, and tie the other cub. Then we'll go help the boys."

Queen did hurry. But there seems to be a great difference between young jaguars in the matter of temper. As soon as the paw of this one was caught they set up a yell, and kept it up. That scared Queen so that he couldn't work as fast as he had with the first kitten. His eyes roved about the brush and searched the treetops. Still he bravely stuck to his work, for he was bolder than any other of the Mosquitos I had seen, and we had our second captive safely tied when we heard a shout and the voices of the dogs. They were coming toward us.

"Look out, boss; ol' debbil comin'," cried Queen.

"Let her come. Pick up these youngsters and cut for the savana. She can't jump us there in the open."

That was where we blundered. We should have left the cubs in their nest and ambushed the dam. But Queen caught up the two and made good time through the bush. I hurried after, my thumb on the hammer of my rifle. The dogs hurried after both of us. We hadn't the least doubt that the tiger was between us and the dogs. She could get over the ground like a race horse, and would surely soon overhaul us. I was close behind Queen, for he was burdened by the two cats. I fancy that he was quite willing that the repeating rifle should be near him. He would be safer so than far ahead, with a raging tiger hunting the thief who had robbed her of her young.

"El tigre, el tigre grande!" he exclaimed. But I cannot see how he heard her sooner than I did.

I stopped and faced the brute, then backed up to a big tree. Queen as promptly put the tree between himself and me, and was out of sight of the tigress. Just then one of those little whelps gave a half-choked cry.

A MOUNTAIN PASTURE.

Photographed from life in the Yellowstone National Park by W. H. Weed.

leaves. John instinctively turned the muzzle of the gun toward her and poured a charge of shot in the general direction of the beast. She was frightened off by the noise and smoke, and possibly a pellet or two tickled her ribs.

"Black debbil! She got baby tigras close by not fur 'way," John declared. "Mus' git um for pay her for tear Ebat all up." Ebat seemed to concur in this view.

Queen, John and I started a day or two later across the sandy prairie for the place where lay a young heifer killed by a jaguar the night before. Twenty young cattle had been killed near the village within a year by jaguars and public opinion was strong against these American tigers. The villagers were as a unit in crying for reform.

Curs of every degree of worthlessness frolicked before us, behind us and beside us until we had tramped some three miles. Then those in the lead turned back, tails down, looking fearfully back as they sneaked toward us. They plucked up courage and yelped along the trail when they saw us coming. A minute or two later we came upon the carcass of the heifer lying in the thicket. Her neck had been broken and her throat was torn.

"To-night she come for git um," said Queen. "She keep um for baby tigras. We wait here, mabbe she bring um baby."

But I had no intention of waiting there. It was not yet noon.

"Send the dogs after her, Queen. We can't wait here," said I.

"Boss, dem dog he no good for tigre. He nebber go."

"Nonsense. You've bragged that they were the best tiger dogs in Honduras. Now I'm going to see whether they are good for anything or not, and I tell you now that every dog of them will get a bullet through him if he flunks. If they will not hunt tiger I'll see to it that they shall feed tiger before we leave this bush; so they may as well go ahead." I spoke with great emphasis, for that pack of curs had been a howling, thieving, garden-destroying nuisance, and I was quite willing to see the last one of them properly punished.

There was no protest, but the dogs started on the trail when they saw that we were following. The younger ones were frisky and noisy, but the old dogs were unusually steady and quiet.

They led us at least five miles through avenues under arching corosos and bamboos, through thickets of thorny palmetos, and into a forest of giant silk-cotton trees and Santa Marias. They made little disturbance as they went. Perhaps the old dogs felt that the occasion was too solemn

The dam heard the kitten's smothered wail. She was mad. Her eyes shone like burnished metal. Her ears lay back close to her head and her upper lip was drawn back. Her teeth gleamed white and four of them stood high above the rest. Her nose was wrinkled and the hair on her back stood on end. She looked to be as big as a cow. Her breast almost touched the ground, and her back rose in a curve that told of power to jump. Her feet were drawn forward under her belly, and her long tail swept once or twice across the leaves, then lay still and straight. Her claws pricked holes in the broad, moist leaves that carpeted the ground, and crumpled them as the sharp, curved nails were retracted. She was not more than forty feet from me. I wished she was forty rods away, for an instant.

I threw up my rifle just as the dogs came tearing and yelling up. In an instant they were all about her, and all at a respectful distance. The old dogs knew her kind too well to go at her, and the young ones were at first too wary to do so. But there was no reason why they should not make an uproar, and they made it.

At last, encouraged perhaps by the racket of his fellows and by his own brave voice, one young dog ventured nearer and barked in the face of the tigress. One of her kittens cried just then. Queen instantly choked off the sound, but in that moment the mother gave a mighty spring, caught that foolish young dog, gave one little shake of her head from side to side. Then the dog dropped to the ground, limp. His neck was broken.

Quick as the tigress was, the dogs were as quick. They had her by the legs; they had her by the neck; they snapped at the folds of skin in her flanks; they caught at every spot where tooth of dog could get a hold. There was a whirlwind of dogs and leaves, of tiger and of flying hair. Out of this suddenly bounded a lithe form and scrambled up a thick liana that hung low, suspended from the tops like a natural bridge. On the ground lay half a dozen dogs, two of them dead, all the others were badly torn and gashed. Most of the rest of the mob were scratched more or less.

"Kill um now, boss! Shoot um now!" cried the men. I could have done so, for she lay along the liana, her tail hanging down curled a little at the end and waved slowly. She looked quietly down on her panting enemies and offered an easy and certain shot as she lay there, her broad side fully exposed. The sunlight fell full on her and plainly brought out the pattern of irregular black spots that marked the bright tawny sides, and merged into a glossy solid black along her back. We could see the black stripes that marked the upper part of her head, and appeared like tremendous wrinkles in her flat brow, as she scowled down at the foes below. A little of the breast and belly showed white against the dark vine whereon she lay. She was clearly a jaguar (*Felis onca*) and not a black tiger (*Felis discolor*), the fiercest cat in all tropical America; a big brute that often kills fully grown cattle and drags them into the bush, and that is not averse to attacking man himself when annoyed by him.

But the men were wondering and impatient, although I had probably not spent more than thirty seconds in fixing the picture in my memory. The dogs, too, began baying at their enemy again. I raised my rifle. With its crack that spotted bundle of tough muscles was down among those dogs again, and every dog that could crawl was doing his best to get out of the way of the curved claws that cut like a knife. I fired again and broke her shoulders. She could only toss about aimlessly and tear up the ground with her hind claws, nevertheless not a dog cared to go near her. They knew that they had enough.

Then Queen rushed from behind the tree, and was about to attack the wounded animal with his machete, which would have ruined her skin. I yelled to him to stop and ran to within a few feet of the writhing form. A bullet in her brain stilled her forever.

Then those barefooted beggars kicked the dead cat most vigorously, and reviled her shamefully, and cursed her for the dogs and calves and colts she had killed, and for all that her kin had destroyed in generations. To add insult to injury of her dead majesty, Queen rubbed the two kittens against the nose of the dead mother.

"Here, you li'l debbils. W'y you don't take um, huh! T'ink you make Waiha 'fraid; t'ink you mek um run 'way, huh! Waiha no 'fraid dem tigre in dat bush, no suh!"

E. W. PERRY.

## SHOOTING GOOSE ON CARAQUET SHORE

I AM often very much interested in the graphic descriptions with which your columns teem of camp life and shooting expeditions, and it has occurred to me that possibly some of your readers would like to read a story or two told me on a recent shooting expedition to northern New Brunswick.

"Shooting wild goose on the Caraquet shore"

is the refrain of an old song sometimes sung in the backwoods and lumber camps of New Brunswick. I had frequently heard it, and had a yearning desire to have a practical experience with the geese and brant of that region. I shall not attempt a description of the trip which four of us took in that direction, nor essay to depict the triumphs and defeats which attended our attempts to beguile the reserved in manner wild goose or the more confiding but all too distant brant. Still less have I a desire to tell of our struggles to secure the not-to-be-foolish black duck—or "wild injun," as he is called by the natives of the northern counties of this Province. I simply wish to preserve two or three good stories which were told around the flickering camp-fire by our *chef de cuisine*, who rejoiced in the euphonious name of Telephore; and by the way, we christened him Peter for short.

I need not tell the "experienced" that the incidents of each day were recounted in detail as we recliningly enjoyed the after-supper pipe, nor did the aforesaid "incidents" lose anything in the recital. The first night's experiences in this respect were particularly thrilling, not to say heart-rending. The number shot and the "might have been" were in strange contrast; each could sympathize with the others, and the confessions were, therefore, less embarrassing. Our friend Willard, who was an excellent shot, had just told us in a lamenting tone of voice of a miss with his first barrel whereby a flock of a dozen honkers had escaped with the loss of but one of their number, when we were interrupted by Telephore, who had been busily clearing away the remains of our salt cod and pork scraps repast, saying, "Oh, you talk about shooting now. It is nothing, nothing at all here like what it use"

to be down in de Tabusintac Bay. I was dere once wid my fader; de blow she was big from de nor'e'es; bimeby a big flock she'll come an' my fader she'll fire. Graacious, but de goose she'll come down, and my fader she kill sixty wid dat one shot."

There was a pause. All were silent, breathless almost, until our friend George, with significant incredulity in his tone, inquired, "How many?" I hastened to interpose, remarking to George *sotto voce*, "See here, old fellow, don't spoil a good thing by exhibiting any want of faith."

And Telephore, who had stood in triumph watching the effect of his startling narrative, as if to nail home the truth of his statement, and by way of conclusive proof, added: "Yes, dere was jes' sixty goose kill by my fader in dat shot, as I pick dem up and count dem myself. I was dere."

Telephore then quietly proceeded to finish his culinary duties for the day, while we gave earnestly the many causes which could make the accomplishment of such a feat easy in the days of the long-ago, when geese were as plentiful as the flakes of snow which accompany a north-easter in the black north in the month of November.

Our reception of this experience of the long-ago—of "my fader"—emboldened our "water boiler" again to astonish us. The occasion presented itself a few evenings later. The subject of charges and loads, etc., was under discussion, and as is usual when such a topic is introduced, there were differences of opinion, and FOREST AND STREAM was frequently cited. The civil engineer of our party undertook to demonstrate his theory on scientific principles, when he was suddenly knocked cold by another reminiscence from the repertoire of "my fader."

"I was down on de Tabusintac wid my fader a few years before he die," proceeded Telephore; "he had been shoot all day, and his powder and shot hes mos' all gone; he come for load de las' time an' dere was only seven shot left; he'll put it in on top of de powder in de musket, an' dere's good lot powder dere; bimeby a flock of goose she'll fly in very low. My fader he'll fire an' he kill jes seven goose."

Telephore was more triumphant than ever, in view of the general acceptance with which the story was received—and believed. We had a long, earnest and serious discussion as to whether each shot took effect and killed a particular bird or whether any one shot killed more than one bird. It is needless to say that the question is still an open one. The theme is one that might be taken up in some debating society during the coming winter evenings.

Our evenings in camp were always pleasantly spent; we were far from the habitations of man, and were quite free from callers. We depended upon ourselves for amusement, and it did not prove to be very dull. A few nights before breaking camp a proposed and long cherished deer and caribou hunt was discussed. Telephore in the midst of it suddenly broke in on the conversation by saying, "Mr. Hammersley, I 'spec' you seen a moose?"

I was forced to admit that it had never been my pleasure to see one running wild in the woods, although I had seen numberless tracks of them, and had been favored with a view of Hunter Sellick and his famous family of moose.

"Well," he continued, "I see one once. I was up de big Tricadie, and I was drive along on de wood road wid my horse and sled, de snow, she's been very deep about seven feet, I t'ink, an' on de top dere was one crus—very hard. I'll drive along on de road, when, bimeby I see one great moose right 'longside de wood road; she's so tire she not able to move. My horse she not go by an' have to get out and take my whip and drive dat moose, an' den he seem not able to get out my way, he so tired; man chase him twenty-five mile dat day from Battus way, an' every jump dat moose make he break tro de crus' and go clear down in de seven foot of snow. I get him move at las', but by graacious Ise been so sorry eber since."

He paused and I breathlessly asked, "Why—why was that, Peter?"

"Oh," said he, "Ise been sorry 'cos I not take my horse chain an' tie dat moose to a tree. If I do dat, an' I not t'ink at de time, I'll have him yet!"

We all with one accord tried to console him for his thoughtlessness. HAMMERSLEY.

NEW BRUNSWICK.

## A MIGHTY HARD TRAMP.

To the west of Lake Michigan, or rather, to the west of Green Bay, is a vast tract of level ground, which long before the time that white man or Indian first knew it was covered with gigantic trees. These were all uprooted by a mighty wind, leaving the ground to this day full of holes and hillocks. After these trees came a thick pine forest, which in turn was destroyed by the terrific forest fires that raged throughout the Northwest during the autumn of 1871. Since then the dead pines have fallen, and lying in all directions often 7 or 8 ft. deep, they present an obstacle that none but an athlete would care to attempt. After the death of the pines came a thick growth of hardwood bushes, that are now from 6 to 30 ft. high, and more recent fires have burned the peaty soil of the low grounds away from the roots of these bushes in the low ground and they lie on top of the tangle of logs.

Now, when the writer of this sees long strings of ruffed grouse hanging in front of the meat markets, as he did in Green Bay, Wis., a short time ago, he straightway has visions of the gorgeous autumn woods, the delicious air, and the soft hazy sunshine of Indian summer; and dreams of brushy thickets, from which with a cluck and a flop there darts a streak of brown, followed by the crack of a gun, a handful of feathers and the fall of a plump bird into the top of a bush. Not only do these visions come, but memories of such visions realized are brought up too and all the good days and none of the blank ones are remembered. Business says, you are chained to me, so just stop that foolish dreaming. Desire says, you are getting old, and in a few years your legs will be too feeble and your eye too dim. Go now, while you can; besides your health of body and of mind demand it. Desire prevails, and decision is made to break loose from business, even if one leg has to be left in the chain.

Parties inquired of say anywhere north of Green Bay will do; better stop at Gardner, Abrams or Maple Valley. The latter sounding a little the best, is decided upon, and noon of next day finds me there, and an hour later begins the tramp through the interminable tangle of fallen logs, brush, bushes and rough ground. An hour and a half of hard work shows nothing but a few signs, and reaching a

little pine grove I lay down on the soft needles to rest. A pine squirrel is greatly incensed at this invasion of his home; with much chatter and many approaches and panicky retreats he finally plants himself on a limb within 4 ft. of my head, and looking me straight in the eye, let off a series of explosive barks that convulsed his whole body. Seeing this does not scare anybody, he goes off in disgust and sets to eating pine seeds, while I resume the tramp, thinking if Joe were only here, how much company he would be, and how he would find a dozen birds where I might find none. Coming to an old wagon road and remembering that the birds frequent such places mornings and evenings, I walk along it. There goes one! Got up in the road, 50 yds. ahead. He tops the bushes and goes sailing off to the right. Mark him. He is down, just to the right of that tall pine stump. There goes another! It's too far away, but "if you don't shoot you won't get nothin'," so the gun cracks, but the bird comes down a hundred yards beyond the first one. A new shell is just put in, when up go two more. Let 'em have it, quick! Crack! Bang! First one gets away all right, but the last one tumbles into the top of the brush, leaving some feathers hanging on the limbs to mark where he fell. The unhurt one goes down near the others, and I start after the one that was shot. It took five minutes to climb over and through the tangle of logs, and when the spot was reached no bird was there. It was traced several rods by feathers that dropped as it ran, but it could not be found. How I did miss Joe! He would have brought the bird to me before I could get half-way to where it fell.

Going after the others, one of them got up within twenty feet and went straight away, but it was missed. Thereupon I sat down on a log and proceeded to lecture myself as follows: "See here, old man, you think because you happened to knock down a bird fifty yards away, back there on the road, that all you have to do is to shoot and knock 'em right out of their feathers. You're rattled. Next time you wait till the bird tops the bushes before you try to shoot, and then, mind, you are not to see any bushes yourself, no matter how thick the bushes are; you are not to see the gun, either. See nothing but the bird, and see it with both eyes, too. If you do this your muscles will handle the gun all right."

A little walking flushes another bird. Steady now, there he is above the bushes and still not over thirty-five yards away, perhaps not thirty. Now, up with the gun (don't see the bushes). Crack! and the bird falls stone dead.

While putting in another shell the third grouse takes wing and gets a good start, but falls with a broken wing. Rushing to the spot I find he is not trying to hide, but is walking about and making a clucking noise. I take a shot at his head, but do not see him afterward. Can't imagine how this bird got out of sight in an instant, but he did. There are shot marks and some neck feathers right where he was, but he is gone and can't be found. I next go after the bird that was missed, and get it with a very easy straightaway shot, then conclude to hunt the crippled one some more, and after a long search see it sitting by the side of a log, shoot its head and pocket it. A little ways beyond where all this sport was had the thicket joins a bit of pastureland. Skirting the thicket on this side two more birds rise, beyond gunshot. Evidently a couple of wary old chaps of the disreputable kind that Dr. Morris tells us about. One goes i. to the thicket and the other flies across the pasture and into some high bushes near the creek. Going after the one in the thicket it got up wild, and the bushes were so thick and tall it could not be seen till too far away, but a charge of shot was sent after it just the same. The one across the pasture got up wild, too, so neither of these birds were hurt.

Shortly after this, one got up 10 ft. behind me and circling round to the front gave a very easy shot in almost open ground, but directly toward some cattle, and as I was not hunting cattle and did not want their owner to hunt me, refrained from shooting, and saw the bird fly away across the creek.

It looked like good ground along the creek, so I concluded to follow a cattle path that led along the bank, and almost stepped on one that was in the grass at the path edge. It tried the old dodge of flying behind a tree, but seeing what it was up to, I took a snap shot, and was fortunate enough to clip a wing, and starting for it in a hurry flushed another one, which started across the creek, but fell into the water near the far side. Meanwhile the winged one had got out of sight, and seeing that the one in the creek would soon drift into a wide pool and be difficult to get, began to pull a pole out of a pile of drift on which to cross the creek. After a few pulls at the pole the crippled bird ran out of the drift. I chased it into the creek, but it only went a few steps into the shallow water till it turned back. It started into the water several times, but always turned back and was soon caught.

Getting the one in the creek I started for town as it was sundown and the village two miles away. One flew from the roadside but was missed. After supper at the village the host remarked, "Of you always eat like dot, it was not long till you proke me oop alretty." It was just 10 o'clock that night when I got into the sleeper, and didn't think I'd been there more than thirty minutes when a black face peeped between the curtain and said, "Seven o'clock, Judge, Milwaukee."

On getting up, the tendons in the back of my legs seemed about 3 in. too short, but a few vigorous kicks and a walk to the Kirby House brought them all right, and felt fully equal to breaking up another German hotel man. No doubt the old ruffed grouse shooters will take the shooting narrated above with a good many grains of allowance, but I beg you will remember that there are some days when we can shoot, almost to perfection, and there are other days when we can't shoot just a little bit, and it so happened that this was one of my shooting days.

Then the shooting ground was not so bad as usually falls to the grouse shooter. The birds flew up above the bushes before starting away, and if a shooter could make his eyes ignore the brush they were really easier shots than if in perfectly open ground. Except along the creek, there were no trees, just the bushes.

The natives of the village say nobody in that section ever shoots on the wing, none of them had ever seen a dog point a bird and none of them use any kind of dog in hunting grouse; yet the station agent said there had been shipped this season (since Sept. 1) more than \$1,000 worth at 25 cents each, and all with whom I talked said thousands had been shipped. How do they get them? Still-hunt for them; sneak along the roads, sit down in

the brush and wait for them, any way to get sight of them before they fly. Then it seems most of the population goes gunning for them. The certainty of making (for them) fair wages, with a possibility of five to ten times as much (one man made \$9 in a day), sets them all at it; but as there are hundreds of thousands of acres of hunting grounds there seems to be room enough and, so far, birds enough for all. In the north half of Wisconsin there are more or less grouse everywhere. North of a line drawn from Green Bay to La Crosse they are pretty sure to be found abundant everywhere. It is not satisfactory to hunt them in the burned pine regions. One or two days of it will wear out the best of men and dogs. In selecting a place make sure that it is hardwood and not pineland. Cecil, in Shawam county, is said to be good. Some friends just returned from a deer hunt in Wood county report three deer killed and that they saw a great many grouse. During October the weather is usually perfect and often into the middle of November.

O. H. HAMPTON.

#### ALLEN BAYOU AND BEYOND.

If you will stand with me in the dawn of the morning and look northward from the Red River Hills you will look upon a scene not easily forgotten in future wanderings. This is the domain of the Five Nations, Chickasaws, Choctaws, Seminoles, Creeks and Cherokees. It is the only spot left on the American Continent that is still a barrier to the outside world. It is a land where there is so close an affinity between nature and man that nature is one hourly teacher—a land that is solemn as the sea, and where, as upon the sea, the far blue mists of the horizon bound the world. Nature is herself and spreads her feasts and indulges her caprices for her own pleasure. Acres of flowers, leagues of beauty, bloom and fade and come again unseen by man. And yet the seclusion is doomed. Already a Commission has left the National Capital to treat with the five civilized tribes for the cession of their lands. It makes no difference what the result of this visit may be, the handwriting is on the wall. It is easy to predict that within the next five years the Indians' title will be extinguished. Already the camp-fires of that restless horde of cosmopolites who form the advance guard twinkle at the border.

We who live here at the threshold of the home of the five civilized tribes will deeply deplore when it shall share the fate of Oklahoma and other reservations so long sealed to the outside world. The disciples of dog and gun, the lovers of woodland sports, men who now and then tramp and camp in the woods and escape as far as possible the requirements of civilization, have as much desire to resist the encroachments of the outside world as the Indians themselves.

On Nov. 11 a party of six, with a camp cook, crossed Red River into the Chickasaw country. The six—Henry Heath, John H. Gardner, Gerald Hughes, Chas. Peoples, George Moulton and the writer—all enthusiastic sportsmen, considered no privation too great to indulge their favorite pastime. The elements had no terrors for them; welcome rain, sleet, hail, snow, the cold, hard earth to sleep on; they accepted the situation without a murmur as long as game was plentiful.

The Chickasaw country through which the party passed is decidedly primitive. It retains the features of the backwoods settlement which might have been seen in "the clearings" fifty years ago. The houses are mostly constructed of rough, unhewn logs, notched together at the corners, and the spaces between them filled with mud and sticks. The chimney is built of sticks plastered with mud, supported at the back and sides where the fire burns by walls of stone. Earth sometimes forms the floor. A better class of dwellings is met with now and then, where the occupants, white men with Indian wives, affect "city airs." At the conclusion of the Civil War a number of white men, nearly all Confederate soldiers, cast their lot with the Chickasaw and Choctaw Indians and intermarried among them. A portion of the Creeks and Cherokees were loyal to the Government and contributed companies and regiments to the Federal army.

The most prosperous residents of the five civilized tribes are the white "Squaw-men." Stock-raising is the principal industry. Within the past few years more attention has been paid to farming. It was found profitable to invite renters who pay a royalty to the Government and give a portion of the crop to the owners of the land. The mercantile business is nearly all in the hands of white men. They direct the affairs of the five civilized tribes, they are the power behind the throne. All of the machinery of the affairs of government is manipulated by them. If they are shrewd and possess ordinary business tact, there is nothing to prevent them from getting rich.

The Chickasaw Nation is a beautiful fertile country. The land is greatly superior to Oklahoma and the Cherokee Strip. Game is abundant. The favorite season to hunt it is in the fall of the year, the months of October and November when the delicious weather of the Indian summer prevails. The spring and summer months with their glory of air and sunshine and balm, have no attractions for the hunter, like those of the Indian summer when the barbaric magnificence of dying nature is made manifest. The air is full of sweetness, the world of color.

After a two days' journey we reached the game country, and made camp on the shores of Cotton-tree Lake, where thousands of ducks on their way to the Gulf stop to feed and rest. Unfortunately the lake was so miry from recent overflows that it was not safe to venture in after the ducks killed. Charley Peoples attempted it, and a rescuing party had to be sent out. At dusk thousands of ducks came in from their feeding grounds and settled on the lake. They were vigorously cannonaded, many killed, but few recovered. The next day the party was joined by John McHenry, a somewhat noted character of this country. McHenry is a white man, a citizen by marriage, a deputy United States Marshal, and is known as a fighter. The country is overrun with desperate criminals. There is one reason why McHenry is not afraid of them. There is a certain firearm which all have seen and with which many are familiar, it is a small arsenal of rapid and sudden death, and a single man, skilled in the use of Colt's revolver is almost equal to six men each armed with a weapon which fires but a single shot. In the use of this weapon McHenry is a wonder, even among his skilled companions. They have tried for the past two years to bushwhack and kill him, but he still lives to trouble and vex them. At night a light is never

permitted in his house, as he is afraid that some lurker, for revenge, may creep up and shoot him through the chinks. He always rides Winchester in hand, and a pistol buckled at his side. His simplicity of character and undaunted courage make him admired of all true men.

McHenry advised the camp to move, so with him as guide we pulled out of the bottoms for the deer country. The camp was made in beautiful woods near good water. Henry Heath, a veteran hunter, and one of the most noble men who ever sat before a camp-fire, made a circuit of the surrounding country and reported deer signs plentiful. McHenry promised to give the party a drive with his famous pack of deerhounds. It was a glorious, ideal winter morning—cold, clear, crisp—that infused new life into the blood and exhilarated like sips of champagne. Everyone was happy, smiling in anticipation of the glorious sport. Over the hills, down through the valley, there was a sound, a distant, prolonged note, mellow, bell-toned, pervading the great woods, shaking the air in sweet vibrations; it was McHenry's horn—the signal to go to the stands. A slight ridge was a favorite running ground for the deer; many had been killed there. The ground was open woods and it was hardly possible for a deer to run the gauntlet of guns held by men of steady nerve and unerring aim. Buck ague was unknown to these hunters. There was just the faintest sound of a hound's voice, then silence reigned. It was, perhaps, a false alarm, but no, the cry of the hound became more distinct, and there was no longer a doubt that a trail had been struck. The deer, with a strange fatality, made directly for the ridge where six men, with bated breath, were awaiting her coming. It was not strange that she should run into the jaws of death. Deer have their established runway; she went to her death as many have done before. There was an avenue of escape at the river but she did not take it. There was not one hound, but several, on the trail, old Cheatan in the lead. It was told in camp by McHenry that this hound had run three days and nights without rest. The baying and yelping, the deep-mouthed howl of pursuit, was getting nearer every moment. The dogs were evidently coming on at a slashing pace. There was a crash of bushes, and the beautiful creature with great leaps clearing fallen logs passed within a few feet of where Gerald Hughes was standing. He fired and killed her. In a moment the pack of hounds, panting and lolling out their tongues, burst into view and were at the dead deer's throat.

That night a great fire was built and the hunters, seated about in the glare of the flames, told stories, spun yarns and cracked jokes until the first quarter of the moon disappeared behind the trees, leaving them prisoners of the night. The first deer is a great event in camp.

The next day McHenry was called away. Heath and Moulton went still-hunting, saw many deer, but strange to say killed none. The remainder of the party went to squirrel shooting, which is one of the most exciting sports of the woods, especially when a fox or gray squirrel is in view every moment and fairly flies from tree to tree, requiring snap shooting. I challenge all America to produce woods like these for squirrel shooting. We had been in camp three days and had done tolerably well. There were venison, squirrel, ducks and quail hanging on the trees.

Wild turkeys are very plentiful in the Indian Territory; wild turkey shooting must take the preference over all other sport.

In the midst of a beautiful landscape, composed of prairie and woodland, stretching in monotony and silence for miles away, is a sluggish stream called Allen Bayou. Eighteen years ago, when I first visited the bayou country, it was the most celebrated for game in the Indian Territory. Great troops of deer and flocks of wild turkeys literally overrun the land. Cutting loose from civilization with a kindred companion, Richard Maughs, we passed two months in this veritable hunter's paradise, living in a ranchman's deserted cabin. It was rare to see a human face. Deer were always in sight and wild turkeys fed to our cabin door. The water courses teemed with wild ducks, while the prairies afforded covert for quail and pinnated grouse. There was wild honey in the hollow trees, coons and opossums disturbed the slumber, and from out the caverns of the night the gaunt gray wolf sent his hoarse voice across the ravine dismal and harrowing. The mocking laugh of the great-horned owl answered the chorus of wolves.

Now, all this is changed. Cities have sprung up on Texas soil, and the woods were invaded by hunting parties who mercilessly slaughtered the game for the market. Wagon loads of deer and turkey were killed in the bayou country. One Christmas night sixty-one wild turkeys were killed on their roost by the light of the moon.

A greater change has passed over the land, the log cabin looks out from many a wilderness nook. The barbed wire fence is cutting the land into pastures for stock; civilization with all of its attendant evils is slowly but surely exterminating the game until Allen Bayou is but a memory of the past.

Our party reached the bayou in the evening and made camp at the crossing. The hunt here was not a success, the fates were against us. Two flocks of wild turkeys were seen, but none killed. Heath, who imitates the sound of either cock or hen, decoyed a flock within gun range, but owing to a misunderstanding one of the party fired too soon and the flock escaped to the thick brush.

It was decided to make one more move to the Eagle Lake country, where ducks at this season are plentiful. But another disappointment awaited us. The great lake was perfectly dry, the first time in a number of years. Where there were usually countless thousands, not a duck was to be seen. It is supposed that when you write a hunting article for a journal that the game record figures largely, but in this the reader will be disappointed.

The Eagle Lake country is a vast wilderness bottom, stretching away for miles. Even when the sunshine is brightest it is mantled in gloom. The most experienced hunter is liable to get lost in these woods. Many thrilling narratives are related of this wilderness which leads everywhere and nowhere.

John H. Gardner, as good a man as ever shot over dog, whose presence contributed so much to make camp-life pleasant, took his dogs to the edge of a cotton field at the bottoms and made a fine bag of quail. Charley Peoples, the most successful shot of the party, added new laurels to his squirrel record. George Moulton plunged into the

woods after big game, but returned empty-handed. At night cowboys from a neighboring camp joined the circle. The cowboy seated at my side, wearing a large sombrero, with enormous spurs jingling at his boot-heels is typical of the great change going on. In a few years the immense grassy plains of Texas will be allotted to farming purposes. Already the Pan Handle is spanned by a railway, and farming communities have spread out over the land. The long procession of lean and weary herds will never cross the plains again. Past the western forts over a trail which stretches like a path through hundreds of miles, they struggled toward the markets of far off Kansas, Illinois and Colorado. The cowboy was then as much of a character as the scout and plainsman, only he was more numerous. His race is about run, and in the future you will see him only on the playboards or in the Wild West shows.

On Sunday, Nov. 17, the party reached home, which all have a longing for notwithstanding the pleasures and allurements of camp life. "For he who has once experienced the fascinations of the wood life never escapes its enticements; in the memory nothing remains but its charm."

R. POLK BURHANS.

DENISON, TEXAS.

#### UTAH NOTES.

THE mountains are grand, rather than glorious, and the days are cold, rather than comfortable. For some the days may be melancholy, especially for us poor silver miners of Utah; but there is compensation for all such trivial discomforts, and game in the hills is more abundant than I have known it for many years. It seems to me that ducks are unusually scarce, and for this fact I cannot account. Still there are deer and bears and grouse (both the western ruffed grouse, the willow grouse and the pine hen that rests lazily in the dense branches over the snow banks).

Farmers are always busy, but so many of our mechanics and professional men have idle hours at their disposal that the crack of some shot is heard echoing over the valley from dawn to dark. For big game the upper cañons and valleys of the Wasatch, especially Strawberry Valley lying between us and the Uintahs, are favorite resorts. For chickens the sportsman tries Sanpete county and the hills that fringe the Sevier Valley.

This is not supposed to be a month for fishing, but only yesterday I saw a man peddling a wagon load of fine lake trout. I imagine that some device other than hook and line had been used in their capture. Speaking of fish reminds me that the black bass planted in Utah Lake three years ago are rapidly multiplying and in three more years we will have as good black bass fishing as is enjoyed in Wisconsin. Last month Fish Commissioner Musser planted 1,000 catfish at the mouth of American Fork Creek, and, of course, the small boy of the future will be delighted with the results. For my part I am sorry to see our waters stocked with sluggish carp and slimy catfish. Naturally they do not live in the same vicinity as the trout and bass, but I should think that these gamy fish would hate to have the water they inhabit so contaminated.

Never have I experienced worse luck in fishing than I had this summer. This was due in a great degree to the use of giant powder. I see no chance of good brook trout fishing until half a dozen notable examples are made of these violators, and then the rest of the pot hunters will quit of their own accord. The secret of the whole matter lies in the lack of union among local sportsmen. I know of one mess of trout that was caught in Diamond Creek about a week before the law was up. The fisherman tied them in a sack behind his saddle and started on a twenty-two-mile ride to Provo. Stopping for a drink in an intermediate settlement, he boasted of his piscatorial exploits in the presence of the game warden, who, when the fisher's back was turned took the sack and appropriated the trout to his own supper. He enjoyed a good laugh at the expense of his victim and the fisherman dared not complain audibly.

During the latter part of June and early in July I tried every trout stream of note along the western slope of the Wasatch. Later in July I laid my rod aside and wandered up the north fork of Provo River in search of larger game. For the first time in my life I pitched camp without regard to fishing facilities. Provo River and its south fork were lined with campers, two for each fish. The wagons that were going constantly to and from town and the log drags made the dust knee deep along the river road. No wonder then that we turned away from the main stream and up an icy brook, too cold for trout, but bordered with heavy timber and grassy parks, with service-berry patches and marshy wallows, just the place for deer and bear.

So far as scenery goes our location could not be surpassed. At the base of a small, pine-covered hill, the north fork divided and each branch came from snows 2,000ft. above and about three miles distant. In feathery cascades it tumbled over mossy and fern-clad rocks down into the spruces at the foot of the cliff. The source of the main branch is a glacier a quarter of a mile long and 100yds. wide. "It has," to use the words of the guide who first showed it to me, "been there since the time of Adam," and though comparatively short, its moraines are well defined. It is the only true glacier that I have seen south of the Wind River Mountains, but there is said to be one in the Uintahs.

I must confess that we were not on a hunting expedition. We lay in our tents or hammocks and read, gathered beetles, butterflies and mosses, and incidentally, at early morn and dewy eve, shouldered rifles and strolled away on the hillsides. On the second evening after our arrival one of the small boys of our party called me aside.

"Walt, I know where the biggest bear you ever saw is. He's an old he one—the daddy of 'em all."

I wanted all the glory myself; so, saying naught, took my gun and followed my little leader.

"Thar he is!" and in the midst of a clump of service berries the largest bear that ever I have seen so close to civilization was eating his supper. I had to beat about the bush to get him, hence I took a direction where I could see the boy and not the bear. Motioning, after the manner of a surveyor, now with this hand, now with that, he piloted me right to the bush where bruin was feeding, and the first intimation I had of my proximity to his majesty was a snort and old Eph sat up on his haunches to examine the intruder. I had plenty of time to aim and intended to break down both shoulders, but my bullet had not sufficient penetration. It shattered one shoulder.

The brute hesitated an instant and then came the charge. But the side hill was steep and the bear in spite of his efforts swung down and then tumbled into a heap about 100 yds. below. Before I reached him another shot went through his skull and I found a man from a neighboring camp watching the grizzly die. He did not claim the carcass and I gave him a piece of the meat, saving the hide for a noble rug.

The next morning we secured a deer. Chickens (willow grouse and western ruffed grouse) were abundant and the sportsman could not wish a more attractive spot. It seems to me that bears are more numerous in the Wasatch than in any other settled portion of the West.

Early in August we went fifty miles further—to Strawberry Valley on the eastern edge of the Uintah reservation. Here the trout fishing was fairly good and there was a moderate supply of game. This valley is a favorite camping spot for those who have several weeks at their disposal.

SHOSHONE.

## THE BOY, THE BOSTONIAN, THE BULL.

*The title does not give the impression that this is a fishing yarn, but that is what it is.*

NINE times out of ten when the jolly angler takes up his pen it is to regale you with a stirring account of some fierce battle waged with the split-bamboo against the gamy bass or trout, or perchance the lordly salmon, but once in a while you stumble across a good old-fashioned yarn in which the thick-headed sucker, the "beastly little sun perch," as an English friend of mine calls them, and the "homely, but good," catfish gets a hearing. This is one.

Of late years the fly-rod and artistic angling appeal very pleasantly to my sense of enjoyment, but I guess I had just as much fun when as a boy I fished—just plain fished—and used a "pole." I don't even blush assume do when I recall those days, for I haven't the slightest doubt but that little Ikey Walton made a beginning with a string and bent pin for tackle.

It was a good many years ago that I made my last raid on the succulent little New England catfish, but the details of that trip still occupy a very fresh and green spot in my memory. There was a visitor in the house at the time—a young man who hailed from the classic shadows of Boston. Mr. F., as we will call him, had just about gotten rid of twenty-one years of his allotted days and was at this time passing through the "know it all" period of his life—a time of sore affliction for all his friends—yet not without hope, for very few cases of this kind prove fatal. He always impressed me with the idea that he considered the rest of humanity as a door-mat designed for his especial use and he didn't try to conceal the fact that he considered boys of fifteen of very little account. That hit me.

He was so green, however, as concerned those things most familiar to country boys that with very little assistance he managed to get himself into all sorts of uncomfortable scrapes, and at such times I usually got around in time to enjoy his discomfiture. One day he expressed a desire to inspect the pigeon loft, which was located directly over the piggery, so I placed a ladder in position, and up he went. The door to the loft was right over the door to the pig-pen, and just as F. was about to descend I opened the door and stamped the occupants of the sty. One sturdy porker caught the lower rung of the ladder under his snout when F. was about one-third of the way down. Something tumbled. When the last piggie had gambled over his prostrate form F. arose and consigned the ladder, the pigs, myself and everything else within sight to a place that the "King James edition" don't call Hades.

It was as a peace offering for this bit of cussedness of mine that I invited him to go fishing with me. He accepted the olive branch and I at once set about getting things in readiness for an early start on the morrow—in fact, I usually was the working partner whenever F. and I did anything together. After fixing up two sets of tackle I took the spade and went out to dig for angleworms. The earth was as dry as powder and I spaded up nearly half an acre of cabbage bed before I secured a sufficient supply of bait. Then I set the can very carefully down upon the seat of a rustic bench and went to put the spade away. When I returned again I found a conglomerate mass of Shanghais, Cochins, Plymouth Rocks and Leghorns engaged in a rough and tumble over those worms. After driving them off I found that they had considerably left the can, so I got out the shovel and rounded up another half-acre of ground.

Early the next morning I got into my fishing clothes and then proceeded to get F. properly dressed for such a jaunt. The most difficult problem was how to dress his feet. F. was not exactly massive, and he had the smallest feet I ever saw on any man who wasn't in the Tom Thumb line. They were his greatest pride, and he always dressed them most daintily; but as we were bound for the boggiest, muddiest, roughest piece of land in the entire township I told him that none of his footgear would do and that he must wear a pair of rubber boots. That about broke up the trip. Finally he consented to wear a pair of my uncle's boots. They were not what one would call a snug fit, in fact, he could almost have gotten both of his feet and legs into one boot, but with a few newspapers tucked into the toes he could keep them on very well, provided he was careful as to how he walked. An old coat, also my uncle's, and fitting him quite as well as the boots, completed his list of borrowed finery. He looked quite picturesque, but I thought it just as well not to let him get in front of any mirror in getting him out of the house. We hitched old Buckskin to the side-bar, and stowing away our lunch and tackle, off we started. I knew almost to a minute how long we should be on the road, for the old horse was born with but one pace—a comfortable trot—and neither beating nor coaxing could move him one bit faster. Before we got out of the village we met several fair maids, with whom F. was acquainted—in fact every one seemed to be as stir as an abnormally early hour that morning—and taking the cue from sundry smiles which illuminated the faces of all as we passed, it began to dawn upon F. that he must be cutting a very comical figure. At first he tried to hide the boots, but soon discovered that they were not built for any such games as "hide and seek" and "button, button; who's got the button?" Then he begged me to run the horse until we got out of the town, and when I explained old Buckskin's peculiarities to him, he said some real harsh things about the poor beast. His complexion also became a

trifle lurid during the ordeal, but he was pretty nearly in a normal condition again when about half an hour later we reached the farmhouse where I always put up my horse on these trips.

Half a mile or so back from the house ran the stream which was our objective point. Usually half a mile doesn't look such a very long stretch, but this half mile consisted of about half and half of the roughest kind of pasture land and the softest kind of swamp, and was about as exhausting as a six-days' walking match. F. and the boots had a rough and tumble all the way through the pasture, and truth compels me to say that the boots were on top a goodly portion of the trip, but then F. spent a good deal of the time in watching a herd of cattle that were grazing in a remote corner of the pasture, so the boots had it pretty much all their own way. F. didn't care much for beef on the hoof. I also kept my weather eye on the herd, for while I dared not mention the fact, I knew that that particular bunch of cattle was governed by one of the most cantankerous old bulls that ever trod the turf. Twice had he chased me so vigorously that I only escaped into the swamp by some very tall sprinting. There I could jump from tuft to tuft of swamp grass, but he would get mired before he had gone ten feet. Before notifying his owner of his condition I found it very comforting to prod him in the ribs a few times with the butt of my fishing rod. It usually took a yoke of oxen and half an hour's work to extricate him, but he didn't seem to profit much by experience and was just as cussed the next time. F. and I were in luck, however, and reached the swamp in safety.

Then the fun began. It required the jumping powers of a kangaroo combined with the balancing abilities of a Blondin to get along in that swamp without mishap, and as F.'s accomplishments were of a very different order, and the boots were just getting warmed up to their work, he managed to give a most entertaining performance. With great effort he balanced himself on a shaky bunch of grass, and gradually worked his feet as far up into the toes of his boots as they would go. Then he jumped. He landed the toes of his boots on the bunch of grass he was trying for, but as his feet had by this time retreated to the heels of the No. 9's again the toes didn't hold, and he made his real landing on the pit of his stomach, but fortunately across the grass, and not in the mire. He didn't seem to appreciate this stroke of luck, however. His boots were imbedded nearly a foot in the mud, but his lower extremities had escaped from them in some way, so he very cautiously turned himself over, assumed a sitting posture, excavated the boots and got into them again. Then he began the act all over again, and it was in this manner, with occasional variations, that he finally got to our fishing ground. I gave him the biggest and steadiest bunch of grass I could find, showed him how to bait his hook, and in a few moments we were fishing.

We had scarcely wet our lines, however, when F. had a bite. Giving his rod a mighty swish through the air, he hurled an innocent little catfish, who let go as soon as he could, fifty feet or more back into the swamp. His sporting blood was aroused now, and before I could tell him that it wouldn't pay to go into the swamp after the fish, he gave a yell of exultation and started pell mell after it with as little caution as he might exercise in promenading up Beacon street. He left his boots at about the second stride, but I don't think he missed them until he started to return. I yelled to him to look out for the horns, and he asked where they were. I told him that they were located on either side of his head, and he immediately grasped it by the tail. He couldn't have pleased the little fellow better, and it at once showed its appreciation by giving a most vigorous flop, which imbedded a horn quite deeply in his hand. He dropped it, and made a few remarks the like of which all good books record only by a series of dashes. By this time he was pretty nearly huddled down in the mud, so scooping the fish into his hat he began the return trip. The excitement of the chase being now eliminated, he found it devoid of all pleasure and demerit hard work, especially when he found himself bootless. He floundered about desperately for a few moments, and finally went flat on his back in the mud. I had given up fishing and was devoting my time to watching his antics, and at this juncture I went to his rescue. His language was of a very florid type, and he insisted upon returning home at once. He was company, so that settled it, and home we started.

Retracing our steps through the swamp was only a repetition of what had occurred in coming into it except that F. was pretty tired and very much madder, which served to make things harder for him. But the climax was not capped until we were out of the swamp. It was then that I spied Farmer——'s bull parading up and down and waiting impatiently for us. F. saw him at the same moment, I guess, for as I turned to speak to him I discovered him executing a most precipitate retreat, but he was already so used up that he got mired before he had gone 20 ft. His run, however, short as it was, stirred up his bullship a good deal. He bellowed and pawed and lashed his tail and made himself generally disagreeable, and for a few moments it looked as if he would bolt into the swamp, but he didn't quite dare or he wasn't quite mad enough; yet I braced F. up a bit and when he had gotten his breathing apparatus in working order again, I told him that I would lure the animal away from him and that he must watch his opportunity and get out as quickly and quietly as possible. He accepted the proposition so quickly and with such a matter of fact air, that I felt inclined to let him perch for an hour or so on a bunch of swamp grass before helping him out, but I thought better of it and soon had his bovine majesty 100 yds. or more away.

Then F. began his retreat. He was marvelously lively for so tired a man, but he had scarcely cleared the swamp when the bull suddenly remembered him. It was a hot chase. F. went down once or twice and left one boot behind, but he ran like a sprinter and had nearly 6 in. to spare as he went over the stone wall of the pasture. Then he climbed an apple tree which grew close to the wall and amused the bull by throwing green apples at him while I gathered in the boot and reached a place of safety myself. When F. had cooled down a bit he showed a great disinclination to return home before dark—he didn't care to have the townspeople think that he had taken to modeling in clay or had gone into the mud pie business. After some discussion I got him to go to the farmhouse, where he spent the balance of the day scraping off mud and drying himself out. I went back and fished.

After several "shades of night" had fallen we entered

town most unostentatiously. F. swore that he would never eat fish again, but I told him that it seemed to me that it was beef that he should forswear against.

W. B. A.

## TWO WILD ANIMAL STORIES.

I.

SOME years ago, while living in Virginia, I was visiting a friend who lived pretty well up among the Blue Ridge Mountains, I had been out all day after small game, when nightfall found me several miles from home. With a full game bag and not another loaded shell left, I started down the mountain feeling pretty well satisfied with my day's tramp, when I fancied I heard some animal following me. It was quite dark by this time and I was walking along a rough path partly overhung by scrub oak, etc. When I would stop to listen, whatever it was following would stop also. But as I walked I could hear the leaves rustle and sticks snap, and once a stone was knocked from its place and went rolling down. I knew bears were about as I had several times during the day noticed their signs on ground and trees, still I did not believe it could be a bear after me, but perhaps some stray dog. As the houses were very few and far between it could not be cattle. After some two miles of rapid walking, as the thing was still heard behind, I admit I got well scared. I had stopped several times to let it catch up or pass by, and called and whistled in hopes that it might turn out to be a dog, but although it came near enough for me to hear it breathe I could not see it in the darkness. What could it be? and oh, if the old gun were only loaded.

As I knew my way well, I tried a run until I was puffing like a grampus; but still I could hear it come tearing along after me, and once in a clear spot I thought I could distinguish an animal which looked like a bear. Shall I climb a tree? No, not yet. But by this time I was pretty well frightened. Anything was better than being followed by that old puff and blow behind, so I felt for some stones and found three as large as my fist; then I ran as hard as I could pelt, and pulled up quickly where there was a clear place, and soon I can hear him, she or it scuffling along. This time it must have thought I was far ahead. Any way, I could just distinguish something black about 10 ft. from me. With a yell I let fly a stone, and as luck would have it knocked it over. But in a second it was on its feet, squealing and dashing down the hillside. When it let out that squeal I knew it must be a hog of some kind; so lit a match and soon saw by the tracks that a hog it was. But I own up that I felt very much relieved; and on getting to my friend's home I said nothing about my adventure.

The next morning I heard my friend Parsons asking one of his help what had become of the old black sow. "Why, boss," was the answer, "dat hog done broke out day befo' yesterday, and I reckon she is done gone to look for that mess of hogs of Mr. B.'s." Well, well, so my bear was an old sow looking up a mate.

BRYAN THE STILL-HUNTER.

IRVING, Michigan.

II.

Supper over I repair to my den for a quiet smoke. The wind is howling dismally and Jack Frost is out on a nipping trip. After stirring the fire in the grate I draw the curtains and pick up my last FOREST AND STREAM to see if I have missed anything. Then I take down from the case "Sam Lovel's Camps" and turn to the place where Antwine fooled them with "heel." After enjoying a good laugh at Sam's expense I fell to dreaming. Again I am a boy at school, the last days of which are near at hand, and the long summer vacation is before. Arrangements have been made that I should spend part of the vacation with a friend of my father in the western part of the State. I have been at the home of Mr. Hazzard for a few days when who should walk in but one of my schoolmates, who also had been invited to spend vacation here. Well, that settled it. We both had breechloaders, and as our host kindly put his powder and shot at our disposal, we were in clover. That evening our host had regaled us with stories of his frontier life, and ended by telling us that three wildcats had been killed near his place that spring, and for us to be on the lookout for another that had been seen only a short time before our arrival.

The next morning with lunches stowed away in coat pockets we started for Rattlesnake Gulch in quest of quail or chicken, "for everything went in those days and at any season." We had tramped up one gulch, down another along the creek and across the prairie and nothing had been seen but larks and field birds. It was getting well along in the afternoon and we were on our way home, when up flew a chicken from under our feet so unexpectedly that we were both rattled. Nevertheless we blazed away, and still the chicken flew on—a clean miss for us both. As the house was only a short distance away we decided to cross over the creek and go home, as we were both tired out. Knowing there was a board fence a short distance below where we could cross, we started for that point.

While going through a dense thicket of plum trees we heard a noise we could not account for, and at once put it down as that "wild cat." That took all the sand we ever had out of us, and we started on a dead run for that fence, all the time fancying that the "cat" was close upon us. I was behind, not being as good a sprinter as my friend. He reached the fence first and was soon across; I tossed my gun to him and commenced lowering myself over the bank which here overhung the fence and soon was part way across, when a most unearthly yell seemed to come from under that bank and a great floundering in the water. Well, I was so scared I just let go of everything and fell over backward into the shallow water and mud. I had hardly struck the mud when something came rushing through the water and over me; I thought my time was up. I lay there for a few seconds afraid to move, then slowly raising myself, I crawled up the bank and there lay my companion just bursting with laughter.

It seems that an old sow with her young had taken refuge under the bank from the hot June sun, and in crossing we had scared them as badly as they had us. And that was the "wild cat" that had caused my mud bath and no end of chaffing when we arrived at the house.

DIAMOND WALT.

EXETER, Neb.

## A WESTERN WAIL.

IN the issue of Dec. 9 I noticed that Mr. F. A. Whitman, of Macomb, Ill., asks to have his name posted in the FOREST AND STREAM register, as he thinks that Cupid stood between him and the said register during fair time.

His appeal for justice emboldens me to voice my complaint also. When it was found impossible for me to go to the great Fair, and that my daughter (the little bear hunter) could go, I equipped her with a letter of introduction to Mr. Hough, thinking to pay my respects to the gifted Western representative of "Our Paper" in the best manner possible—by proxy.

On her return she reported her inability to find Mr. H. in the FOREST AND STREAM department of the Fair; that the young lady in charge of affairs under the big birch sign said he had gone out somewhere on the grounds, she did not know where. There was really nothing so very formidable in the appearance of the little bear hunter that a man of Mr. H.'s known firmness should take to his heels on her approach (she does not weigh a hundred pounds, and I can assure the gentleman that she looks too much like a certain old uncle of my acquaintance to be entirely devoid of personal attractions), and the story of his mysterious disappearance was a surprise to me. Where was the young gentleman learning to spend his leisure hours?

When the "Staff Story of the Midway" came out all was clear. The idea of two virtuous and bright young men having been enticed into following that unprincipled and deeply dissipated dog Katie through all of his (or her, as the case may be) wayward wanderings through the transplanted heathendom of the White City, comes pretty near being positively shocking. A bird dog it was, too, I believe. Who will dare harbor a sporting dog around the house after this?

Turn McLin out of the penitentiary forthwith if the dogs be cremated were of the Katie breed.

Of course, it is now hinted that the short-hand reporter is responsible for the whole Midway story. Tell that to the marines! The next thing will probably be that the short-hand man will have to swallow the story of the seventeen cups of heathen coffee. I begin to suspect that it was a good thing after all that I did not go to the Fair. I might have lost my way and blundered into that same terrible Midway. Think of it! (And "coffee" never did agree with me.)

All the same my name did not go into the register of the dear old paper (which, by the way, grows more and more charming with the passing years), and I have wondered if there was not at the bottom of the last page of the aforesaid register still enough room for another of the host of lovers of FOREST AND STREAM.

As Mr. Hough says, "Names there have good company." ORIN BELKNAP.

## TWO GUARANTEED MOOSE.

MOOSE hunters in some parts of Maine have been more successful than usual the past season. Recently while on a hunting trip I saw some exceptionally fine heads. Three were killed near Atkins's camps in the Monsungun region during calling time, and Atkins told me that he had killed a bull with a fine head, which he had not as yet brought out. The largest head I saw was killed quite recently by C. R. Peavey, a guide of Oxbow. Peavey killed this moose some fifteen miles north of Oxbow when still-hunting, and hunted but one day to get him. All the above heads had fine antlers, having the following spread of horns: 48, 52, 54 and 56 inches, Peavey's being the largest with 56in. spread and twenty-two points, eleven on each horn. From my experience any one might kill twenty-five bulls and not get four heads to compare with those I have described.

I have known Peavey for two years, but have never hunted with him. He wanted me to go with him, saying we were sure of a moose. But my moose-hunting days are over. I have killed enough, and unless some big bull runs across me and acts as though he wanted to be killed I shall probably never shoot another. Peavey has the name of being a first-rate guide and hunter. He is certainly successful in finding moose.

Some time during the past summer or early fall Peavey met Dr. C. C. Morrison, of Bar Harbor. The Doctor said he wanted very much to shoot a bull moose. Peavey said he could give him a chance to shoot one; in fact, he was so confident that he told the Doctor to make arrangements to go with him in November about the time of the first snows, and if he would put in a week's time hunting he would guarantee him a shot at a bull or he would charge nothing for his services as guide. About Nov. 25 I saw Dr. Morrison and his brother Dr. E. J. Morrison on their way to meet Peavey and another guide at Oxbow. I thought at the time that their chances of getting shots at moose were slight. I did not doubt Peavey's ability to find the game, but as the snow was very crusty and noisy, and only a few inches of it, I doubted very much their doing any successful still-hunting. The story of their hunting as told me by Dr. C. C. Morrison is as follows: The first day Peavey and his man failed to find fresh moose signs, but found the tracks of an old bear and cub, which they followed some time, but as they were leading straight away from camp and it was getting late in the day they gave it up and returned to camp. Dr. E. J. Morrison and his guide had much better luck, to a certain extent. They saw two moose at quite a distance, which they took to be a cow and calf. On the second morning they started again. Dr. C. C. Morrison had hurt his knee getting over a windfall, and it troubled him a good deal in the afternoon. He said to Peavey, "My knee is so bad that it will be all I can do to make the camp, and you must carry my rifle and go slowly." The Doctor cut a stick for a cane, and was getting along the best he could a few yards behind Peavey, when he saw the latter suddenly stop and lay the rifle down in the snow. When he came up Peavey whispered, "There is your bull," and at quite a distance in an open growth of hardwood the Doctor saw his first moose standing broadside. Peavey handed his own rifle to the Doctor, saying, "Take time and hold high, as it is a good 250 yds." The Doctor raised the rifle, but finding it had open sights, whispered, "Give me mine, mine has Lyman sights." Taking his own rifle and brushing the snow from the sights and barrel he took deliberate aim, holding high, and fired three shots, at the third shot the moose staggered slightly and walked behind a fallen top. Peavey said, "You've got him, Doctor."

When they came to where the moose was standing he turned and faced them, and in a few moments began to

reel, and went down. Happening to look up, there, within easy shooting distance, stood another moose, a young bull, looking at them. Peavey pointed at him, but the Doctor shook his head, saying, "No more. I have got enough." Not much attention was paid to the lame knee on the way to camp, which they reached just after dark, finding the other party had just got in, and were also in great spirits, for Dr. E. J. Morrison had also shot a bull. Now began the hardest part of the trip. The two sportsmen decided to take their moose out whole. A man was sent to Oxbow, some thirty miles away, to get a team. The team could get pretty near the camp by following some of the old lumber roads; then roads were swamped to where each moose lay. Five men worked four days to get the two moose to Oxbow.

I saw the party when on their way to Houlton to take the train. They had quite a load, the two bull moose and a caribou, which had been shot quite near the camp by Dr. E. J. Morrison one day while waiting for the team.

To kill a bull moose under favorable conditions is doing well. Getting two on such noisy snow was doing unusually well. My experience in still-hunting moose is that it is almost impossible to get a shot at your game should it be in thick, black growth or when there is much underbrush when there is a noisy, crusty snow, unless the wind blows almost a gale. The Morrisons were fortunate in finding their moose in very open, hard wood where they could make long shots. The distances as paced were as follows: Dr. C. C. Morrison 250 paces, one bullet through middle of body, two back of shoulders rather low. Dr. E. J. Morrison 220 paces, first shot broke the neck of his moose.

I looked over both the moose; neither were what would be called very large ones. They were good-sized young bulls with pretty good heads. Every one in the party was well satisfied. The Doctors had killed their moose and Peavey had made good his guarantee. C. M. STARK.

## TROUT FISHING IN NEW BRUNSWICK.

Editor Forest and Stream:

The following by a friend may be of interest to fellow fishermen and readers of FOREST AND STREAM:

The fishing on Salmon River has been good. The past season my largest caught there weighed 4lbs. 2oz.; and I took quite a number between 1 and 4lbs., all with the fly. There has been quite a run of parties from Moncton the past summer; some of them—the majority—doing little or nothing, the others making fair catches. A good many of what I used to look upon as my old stretches and pools have not yielded as well as usual, no doubt because of the increased number that have fished the river the past season.

Some pleasant days were spent at the Adoywaasook Fishing Club grounds in Kent county. Having arranged a trip with a couple of friends, Black and Brown, we took the Kent Northern Railroad for Kingston, where we had arranged for a team to meet us. After a fast drive over the sixteen miles of a pretty fair road, we arrived in time for the first evening's fishing. We found the club's attentive guardian Jot waiting for us, the comfortable club house clean and neat, and a good hot cup of tea ready. After a hurried bite rods were hastily put together and a start was made for the pools. While walking up, let me give you a slight sketch of the club and its grounds.

The Adoywaasook (Micmac for "trout") Fishing Club was first formed about four years ago with W. A. D. Steven as president, an ardent fisherman and courteous gentleman, with Geo. V. McNerny, M. P., secretary. There is a total membership of twenty-five, its members coming from Richibucto, Kingston, Weldford, Moulton and Dorchester. Last year the club was incorporated, with Mr. J. H. Abbott as president and Mr. Henry Wathus as secretary and treasurer. They are as genial gentlemen as may be found in the Province. The club has some 400 acres of land, through which the stream runs, thus avoiding any trouble with neighbors. They have a good comfortable club house, ice house and stable. The stream, a branch of Black River, has a peculiarity which perhaps no other in the Province possesses, which is, that the best pools are tidal, the tide rising and falling in them as each flow, thus giving a fresh run of fish, of which there are none brighter or more lively, every springtide at least. It is only about two miles from the club house and first pool to the mouth of the stream.

To go back with us to the pools—we had a fairly good catch, none larger than 1½ lbs. Owing to continued dry weather the water was low and clear. We spent Sunday about the house until after dinner, then took a stroll up the stream on, as Brown said, a "reconnoitering tour," and found there was no spring run of trout above Pine Tree Pool, the water being actually too low for them to get up.

We remained at the grounds until Thursday morning with indifferent success, the wind being easterly until the morning we left, when it changed round to southwest; therefore we had to work hard for our catch, which was some eighty odd pounds, both Black and Brown catching more than I did, both in weight and number. They are good fishermen, Black, perhaps, taking first place. Jot told me (perhaps I should not say so) we were by all odds the best three fishermen of the club, as the sequel perhaps will show.

Going in to dinner one day feeling very blue over our poor fishing, and being all too ardent fishermen with the fly to think of trying any other bait, we were talking it over when Tot said, "Try them with bait; there are plenty of worms outside by the sink drain." To sum up, consent was given, and Tot getting us a lot of worms we started for Green Bank Pool. On our arrival Black says, "Now, Green, you take the rod and Brown and I will tell you where to cast," "All right," Green was willing.

Shortly after I got orders to cast in a certain place, they having crossed the stream and getting into a position that commanded a full view of the bottom of the pool. I did as I was told, and let her sink. "Now," says Black, "don't you move your line until we say pull." "All right, I'll do the pulling." I could hear them talking in an undertone at follows: "There's one making for it—Yes, but it's not a large one—See that big one—he's getting uneasy—see, he's looking at it—yes, he's turning round—keep steady, Green, and be ready." "All ready," says I. "He's making for it. Pull!" Perhaps I didn't pull. I thought the rod was done for, hooked him all right and landed him in a few minutes, Brown having come over with the landing-net in about 3½ seconds. He was a beauty, weighed 2lbs. strong. I wanted Brown to

take the rod. "No," says he. "You are a good 'puller.'" I was perfectly willing to do the pulling. It resulted in our taking two more of 1½ lbs. each. Then I "kicked." It was getting just a little monotonous, more especially as the flies were thick, and I dare not move for fear of moving the bait at the wrong time. Brown caught three, and then Black took the same number. By this time the small trout were making for the bait so lively that the larger fish had no chance, so concluded to go home. This was on our last day, so had not an opportunity of trying it again. TWEEDIE BROOK.

## WITH THE DEER IN MICHIGAN.

LANSING, Mich., Dec. 10.—The hunters of Michigan have for generations been famous the world over. No more sturdy pioneers ever lived, no more untiring, successful hunters ever roamed the woods of any country, ever followed the deer or bear over hill and dale, or the wily turkey in the inland jungles, than the three generations of settlers which have come and gone and have left the native wilds of Michigan almost as productive as the garden spot of the world. Central Michigan is one of the most lovely sections of country on earth. Her beautiful forests, her charming valleys, her elegant lakes and rivers, her uplands and her lowlands please the eye of the traveler, and the ever changing scenery is so delightfully restful to the weary care-worn business man, that every year brings hundreds of hunter and fisherman pilgrims, to enjoy our woodland pleasures, and the charming, health-restoring, soul-invigorating life in the open air, by stream and lake, and in forest wild, as it abounds in many sections of the northern part of our State.

In central Michigan thirty years ago the deer, the bear and the wild turkey was to be found in almost every cover. The deer and the bear furnished the meat for the family table, and the skin and furs brought many a welcome dollar to half fill the not over plethoric family purse. The wild turkey was the same wild turkey of our Pilgrim fathers, the same, juicy, toothsome, dainty bird; and in autumn and early winter the furious gobblers of the great migrating flock could be heard in almost every tangled thicket, and if the settler was of keen perception, steady nerve, and had the energy of the thoroughbred New Englander, his table need not be destitute of this, the choicest, most delicious and most eatable of all game birds. The dismal howl of the sneaking wolf could be heard almost any hour of the night, and oftentimes the pioneer was obliged to fight these ferocious intruders, and protect his half-wild forest home from their dreadful attacks. In central Michigan, the thick grass-covered swamps, the shallow lakes, the overgrown thicket lowlands, made a congenial cover, and invited the animals of the forest to make their home there, and the wildfowl found a safe roosting place on the quiet waters of the little lakes, and the wild rice, which they so much enjoy feeding upon, was in such abundance there, that thousands upon thousands of wildfowl visited them each season, and afforded to the pioneer the choicest wildfowl shooting that ever existed in any country.

Years of internal improvement, such as the clearing away of the forests and the draining of large areas of swamp lands, and the consequent lowering of the shallow lakes and the ever constant game persecution, has driven all of the deer and bear to the extreme northern limits of our State, and at the present time it would seem but a question of a few short years to bring about the total extinction, while the wildfowl, deprived of their resting places and their needed food supply, are visiting us in greatly decreasing numbers each year.

It is to be wondered at, cradled amid the surroundings that existed in Michigan thirty years ago, that the hereditary hunter's tact and disposition, and the taste, and the hunter's qualities of mind and body, have been transmitted to the present generation; and that each fall when the season opens for deer shooting that little parties in many sections of our State quietly get together their camping outfit, and with trusty rifle and a few chosen hunter friends penetrate the great North wilderness, and spend their vacation in deer hunting and in the enjoyment of the quiet and comfort of a wild wood life, which such a far away forest seclusion can only bring.

A few evenings since I had a very pleasant half hour's chat with Mr. O. D. Hardy, the hustling real estate man, of Lansing, and as he had just returned from his regular northern pilgrimage to the woods, and had been fortunate in getting plenty of deer, I enjoyed his entertaining report of his outing very much. Mr. Hardy has lived at Pine Lake, central Michigan, all of his life. He is one of those native-born Wolverines who is a deer hunter because he can't help being one, for his father and his grandfather before him were famous deer hunters, and the hunting trait is bred in the bone, so to speak. In early manhood Mr. Hardy had plenty of the best of shooting almost at his father's door, but with the age of progress and rapid advance of settlement in Michigan, the game has been exterminated or driven to the far-away great woods of the north. As the game vanished from central Michigan, Mr. Hardy took up his line of march, and for a period extending over nearly twenty years, with the exception of one season which he spent on the great plains, and in California, and one season when sickness and press of business prevented, he has gone on his fall hunting outing as regular as the seasons came. He has everything that is necessary for his comfort while in camp and in the wood, and his camp equipage is always well cared for and in ship shape, ready for duty at a moment's notice.

He usually has a few choice friends with him, and this season his hunting companions were Mr. George Northrup of Pine Lode, Strubel Hammond of Okerwos, Charles Towner of Pine Lode, Charles Smith of Bath and C. Harrington of Pine Lode—only one tenderfoot in the party. Mr. Hardy uses a .38-56-255 Winchester. He has used all kinds of guns, from the .38-180 Winchester to the .45-70, and he has never handled a rifle that for good service on all game equals the .38-56-255, only that the rifle is far too heavy and is a great burden to carry when in the field in active service. He is looking for a lighter gun, say 7½ to 8lbs. weight, and he thinks that in the new light weight Marlin he has found exactly what he wants. In his experience the Winchester light weight .44-40-200 would be just about the right gun if the powder charge was 60grs. instead of 40. Mr. Northrup shoots a Pieper breech-loading rifle and shotgun combination of 12-gauge and .44cal. With this same style of gun Mr. Hardy has killed many deer, and with the old Winchester .44-40 he

has done some of his best work. Mr. Hammond has a .38-56-255 Winchester, and, with Mr. Hardy, he thinks it just the gun for game in Michigan, only that it is too heavy to carry comfortably, when a much lighter rifle would do the work just as well. Mr. Turner uses a .40-60 Winchester, and excepting that the rifle is too heavy he is well pleased with it. Mr. Smith uses a .44cal., and excepting the too light powder charge he likes the rifle well and does some good work with it. Mr. Harrington is the artilleryman of the party. He has a .45-70 Winchester that wakes the stillness of the forest with thunder-like notes, as he rapidly works the lever on the flying deer. Last season Mr. Hardy used a .40-60 Colt's repeating rifle, but in a sleety storm the ice on the gun prevented the sliding forearm motion from working, and as he could not take any chances in the woods he sold the gun, for the owner, Mr. Charles J. Davis, and hereafter he will stick to the substantial old style lever.

Early in October after frequent consultation, the party was fully organized. After it was determined that they should go, and who was to compose the party, the most serious part of the work was to decide just where to locate camp with a fair prospect of getting a few deer. After a hurried correspondence with Mr. W. P. Davis, of Onalaska, Presque Isle county, it was determined to go by rail to Indian River, and have Mr. Davis meet them at the railroad station with two teams and take them to his forest home, twenty-two miles away, and after a night's rest to go into the woods ten miles further and locate their camp on the banks of the Rainy River, a beautiful stream which flows north and empties into Indian River, and for many miles flows through an almost unbroken wilderness. Mr. Davis was to receive \$36 for two teams to take the entire party and their camp equipment out and back. The camp stove that had seen many years' hard service was got out and put in order. The two tents were overhauled and thoroughly repaired, ammunition brought, groceries of all kinds laid in in great abundance, and the good wives of each member of the party went to cooking and baking with such a hearty good will, that the last week in October found the supply department loaded to overflowing, and the party ready to start.

Right here let me say a good word for salt rising bread, as the best of bread for the hunter's camp, and many more words of praise for the good lady whose bread-making skill supplied the camp for two weeks with the most delicious bread. This bread was all baked before the party started. It was packed in a large box and when the camp was made the box was placed out of doors in the open air and covered with a piece of tent cloth. Three weeks later what was left of the bread was just as nice and toothsome as the day it came out of the oven.

The railroad fare to Indian River, for the party, including camp equipment and luggage, was \$9 each, which made the total expense for the entire party less than \$25 for each person—not a very expensive outing, by any means. As two or three of the party were good wing shots, and the prospects of finding plenty of grouse were good, they took along their shotguns and one young English setter, and a small spaniel that had developed some considerable bird-finding qualities. After leaving the railroad and before getting into the woods they purchased of a settler what potatoes and vegetables they needed, as it was much cheaper to buy them there than to pay the freight from Lansing.

The last week in October, after some delays and inconveniences en route, found the party camped on the Little Rainy, near by a nice spring of water and in a location high and dry and surrounded by some of the finest woodland scenery to be found in Michigan. Instead of pitching the tents they built a solid log wall 5 ft. high all around without an opening, except a small place to go in and out of, and over this log work they erect their tent, which acted as a roof and also served as a window—a portion of this log house they partitioned off, and gathering a large quantity of hemlock boughs, they placed them on the ground in the partitioned off part of the cabin, and over the boughs they spread a quantity of straw, and on top of this they placed their blankets and made their beds. With a blanket over the doorway and the camp-stove filled with wood and burning nicely, the cabin was as warm and cosy as one could ask for. In the routine work of camp life it was decided that each person was to take his turn in doing camp work. They took a box of matches, unbroken, opened it, and began to draw out, each a match in regular order till all the matches had been drawn. The one who got the last match did the entire camp work for one entire day, then he fell out, and the remaining members again drew lots in the same way, and the one who drew the last match did the camp work for one entire day, and so the drawing and the work went on, till each had done one day's camp work, when the drawing began new again and went around as at first.

Their method of hunting was to drive. Two of the party acted as drivers, and the remaining members were located on what was supposed to be runways, only the camp man, and he attended strictly to his household work. The drivers made all the racket and noise that they could get up, and as they had tin horns and good lungs, the noise was, at times, almost deafening, and frightened the deer till they did not know whether to lie down or run, half of the time. The entire hunting was done within a few miles of camp, and as several other camps were located in that neighborhood, each party was to keep on their own hunting grounds. A party located on a little lake, of which there were several all joined together, and teeming with fish, sent over a basket of fish almost every day, and another party from Bath sent over a fine nice sirloin of beef, which one of the party had found stowed away in his winter quarters, and when the bear stuck out his head, to satisfy himself as to who his visitor was, the hunter opened fire on him and soon placed his bearship *hors du combat*. The bear was very fat, and was in great condition for his winter hibernation, and the Bath hunters, and the neighboring hunters' camps, were well supplied with bear meat during their stay in the woods.

There are a great many wolves in the up-country forests and roaming over the jack pine plains, but they do not go into the woods for the winter till they are driven in by the cold and snow. When the frost comes, and the snow is deep, the wolves visit all of the camping places and pick up all the refuse left in the camps, and run down all the deer that have been wounded and not brought in by the hunters. Oftentimes the wolves get to be very troublesome to the settlers, and they organize wolf-hunting parties to clean them out. This section of country is

not a farming country, and when the timber is taken off the land is left to grow up to underbrush and second-growth trees. Fires run through the underbrush almost every season, and large areas are thus rendered almost worthless for any purpose. The pine barrens stretch away to the south for miles and miles, and this pine plains and north woods is now the only home of the deer in southern Michigan. Year by year, even this desolate country is being intruded upon, and year by year the hunting territory in Michigan is being brought into narrower limits, and in a few years more deer hunting in Michigan will be a story of the past. Like the Indian and the buffalo, the deer will vanish, never to return. A few years ago Mr. Hardy and his party used to camp on the Lower Tittabawassee River, and found lots of deer there, but of late years that section has been so thoroughly hunted that the game has been nearly all killed or driven out.

The next morning after our party got to camp and located comfortably, the hunt was organized bright and early, and after a hard day's work and all the hunters had returned to camp, the bag all told was one deer—so the camp was supplied with meat, a most desirable addition to the regular camp rations. Our party are early birds and hard workers, and the second day by sun-up the drive was well under way. This day's work brought to bag three fine deer, and in the evening over the pipes and while enjoying a round of camp pedro, they fought over again the battles of the day. A little joke on one of the boys, who stood on a runway and almost let a deer run him down, and then got away, without his firing a single shot, gave evidence that once in a great while even a deer hunter will get the buck fever.

The third day began, with increasing energy on the part of the hunters. The camp was deserted by sunrise, and the camp keeper was busy with his routine work most of the day, for, in addition to his camp work, he had the deer to take care of, and all the work in any way connected with the camp, and with the game brought in, and wood, and the fire, rested upon his shoulders. One of the drivers took his shotgun, and his horn, and the little spaniel along with him thinking to get some birds. Just as he passed by a brush and log jam, he thought he saw a deer laying down, quite too frightened to run, and badly scared by the noise of the horns and the unearthly racket the drivers were making. One barrel of the shotgun was loaded with buckshot, so he fired at the deer with the buckshot load, and to his great surprise the deer tumbled over seemingly quite dead. The little spaniel rushed in to the jam pile, and tackled the dead deer, while the hunter climbed over the timber and catching the deer by the ear drew his knife to cut his deer's throat. Suddenly the deer jumped up and bounded away, with the little spaniel yelping at his feet. After making three or four jumps the deer seemed to be annoyed by the little dog and he halted to give him battle. As soon as the deer stopped the dog gave a jump and caught on to the tail of the deer. This condition of things started the deer away on the bound again, but the little dog hung on, like the old time puppy to the root. After riding fifteen or twenty rods the tail of the deer gave way and the little spaniel fell to the ground, still holding in his mouth the tail of the deer. After the deer had disposed of the dog, but lost his tail, he passed into another jam pile near to a hunter with a .38-56-255 Winchester, when a well aimed shot brought the deer to the ground. This pleasing incident was enjoyed by the hunters and by the little spaniel very much. In the evening this deer was brought in, the sport of the day closed, and the hunters retired early to their bed of hemlock boughs. The next day opened in royal shape, and brought the usual returns at the evening inventory. One little incident occurred which was greatly enjoyed by all who witnessed it. The English setter while on his morning ramble had started a fawn. The fawn started through the brush as fast as he could run, while the setter ran by his side, usually keeping just a trifle in advance of the fawn, and barking continuously all of the time, and looking up into the fawn's face as they ran. The fawn and setter ran their race out of the woods and through a low swale place which was covered with a thick grass about a foot high, and as the hunters were mostly posted on the runways on the high ground, the fawn and the setter were in plain sight for nearly a mile. The setter did not attempt to catch hold of the deer, or in any way to disturb him, but seemed to make the run for the fun of the run, and to keep the fawn company. It is needless to say that the setter saved the fawn's life, for a half dozen rifles were leveled upon him as he ran, but no one wanted to break the pretty race bad enough to shoot the gamy fawn. For the next ten days the hunters continued to increase their tally till a total of eighteen deer was hung up at their cabin door, while a dozen or so quail, and a score of grouse, helped to give a variety of tid bits at the hunters' table. One day the last week in camp they brought in six deer, all shot clean and nice, and not a single pot shot in the lot. One day Mr. Hardy stood on a stump, when a fine deer came running over his way, and came within four rods of the hunter, when Mr. Hardy said stop to him. He did stop, but the next moment a yellow streak marked his line of flight, and the hunter on the stump vainly endeavored to fire his rifle—but the surly gun refused to respond to the call, and the life of the deer was saved. A little later one of the hunters shot a fine buck high up through the hips. The buck came down but soon gathered himself, and was only brought down by Mr. Hardy after a long chase, in which the little spaniel cut quite a figure. The wind and the weather were quite important factors in the work of the hunter, and the knowledge of the habits of the deer, when at home and undisturbed, and after being wounded, enabled our little party to add largely to their score of deer killed. At the close of the season the party returned home, loaded with the spoils of the chase, and thoroughly well pleased with their hunting season of 1893.

JULIAN.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$8 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$8).

## Game Bag and Gun.

### QUAIL BREEDING AND WINTERING.

CHATHAM, Ont.—*Editor Forest and Stream:* Hearing from a friend, who happened to be in the village of Wyoming, Ont., that a sportsman there had succeeded in raising quail in confinement, I thought I would write him and find out his mode of operating. I inclose you his reply:

"I raised during last year a few quail. They were hatched out by a small bantam hen. I had no difficulty whatever, and would have had a larger number if the two quail hens had not been killed by a weasel. I expect to raise a large number next summer; and think they will be very much tamer, and through time entirely domesticated. It has afforded me very great pleasure feeding and studying the habits of these birds, and it will give me pleasure to give you any information in my power.—ALLAN DUNCAN."

Owing to the past severe winter quail throughout the North have suffered severely, and in some places they have been entirely wiped out. The present winter has started in as if it meant not to be outdone by the last; so it behooves sportsmen in the North to be on the lookout or they will find their favorite sport gone until another period of mild winters sets in.

I am of the opinion that with a little work on the part of those interested, a sufficient number of birds can be saved to form a fair breeding stock. Last year on our preserve at Big Point we fed the birds on their grounds and had as many as three bevises, in all twenty-five or thirty birds, feeding at the same spot, and they were strong and hearty up to the last week in February, which was a succession of drifting snow storms coupled with very low temperature. After that we could only find from six to eight birds where before were twenty-five or thirty. The supposition is that they were disturbed and scattered and covered up by the drifting snow.

Although it is against the law to trap or net it is doubtful whether the law would touch a person trapping or netting birds and having them in possession for breeding purposes. I would advocate, if the weather gets severe, trapping the birds and keeping them in coops until the severe weather is over, when they can be turned out in pairs. An old sportsman once told me that two pair put out in a good place would breed more than a whole bevy left together. I suppose the idea is that in a bevy left to themselves the cocks predominate and disturb the peace of the family by fighting.

My French-Canadian punter was in the other day and spoke of seeing a fine bevy huddled under a log, but he was sorry they were nearly all "drakes."

I have been for a long time curious to know whether our Northern quail were not larger than those I had shot in the South, and the other day when in Detroit I inquired of a wholesale game dealer, who said that the Northern birds were from two to three ounces heavier. I was under this impression myself but could not find out from any one who had shot both North and South. One man, a professional breaker, said that the Southern birds he thought were the largest. There is one thing certain that I found out, and that is they fly just as fast. I hope to be lucky enough to get a chance to try to stop a few shortly.

CINNA.

#### Size of Horns vs. Weight.

BOSTON, Mass.—*Editor Forest and Stream:* Why is it that so many sportsmen when sending accounts of big game killed to your paper give an estimate of the animal's weight and say nothing of the spread of horns or number of points on them? Are they pot-hunters that they want pounds of dead game, or are they that other species of the same genus that kills does and cows for sport rather than go home without game to boast of to their friends? It is ridiculous to attempt to send the weight of an animal as evidence of one's prowess. In the first place anyone familiar with our great woods knows that for one animal killed near a pair of scales, a hundred are killed too far from home to get out all the meat. In the next place the true sportsman is prouder in showing a mounted head with antlers of extraordinary spread, nay with only a small prongs, than to boast the killing in a single day of a thousand or more pounds of meat, when questioning will usually elicit the fact that it was killed so far from a settlement that only a small portion could be used.

Moreover, anyone who has killed a moose knows how difficult a job he has in dressing his game, especially a moose called into the water; and after he has labored over it until his back aches, you may be sure he will estimate the weight of the carcass high enough to satisfy any reasonable demand. The fact that such estimates are entirely untrustworthy is illustrated by the widely different results arrived at when two persons endeavor to guess the weight of a third. Measurements are exact. They give a much better idea of the value of a head or specimen and are easily marked off on some object, be it gun or paddle, and measured when a tape is handy.

My hunting has been confined to the east, mostly to Maine, and I do not feel particularly virtuous when I say that I saw ten moose at close range before I shot at one. Last October, I was so fortunate as to kill a large bull and do not regret at all the ten moose spared, because they were cows or small bulls, and are still in the woods and increasing unless some one after meat has met them.

My moose measured as follows: Perpendicular drawn from fore foot to the top of the back 6 ft. 4 in., spread of horns 4 ft. 9 in., number of points 26, width of web 14 in.

SUMNER ROBINSON.

#### New York State Association for the Protection of Fish and Game.

THE following note has been sent out: BUFFALO, Dec. 21.—Gentlemen: Will you please mail to Walter S. Mac Gregor, Syracuse, any amendments to the present fish and game laws that you think advisable to make. Kindly do this at once, so that the law committee may make their report at the annual meeting, to be held at the Yates House, in Syracuse, on Jan. 11. It is desirable that clubs and associations should name their delegations as soon as convenient, and forward names to me. The meeting promises to be of great importance to the interest it represents. Yours truly, JOHN B. SAGE, Sec.-Treas.

## The Connecticut Season.

HADDAM, Conn., Dec. 21.—*Editor Forest and Stream:* Game of all kinds, except squirrels, has been unusually scarce in this locality this fall. Quail have been like the proverbial song of angels' visits—few and far between. Woodcock were not as plenty as last fall. Partridges were more plenty than either of the other game birds, but they were generally found singly and scattered over a large extent of cover. Gray squirrels were very plenty and in excellent condition, owing to the abundance of nuts. Rabbits seem to have been almost exterminated, probably by the foxes, which seem to have increased rapidly within a few years.

By the laws of this Commonwealth the open season for shooting quail, woodcock and partridge began Oct. 1 and will end Dec. 31, but by the natural law of the seasons governing such sport and in simple justice to the few game birds remaining in this State it should not begin till Oct. 15 and should end Nov. 30 in each year.

There was an effort made in the last Legislature of this State to abridge the open season for these game birds, but in the great wisdom and knowledge on this subject of the Committee on Agriculture, before which the matter came, aided by the advice of a few men who seemingly would like to shoot the last live bird on the last day of the year and of the open season, the effort failed.

It is hoped that those opposing this measure will remember how uncomfortably warm it was in this State for pleasure shooting from Oct. 1 to 15 last, and also how few leaves had fallen from the trees and underbrush even by the latter date. It is also hoped they will make a note of the severe snows and freezing weather we have had almost from Dec. 1 to the present time, and see how few have been the days in which a sportsman would care to be seen in the field with his dog and gun, but that this condition suits the market-hunter, for they can follow the tracks of the poor birds in the snow and slaughter them under the first cover they seek. It is a shame to the sportsmen of this State that these three game birds are not given a fair chance to live and increase, and it is hoped the time will soon come when they will take effective action in the matter. A.

## Sport in Japan.

JAPAN, as a sporting field, naturally falls within the province of Chicago and the West, therefore I beg to borrow material as I may to hold down the field. This morning a gentleman came into the Western office of FOREST AND STREAM and wanted a FOREST AND STREAM book sent over to a friend of his in Yokohama, Japan. The gentleman is Mr. E. W. Clement, now of this city, and his friend is Mr. Jas. Ellacott Beale, editor of the *Japan Mail*, a Yokohama newspaper. Mr. Clement lived in Japan himself four years, 1887-91, and was able to tell something of the sport in that country. He says that game of many kinds, ducks, snipe, etc., was very abundant, and much cheaper in the markets than beef. Pheasants were common, and sold for low prices. Near by Yokohama was a fine salmon stream, and the salmon taken there were very fine, although it does not yet appear that salmon angling was practiced successfully. Mr. Beale, being much of a sportsman, always kept a gun and dogs, and had very fine sport. Mr. Clement was engaged in traveling, in a native school further toward the interior, and did not occupy himself with field sports, but he says he remembers very well the swift rushing salmon streams which tumbled their brief course from the mountains to the sea. This summer at the World's Fair we had many fine paintings of these mountain streams done by Japanese artists. And now comes Mr. Clement and says that he will write to his friend, Mr. Beale, whose paper, by the way, he represents in Chicago, and will prevail upon him to tell the readers of FOREST AND STREAM a great deal more about the shooting and fishing in that far away but pleasant land, where everybody is polite and the days go goldenly along. If Mr. Beale will kindly do this, he will give a great many readers a sincere pleasure. E. HOUGH.

## Lake Champlain Ducks.

ROUSE'S POINT, N. Y., Dec. 17.—*Editor Forest and Stream:* In your issue of Dec. 16, under the heading of "Lake Champlain Ducking," J. R. Latham, M.D., of New York, in relating his experience of this sport, states that he was surprised at the extreme wildness of the ducks, and upon his making inquiry was informed that the wildness was caused by the constant pursuing of them by several steam yachts from Rouse's Point and other places on the Lake.

As to the yachts from other places I know nothing, but I do know that no such use was made of the one yacht which belongs in this port, and that none of our Rouse's Point gunners made a practice of this method of duck hunting.

I acknowledge we have a class of pot-hunters here (such as is found in most every locality), who will hunt in season and out of season, and seem to have an utter disregard of any such thing as game law, and as we have no local game constable here, they do pretty much as they please.

I agree with the Doctor that this manner of duck hunting from steam yachts is very unsportsmanlike and should be prevented, and it is my utter dislike of it that causes me to make this correction as regards Rouse's Point gunners making a practice of it, and I hope he will think twice before he again makes us so conspicuous in an article of this kind on the simple information of some one from Alburg, Vt. WILL McCOMB, JR.

## Pittsburgh's Game Fields.

PITTSBURGH, Pa., Dec. 15.—Game of all kinds, turkey, grouse, quail, squirrels and rabbits, are very scarce and wild in the Laurel Hill Mountain section this season. As this is the nearest ground of any importance within one hundred miles of our city, all sportsmen in this section are interested. It is reported that considerable game is killed illegally in this section, and the sportsmen who go there in the legal season find but little left. This season there was a party composed of members of the Wilkensburg, Pa., Gun Club up in this section for about a week. They had moderate success. Also a party composed of members of the Mutual Gun Club, of the E. E., who report very poor success; and a party composed of members of the Iroquois Gun Club, S. S., left a few days since for the same district, but I have received no report in regard to their success so far. F.

## Following the Trail.

BARTON, Vermont.—We are having plenty of snow and cold weather in the woods. There was twenty inches of snow on Dec. 20 and thermometer registered 40° below. On Dec. 7 Mr. Brown, of Belvidere, was told that a large bear had been seen crossing the road the night before. Mr. Brown is 62 years and an old bear hunter. He took the bear trail the next morning, armed only with a light axe and heavy revolver. The bear passed through this town, going east, on Dec. 9, with the old man about one hour behind. Brown, when he crosses a road near a house, stops, gets something to eat and follows on. He has followed the bear steadily up to date. He has come up to him once and wounded him slightly. On Dec. 10 two of our hunters started on after Brown and overtook him on the 11th, and traveled with him until Saturday night. Brown told them they might go on if they wanted to, but that was his bear and he should claim it who ever killed it. The bear is headed for the big woods of Maine.

Dec. 4 I was intending to take my trip to Maine after my deer. Three of our hunters went and brought back a deer each, one a very nice buck with a splendid set of horns. They say that deer are very plenty and there is a nice tracking snow. Another party starts to-morrow. We go to Lenoxville, P. Q., then from there to Megantic and to Lowelltown, Maine. There is a large lumbering business down there, some 300 men being in the woods; that means crust-hunting. G. E. R.

## White Deer in Pennsylvania.

THE announcement that a white deer had been killed in the woods near Foxburg, Forest county, on Bluejay Creek, has attracted much interest among the naturalists and hunters of this vicinity. The deer above referred to was killed on Tuesday of last week by A. Gilson and C. H. Dubois, and is now on exhibition at the latter's place of business in Bradford. This is the first authentic record of an albino deer being killed in this vicinity since 1838, when Joseph Gayetty, the father of ex-Police Captain J. M. Gayetty, of this city, killed a white buck deer at the headwaters of Horse Creek, about six miles from where the city hall now stands. In the same year and later in the fall, John McCool killed a white doe on Hemlock run. Eighteen years ago and near the vicinity where the white deer was killed last week a spotted deer and full grown, was seen for three different seasons, and was chased by many hunters, but could not be shot nor captured. Its mangled carcass was found one summer by one of the hunters in search of a bee tree. The deer had been dragged down by a panther, wild cat or lynx, and when found the carcass was so badly decomposed that the hide could not be saved.—*Oil City Derrick.*

## Native Animals of Pennsylvania and New Jersey.

MR. SAMUEL N. RHOADS of the Academy of Natural Science, Philadelphia, is preparing a book on the animals (quadrupeds) of Pennsylvania and New Jersey. He asks for the collection of specimens of such four-footed animals as are not commonly met with, from every county of the two States, and second, information about the habits of certain species which are little known or are supposed to have become extinct since the settlement of the country.

## Sea and River Fishing.

## ANGLING NOTES.

## Landlocked Salmon in New York.

THE first plant of landlocked salmon fry made in the waters of New York was made in 1879. The fry, 9,000 of them, were, I believe, intended for Bisby Lake, but owing to hot weather and unavoidable delays it was found impossible to reach the waters to which they were consigned and they were dumped into the middle of Woodhull Lake, in Herkimer county, near the Bisby lakes. The same year 9,000 fry were planted in western New York.

Since that time 466,500 fry and eggs of the landlocked salmon have been distributed in various New York waters, chiefly in the Adirondack region. The eggs, of course, were hatched after leaving the distributing station and the fry planted; but for convenience I have placed eggs and fry together.

What is there to show to-day for nearly half a million salmon fry planted during the past fourteen years? There is not a lake in the State that has a reputation for its landlocked salmon, even if there is one that affords fishing for the fish that is worth mentioning.

It is true that many thousands of fry were planted in waters wholly unfit for the adult fish. I planted one lot of 20,000 myself that might as well have been turned into a tea kettle on a stove in which there was a fire. I obeyed instructions, but I knew the water and the one in authority who ordered the plant did not, although he had the best possible intentions. Not one of that plant was ever heard of afterwards.

In fact, except in Woodhull Lake and the Bisby chain, if any of the half-million fry have prospered I have not been able to learn about it. In Woodhull Lake, I believe that within a few years after the first plant a small number of salmon of a pound or so in weight were caught and it was afterward reported that the fish had worked down stream and disappeared. In the Bisby lakes landlocked salmon up to four pounds in weight have been caught and Gen. Sherman considers the waters there suitable for them, but the lakes are owned by a private club. I have an idea that the failures to establish the landlocked salmon in the waters of New York State have been chargeable in large part to the fact that the waters selected for the fry have not contained suitable food for the fish. The principal food in the waters where they are originally found is small fish, and the particular small fish that they thrive upon is the smelt. "Frost fish," which means the round whitefish, would seem to be an excellent substitute for the smelt as salmon food, and in Bisby Lakes this is the food that has been supplied for them, although the frost fish were not planted until five years after the first planting of salmon fry.

## Landlocked Salmon for Lake George.

For a number of years past I have been impressed with the thought that Lake George, N. Y., which my friend Mr. W. H. Hippitts, editor of the *Lake George Mirror*,

calls on the title page of his paper, "The Queen of American Lakes," would be an ideal water for landlocked salmon—the king of fresh-water fishes.

The water is clear as crystal and so cold that the surface water in August is but little above seventy-two degrees Fahrenheit. It is made up largely of springs in the bottom and no mountain lake can boast of water of greater purity. As for food the lake fairly swarms with whitefish. The frost fish, or round whitefish, *C. quadrilateralis*, is native to the lake. (See FOREST AND STREAM of January 14, 1892, for an article upon, and illustration of, the "Frost-Fish," in which I described them as found in Lake George), and the U. S. Fish Commission has planted (in the spring of 1887) 761,000 fry of the lake whitefish, *C. clupeiformis*, whose young may now be seen covering the surface of the lake at certain seasons.

Upon one point only was I in doubt about the success of planting Lake George with salmon. I feared that the inlet streams, which are ordinary trout brooks, might not be large enough to afford spawning grounds for the big salmon, which the fry would surely become on the rich pasturage of the lake, and this is why I halted. Some nine or ten years ago when I first conceived the idea of planting landlocked salmon in Lake George the late E. M. Stilwell, Fish Commissioner of Maine, wrote me: "In Grand Lake the favorite spawning ground for the fish is in Grand Lake stream, the outlet of the lake. In Sebago Lake there are several favorite spawning grounds, but they are all in tributary streams or inlets. \* \* \* They require in miniature the same conditions as *Salmo salar*, viz., the ocean home (the lake) and a river of aerated, broken water and gravelly, sandy bottom to spawn on, as well as to clean themselves in. The young fish when hatched are helpless and should drift into their lake home rather than be compelled to drift away from it. The instinct of the fish teaches them to seek the inlets. \* \* \* They will spawn in shallow water on a sand bar where the wind will give a little ripple, but few ever hatch of the eggs so deposited."

Commenting upon this the late Prof. Baird said: "Running water is not necessary to the propagation of the landlocked salmon. The landlocked salmon can be, and has been made a pond fish, provided that the lake is large enough and its water fresh, cold and pure."

Neither of the gentlemen quoted said one word about food which I have come to believe is of the first importance in establishing any kind of fish, and as they seemed to be not in accord in regard to the necessary conditions for the successful spawning of the landlocked salmon, I thought it would be best for me, like Br'er Rabbit, to lay low for a time.

Later I made several visits to Sunapee Lake, N. H., where the landlocked salmon have been planted and established, growing to twenty pounds and over, and affording excellent fishing. There I studied the conditions which existed to produce this result and compared them with conditions existing at Lake George, and was convinced that everything was favorable in a marked degree to the establishment of the salmon in the latter lake. The streams flowing into Lake George are larger than those flowing in Lake Sunapee, in which the salmon enter to spawn, or would enter if the Fish Commissioners did not net them at the mouth and spawn them artificially. In Lake George the frost fish are as abundant as the smelt in Sunapee, and other conditions are similar.

## Final Action.

With these facts acquired to my satisfaction I still hesitated about taking the responsibility of recommending Lake George as a lake in which to plant salmon, for there was still the chance that the salmon might go down stream to spawn and so work into Lake Champlain; but when the U. S. Fish Commission began to plant fingerling salmon in Lake Champlain the last objection in my mind faded away.

Last month I wrote to the U. S. Fish Commission, described the lake and its adaptability for landlocked salmon, and suggested that it should be planted with fingerlings or yearlings; and said that while I was convinced that it would prove a lake second to none in the State for this fish, if they should by any chance go out they would go into Lake Champlain. Col. McDonald wrote me as follows: "Acting upon your suggestion I have determined to plant, during the ensuing season, fingerlings of the landlocked salmon in Lake George as well as in Lake Champlain. I feel very sure that both lakes will prove desirable habitats for this species, and I propose to continue the planting on as great a scale as our means will permit, until the species is well established in Lake George and Lake Champlain, or the scheme is demonstrated to be impracticable. I do not, however, apprehend failure."

I then wrote to Mr. J. W. Burdick, General Passenger Agent of the Delaware & Hudson Canal Company, whom I have always found most ready to render assistance to any undertaking of this kind, and he very kindly offered to haul cars of the U. S. Fish Commission and furnish transportation for the men free over his railway, which runs to Lake George and along the shore of Lake Champlain, so the way is prepared to make Lake George, as well as Lake Champlain, the home of the "ouananiche," and I believe that in a few years this will be an accomplished fact, and that the Empire State will have the very best of landlocked salmon fishing within her borders. Lake Champlain will furnish smelt food, and Lake George frost-fish food for the salmon, and their merits can be determined by comparison. A. N. CHENEY.

## Trout Development in Tasmania.

THAT the European trout introduced in New Zealand waters have done well has long been known in a general way, but some facts recently published in the *London Field* give details which are interesting. The Agent General of Tasmania has recently sent the *Field* a photograph of a number of trout, of which the following details are given: They were taken in the great lake Tasmania by three rods from April 1 to April 12. The total was 53 fish, weight 470lbs., average 9lbs. The number and weights were as follows: One fish 1½lbs., one 3lbs., two 4lbs., one 4½lbs., six 5lbs., three 6lbs., one 6½lbs., three 7lbs., three 7½lbs., two 8lbs., four 9lbs., three 9½lbs., four 10lbs., eight 11lbs., one 12lb., one 13lb., two 16lbs., one 17½lbs. The character of these descendants of Hampshire and Wycombe fish has been often described, and the large specimen weighing 17½lbs. is a magnificent example of the short, deep, thick, well-shaped variety of the *fario*, which has now become acclimated in Tasmania.

The Kennel.

FIXTURES.

DOG SHOWS.

1894.

Jan. 16 to 19.—Saratoga Poultry and Kennel Club, at Saratoga, N. Y. L. W. Clute, Ballston Lake, N. Y., Sec'y.  
Feb. 25 to 26.—New Orleans Fanciers' Club, at New Orleans, La. G. W. Sontell, Jr., Sec'y.  
Jan. 23 to 23.—Westminster Kennel Club, at New York. James Mortimer, Superintendent.  
Feb. 27 to March 2.—Columbus Fanciers' Club, at Columbus, O. G. F. Mooney, Sec'y.  
March 7 to 10.—City of Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.  
March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y.  
March 20 to 23.—St. Louis Kennel Club, at St. Louis, Mo.  
April 3 to 6.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 2 to 5.—Pacific Kennel Club, at San Francisco, Cal. H. W. Orear, Sec'y.  
May 15.—Portland Kennel Club, at Portland, Ore. D. L. Williams, Sec'y.

FIELD TRIALS.

1894.

Jan. 15.—Pacific Coast Field Trial Club, at Salinas, Cal. J. M. Kilgariff, Sec'y, San Francisco, Cal.  
Feb. 1.—Blue Ridge Futurity Stakes, at New Albany, Miss.  
Feb. 5.—Southern Field Trial Club's Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

American Kennel Club Meeting.

The quarterly meeting of the executive committee of the American Kennel Club was held at the office of the club, 44 Broadway, New York, Dec. 21, at 3 P. M. In the absence of the president and vice-president, Mr. William C. Reick was elected to preside. The following associate members, Dr. H. T. Foote and A. C. Wilmersburg; American Mastiff Club, George G. Stephenson; American Spaniel Club, E. M. Oldham; English Sitter Club, Wilson Fiske; Gordon Setter Club of America, J. B. Blossom; National Beagle Club, H. F. Schellhass; New Jersey Kennel League, E. H. Morris; Pacific Kennel Club, Jas. Mortimer; Point of View Kennel Club, J. B. Blossom; Southern California Kennel Club, Jas. Watson; St. Bernard Club of America, V. C. Reick; St. Louis Kennel Club, J. M. Taylor; Washington City Kennel Club, F. S. Webster; Westminster Kennel Club, H. B. Cromwell; American Bull dog Club, E. Willard Roby.

The minutes of the last meeting were read, and on motion approved. Credentials of the following named delegates to represent the following clubs were read and accepted: American Bulldog Club, E. Willard Roby; Portland Kennel Club, W. L. Washington; Akron Poultry and Kennel Club, H. F. Peck.

The secretary read his report, which on motion was accepted, and is as follows:

New York, Dec. 20, 1893.

To the Executive Committee of the American Kennel Club: GENTLEMEN: I have the honor to report that since our last meeting there have been no new applications for membership. There is, however, one in abeyance, which was laid over at the last meeting. I ordered that the applicant might complete its application by filing a copy of its constitution as required by our rules. I mailed a communication to the club in question, explaining the matter, and no reply has yet been received. The club is known as the Kansas City Exposition Driving Park Association, and from its title it would appear that it is no relation that this club is a kennel club.

The South Carolina Poultry and Pet Stock Association tenders its resignation, and as the club is in good standing, I would recommend the prompt acceptance of the same. The Long Island Live Stock and Fair Association having been sold out we are requested to drop its name from our roll of membership. I would recommend such action. The following credentials have been filed: Akron Poultry and Kennel Club, appointing Robert E. Peck, as its delegate; Portland Kennel Club, appointing W. L. Washington, as its delegate; Bulldog Club of America, appointing E. Willard Roby, New York city, as its delegate in place of John H. Matthews, resigned.

You will hereby recall that at our last meeting the Illindio Kennel Club was duly suspended until it should pay its fees for listings. The order for this was sent in the order of the treasurer to the order of said club to pay the American Kennel Club the sum of \$19.75 in liquidation of our claim. Dr. H. Van Hummel undertook to collect said order for our account. I endorsed it over to him and forwarded it to his address on Dec. 13, and up to this writing no reply has been received. In the meanwhile we have received from Mr. F. W. Chapman a communication claiming that the Illindio Kennel Club sent him \$100 in liquidation of the sum of \$19.75 for prizes won by his dogs at its show. He deposited same in his bank for collection, which was later returned to him marked "N. G." with \$2.14 protest fees charged, which he paid, and although he has repeatedly demanded payment of his claim the club has failed to respond. The club having already been suspended by the action of your honorable body, your secretary has taken no steps in the matter other than to advise the delegate of the Illindio Kennel Club of the state of affairs as above set forth. It now remains for this club to enforce its claims.

I was directed at our last meeting to ascertain what compact, if any, has been entered into between the Trunk Lines and the express companies in regard to the free transportation of dogs in charge of their owners or caretakers to and from shows throughout the United States. I addressed a letter containing this inquiry to Mr. L. P. Farmer, Commissioner of the Trunk Line Association, and quote his reply:

142 LIBERTY STREET, New York, Nov. 16.

DEAR SIR:—In reply to your inquiry of the 15th inst. beg to say that I cannot advise you what agreement exists between the several Trunk Lines and Express companies operating thereon. I beg, however, to state the rule of the express companies in regard to the transportation of dogs when forwarded for exhibition purposes. "Dogs on exhibition do not to be carried in baggage cars and owners to be referred to the express companies." Very truly, L. P. FARMER, Commissioner Passenger Department.

I beg to report that agreeable to instructions I promptly returned all the fees received by this club for World's Fair certificates. One notice and card has been returned, the party to whom it was addressed not being found by the post-office officials. I hold this amount subject to claim by the proper party.

I now beg to call your attention to several important matters with my recommendations regarding them. First, I am forced by circumstances to advise you that we have outgrown our present system of indexing. We have registered upward of 3,000 dogs, and the danger of duplicating names is growing more apparent each day. This is a very serious matter and its dangers should be guarded against. I believe that we owe it to our patrons to perfect our plan as far as it is possible so to do, and as a matter of justice to them and safety to ourselves, I would ask you to make an appropriation of sufficient money to enable us to purchase a card index such as is now used in nearly all of our public libraries, life and insurance companies, the different cattle clubs and other institutions where indexing is of such vital importance. To this end I have procured from the Library Bureau, of Boston, Mass., an estimate of the cost of such a cabinet made of hard wood throughout, provided with all of the latest appliances, with a capacity of 72,331 cards, with that number of cards of Bristol board, printed with breed, sex, number, sire, dam, an owner, for the sum of \$215. This company also agrees to write all the names up to Jan. 1, 1894, for \$13.50 per thousand, or \$432 for the 32,000 names already registered. I would, therefore, recommend that the cabinet and cards as per specification and estimate be purchased at once, leaving the matter of the indexing of the dogs already registered to the discretion of the secretary, who believes he can obtain a lower bid for that work.

Second—I would also inform you that in my opinion this club has outgrown its present quarters up to needs more storage room and should have its electrolyte plates of all its published volumes of the stud book under its immediate control, which is now in possession of a private individual. I have obtained the refusal of the office adjoining, being of the same dimensions as that now occupied by me, and would recommend that this club should hire the same, placing the registration department and stenographer therein, and keeping the large room we now lease for the purpose of meetings and for extra storage space. The additional rent would amount to \$225 per annum.

Third—By resolution at the May meeting the compact between the Canadian Kennel Club and the American K-nel Club was annulled. It is my opinion, however, that we should in some way control all bench shows, registrations and questions of discipline, and to that end I would recommend that a committee be appointed by the chair and a

request forwarded to the C. K. C. to appoint a similar committee to confer, and try to arrive at some conclusion so that a report would be made at the annual meeting. My suggestion as a groundwork for such joint committee to work upon is as follows:

First, the C. K. C. to give up its publication of its Stud Book; second, the C. K. C. to affiliate with the A. K. C. by paying certain annual dues; third, the C. K. C. to send a delegate to the A. K. C. to be to represent the Canadian dog show interests for the entire Dominion of Canada; fourth, the benefits to be derived would be one set of dog show rules, general recognition of all awards to qualify for a championship, general recognition of disqualifications and suspensions. The Canadians through their delegate having the same privileges as we accord every member; and for the general good of the Kennel interests throughout this entire country.

In closing my report I have to request that the chair appoint an auditing committee to examine my accounts for the year ending Dec. 31, 1893, and for authority to publish in the Kennel Gazette in the month of January, 1894, my financial statement, as has been the custom for the past years.

All of which is respectfully submitted.

(Signed) A. P. VREDENBURGH, Secretary.

Mr. Schellhass moved that the chair appoint an auditing committee, pursuant to the request of the treasurer to audit his accounts.

Motion seconded and carried.

The chair appointed the following auditing committee: Dr. H. T. Foote, F. S. Webster and H. F. Schellhass.

The treasurer's report was also read, and accepted as follows:

To the Executive Committee of the American Kennel Club, Gentlemen:—I hereby beg to submit my quarterly report of all moneys received and disbursed by me during the year 1893.

Balance on hand Jan. 1, 1893.....	\$5,040.20
Receipts from all sources to date.....	6,775.65
Disbursements for same period.....	\$11,760.05
Balance on hand.....	9,211.97
Respectfully submitted,	\$2,568.03

(Signed) A. P. VREDENBURGH, Treasurer.

The report of the special committee appointed at the last meeting to draw suitable resolutions on the resignation of Mr. James L. Anthony was read as follows:

Whereas, Mr. Jas. L. Anthony resigned as a member and an official of the A. K. C., and, to Whereas, At the meeting of the Executive Committee of the A. K. C. held May 18, 1893, the president was requested to appoint a committee to draft and present to the club a resolution of thanks to Mr. Anthony for his past services, and

Whereas, Under date of Nov. 8, 1893, the president duly appointed Messrs. A. P. Vredenburg, John L. Lincoln, Jr., and H. F. Schellhass as such committee, therefore be it

Resolved, That the thanks of the A. K. C. are due, and are hereby tendered to Mr. Anthony for his loyal support, his disinterested labor, and for his regular attendance at all meetings of the club and various committees of which he was a member for the several years that he was connected with this body, and to express regrets that he found it necessary to sever that connection which proved such a pleasant and valuable one to his fellow members, and

Resolved, That a copy of these preambles and resolutions be sent to Mr. Anthony, and that they be spread in full upon the records of the club.

(Signed) JOHN L. LINCOLN, JR., HERMANN F. SCHELLHASS.

On motion the same was unanimously adopted. The resignation of the South Carolina Pet Stock Association was presented, and Mr. Mortimer moved that, as the club was in good standing, the resignation be accepted. Motion seconded.

The request of the Long Island Live Stock Association to be dropped from our roll of membership, and the disbanding of the club was, on motion of Mr. Mortimer, granted.

Mr. VREDENBURGH—As I have stated before, the Illindio Kennel Club was suspended at our last meeting for failure in complying to our rules in sending us certain moneys due the club. They sent a draft on their treasurer. I endorsed that draft over to their delegate for collection, as he had said that he would collect it for us. I have heard nothing from him since. In the meantime Mr. F. W. Chapman of Boston won \$300 for his dog at the show. They sent him a similar draft and he deposited it in the bank, and it was returned to him marked "N. G."

Mr. WEBSTER—I move that the secretary be directed to notify the Illindio Kennel Club of the claim of Mr. Chapman against it, and that the club be granted thirty days within which either to disprove the claim or to pay the same, in default of which the officials of the club shall be expelled and the club remain suspended. Motion seconded and carried.

Mr. VREDENBURGH—As I have stated in my report, the Kansas City Exposition Driving Park Association have sent in their application for membership and a draft for \$10. The matter could not properly come up at the last meeting for action, but I was instructed to advise that club that it must comply with our rules by sending a list of their owners and a guarantee of the club before the matter could come before us. No attention has been paid to that letter, and, as I have said, the association does not appear to be one that the American Kennel Club would care to have on its roll.

Mr. SCHELLHASS—I move that the secretary be directed to return the \$10 to said association pending a proper compliance by said association with the rules. Motion carried.

Mr. VREDENBURGH—During my absence we had two applications for membership from Portland, Ore., one from the Portland Kennel Club and the other from the Oregon Kennel Club. We secured affidavits from both clubs regarding the date of the organization, and the action of this club was entirely upon the affidavits that we received, which action was that we elected the Portland Kennel Club, because it appeared from the affidavits submitted that the Portland Kennel Club had organized three days before that effected by the Oregon Kennel Club. On Nov. 10 I received a letter from the Oregon Kennel Club, which is as follows:

"PORTLAND, Oregon, Nov. 10.—To the Secretary of the American Kennel Club: Dear Sir—Noing the proceedings of the American Kennel Club at their last meeting, wherein a motion was made to grant a charter to the Portland Kennel Club instead of the Oregon Kennel Club, the latter club immediately held a meeting in regard to the matter and the officers of the Portland Kennel Club were elected. We with we most earnestly solicit your careful attention to the fact that we which the Oregon Kennel Club set forth. We still insist that the Oregon Kennel Club was the first to organize, and feel certain that we are able to prove such to be a fact, and that the Oregon Kennel Club are obtaining their charter by fraud and misrepresentation in claim- ing the Kennel Club; we have positive proof to the contrary. We have opportunity to set it before the American Kennel Club, and we have composed of many old and reliable business men who would not lend their name or assistance to these proceedings were they not truthful and correct. We feel that we are justly entitled to the charter under the constitution and precedents of the sovereign club, and we do not propose to be unduly influenced by unscrupulous parties without an effort to obtain that which rightly belongs to us. We have for many months of labor and hearty effort, for we have provided always, and we being out-witted by a disappointed office-seeker, who would not hesitate at any unscrupulous trick to supersede us in getting a charter and who wisely keeps in the dark and leaves his name unmentioned for obvious reasons. The president of the Portland Kennel Club committed to our secretary that he knew nothing of his objection to the motion made at the meeting of said club—that their motto was 'anything for a charter' and 'any way to get ahead of the Oregon Kennel Club.' We further truly believe that it is not in the welfare of the dog world which these parties have at heart, as it is to spite the Oregon Kennel Club, as one of their party remarked that 'any dirty work goes' in this case. Now, what we earnestly petition the American Kennel Club to do is to appoint a member of the Portland Kennel Club to come to Portland (at our expense) and fully and impartially investigate the facts in this controversy, and we will cheerfully abide by his decision. We would suggest that an officer of the Seattle, Wash., Kennel Club be appointed to come over here, and we are satisfied that the American Kennel Club will find that these statements are truthful and correct, and we ask, in justice between man and man, that the charter, if not already granted to the Portland Kennel Club, be withheld until such investigation can be had, and if the charter has been granted, that the same be revoked and given to the Oregon Kennel Club, provided always, that we can prove priority of organization. The reason we suggest the Seattle Club is because of the short distance to Portland, and, consequently, less expense to us.

In closing to have favorable consideration of our plea, we subscribe for the Oregon Kennel Club, Joseph R. Bowles, President; Fred A. Dunham, Secretary, Chairman Bench Show Committee; George A. Srow, L. A. Wheeler."

Since receiving that I have received a communication from the Seattle Kennel Club, dated Dec. 15, as follows:

"SEATTLE KENNEL CLUB, Seattle, Wash., Dec. 15.—Mr. A. Vredenburg, Secretary American Kennel Club: Dear Sir.—We beg to call your attention to the controversy existing between the Oregon Kennel Club and the Portland Kennel Club, said club being in the city of Portland, Ore., as to which club had the prior organization. The Portland Kennel Club, we understand, has represented that

they were organized on the 10th of April last, and from that showing were given the franchise of your club for the city of Portland.

"At a meeting of this club held this evening Mr. G. C. Strowe, of the Oregon Kennel Club, was present and laid before our club newspapers containing call for organization of the Oregon Kennel Club under date of April 8, also other newspapers showing that the organization was effected at that time, and that at that meeting among other officers elected Mr. D. L. Williams was elected to the position of financial secretary and treasurer. From the representation of Mr. Strowe it appears that Mr. Williams was very desirous of obtaining the position of corresponding secretary, and failing in that withdrew entirely from the Oregon Kennel Club and organized the Portland Kennel Club, though his name did not appear publicly. At the present time, however, we were informed that he holds the office of corresponding secretary of the last-named club. From the showing of Mr. Strowe, which seems to us that at least there is a very grave question as to which club has the title to priority of organization, and in the interest of fair play and of honest and clean sportsmanship on the Pacific coast, we respectfully ask you to lay this matter before the American Kennel Club at their coming meeting for such action as it may be their pleasure to take.

"The Oregon Kennel Club has agreed to defray all expenses of the member of this club going to Portland to investigate the facts as he may find them and report to your honorable body.

"We would, therefore, suggest, as a member of the American Kennel Club, that it might not be out of place that you decide as to what plan to pursue in order that this controversy may be settled as amicably and as soon as possible.

Mr. MORRIS—I move that this matter be reconsidered at the 10th of Jan. 1894.

Mr. MORTIMER—I think before such motion is entertained it would be well to take into consideration the testimony of an associate member, a member in good standing, Mr. W. L. Washington, who visited Portland last summer and reported very favorably on the Portland Club. He thought that club, being the first club organized, and representing a better class of people, who really had the interest of the dog at heart, should be recognized, and he very strongly recommended their admission. I do not see how we can reconsider this unless we have some very strong evidence to act upon.

Mr. SCHELLHASS—Even though we may have made a mistake in admitting the wrong club, I think if we reconsider the matter at this late date that the remedy might be a great deal worse than the evil. I move that the secretary be instructed to inform the Oregon Kennel Club that no action can be taken in the matter at this time.

Mr. Mortimer produced and read a letter from the secretary of the Portland Kennel Club, in which it was stated that that club was very desirous of holding its first dog show in May, 1894, and would like to have everything in connection with the show as near the rules and regulations of the American Kennel Club as possible.

The motion of Mr. Schellhass that the secretary be instructed to notify the Oregon Kennel Club that it is too late for the American Kennel Club to consider the matter was seconded.

Mr. FISKE—There being charges of fraud against the officers of the Portland Kennel Club, we now have the right to investigate those charges with perfect propriety, it seems to me.

Mr. Schellhass's motion was put to vote and lost.

Dr. FOOTE—I move that the matter be turned over to the advisory committee for the purpose of investigating the charges. Motion seconded.

Mr. VREDENBURGH—I would like to impress it upon the minds of delegates that the true reason for the acceptance of the Portland Kennel Club was upon an affidavit that they sent here showing that they were organized two or three days in advance of the affidavits received from the Oregon Kennel Club. Mr. Washington's letter of recommendation was also read, but the true reason for the acceptance of the club was its priority of organization. However, the Oregon Kennel Club, who granted no action, may have charges against the Portland Kennel Club. I think it is the duty of the delegates to investigate those charges.

Dr. Foote's motion to refer to advisory committee carried.

Mr. VREDENBURGH—The matter of the dog Sprake comes now properly before us. You will all remember that this dog was disqualified at the show of the Blue Grass Kennel Club held at Lexington, Ky., and was as secretary of this club. At the last meeting it was resolved that the present owner of the dog, Mrs. Davis, be given an opportunity of appeal. I have her appeal before me, which I submit to you, and in which she states in substance that since she was the owner of the dog she had always registered him as "I. C. P.," with "Sprake" in brackets.

Mr. MORTIMER—It would seem from the appeal of Mrs. Davis that she is the owner of the dog, and that she, as owner, and the dog Sprake, are disqualified permanently. I think I am justified in stating that the dog was only disqualified at the Lexington show, the matter could be readily settled.

Mr. MORRIS—I move that the matter be left with the secretary for attention.

Mr. LEWIS—The dog is now properly registered.

Motion seconded and carried.

Mrs. WASHINGTON offered the following resolution, that the stud book committee be authorized to recognize all wins with the exception of that at the Blue Grass Kennel Club, of Lexington, Kentucky, and if the dog is again shown as "I. C. P." ("Sprake") it be registered in the stud book. Motion seconded and carried.

The charge preferred by E. H. Morris against the Danbury Agricultural Society was on motion referred to the advisory committee.

Mr. Vredenburg's resolution in his report concerning a new system of indexing by which reference could be more readily had to registrations, and called attention to the advantage of a system such as is now used by a number of other clubs and corporations, and strongly recommended that some action be taken at this meeting regarding the matter.

Mr. MORRIS—I move that the whole matter be left to the discretion of the secretary, who be limited to his expenditures in said matter to \$550. Motion seconded and carried.

In regard to the recommendation of the secretary for more spacious quarters, Mr. Schellhass moved that the secretary be instructed to lease the adjoining office pursuant to his recommendation until May, 1895. Motion seconded and carried.

Mr. VREDENBURGH—Now comes the matter of our relation with the Canadian Kennel Club. As you all know, we had a compact in 1889 which was very much like the handle of a jug—all on one side—and this club was fit at its May meeting to annul that compact, and we are now in a position to part with that club as we are with England. I do not think this is for the best interest of the Kennel clubs of this country. Our constitution says that this club is a part of the American Kennel Club, which consists of individuals who have assumed to regulate kennel affairs in Canada. For the last five years we have recognized their stud book registrations and their awards and their black lists. In return they have done the same thing for us. I sincerely believe that it is time to come to some conclusion with the Canadian Kennel Club whereby we may be able to get them out of the American Kennel Club. In my opinion the grounds for our withdrawal be that they should abandon their stud book. They ought to affiliate with the American Kennel Club, and should send a delegate to this club to represent the Canadian dog show interests.

Mr. WATSON—I move that the communication received from the Canadian Kennel Club be submitted at a former meeting and laid upon the table, be taken up.

Motion seconded and carried.

MAJOR TAYLOR—I move that the chairman appoint a committee of three, of which our secretary shall be chairman, to confer with a committee of the Canadian Kennel Club and devise some means of establishing a new compact between the clubs.

Motion seconded and carried.

The chairman appointed as such committee Messrs. Vredenburg, Watson and Taylor.

Mr. MORRIS—I move that the secretary be given authority to publish in the Kennel Gazette for the month of January, 1894, his financial statement.

Motion seconded and carried.

Mr. WATSON—As the decision of the executive committee at its last meeting of the Canadian Kennel Club, Mr. Patterson was entered without any notice having been given to Mr. Schillcock or myself. I having acted for him, I beg to protest against this decision on his behalf. This case came up before the American Kennel Club and was referred to the advisory committee, where the whole testimony in the case was submitted. They went through it, and there was one point on which they desired further information. Our present chairman was on the way to England at the time, and he was requested to obtain information on that one particular point. The question was whether the bitch had been served, and Mr. Reick looked up the old service book and found exactly as Mr. Schillcock had said, that the service had been rendered in the manner stated. That was the only ground on which Mr. Patterson had to evade the responsibility. The case went against Mr. Patterson. At the last meeting a request was made by Mr. Patterson for a reconsideration of the case, and I was practically refused. I received no notice and knew nothing about the matter until I saw it in the report of the club in the Gazette. Now I ask, is it proper for a judicial body of this character to render a decision of that kind without full knowledge of the facts of the case? I do not think I ought to go into the facts now, because they are in evidence and can be produced. I do not think the gentlemen who voted in favor of his reinstatement had any idea of what this case was or how this man had

obtained this dog from Mr. Schillock, and that he had notified the bankers to refuse payment of the draft, and at the same time he was telling Mr. Schillock that it was the banker's fault that the draft was not paid. There was no one outside of Mr. Belmont, Mr. Vredenburg, Mr. Anthony and myself who were acquainted with these facts. We are in a certain sense a court of law. We give a decision. Some person wants to reopen the case. What do you do? You bring new evidence. This man owes \$40. There is the protested draft. There is the statement of this man that he ordered this draft to be paid, and yet he is still writing to these bankers not to pay this draft. I protest on behalf of Mr. Schillock against the reinstatement of Mr. Patterson, and request that some action be taken in the matter.

MR. VREDENBURG—I would like to state for the information of Mr. Watson, that when this case was brought up I suggested that as the case had been tried by the advisory committee, this man's appeal should, out of courtesy to the advisory committee, be referred to it so that if that committee saw any good reason why it should reinstate Mr. Patterson, they could do so. The meeting would not act on that suggestion, and they stated that it was the sense of that meeting that Mr. Patterson had been sufficiently punished for his misconduct, and that he should be reinstated. Mr. Patterson was reinstated.

MR. MORRIS—And it was also in view of the decision of the executive committee that these monetary matters should not be acted upon by the executive committee.

THE CHAIR—That resolution was rather *ex post facto*. I must say I thought it was one of the most amazing pieces of legislation that could be done. This man puts in circulation a printed paper in which he sought to defend himself, but which was simply an acknowledgment of that with which he had been charged. He bought this bitch and sent a draft for her, which he afterward ordered cancelled, and said the bitch had not been served. I suggest that the better way would be to appeal to the American Kennel Club as a club.

MR. WATSON—I give notice now that I will bring the matter before the next annual meeting.

MR. MORRIS brought up Rule 1 of the dog show rules and moved that the secretary be appointed a committee of one to act upon dates. Motion seconded and carried.

In the matter of the investigation made to ascertain what compact, if any, has been entered into between the trunk lines and the express companies in regard to free transportation of dogs in charge of their owners, which was somewhat fully discussed, Mr. Morris moved that a committee be appointed to treat with the express companies and trunk lines in order to bring about some more equitable rates for exhibitors. Motion seconded and carried.

The chairman appointed as such committee Messrs. Morris, Webster and Dr. Foote.

DR. FOOTE—Before the meeting is adjourned I desire to call attention to the action of Dr. L. R. Sattler at the Newark show recently held. According to the papers grave charges are made against Dr. Sattler to the effect that he surreptitiously took one of Mr. Belmont's dogs to serve one of his own. I understood he was expelled by his own club for so doing. I think it is a matter which the American Kennel Club should take some notice of.

MR. MORRIS—I can say on behalf of the New Jersey Kennel League that on the matter coming to our attention we insisted that he should pay the fee, and then we afterward had a hearing in the case and expelled him from the club. This is as far as we have gone.

DR. FOOTE—If that is all that has been done there is nothing to prevent this man from going on and showing his dogs. I think that a man who stoops to such a thing as that should not be allowed to show dogs.

MR. SCHELLHAAS—I move that it is the sense of this meeting that the New Jersey Kennel League shall prefer charges against Dr. Sattler to the American Kennel Club for investigation.

Motion seconded and carried.

The meeting then adjourned.

#### Field Trial Reports.

WE have received a long letter for publication from Maj. J. R. Purcell in regard to alleged incorrect reporting of certain heats in the field trials of 1893 and '93 in a Western paper. While Maj. Purcell seems to have some cause for complaint according to the published accounts of the same heats in the FOREST AND STREAM, which he quotes as bearing out his contention, we do not deem the letter sufficiently interesting to the general reader to publish it *in extenso*.

There is one part of his letter that we may allude to here. He says that at the club room at Lexington, N. C., during the Central field trials of 1892, a meeting was held by the handlers and the following resolution drawn up: "That Whereas, Published reports of work done by bird dogs running in the public trials have so often been untrue as to various dogs, misleading to the public, damaging to the reputations of handlers and injurious to the interests of owners, therefore it is Resolved, That we demand of the sportsmen's papers that such reports contain the truth, the whole truth, and nothing but the truth." Maj. Purcell was elected secretary, but he says he refrained from making such resolutions public because it was thought that the mere fact of such action having been taken would be sufficient to correct the abuses complained of; besides, he felt that gentlemen to whom this was not intended to apply might feel that they were indirectly reflected upon. We think, however, if such feeling existed among the handlers and others that some specific action should have been taken by advising the public of the direct cause for complaint and names of the journal or journals that transgressed.

A field trial reporter has a difficult task to fulfill at the best, and handlers and others should bear in mind the fact that men do not all view the work of field dogs from the same standpoint, and that, as Mr. Waters has often contended, a knowledge of ordinary field work does not necessarily make a man a field trial handler, judge or reporter. Field trial work is in a class by itself and should be so considered. Judging from Major Purcell's letter, however, FOREST AND STREAM was not included in the list of transgressors. We have perfect confidence in the honesty and fairness of our own field trial reports. We have no axe to grind nor any one kennel to boom; our sole desire is to boom the FOREST AND STREAM among field trial men and dog breeders generally, and this we are convinced can only be done by acting in a fair spirit to all. It is not our fault if another journal has shown favoritism. We are in receipt of another letter asking us to expose the same reporter and journal's alleged biased report of certain running at Bicknell last month. FOREST AND STREAM will always welcome any healthy discussion among field trial men in regard to the character and importance of work done in field trials or the merits of, for instance, the pointer *versus* the setter, or *vice versa*. But personal contentions, of no earthly value to any one but those directly interested, and which surely lead to mutual recrimination, can find no place in these columns. This fact is well understood by this time and that is why FOREST AND STREAM does not weary, but interest, the general reader.

#### Lady Mignon is Not Savage.

Editor Forest and Stream:

I am the owner of the celebrated St. Bernard Lady Mignon and her litter brother Councillor Joe. The former I notice in your last week's issue was made popular through drawing blood in biting Mr. Reick at the Birmingham show. In justice to her ladyship I wish to state that she is as beautiful in temper as in appearance except on the show bench, where she has had to undergo such admiration during the past season in England, in consequence of being always the prize winner, that she never gets a chance of being rested. People are so in the habit of poking her to wake her up that she has become tired of it. I am, however, very sorry and expressed myself so to Mr. Reick, that she should select him of all people to bite. I had been busy showing her in the various classes and had left her a few minutes when it took place.

SAMUEL JAGGER.

#### Death of Senta.

MR. J. H. Lawrence, owner of Kennel Lawrence, has sustained severe loss in the death of his great Dane bitch Senta, which he recently purchased from Mr. Glynn. Senta died of pneumonia ten hours after her return from Chicago show. Earl of Wurttemberg is also down with the same complaint, but Mr. Lawrence expects to pull him through.

#### Akron Dog Show, Dec. 19 to 22.

(Special Report.)

THE Akron Poultry and Kennel Club's first show was held last week, and while not a success financially, it was a very good start in the right direction. Next year Akron should come into some good circuit and offer cash prizes. The benching was of the old style wooden stalls, but was made of nice clean lumber, surfaced on both sides, which added to the appearance very much. The stalls were kept clean and well disinfected. Among the exhibitors I noticed Mrs. Lee, T. A. Howard, Dr. F. H. Hoyt, C. Klocke, Gale Good, Dr. J. R. Daniels, Luther Cole, F. H. Morris, A. Asire, Joe Deiter, Geo. Ratters, Fred Pastre, Geo. Mooney (secretary Columbus Fanciers' Club), A. J. C. Smith, Mr. Orr, of the Dwight Gordon Kennels.

Dr. F. H. Hoyt made a fine exhibit of Italian greyhounds, and succeeded in disposing of a couple of puppies, Mr. A. J. C. Smyth sold two Gordon setter puppies and several others made sales. Mr. Davidson judged all classes and, as usual, gave satisfaction.

MASTIFFS were a poor lot with the exception of two mongrel puppies; only one faced the judge, Caesar D., who is a shabby, poor-headed specimen.

ST. BERNARDS were one of the strongest classes in the show. No challenge entries filled. In open rough dogs Grand Master, shown in rather light flesh, won easily from American Caesar, who is recovering from his Chicago lameness. Rough bitches showed to the winner; she is well known. Second went to Juliet, a typical bitch, but losing in size and substance to the winner. The reserve went to a daughter of Lord Bute and Ellen Terry, a big roomy bitch whose place is in the nursery. The open smooth class showed a good young specimen in Nero Frank, of the celebrated Keeper strain. Should he go on right he can do some winning. Pliny made rather a poor second. Lady Judith, the Chicago winner, was alone in her class and was awarded first. She is a typical specimen.

GREAT DANES.—All the six entries, made by the Kennel Lawrence, were absent, owing to illness.

POINTERS.—There was a strong entry for a small show, and most of the winners are well known.

ENGLISH SETTERS.—There was only one challenge entry, Zona. She was lucky to have no competition, as she is not up to challenge form. Open dogs saw MacMurdo first over Tilt; the latter is coarse and light in eye. The winner scores in type and general character. In open bitches Bessie Hill was rightly placed, I thought, over Daisy B. II., reversing a former decision. The former scores considerably in head and ear, losing to Daisy in spring of ribs and loin. She was shown, however, in very light flesh.

IRISH SETTERS.—Kildare Beverly was the only entry in open dogs and was awarded the blue. In open bitches Bessie Femmore scored easily over Belle of Kildare; the latter was ragged in coat and light in color. The winner is a good typical bitch, good in head and color, but light in eye.

GORDONS had no challenge entries. In open class Heather Lad, a handsome specimen, won; he is well known. Second went to a new one, Judge S.; he is just in from a two month's hunt, and in no form to show. He is a good dog, but light in eye and tan. In open bitches, Heather Elfin won easily over Mont Rose, who is bad in head and ear. The winner has been described before.

COCKERS were a local entry, and would not give a very good account of themselves with outside competition.

COLLIES were a poor lot too, all Akron dogs. The best of the lot was Countess Bertha, who was awarded the blue.

BULL-TERRIERS had only two entries. Barney B., well known, was alone in his class, while Lady Diana held the same position in hers.

DACHSHUNDS were a strong entry. Fritz K. was alone in challenge class. Mr. Klocke showed a strong team of four, winning in both open dog and bitch classes.

PUGS.—Cassina, in good condition, was alone and won in challenge class. Open dogs found the Chicago winner Drummer an easy first; he is a good pug and has been described. In bitches Miss Decima, who was rather unlucky at Chicago, scored easily over Diamond Bessie. The winner is a grand muzzled little bitch, cobby and short in body. A. L.

#### AWARDS.

MASTIFFS.—Dogs: 1st, W. B. Dobson's Caesar D. Puppies: Prizes withheld.

ST. BERNARDS.—ROUGH-COATED—Dogs: 1st, Alta Kennels' Grand Master; 2d, A. Froembling's American Caesar. Bitches: 1st, J. B. Lewis's Io; 2d, and very high com., Alta Kennels' Juliet and Harmonie.

SMOOTH-COATED—Dogs: 1st, F. H. Morris's Nero Frank; 2d, A. V. Asire's Pliny. Bitches: 1st, Alta Kennels' Lady Judith.

RUSSIAN WOLFHOOUNDS.—Bitches: 1st, A. E. Pitts's Globelis.

AMERICAN FOXHOOUNDS.—CHALLENGE—Dogs: 1st, R. D. Williams's Commodore.

ENGLISH FOXHOOUNDS.—Prizes withheld.

GREYHOUNDS.—Dogs: 1st, E. J. Viall's Coyne. Bitches: 1st and special, Dr. F. H. Hoyt's Martha.

POINTERS.—CHALLENGE—Dogs (50lbs. and over): 1st, John R. Daniels's Lord Graphic. Under 55lbs.: 1st, Glenrock Kennels' Duke of Kent II. Bitches: 1st, Geo. W. Lovell's Wild Lilly. —OPEN—Dogs (50lbs. and over): 1st, John R. Daniels's London. Bitches (50lbs. and over): 1st, S. S. Van Patten's Dixie II.; 2d, G. F. Mooney's Luck's Own Daughter. Dogs (under 50lbs.): 1st, A. F. Hochwald and W. H. Waidle's Rush of Lad; 2d, Glenrock Kennels' Twinkle. Reserve, Dr. John R. Daniels's Guano Beppo. High com., C. M. Oberlin's Flying Job; Com., R. Rowland's Phil II. Puppies: 1st, C. M. Oberlin's K. & O.

ENGLISH SETTERS.—CHALLENGE—Bitches: 1st, P. D. Cheseldine's Zona. —OPEN—Dogs: 1st, F. Pastre's Mac Murdo; 2d, J. F. Strookle's Tilt. Very high com., H. W. Kline's Count Kline. High com., P. B. Cheseldine's Monk of Join. Bitches: 1st, S. S. Van Patten's Bessie Hill; 2d, Geo. Batterson's Daisy B. II. Puppies: 1st, Geo. Batterson's Queen Emma; 2d, Kashner & Bonstedt's Baby.

IRISH SETTERS.—Dogs: 1st, Kildare Kennels' Kildare Beverly. Bitches: 1st, H. Eakins's Bessie Femmore; 2d, Kildare Kennels' Belle of Kildare. Very high com. reserve, G. W. Lang's Kildare Gladys. High com. and com., J. Mills's Mollie Whipple and Mattie Hunter. —PUPPIES—Dogs: 1st, Kildare Kennels' Kildare Oden. Bitches: 1st, Kildare Kennels' Kildare Melville.

GORDON SETTERS.—OPEN—Dogs: 1st and very high com., Dwight Kennels' Heather Lad and Heather Lad II.; 2d, A. J. C. Smith's Judge S. Bitches: 1st, Dwight Kennels' Heather Elfin; 2d and very high com., A. J. C. Smith's Mont Rose and Mohawk Fanny. Puppies: 1st and 2d, Dwight Kennels' Lad II. and Dwight Rose.

COCKER SPANIELS (under 24lbs.). —OPEN—Dogs: 1st, Joe Harrier's St. Patrick. Bitches: 1st, Kashner & Bonstedt's Baby.

IRISH WOLF SPANIELS.—1st, Joseph Mills's Faro Boy; 2d withheld.

COLLIES.—OPEN—Bitches: 1st, H. F. Peck's Countess Bertha; 2d, very high com. and high com., O. H. Colledge's Collie, L. Esmeralda and Christmas Belle.

BULL-TERRIERS.—OPEN—Dogs: 1st, J. C. Mahler's Barney B. Bitches: 1st, J. C. Mahler's Lady Diana.

DACHSHUNDS.—CHALLENGE—1st, L. O. Seidel's Fritz K. —OPEN—Dogs: 1st, C. Klocke's Roy K.; 2d, Arthur Froembling's Tapszur Horst. Bitches: 1st, 2d and very high com., C. Klocke's Lovely K., Diana K. and Bessie K.

BEAGLES.—30 to 15lb.—CHALLENGE—1st, Glenrose Beagle Kennels Parthenia. —OPEN—Dogs: 1st, Glenrose Beagle Kennels' Sir Thomas; 2d, O. L. Colledge's Rex. Bitches: 1st, Middleton Kennels' Snow; 2d, Glenrose Beagle Kennels' Gypsy A. Very high com., Chas. Wood; ward's Hattie—15lb. and under.—OPEN—Dogs: 1st, Middleton Kennels' Adam; 2d, Glenrose Beagle Kennels' Paderewski. Bitches: 1st, Middleton Kennels' Little Fraud; 2d, James Sauce's Belle II.

FOX-TERRIERS.—WIRE-HAIRED—1st, H. H. Hunsdell, Jr.'s Oakleigh Bruiser.

BASSET HOUNDS.—Dogs: 1st, Doc Short's Bent; 2d, C. H. Woodward's Tom Pich. Bitches: 1st, D. Short's Bet.

BLACK AND TAN TERRIERS.—Dogs: 1st, Davis & Winters's Rochelle Rust. Bitches: 1st, Davis & Winters's Mizpah.

FUGS.—CHALLENGE—Bitches: 1st, A. H. Baker's Cassina. —OPEN—Dogs: 1st, German-Howard Fug Kennels' Drummer; 2d, M. Mander-

bach's Bob. Very high com., G. Goble's Jim. Bitches: 1st and 2d, German-Howard Fug Kennels' Miss Decima and Diamond Bessie. Very high com., M. Manderbach's Gipsy. Puppies: 1st, German-Howard Fug Kennels' Young Penrice.

ITALIAN GREYHOUNDS.—Dogs: 1st, 2d and very high com., F. H. Hoyt's Roma, Snowball and Sir Fritz. Bitches: 1st and 2d, F. H. Hoyt's Idiom and Irene. Puppies: 1st, F. H. Hoyt's Ingersoll.

#### SPECIALS.

Best mastiff dog, Caesar D. Best St. Bernard dog, Grand Master; best kennel, Alta Kennels. English setters, best dog, Macmurdo, best bitch (2), Bessie Hill. Irish setters, best dog, Kildare Beverly; best bitch, Kildare Beverly and Belle of Kildare. Pointers, best bitch, Wild Lilly; best dog (2), Rush of Lad; best kennel, Dr. J. R. Daniels's. Best kennel, Gordons, Dwight Kennels; best Gordon setter, Heather Lad. Best cocker spaniel dog, St. Patrick. Best collie bitch, Countess Bertha. Best pair black and tan terriers, Rochelle Rust and Mizpah; best dog (2), Rochelle Rust. Best pug dog, Drummer; best pug bitch, Miss Decima. Best greyhound, Martha. Best Dachshund, Lovely K. Best beagle owned in Akron, Hattie. Best bull-terrier, Barney B. Best Italian greyhound, Idiom. Owned in Akron: best pug, Rob; best terrier, W. Smith's Dot. Best Italian greyhound dog, Roma. Best American foxhound, Commodore. Best Kennel beagles, Middleton Kennels. Best pointer bitch owned in Akron, Belle R.

#### POINTS AND FLUSHES.

[By a Staff Correspondent.]

In the matter of the replevin suit to establish the ownership of four dogs, replevined at the Chicago Kennel Club's show by Mr. Marmaduke Woods, Mr. Wm. Potter, the defendant, won the suit.

The auction of dogs at the Chicago Kennel Club's show did not meet with the success anticipated. The bidding was very slow and the prices low. Mr. T. Donoghue acted as auctioneer. No better one could have been secured. The public, however, were not in a purchasing mood, and the auction was a failure. There is a belief among owners that an auction sale tends to the injury of breeders, since the low prices and larger number of inferior specimens offered create a false impression in regard to values or merit.

Mr. Thos. Johnson has received a letter from Mr. Wm. Brailsford, informing him that Musa and Dogwood reached Ighite in safety. He writes: "They have arrived here looking so fresh and well that one can scarcely believe they have even left the kennels, much more that they have returned from a tramp of 10,000 miles." He further wrote: "We had a big shoot last Tuesday, 1,005 pheasants and other game." B. WATERS.

#### DOG CHAT.

##### A Happy New Year.

A Happy New Year to all our readers, and may their dogs live long in the land and multiply abundantly.

##### Champion Fritz Dead.

We have been asked recently what had become of champion Fritz. We regret to say a letter from Mr. Wickery, of Pittsburgh, Pa., informs us that he died Dec. 17, of pneumonia. He was generally counted Beaufort's best son.

##### Death of Champion Novel.

Mr. C. T. Sacket, of Cape Vincent, N. Y., has lost his cocker bitch Champion Novel. She died Dec. 23, from a stroke of paralysis. Mr. Sacket will not look back upon 1893 with any great regard as far as his dogs are concerned. He first lost Eve and a fine litter by Prince W.; then Champion Rabbi went, and after him a nice little "red one," with her pups. We wish Mr. Sacket better luck in '94.

Business is usually dull during Christmas week, but there is no reason why there should not be a lively trade in dogs for presents. A reference to our business columns will afford ample choice. This week we find among the new ads. that H. L. Kreuder offers broken and unbroken beagles; 933 Prospect avenue, choice setters; A. E. Seidel, trained pointer; F. G. Tripp, small bull-terriers; E. F. Beach, rough-coated St. Bernard; E. Baldwin, pointer pup; W. P. Boyle, sporting dogs; G. P. Wiggin, St. Bernard pups; F. McGough, beagles. At stud: S. J. Rogers offers the prize-winning wire fox-terrier Ebor Larchmont; Exchange, champion Schread, beagle, for ferrets or wildcat.

##### Correction.

In our tabulated list of field trial winners, in Irish setter trials the winner of second in the Derby should be J. B. Blossom's Nugget II., by Finglas—Betsy Craft. While no one regrets more than we do when errors creep into such reports, there is no little wonder that more mistakes are not made when we consider the slipshod method in which some of the field trial entries are sent in for publication. There can be no excuse whatever, though, for the arrant stupidity exhibited by a Western journal which comes out a week behind our list, and withal turns bitches into dogs, as for instance in the Gordon Setter Trials' All-Aged Stake, where Jolly G., the winner, is put down as a dog when every one outside of that office knows she is a bitch. Needless to say such records are wholly unreliable.

##### White Wonder's Deafness.

The bull-terrier White Wonder, of whose return to his native country FOREST AND STREAM advised its readers some time since, was disqualified at the Birmingham show for deafness, as at Boston in 1890. The case is attracting much attention on the other side, as the eminent "vet," Mr. Sewell, has certified to the dog's owner that while the dog is deaf he is by no means entirely deaf. Mr. Pegg, the owner of the dog, has appealed to the Birmingham committee from the decision of the judge at the show named, and if a satisfactory decision is not arrived at he will take the case before the Kennel Club. Then we shall hear probably what tests, etc., have been used to prove that the dog can hear. White Wonder was never shown here after it was proved he was deaf at Boston in 1890.

At the next field trials of the English Kennel Club, to be held April 3, an innovation will be adopted by the judges which seems to commend itself. They will give certificates of merit in the Derby to dogs, other than those successful enough to get into the money, that give promise of making valuable field dogs, with a view to provide workers' classes at the dog shows and as a guide to purchasers.

According to Stock-Keeper (Eng.), Mr. Henry S. Loud, of Chicago, has purchased from Mr. W. J. Mason, of England, the bull-terrier bitch Flower of the Valley, winner at Cirencester and Gloucester, and dam of Lady Loo Loo, winner of challenge cup at Birkenhead, etc.

Another important sale was consummated at the close of the Chicago show. Mr. Schallenberger of Alma, Neb., disposed of his noted rough coat St. Bernard Aristocrat to Mr. Frank Anderson of Chicago. Mr. Anderson has a good dog and one that has done well in the stud, and is not too old to yet stamp his progeny with type and quality.

##### Death of C. O. D.

It is with great regret that we learn of the death of Caution's Own Daughter, as much for the loss which the mastiff

Boston, Mass., Dec. 7.

breed has sustained as the personal loss which Mr. Bunn must feel. During the latter part of the Chicago show the bitch seemed ailing, but nothing more serious than a cold and fever was suspected. She died on Monday, Dec. 13, and the autopsy revealed a general derangement internally. This bitch has had a brilliant career, a career so recent that it is needless to refer to it here. She was bred by Mr. Moore and was by champion Iford Caution out of Lady Dorothy and whelped May 5, 1893. Though her markings were, in the eyes of some lovers of the breed, a detriment, her beautiful formation of head and body and intense quality sufficed to place her at the very top of the mastiff fancy.

Correction.

Mr. Patterson writes us that Abe, as stated in our special report of Providence show, is not a mastiff, but a smooth St. Bernard, and the criticism on Eulalie should apply to him. He won first in open St. Bernard dogs. The only mastiff shown was the puppy Philip, who was given first in dog puppies. Eulalie was removed the first day of the show.

Dr. Perry, who has been president of the board of directors of the *Fanciers' Journal* for some months, has resigned and severed entire connection with that publication.

The Portland Kennel Club intend holding a show about May 15. So it looks very much as though the club means business, whether organized before or after its rival. The club has elected the following officers: President, Dr. F. Cuthbert; Vice-President, J. S. Seed; Secretary, D. L. Williams; Treasurer, J. W. Keen; Directors, J. F. Carraher, W. L. Curry, E. House, I. Humason and F. Westenfelder; Delegate to A. K. C., W. L. Washington.

The Saratoga Poultry and Kennel Club have made the following arrangements for transportation to their coming show: The National and American express companies will return free all dogs that have been forwarded over their lines. The Delaware & Hudson Canal Co. will carry free all dogs when accompanied by care-takers. N. Y. C. & H. R. Ry. and Poughkeepsie Ry. will transport free three dogs when in charge of care-takers. Mr. J. Otis Fellows is to superintend, and we again call the attention of exhibitors to the fact that the entry fee has been reduced to \$2 and that of selling class to \$1. Entries close Jan. 6, 1894. Col. A. B. Hilton's dogs of the Woodlawn Stock Farm Kennels will be for exhibition only at the Saratoga show. A \$10 special for the best kennel of four bull-terriers will be given.

KENNEL NOTES.

NAME CLAIMED.

**Prepared Blanks sent free on application.**  
*Tiny Tobe, Trinkle, Good Boy, Dandy and Clara Belle.* By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pugs, four dogs and one bitch, whelped July 8, 1893, by Happy Toby (Spokane—Nellie) out of La Lassie (Spokane—Lady Fane).  
*Young Cashier, Sir Tilford, Pedro, The Captain and Cyrene.* By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dogs, whelped July 7, 1893, by Eberhart's Cashier (champion Kash—Lady Thora) out of Cashier's Daughter (Eberhart's Cashier—Flossie II.).  
*Cataragui Dash.* By C. E. Levey, Cataragui, Ont., for liver belton English setter dog, whelped Dec. 10, 1893, by Onward II. (Field Trial Jester—Lassie) out of Nell (Rheul—Lassie).  
*Cataragui Sting, Cataragui Sling, Cataragui Blue Prince, Cataragui Blue Rock and Cataragui Blue Bell.* By C. E. Levey, Cataragui, Ont., for blue belton English setters, four dogs and one bitch, whelped Dec. 10, 1893, by Onward II. (Field Trial Jester—Lassie) out of Nell (Rheul—Lassie).

BRED.

**Prepared Blanks sent free on application.**  
*Fannie—Doctor.* C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Fannie (Tom—Beulah) to his Doctor (Ben Butler—Bell A.), Dec. 4.  
*Queen Noble—Murdland Ranger, Jr.* C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Queen Noble (Ben Butler—Quail) to his Murdland Ranger, Jr. (Murdland Ranger—Beulah), Nov. 17.  
*Duchess—Murdland Ranger, Jr.* C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Duchess (Gordon Grouse—Bell E.) to his Murdland Ranger, Jr. (Murdland Ranger—Beulah), Dec. 2.  
*Bell A.—Murdland Ranger, Jr.* C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Bell A. (Richmond's Sam—Brownell's Judy) to his Murdland Ranger, Jr. (Murdland Ranger—Brownell's Beulah), Nov. 24.  
*June—Laddie.* Geo. Hatt's (East Orange, N. J.) beagle bitch June (Bob—Sallie) to N. A. Baldwin's Laddie (Royal Krueger—Midge), Dec. 9.  
*Kinjal—Soravets.* C. S. Hanks's (Manchester, Mass.) Russian wolfhound bitch Kinjal to his Soravets, Nov. 26.  
*Vinga—Leekhoi.* C. S. Hanks's (Manchester, Mass.) Russian wolfhound bitch Vinga to his Leekhoi, Nov. 17.  
*Green Mountain Lass—Conrad II.* Hempstead Farm Kennels' (Hempstead, L. I.) collie bitch Green Mountain Lass to their Conrad II., Oct. 22.  
*Roslyn Eileen—Romulus.* Chestnut Hill Kennels' (Chestnut Hill, Pa.) Irish terrier bitch Roslyn Eileen to Hempstead Farm Kennels' Romulus, Sept. 1.  
*Kilcoran—Romulus.* E. W. Roby's Irish terrier bitch Kilcoran to Hempstead Farm Kennels' Romulus, Oct. 22.  
*Craig—Woodmansterne Trefoil.* Hempstead Farm Kennels' (Hempstead, L. I.) collie bitch Craig to their Woodmansterne Trefoil, Nov. 8.  
*Mica—Romulus.* Hempstead Farm Kennels' (Hempstead, L. I.) Irish terrier bitch Mica to their Romulus, Oct. 18.  
*Thorndale—Rab.* Hempstead Farm Kennels' (Hempstead, L. I.) English setter bitch Thorndale to Rab, Nov. 13.

WHEELPS.

**Prepared Blanks sent free on application.**  
*Svodka.* C. S. Hanks's (Manchester, Mass.) Russian wolfhound bitch champion Svodka (Khedai—Krasolka), Dec. 10, five (two dogs), by his Leekhoi (Rieznee—Jabedka).  
*Grouse II.* C. S. Hanks's (Manchester, Mass.) fox-terrier bitch Grouse II. (Rational—Olive II.), Dec. 6, seven (three dogs), by A. Belmont's Blenton Slicker (champion Sipend—Blenton Trinker).  
*Breakers.* C. S. Hanks's (Manchester, Mass.) fox-terrier bitch Breakers (Queenie—Ytem), Nov. 23, five (three dogs), by his Baby Pallas-y (Baby Patter—Maize).  
*Damson.* C. S. Hanks's (Manchester, Mass.) fox-terrier bitch Damson (Dominie—Daphnia), Nov. 23, six (two dogs), by his Baby Pallas-y (Baby Potter—Maize).  
*Belle of Sharon.* V. F. Porter's (Sharon, Pa.) fox-terrier bitch Belle of Sharon, Dec. 6, five (three dogs), by his Woodale Driver.  
*Lala.* F. W. Otto's (Providence, R. I.) cocker spaniel bitch Lala (champion Pete—Miss Nance), Nov. 30, seven (six dogs), by J. M. Brown's Moses K. (Obo II.—Black Bess II.).  
*Zulu Princess II.* Hempstead Farm Kennels' (Hempstead, L. I.) collie bitch Zulu Princess II., Nov. 1, eleven (five dogs), by their Hempstead Zulu.  
*Brittany.* Hempstead Farm Kennels' (Hempstead, L. I.) wire fox-terrier bitch Brittany, Oct. 23, two bitches, by their Suffolk Trimmer.

SALES.

**Prepared Blanks sent free on application.**  
*Diamond.* Black and tan Gordon setter dog, whelped July 26, 1893, by Doctor out of Little Girl, by C. T. Brownell, New Bedford, Mass., to C. G. Twombly, Cambridge, Mass.  
*Breakers Tatters.* Tan and white fox-terrier dog, whelped July 10, 1893, by Valeus out of Blenton Belgard, by L. B. Banks, New London, Conn., to Ralph Smith, same place.  
*Al De Bar Sachem.* Sable and white rough collie dog, whelped Aug. 25, 1893, by Bendigo out of Patient, by Al De Bar Collie Kennels, North Attleboro, Mass., to Geo. Tills, Plainville, Mass.  
*Snuggler.* Black, tan and ticked coon bound, by Jas. McAleer, Ensworth, Pa., to M. Bell, Albany, N. Y.  
*Freddie.* Yorkshire terrier dog, by Hempstead Farm Kennels, Hempstead, L. I., to Henry Graves, Jr., New York City.  
*Rose.* Red Irish setter bitch, whelped June 6, 1893, by Duke Royal out of Sunol, by W. Harte, St. Louis, Mo., to S. N. Taylor, same place.  
*Bendigo—Patient whelp.* Sable and white rough collie bitch, whelped Aug. 25, 1893, by Al De Bar Collie Kennels, North Attleboro, Mass., to E. Brett, Chester, N. J.  
*Morengo II—Rose whelp.* Light sedge Chesapeake Bay dog, whelped

Aug. 10, 1893, by B. Alton Smith, North Attleboro, Mass., to R. Connor, South Duxbury, Conn.  
*Red Duke—Harte's Bessie whelps.* Red Irish setters, whelped May 11, 1893, by W. Harte, St. Louis, Mo., a dog to G. W. Powell, Belleville, Ill., and a bitch to H. J. Winn, Orlanthe, Ga.  
*Groubian—Znieka whelp.* Russian wolfhound dog, whelped July 8, 1893, by Hempstead Farm Kennels, Hempstead, L. I., to R. C. Stewart, Baltimore, Md.  
*Grove Tipster—Hallam Queen whelp.* Fox-terrier bitch, by Hempstead Farm Kennels, Hempstead, L. I., to John Auchincloss, Orange, N. J.  
*Conrad II—Hempstead Meg whelp.* Sable and white collie dog, whelped Jan. 13, 1893, by Hempstead Farm Kennels, Hempstead, L. I., to H. M. Hubbel, same place.  
*Duke of Hessen—Woolton Game whelp.* Pointer bitch, whelped July 27, 1893, by Hempstead Farm Kennels, Hempstead, L. I., to A. C. Pickhardt, New York City.

PRESENTATIONS.

*Red Duke—Harte's Bessie whelps.* Red Irish setters, whelped May 11, 1893, by W. Harte, St. Louis, Mo., a dog to Dr. M. C. Starkloff, St. Louis, Mo., and W. L. Anderson, Sedalia, Mo., and a bitch each to E. P. Nichols, St. Louis, Mo., and Erwin & Pyle, DuQuoi, Ill.

ANSWERS TO CORRESPONDENTS.

J. R. M., Wilmington, Del.—Spaying a bitch will not affect her scenting powers.  
SPIONA.—If the correspondent who inquired for the pedigree of the English setter bitch Spiona will write to Dr. Littleton Philadelphia, Pa., he will probably be able to get her pedigree.

JULIAN, Lansing, Mich.—Forest Corvine's A. K. R. number is 6,383. If you want the pedigree, she is by Bruce, by Elcho out of Noreen, out of Little Nell, by Elcho out of Rose. That the owner of this bitch should wish to charge you \$1 for this information is unaccountable.  
O. H., Brooklyn, N. Y.—1. Legerdemain (A. K. C. S. B., 9375), by Mainpring out of Jerry Legs, by Champion Graphic out of Bloomo; Mainpring by Mike out of Romp. 2. He won first at Charleston, S. C., and C. at New York in 1892.

J. S. B., Montreal, Can.—If the sire's pedigree is unknown nothing can be done. You certainly cannot invent the deficiency, and the only record of breeding must come from the dam's side. If you will give us the name of your bitch and sire and dam's names perhaps we can help you.

SNAPSORT, Atlanta, Ga.—We cannot inform you of what kennels are breeding pure Laveracks. They have been merged into the Lowellyn and fresh outcrosses sought until there are few if any left in their original purity of strain.

E. S. R., Port Richmond, N. Y.—Write to secretary American Kennel Club, 44 Broadway, New York, and he will supply you with registration blanks giving full particulars. 2. Warren Tip-Top is by Dusky Trap out of Resume. Dusky II. is not registered.

B. A. A.—I wish to invest in a dog to hunt partridge and quail, which dog would you recommend, English pointer, Gordon setter, English setter? Ans. There is no fixed date upon which to give definite advice. Each breed has its advocates and admirers. It is largely a matter of personal preference. There are good and poor ones of all breeds, and a good dog is to be preferred regardless of what breed he may belong to.

C. E. A., Salt Lake City, Utah.—Breeze is not the dam of Elsie Belton, the latter is by Laverack Chief out of Fame (1976 Vol. II.); Laverack Chief, by Belton (13 Vol. I.) out of Breeze, by Duke out of Belle, by Pontiac (349) out of Fairy II. (354 Vol. I.). Breeze we cannot find registered. 2. Yes, 70lbs. is a rather too heavy weight for an English setter.

M. H., Lenox, Mass.—In 1880 Luke N. White entered two pointer bitch puppies at the W. K. C. show, Leona and Grace II., both by Sensation out of Grace, four months old. There is no mention of Lill. Grace was entered in the champion class at the same show, and her pedigree is given as by Match out of Nell, but we cannot find any further record of these dogs. Grace was 7yrs. old at that time and owned by Luke N. White.

F. H., Boston, Mass.—Please give me the best directions for the cure of canker in dog's ears and head. Ans. Use the following lotion:  
R. Liq. plumbi sub. acet. . . . . 3 ii  
Tr. opii . . . . . 3 iv  
Aq. ad. . . . . 3 iv  
Mix. Lotion. A little to be poured into the ear twice a day.

READER, Tacoma, Wash.—1. What is the best breed of dogs for hunting bear? If not a full-blood, what cross would answer? 2. What is the best remedy for distemper known for puppies four months old, English setters? Ans. 1. If not required to get to close quarters, some 15in. beagles would answer if properly entered. 2. Careful nursing and keeping the puppies in a warm place will do a great deal. Give the following pills:  
R. Quinine sulph. . . . . grs. xxvii  
Ex. gent. . . . . 3 ss  
Mix. Pill. xxvii. Give one three times a day to each puppy.

J. M. B., Newport, R. I.—Please give me extended pedigree of black cocker spaniel bitch Black Bess, owned by Dr. J. S. Niven, London, Ont., in 1881; also of Bob III., owned by Hornellsville Kennel Club at same time; also of Sweep, a bitch I think was owned by Dr. J. S. Niven about the same time. Ans. Black Bess (A. K. C. S. B. 3414), by Brush out of Ruff, by Captain out of Rose; Brush by Ruff out of Nell. 2. Bob III., by Bucleuch (E. 4413) out of Nell. 3. There is a dog Sweep (A. K. R. 2900), but no bitch of that name registered in this country. Sweep was by Hornell Jock (A. K. R. 1877) out of Arma, by Whitman's Carlo, out of his Flora. Owned by Miss Appleton, New York at time of registry in 1885.

W. S. T., Toronto.—I have a black cocker pup, 4mos. old. About two weeks ago he began to shake his head a good deal, at the same time hanging his right ear. I poured in some olive oil and in a few days it seemed quite all right. Four or five days ago the trouble returned and he began to cry out occasionally, scratching his ear a good deal and running around when the pain troubled him. I again applied the oil with a few drops of carbolic acid in it so as to give the oil a slight smell of the acid. The pain has again disappeared and he seems quite well, as he plays with an older dog I have and eats quite heartily. I notice to-day for the first time a little redness inside the ear and on rubbing the side of his face he presses his ear quite strongly against your hand, whining lowly at the same time and seems as though the rubbing eased the itching or slight pain in his ear. He and the old dog play a good deal, and although the old dog is very good tempered, still the pup's long ears form such a convenient hold that he often gets a pretty good tug by them. As to whether such was the original cause of the trouble is a mere matter of conjecture. Ans. Treat for worms and pour a few drops of the following lotion into the ear twice a day:  
R. Liq. plumbi sub. acid. . . . . 3 ii  
Tr. opii . . . . . 3 i  
Aq. ad. . . . . 3 i  
Lotion. Use as directed.

Hunting and Coursing.

FIXTURES.

Jan. 15.—Brunswick Fur Club's winter meet. Bradford S. Turpin, Sec'y.

American Foxhounds.

THE National Fox Hunters' Association is mailing the following circular to all known fox hunters in the country:  
"Believing that you are interested in the further development of the foxhound, we respectfully request that you send in your name for membership in the National Fox Hunters' Association, organized at Lexington, Ky., on Aug. 31, 1893. The object of the Association is to hold one or two meets annually, as the members may determine, where supremacy in speed, hunting and endurance may be established. The Association already has as members many of the most prominent fox hunters, nearly every State in the Union being represented. The place and date of the meets will be decided by a majority vote of the members, and the Association will make the purses sufficiently attractive to warrant hunters in attending from all parts of the country.  
"The annual dues of \$5 may be remitted at the convenience of the member. We inclose blanks, and trust that you will not only send in your own name, but influence your friends to become members. Asking your immediate and favorable consideration, etc."  
Mr. Harry L. Means, Louisville, Ky., is the secretary and treasurer, to whom all communications should be sent.

We have received numerous inquiries as to what the Association intended to do. We recognize the fact that in an

association whose members are so widely scattered it is difficult to make much headway at first. It was understood at the inaugural meeting that a more general meeting would be held in November. If the condition of the treasury admits of such a move we should think the best plan would be to hold a foxhound meet as soon as possible in some central location and in a country best adapted to bring out the best work of the different strains of hounds. This would create an interest in the Association of much more enduring effect than all the letter writing, circulars, and so on, could possibly accomplish. Nothing definite can be done until the fox hunters at large are brought together personally. The movement to form a standard at the Saratoga show next month, which Mr. Lyman L. Clute is agitating, is well enough in its way. Should such a standard be formed at that time by a few men who may be attracted to the show we doubt if it would have the indorsement such as it would be entitled to were the standard evolved and indorsed by a large meeting of our best foxhound breeders under the guidance of the National Fox Hunters' Association. There are so many different interests at stake owing to the present wide diversity of type in the different strains that only by combined personal action can a satisfactory result be obtained, and one that will be productive of the most good to the American foxhound.

Before such general meeting is called it would be well for the president of the association to appoint a committee of thoroughly practical foxhound breeders and hunters whose duty it would be to draw up a standard, and then submit this standard at the general meeting, when such alteration may be made, if requisite, that will meet with the approval of the majority concerned.

Once a standard is evolved and printed our judges at dog shows will quickly become conversant with it and judge accordingly. So many foxhounds are now being placed on the benches at our shows that this action is necessary. At present a judge who is prejudiced in favor of the English type of hound, and has had no experience with American hounds in the field, will naturally judge on English lines, and an American, whose conception of a foxhound is vastly different, will judge on the lines of the strain with which he is most familiar, and it is easy to see the confusion that this will always lead to.

There is no reason why the American foxhound should not have a uniform type.

Good material abounds, and the different trials are bringing the hunters nearer together and causing an infusion of new blood into the strains that will of itself in time even up the general build of the foxhound. Still this is a haphazard way; what is required is some definite form that combines speed lines, strength and beauty. Our experience has been chiefly with the English hound, we admit, but we are not so bigoted in our notions as not to see great merit in the American hounds we have met in the field, especially in the degree of nose and speed they display; but any one who is at all conversant with the uniformity of type to be met with in the English packs cannot but feel astonished when he views the unevenness of the American strains, and can only account for their great deeds in the field on the supposition that more attention is paid to individual than collective merit.

Our experience at Westfield led us to think that if more attention was paid to "sortiness" and general packing qualities the hunters themselves would be saved considerable annoyance and trouble. To illustrate this we will suppose a man has a pack of four couple, one of which is the hound he swears by. This hound generally leads, and, in a rough country will probably carry the fox along alone after awhile; the others lagging behind, are tempted to start fresh trails, and the consequence is the hounds become scattered and unless content to leave them to find their way home as best they can, it is a work of time attended with considerable trouble and personal discomfort to get them together again. This would be avoided to a great extent were more attention paid to uniformity of speed. There will always be a dog in the pack with a truer and better nose than another, and the rest will hark to him, but his speed should not be so fast as to carry him away from his companions. In England, if a hound is too fast, he is drafted out, sold or used in the stud, if too slow he is of no use and is disposed of. Such is the principle that should obtain with our packs here. Where music enters so largely into the enjoyment of a fox hunt in our rough countries where the hounds are seldom viewed from the start, such packing would add to the volume of sound and thrilling tone.

An English fox hunter turns up his nose at the general run of our hounds when he sees crooked forelegs, splay feet, long loins and pasterns, shallow chests and snipy muzzles, and listens with incredulity to a story of their deeds in the field. He forgets that it is courage that sustains so many of our hounds in their great runs, and that it is the heart that is in them that is responsible for a good deal of it. A hound that is built with true symmetry of form, so that all parts work strongly and evenly, will last longer than a hound that is built loosely and with working parts at variance with true symmetrical form, and in turn the latter must draw a note on his courage to keep up the balance. This we find illustrated in the recent letters on courage in foxhounds, written by our valued correspondent, Mr. Hagans. One might spin out columns on this subject of hound build, but enough has been said above to show our meaning in calling for a more uniform type in the American foxhound. Our opinion is but a mere personal deduction, and we should only be too pleased to publish the opinions of other friends of the dog that can stir the soul to deeds of daring as no other can.

National Beagle Club Meeting.

**Editor Forest and Stream:**  
A field trial committee meeting of the National Beagle Club of America was held at the A. K. C. rooms, 44 Broadway, New York, on Monday, Dec. 18. Meeting was called to order at 4:25 P. M. Present were Messrs. Kreuder, Laick, Schellhass, Appleton, Lewis, Tallman and Rogers. The official placing of the winners in Class B was taken up. Voted that inasmuch as Pade has been disqualified, the remaining dogs be placed as follows: Spot R. first, Gypsy Forest second, Lou third. Voted that the dog next to reserve be not advanced to reserve. The secretary was instructed to pay the prize money in Class B. Meeting adjourned at 4:50 P. M.  
An executive committee meeting was then called to order. Present were Messrs. Kreuder, Laick, Schellhass, Appleton and Rogers. Messrs. Pottinger Dorsey and C. Staley Doub offered their resignations from the club, which were, on motion, accepted. The Westminster Kennel Club requested the club to name a judge for their coming show. Voted that the official list of judges be sent to them with the request that they select a judge from the same. A letter was also read from the Westminster K. C. asking the N. B. C. to donate a special prize to their show to be held in February next. It was, on motion, resolved that we donate a special prize to the Westminster K. C. show, to consist of a piece of silver plate, the same not to exceed \$25 in value, for the best beagle in the show. All bills were audited by the executive committee up to date. Mr. Thomas H. Terry was proposed for membership and elected. Meeting adjourned at 5:31 P. M.  
TARRYTOWN, N. Y., Dec. 18.

The well known greyhound bitch Dick's Darling is dead. She was out of Coleraine Diamond by Daylight, and though long past her usefulness as a courser, being 13 years old, until recently she proved herself a most valuable matron. Among her best known progeny are Lord Macpherson, Lady Barton, Lady in Black, Laplander and Living Yet.

HUNTING AND COURSING NOTES.

Mr. H. Nelson, president of the National Greyhound Club, writes us a chatty letter, from which we culled a page here and there. About the late coursing he says: "Mr. Bradbury had a bit of hard luck in losing the running services of my best greyhound imp. Dover (Greenick-Buxton Lass) who had to be drawn after winning the first course in the Columbus Cup. Dover is now recovering from an operation on his shoulder, and we are in hopes he may yet do some coursing. A litter sister of his, House Treasure, has been performing quite well in England this year, having divided the Newton Stakes at Haydock in April with Black Malt; and I see by the *Daily Chronicle* of Nov. 23 she won the Astley Stakes at Brigg, beating Here and There and Point to Point in the final."

"A litter brother to our Miss Dollar, Gunpowder, ran up to Golden Gem in the Farmers' Stake at Yorkshire Club. Miss Dollar was somewhat of a disappointment to me at Huron and Goodlands, but redeemed herself at Leoti, where Benarita only just beat her after Miss Dollar had come an awful cropper. Honor Bright, as you know, had a 'hook in' with an engine and got killed for his foolishness. Before closing, I wish to compliment FOREST AND STREAM on its adding a column on coursing, for this branch of dog sport is bound to become one of the most attractive and exciting of all field sports. It is only a question of time when we in the East will have our meeting right at home, and not until then will the sport become international. In fact, I hear rumors of a little meeting in the near future, which will be used as an illustration to educate and interest a portion of our sportsmen in this kind of all sports."

Mr. Nelson has entered into an arrangement with A. C. Bradbury whereby the latter will take dogs to board and condition for the shows, and Mr. Bradbury's aptitude in this respect is too well known to need much heralding here.

• • • • •

In a letter from Mr. George F. Reed of Barton, Vt., he tells us that he is having good sport with the beagles this winter. He is running four together most of the time. "They pack nicely and are a hard team to beat on our large rabbits, and if nothing happens to them, next fall I shall try to show the boys what they can do at the field trials." The pack is composed of Spot R., that ran so well at Nanuet; Haida by Brelly out of Skip; Flash by champion Bannerman out of champion Lou, and Blanche, by champion Frank Forest out of Ina. Blanche is Mr. Kreuder's Derby entry, that divided second money at Nanuet. Mr. Reed picked her out for a good one, when properly entered, and now Spot R. has all she can do to keep the lead. Mr. Kreuder wants Mr. Reed to take his Lonely II, by champion Frank Forest ex Lonely for a year to see what he can make of her.

Yachting.

THE closing of the year is marked by an unusual degree of dullness, even for the dull season, no challenges, no new yachts, large or small, and little promise for good class racing for 1899. Business depression is undoubtedly responsible in part, but hardly more than the international racing of the past year. The racing of large yachts has now reached a point of perfection where its influence on the sport in general is the reverse of beneficial, and cup contests like that of this year tend to harm more than help that general class racing which is the heart of yachting.

A Cheap Cruise.

ARE questions of economy of interest to the cruising fraternity of yachtsmen? I am perfectly ignorant as to the answer myself, but if a very brief account of a cruise of over 2,000 miles, sailed in a 30-tonner, which I have just finished, can help to solve the question, it may be worth while spinning the yarn. Perhaps my readers, if I have any, will kindly let me know their opinions afterward. My old ship was fitted out, riding to her moorings with sails bent and all ready for sea when I arrived from London at Falmouth, Cornwall, England, on April 24, 1898. I had brought my crew down with me. He was a boy off one of the many industrial training ships which are now being sent to sea, and his knowledge of seamanship fair. Within two days, however, I found discrepancies in both particulars, between statement and fact, and we parted, but not before he had nearly wrecked the ship and driven me wild. But I am anticipating. My yacht is a large one for two hands, one of whom is a boy, to handle, but I had managed so very well the season before that I felt quite confident of being able to get on as well this year. It is possible to obtain a fair idea of the old tub when I say that she is usually taken for a revenue cruiser. Her beam is 13ft. 4in.; her length over all 40ft. and her draft of water 6ft. She has a freeboard of 7ft. forward and 4ft. 6in. aft, so that her accommodation is splendid for her tonnage. No bending of heads down below, or violent contusions, or smothered ejaculations. She has a saloon like a palace, and three sleeping cabins for her Atlantic liner. What makes her easier to handle than might otherwise be thought is the fact that she is yawl-rigged, and none of the sails are heavier than I can manage to set myself single-handed when pushed for it, but I prefer having a little help. Of the sailing and weatherly qualities of this tub-like edifice my imaginary, or real, readers, can judge for themselves as they follow her movements.

I spent four days in Falmouth harbor, getting things straight and finding out what my crew could do. This only took ten minutes, by the way, and was very briefly answered, but I thought I would teach him. There is no end to some people's conceit. I am sadder and wiser now; he taught me.

On April 23, the wind being strong from the N. E., and having obtained a bill of health, signed by the French consul at Falmouth, which cost me 9s. 10d., and in virtue of which I was supposed to start within twenty-four hours, I set sail for Brest, France. The distance is only eighty-nine miles (nautical) from the Lizard to Ushant Light. From Falmouth to the Lizard is twenty miles, and from Ushant to the entrance to the Goulet de Brest is about twenty miles more by the Channel du Tour.

I counted on an average of seven knots with the breeze I had, and was already carrying on an imaginary conversation with—when crash! whirr! whirr! crack! The crew had allowed the main sheet to slip, and before I realized what was happening, destruction swooped down, and there was the main boom gone right in half and the jaws of the gaff working themselves to pieces, while the head of the mast, cross-trees and all, turned round and looked at me. I shall never forget that sad and painful expression. We were six miles out from Falmouth, the sea was following us heavily, and it would be far worse as we got out from the land. The wreck of the boom was too heavy for me to tackle in that sea, and the boy was weeping and very sick.

I luffed up, put the helm to starboard and lashed it and lowered the mainsail. By dint of some trouble I got things fairly straight, but the heavy pitch pine boom I could only manage to clear and lower, and there was no getting it on board. Then, when all was fairly snug, I looked about. We were heading for the land on our port quarter, and, seeing that we should fetch the entrance of a sheltered creek, I determined to run in and anchor for the night.

There was no need to set the mizzen. We stood in, under the head sails only, for the mouth of the Kelford River and holding on were able to pick up a boat and anchor only four fathoms a little above a pretty little village which gives name to the creek. In a short time a boat came alongside, its occupant, as the penny-a-liners say, turned out to be a ship's carpenter, and in less than no time I had struck a bargain with him for a new boom.

I remained in Kelford Creek three weeks. The crew and I parted a week after the catastrophe of the broken boom and I managed the ship alone for a fortnight, taking occasional cruises to Falmouth, and down the coast toward the Lizard, but I did not think it wise to cross single-handed to Brest in so large a boat, although I found her easy enough to handle provided I had plenty of time to set and shorten sail. What I did not like was the idea of entering a strange port, where a berth would have to be picked up and sail shortened with little time to look about for the one or to tuck in the other. Out at

sea I found the size of the ship made little difference and I could as soon handle a 30-tonner single-handed as I would a 5-tonner. It is the going in or out of port where the difficulty lies. But I have many times done this quite alone, weighing anchor and all. I am quite willing, however, to confess that I would rather have a little help.

In harmony with this desire, I induced the carpenter to come for a week's cruise with me, as I saw I should never pick up a boy down there. I had indeed found one excellent lad who came for one day, the next day he came off saying his mother had been told that the yacht required three hands besides a boy and she was afraid to let him go. That is always my difficulty. In vain I sail the boat about alone; in vain I show how easily and comfortably one lives. How calm and tranquil is "the even tenor of our ways." No, it is always the same—"She is too big." "She wants three hands at least." However, I have never had them, and have finished my cruise of six months and only had one other hand besides myself all the time.

The carpenter turned out a great success, but he refused to cross to France. He had a wife and children, besides he was costing me more than I wished or had ever paid for a crew.

We sailed up to Fowey and Plymouth, and at the latter port, leaning over the wall above the landing place at the dock, was a short, grunt, youth, freckled and hard-favored. A 30-tonner was on the water and more garbled edition of the same kind. We talked a bit, did this hardy waterman and I. The conversation ended by the arrangement that the younger specimen should come aboard next day, and see if the berth would suit him—ten shillings a week and his food.

Next morning the freckled one turned up. It would suit him. We set sail and by evening were entering Helford River again, thirty-five miles. We were again in the gloaming, and the boy who rejoiced the heart of his family. While the boy was rowing the captain ashore I was cruising about in the moonlight, for I had made up my mind not to lower the sails again until I was in French waters.

It was a lovely evening, but very little wind. By the time the boy had got on board and the dingy was stowed on deck it was 10 o'clock. By midnight we were off the Manacle rocks, and by daybreak the next day the Lizard Light was still in sight. I never knew the sea so calm. All that day we had a very light air from the north, and carried all the sail we could. By 10 o'clock that night I saw a flash light, a twinkle, then darkness, and again a twinkle. It was Ouessant, called by the English Ushant. We had made more than eighty miles in twenty-four hours. Then there came up a haze, the light breeze dropped, and we spent the night swaying on the sea. We were in French waters.

At early dawn I saw a shadow, more shadows, many shadows. They were French fishing luggers. I hailed one, "Are we in the Chenal du Tour?"

"But yes; you have but to look and you will see the tower in another league or so."

This was reassuring, for to be lost among the rocks of that dangerous archipelago between Ouessant and the French coast, where the tides run like mill streams, averaging from six to eight knots an hour, and where there are innumerable sunken rocks lying ready for the luckless at all states of the tide, is not pleasant.

We drifted on. Have any of my readers tried to make an unknown port after 120 miles run in a fog? It is exciting—especially if that shore be hedged in by rocks, and reefs of sunken rocks with the heavy Atlantic swell always beating on them and a furious tide sweeping you toward them, and where, if you should be only a few miles out of your course, you might easily miss the land altogether and go on sailing on the same course for another 300 miles before reaching land?

This is the excitement I was now enjoying; but the freckled-faced one was enjoying his breakfast. His delight was less when he heard me talking French and listened to the answer in the strange tongue. He thought of the fruit, the grapes, the strawberries, the wine of that happy land, the "baccy" which could be bought for nothing, so he had been told in Plymouth. He ate his breakfast and grinned.

By 10 o'clock the fog lifted a little. Only its skirts, however, were raised, revealing what looked very like chaos, a confused jumble of dark objects, fading into the mists, yellow patches and a definite beginning of what seemed to be a tower. Ahead was a solitary cutter. Like us she was drifting with the tide. I steered toward her, but made little progress.

In another hour the fog had quite gathered itself up, and a hard blue line was spreading out behind us. Chaos had resolved itself into masses of wild rocks, over which the Atlantic swell was surging in booming rollers, intermingling sandy straits of St. Mathew's Abbey, and a few more minutes we had slipped into the slack water on the southern side of the promontory which divides the Chenal de Conquet from the Goulet de Brest.

But I beg pardon; I have over 2,000 miles to go; I must curtail descriptions. We reached Brest by three that afternoon. The port authorities examined the bill of health. It was a month old, but they were far too polite to say anything about that. I had a passport, a French maritime one costing two francs, I think, and "valuable for a year," after which I was free to go and come wherever I liked. Brest is a delightful place, but I must not describe it—no room in a yachting article. I explored all the ramifications of its splendid harbor and its two picturesque rivers, the Blouir and the Oulaine, and by the time I got to the freckled one had become quite expert in shortening sail and getting under way. It had been a little difficult, the first time as we entered Brest he did not like going aloft to unlace the jibed topsail. Poor boy, he had never been on board a boat any bigger than his father's wherry in his life, or any further out to sea than a mile or two beyond the breakwater.

From Brest we passed through the Tanagez de Toulouque, where there are some of the most magnificent rocks and natural arches, across the Baie de Douarnenez and out into the top of the Bay of Biscay through the terrible Raz de Sein. The tide here runs from eight to ten knots, and the rocks are more awkward than picturesque, which is saying a good deal. That night we lay off a little tidal harbor called Audierne, a place as pretty as its name.

Did not like the anchoring in an open roadstead, and the rolling we endured was abominable, but it was a choice of evils, and as the wind was off shore there was no risk. However, I started at an early hour next morning, and made short miles of it across the great bay of Audierne, heading for the celebrated Penmarc Rocks.

This is a very dangerous promontory, as the outlying rocks are found three miles off the shore, which is low and hard to see. The late Marquis de Blandy made the mistake of the expense of a new light-house, and the French Government has already begun the foundation of a tower which is to be 107ft. high. By the time we had reached these rocks a fairly nasty sea had got up and the waves were piling themselves over the wild reefs. Navigation began to get difficult. It was hard to distinguish the breaking sea where the rocks were, and I was very nearly making a mistake when the dark reactivity occurred and I saw that the Penmarc rocks were still further from the coast than I had reckoned. There are no rocks as bad as these anywhere along the English coast, unless it be the Sarn Badrig in Cardigan Bay. As I skirted the dreary promontory the sea generally became quieter, and as I came more on the wind, and under the shelter of the land the old ship made quick work of it toward the entrance of the Odet or Quimper River.

All this part of the low water is described in the Admiralty (English) sailing directions as being too difficult for a stranger to attempt to navigate. A pilot is indispensable.

Apparently it is not, for I found my way into the Odet River, and against an ebb tide, too, without any difficulty. The berth I picked up was a good one, and I stayed here some days.

Benodet, the village at the mouth of the Quimper River, is a very pretty little place, and the river is lovely, and the old cathedral town of Quimper, ten miles up, is most interesting and easily accessible. But to sea again.

From Benodet, which is some seventy-five miles from Brest, I cruised all along the coast, putting in at Lorient, and entering the Sea of Morbihan, most interesting of inland waters, where every rock almost bears the name of a saint. The sea was very calm, and the great thinker, orator and seducer of the twelfth century came floating over the rock-studded waters from the lonely ruins of St. Gildas de Rhy, the retreat of Abaelard, the lover of Heloise.

From Port Navalo, in the Morbihan, I crossed to Belle Ile, and marvelled as I navigated the wild archipelago of the Bay of Quiberon.

NOMAD.

[CONCLUDED NEXT WEEK.]

YACHT NEWS NOTES.

Clay & Torbensen, Gloucester, N. J., are building for L. E. Simon, Guantnamo, Cuba, a cabin cruising steam yacht, which when completed, will be one of the finest afloat. The dimensions are 54ft. over all, 10 1/2 ft. beam. Many novel features are embraced and the interior finish will be unusually attractive. The speed will be 12 knots, and the length will be finished in polished mahogany, and fitted with every convenience for comfort. The cabin, which is 8ft. in length, will have the interior finished in Cuban mahogany, artistically paneled and carved. The motive power will consist of a fore-and-aft compound engine and water-tube boiler, of ample power to drive the boat at a speed of 12 miles per hour without forcing. When completed she will be steamed down to Cuba by her owner.

Down Channel.

THE young Corinthian or singlehander of to-day, who finds his sport ready made to his hand, with cruising craft of every variety of model to be had at a reasonable cost from a builder's catalogue, has little conception of the trials and difficulties which beset his predecessor of forty years back. The greatest advantage however of the cruiser of the present day over him of 1850, is that he has the aid and stimulus of such able writers as the late Capt. John MacGregor and R. T. McMullen; two men who above all others have led the way to the cleanest, healthiest and pleasantest of outdoor sports. Although an ardent singlehander, Capt. MacGregor devoted himself mainly to the canoe, and in the trials of small yachts and singlehanded cruising made give place to his fellow Briton, Mr. McMullen. It is probable that two thirds of the small pleasure craft afloat to-day, are traceable to the writings of these two men. In this country at least, Mr. MacGregor's works are much better known, having been republished here many years since, but from the fact that they have never been republished here, and some of the earlier works have been long out of print in England, Mr. McMullen's cruises have been less widely read here than the fame of his work and his boats would warrant. The original book "Down Channel," narrating the early cruises of the Leo and Sirius, has been long out of print, and in republishing it with the later cruises, the name has been retained for the entire volume.

Mr. McMullen made his first cruise in the Leo, as a boy in 1850, and the last, in the Persius, in 1891, being found dead in the cockpit of the yacht. Some of the details of his life and his experiences of these forty years is quite without parallel, including months of solitary sailing, in all seasons, about the channel, as well as much yachting in company with friends and a paid crew. One of the chief charms of the narrative is its plain and unpretentious style, just what might be expected from the earnest and unassuming character of the man. The new volume has been compiled by Mr. Dixon Kemp, long a friend of the author, and is published by Horace Cox.

Rochester Yacht Club.

ROCHESTER, N. Y., Dec. 19.—At the annual election of the Rochester Y. C., the following officers were elected: Com., H. S. Mackie; Vice Com., A. T. Hagen; Fleet Capt., J. W. Robbins; Treas., W. E. Briggs; Sec., T. B. Pritchard; Cor. Sec., Herbert Leary. Directors, Rufus K. Dryer; J. E. Burroughs, T. G. Young, J. R. White. After the election the members sat down to an elaborate menu prepared by Teall, and it was well on toward the "wee sma hours" before the list of toasts was finished. Many a rollicking yarn of life on the foaming blue billows and the curling tales of hairbreadth escapes along the piratical coast bordering the northern shore of Lake Ontario, were spun. The old salts refreshed the green spots in their memories and laid gigantic plans for the coming season, while the newly enrolled members sat silent and awe-stricken at the abundant flow of narrative and departed for home with unbounded enthusiasm and increasing anticipations for the new and untried sport just promised for the summer season.

The election of Com. Mackie marks a new era in the life of the R. Y. C., and the club is to be congratulated on its good fortune in securing for its commodore so genial and affable a gentleman and at the same time a thoroughly practical and competent navigator. Under the new regime, important and novel features are to be added to the club's routine of business and pleasure. Among things promised by Com. Mackie will be permanent winter quarters, with the club's banner upon the outer wall, when during the winter months a school for the study of the science of navigation under competent instructors will be instituted. In the matter of accommodating guests during regattas and on club days, a large catboat is talked of, whereby the friends of club members will always be sure of a hearty welcome to take a delightful sail on these festive occasions. Great precaution is to be taken in the matter of appointing a committee, to select men who not only have the time but also the inclination to serve and the former proverbial apathy will be forever erased from the club's escutcheon and only sunny skies and fair weather leaver about the horizon of the club's future course.

HERBERT LEARY, Corresponding Sec'y.

Canoeing.

THE full report of the fall meeting of the Royal C. C., as given in the *Model Yachtsman and Canoeist* shows that our understanding of the new rules is correct, and that changes of a most radical nature have been made. The coming "canoe" of the Royal C. C. may be any sort of an under-rigged sailboat or miniature yacht within the extreme limits of 16ft. length over all, 3ft. beam, and a rating of 0.3. Some trial will be necessary to demonstrate the fastest possible machine under these new limitations, but there can be no doubt on one point, that whatever else she may be, the new craft will not be a canoe in the essential points of lightness, compact form and ease of handling; nor can she be the equal in speed of the American canoes.

Without going far enough into the question to plot a trial sketch we should say that this does not more than 14ft. waterline could be taken to advantage, as this gives only 129sq. ft. of sail, the allowance for 15ft. being but 120sq. ft. For the average racing weather we should take a shoal saucer form of nearly the full beam limit, 3ft., and of light displacement, with a large board. With 2ft. of over all length still left it would probably pay to put on about 8in. of after overhang, with a raking stempost and a full buttock line to give a little gain in length, while the other 16in. might well be worked into a Roman nose with little loss of weight and possibly a small gain in longer and cleaner diagonals. Such a boat would not be far from the present 16x30 canoe, though slower than the American craft through smaller sails; but she is the most moderate example under the rule; the chances are strongly in favor of monstrosities in the form of fins and bulb fins that will be useless, save for match sailing, and difficult in the extreme to handle, house and transport.

We know not which to condemn the most, the conservatism which for years has obstructed the development of canoe sailing in England, and which is still visible in the low limit of sail, or the anarchistic spirit of change which at one sweep has obliterated the canoe and substituted the diminutive "rater."

One very practical objection to the new rules is the vastly increased difficulty in measuring which must result, the whole complicated system which is necessary in yachting and entirely unnecessary in canoeing being adopted. The waterline must be marked and measured, and the sails must also be measured. Nothing could be simpler, easier or more satisfactory than the old rules in the matter of measurement, extreme length and extreme beam, as proved by long experience in England and America. The new rule promises greatly increased work for the measurers and also of disputes over marking and measuring.

THE A. C. A. rules are by no means perfect, and might be simplified with advantage in the matter of details, but they work well and tend to conserve the canoe form. We have for several years advocated the removal of certain structural limitations which are capable of evasion, and also of the limit of drop of centerboard, but retaining the present limit of 30in. beam and 16ft. length over all. The non-limitation of sail area has worked well in this country, and a change in this direction would be unpopular; but a limit of length of slide would be an improvement, the point to be at 4ft., or possibly 4ft. 6in. The new R. C. C. rules tend to separate still further, instead of uniting, British and American canoeists, and to prevent even more effectually that international racing which was so beneficial to both sides in 1886 and 1888.

We are indebted to Dr. J. Arthur Gage for the song which we publish this week, the air being composed by him to fit Miss Johnson's poem. The song was very popular in camp last year, and will be welcomed by many of our readers.

A. C. A. Membership.

THE following gentlemen, have applied for membership in the American Canoe Association: Atlantic Division—G. V. Packer, Trenton, N. J.

"In the Shadows."

Words by E. PAULINE JOHNSON.

Music by J. ARTHUR GAGE.

Andante semplice.

1. I am sail-ing to the leeward, Where the current runs to seaward, Soft and slow,..... soft and slow..... And the  
2. My ca-noe is grow-ing la-zy, In the at-mosphere so ha-zy, While I dream,..... while I dream..... Half in

si-lent riv-er grass-es Swish my pad-dle as it pass-es To and fro..... to and fro.....  
slum-ber I am guid-ing, In-dis-tinct-ly eastward glid-ing Down the stream,.... down the stream.....

CHORUS.

Then its to and fro, and soft and slow, I'll pad-dle in my bark ca-noe,..... Then its

ritard.

to and fro and soft and slow, I'll pad-dle in my old ca-noe.....

THE LOG OF THE FRANKIE.

The '92 Cruise of the Shenandoah C. C.

BY THE COMMODORE.

(Continued from Page 554).

FRIDAY, Aug. 6, 1892.—We got an early start this morning with Kemple's Falls as our objective, which place we reached in time for our noonday lunch, after which we went into camp for the rest of the day in order to enjoy the fine fishing here. Our morning's cruise was pleasant and full of events. The wilderness of reefs above the dam at Kite's mill required great patience and skill to successfully negotiate, and the old broken-down dam was successfully shot, although the chute was very rough and full of rocks.

We had a troublesome portage over the miserable brush and stone dam a mile below, which was finally accomplished by finding some pieces of boards among the drift along the crest of the dam and placing them on the rocks to slide the canoes over. The day was intensely hot, of course, and the glare of the sun upon the water would have been unbearable but for our colored glasses.

We picked our way easily through the intricate mazes of the half-mile of reefs below the dam and landed at the spring, a mile below, where George and I lunched last year, to refresh ourselves with a good drink of water. The several dams and rapids near Strickler's were next tested, as was also the rattling little fall at the cliffs below, which finally brought us to Kemple's—undoubtedly the roughest and worst place on the entire Shenandoah, with the exception of the six miles of river immediately above Harper's Ferry.

We fully expected to have a rough time of it here, and we were not disappointed, for if ever canoeists were knocked and banged and hustled around, we certainly were. We hadn't much trouble in threading our way through the intricacies of the reefs at the upper end, and then had the usual exhilarating rush down the "Devil's Run-path," where we received a few trifling bumps from the rocks owing to the low water.

We then followed the channel over the right, around the open end of the big navigation dam that puts out from the base of the cliffs along the left bank, and from here on down we had a rough time of it. At the end of the navigation dam, the channel twists sharply to the left; it is very narrow and swift, and there is a big rock squarely in the middle of it right at the point where it will do the most good; in trying to avoid shipwreck on the rock, I was swept bodily ashore or aground, on the reefs alongside the channel, and had to disembark and let my canoe down by the stern painter. Lacy shared the same fate, while George, profiting by our mishaps, did not attempt the shoot at all, but felt his way cautiously along the face of the dam and slipped over through a little gap further to the left, without getting out.

A couple of hundred yards below this is a large lift, fish dam, lying like a huge V, with the apex as usual down stream, and with a rough shoot at the point filled with rocks, over and among which the water rushed and roared in resistless fury. I landed at the dam alone and examined the shoot carefully with my pike pole and decided to essay it, so I returned to my canoe, re-embarked, and with closed hatches and apron pulled up to my chin, I headed the Frankie down the dam; she took the plunge gallantly, but smashed up on the rocks at the foot of the fall with such force that I was nearly pitched out head first.

The rock held my keel firmly, and the boat hung fast right in the full force of the fall, while the water swept in a great sheet over my decks and closed hatches. The canoe careened until I was nearly capsize, and then swung round, grinding her keel to splinters on the pivot rock, until her bow was directly up stream and high out of the water. It was impossible for me to work her off, so all there was left for me to do was to step overboard nearly up to my waist and lift her off, which I did with as much grace as I could muster under the circumstances.

Lacy, who sometimes exhibits considerable sense, showed his presence of mind on this occasion by promptly declining the shoot and quietly disembarking on the side of the dam a short distance above, as soon as he saw my predicament, and lifting his canoe over the dam, re-embarking below, while George, who dearly loves a good stiff shoot, could not resist this one, but came shooting down by me while I was still hanging on the rock. He swerved a little further to the left, however, and missed the rocks by a hair's breadth and passed on with flying colors.

The final plunge of the falls is very bad, much the worst of all, and another big island in it, the counterpart of the one just passed, didn't improve it, and the shoot at the apex was plainly impracticable. We had trouble in negotiating this dam last year, so George, who was in the lead, when he reached it, made no attempt to run it, but compromised by beaching the Shenandoah on the flank of the dam close to the right bank, lifting her over into the swift water below and letting her drift ahead of him at the length of her painter as he waded down the final steep slope of the rapid to the still, deep water below, now and then giving her a lift or shove off the reefs as she occasionally hung.

I had a theory, founded on my last year's experience, that with a little more care and coolness I could navigate this nasty little piece of

water; so by carefully backing and filling I got around the dam at its upper left hand end and carefully slipped through the maze of reefs at hand into a clear little passage that led down along under the face of the dam to its point, and thence down to deep, clear water below. I shot down this easily without touching a rock, followed by Lacy, and the falls were run.

We went into camp a quarter of a mile below on our last year's camp ground at Keyser's, so as to have a little fishing at this usually fine fishing place; and after lunch the tents were pitched over the canoes, and George and I went up into the falls and fished all the afternoon with very good success.

We felt our way across the river on the navigation dam and fished on the other side in the shade of the cliff, and in doing so discovered a clear, clear little channel through this very troublesome middle part of the falls, which will much simplify our passage through at another time if we can slip over the dam. With a vivid recollection of the excellent biscuit we procured here last year, I had Miss Bettie Keyser bake us five dozen this afternoon—they proved to be fully up to her usual high standard.

We brushed the sand and mud off our canoeing costumes, shaved and otherwise made ourselves as decent and presentable as possible under the circumstances and spent the evening at Keyser's, very pleasantly entertained by Miss Bettie and younger sister. They have a very nice parlor organ and I gave an impromptu musicale.

Saturday, Aug. 6.—We got a good early start this morning, and before 8 o'clock we were packed and afloat again, and the cruise resumed. Miss Bettie and her sister came down to see us start, and ran and landed on the bank until we passed around the bend a short distance below and out of sight. We found the Newport mill dam, a mile below our late camp, had been rebuilt and the shoot over by the bank was no longer open, so we were forced to make a plunge, which we easily did by simply sliding the canoes, with closed hatches, over the crest of the dam and pitching them head first into the deep water below, while quite a little crowd of spectators looked on from the mill.

The stiff little rapid below the dam was easily shot, and we landed at the spring at its foot for a drink, and in fifteen minutes we were pitching and tossing down the Columbia Falls. These falls, while longer than Kemple's Falls and very rough, being fully a mile and a half long, are not nearly as troublesome to negotiate; and while we had to exercise great patience, care and skill, we experienced no special difficulty in running them, the lower half mile being the roughest and worst.

We found a gang of men and teams engaged in rebuilding and enlarging the already huge fish dam at the foot of the falls, and our jump over this dam was quite exciting and was watched with great interest by the workmen engaged on the dam. We landed at the fine spring in the bank a hundred yards below the dam for a drink and a smoke, and then had a pleasant uneventful hour's cruise to Lacy's.

Much to our happiness we found that the beastly old brush mill dam here, probably the meanest to portage on the entire river, had been completely removed, the mill also being torn down, and we passed this erstwhile troublesome place with no trouble at all.

Half a mile below is the little white farmhouse up on the hill, where the "Jersey mansion" lives, and of course the boys could not pass without landing and going to the house for a drink of water from the big iron-handled pump in the shed, and to purchase some canteloupes. They were rewarded by a glimpse of the "Jersey" who is most amusingly shy, as many of the back country girls are. The two or three smaller girls of the family—half-grown children—proved to be by no means so shy, however, as they followed us back down to our canoes to see us start, and then trotted along down to the river bank to the old stone dam a hundred yards below, to see us jump it, which we did successfully.

We soon reached Massanutton, or White House Ferry, where the road winding around among the defiles of the Massanutton Mountains from New Market to Luray, crosses the river, and where we have always heretofore camped, and where George and I spent Sunday last year, but we decided not to stop here this year, as the place offers such poor facilities in the way of a camp ground, but to drop down eight miles further to Bixler's Ferry, where there is a fine spring on the bank at the water's edge as well as better camp place.

We didn't find Postmaster Strickler at the store and post office, but Miss Minnie was in, and she welcomed us so nicely and did the honors of the office and store so gracefully that we were quite reconciled to the absence of her father. We did not see Mr. Brubaker either, who had left the white house (which stands abandoned and empty) and moved into a fine new brick mansion a little further back from the river. We exchanged mail with the ones at home while here, and the boys wrote their Berryville friends to meet us with their picnic party at Castleman's Ferry on Thursday next, as we expect to reach that point on our way to Harper's Ferry about that time. We expect to reach Harper's Ferry on Friday evening and return home (by rail) on Saturday.

We took lunch in a light sprinkle of rain on our last year's camp ground, and at 2 o'clock pushed off from the ferry bank and turned our bows down the river with Bixters as our objective. We easily negotiated the dam at Mark's Mill, around the bend below, by running

the canoes up in the shallow water at the left end of the dam, where there was an overflow running down the sloping face of the dam, until they grounded, and then stepping overboard and easing them down the slope until deep water was reached in the boat channel below.

As we progressed further down the river we were struck with the number of fish jumping out of the water on all sides, and they were especially numerous below the dam. George has kept our table pretty well supplied with fish during the cruise by keeping his rod and fly tackle handy on the deck of his canoe and whipping the stream at likely places. I have done but little fishing of this kind this cruise, as it seems to be too much trouble.

New York C. C.

The disaster of last October has proved a serious one for the New York C. C., so much so that the future of the oldest canoe club in the United States is just now very doubtful. Besides a very heavy individual loss to members, in canoes and other property, the club loss, the expense of raising the scow and repairing the house, will amount to about \$1,000. Even with this heavy item covered and the house once more in good condition, the question of a safe anchorage still remains. The impossibility of securing such an anchorage at Bensonhurst has suggested the return to Staten Island, the old home of the club, but even there the anchorage difficulty is a serious one, and involves the danger of another expensive wreck.

The club has fully demonstrated, by a series of expensive experiments, that a floating house is impracticable in any location on Staten Island or the Gravesend shore which gives a suitable sailing ground, and a shore house is the only possible resort. The high prices at which the waterfront is held offer a serious obstacle in this direction, and what course will finally be decided on is still doubtful. The club is now desirous of selling the present floating house, the hull being comparatively new and perfectly strong and sound, while the roof and framework of the structure are unimpaired, only the siding being damaged. After being raised the house was towed to the builder's shipyard, and the slight damage to the hull made good. The position of the club at the present time in membership and finances apart from the special expense of the wreck, is very satisfactory, the fleet is enlarging every year, especially in the direction of canoe yawls and small cruisers; and, apart from the purely canoeing features, the club is the best located and most promising of the boat sailing organizations about New York. With a suitable shore location on Gravesend Bay, and the increasing facilities for access from New York, it offers exceptional advantages to canoeists and boat sailors, and any change of location or other backward step would be a serious loss to local canoeing and sailing.

The annual meeting of the club was held on Dec. 20, the following officers being elected: Captain, H. H. Smythe; Purser, Wm. Whitlock; Trustees, F. C. Moore, Geo. H. Daley and C. J. Stevens.

CANOE NEWS NOTES.

Congratulations are in order. Rear-Com. C. F. Schuster, Jr., of the Eastern Division, was married on Wednesday, Dec. 20, at Holyoke, Mass., and on Thursday, Dec. 28, Mr. Louis S. Drake, a well known member of the Newton Boat Club, of Newton, Mass., is to become a benedict.

Rifle Range and Gallery.

Our Turkey Shoot at Akin.

When I awoke Thanksgiving morning and heard the wind rattle the slats of the window blinds, and the rain drops pattering against the glass, I thought the prospect rather discouraging for our turkey match at Akin. But about 9 o'clock the wind lulled, the rain, with the exception of an occasional flurry, ceased, and grasping rifles and ammunition cases we boarded an electric car for Akin. When we entered we found the car pretty well filled with a party of riflemen who had come up on the early morning train, some of them were from Albany, and some from Schenectady. It was our first meeting since the turkey matches of last winter and our greeting was rather hilarious.

Akin is only about two miles from Amsterdam, so we reached our destination before we got really quieted down. We went over to Groat's Hotel, where the match was to come off. Against the wall of the sitting room several handbills were displayed, announcing that 25 turkeys and 100 chickens were on hand for the sportsmen to practice on. That was good news, though we afterward found the number of fowls was slightly exaggerated.

The first thing in order was to inspect the proposed range, a new one that had never been shot over. It ran straight away across the Mohawk flats for about forty rods, then across the Mohawk River and Erie Canal and up a slope to a lone apple tree. The distance was supposed to be about eighty rods, but it certainly looked to be nearer half a mile than a quarter.

Harry Coats took his rifle out of the case and fired several sighting shots, using the same elevation that he usually did for 80 rods. We looked closely and carefully through a good field glass, but could not spot one of his bullets. They either fell way short, or struck so dead in the sand that we really did not throw any dirt.

This was a great disappointment to us, if it would be useless to shoot unless we could see where our bullets struck. While we were lamenting the landlord came down and asked us what we thought of the range. We told him it was no good in its present condition, with snow on the ground it might be all right. So, after some talk, it was agreed to abandon the long range and shoot over the 40-rod offhand range below.

The firing point for this range was from the hotel piazza, and we were to shoot up against a very steep side-hill, the pitch was, in fact, nearly as great as an ordinary shingle roof, and made it somewhat like shooting game out of a tree.

The turkeys were carried up, and one of them was tied to the stake, the landlord acted as score-keeper, and called for the names of all who intended to shoot. Eleven men registered. No. 1 toed the mark, and the first three shots he fired. The first three shots he fired, stepped to the firing point. He was armed with a Winchester repeating rifle, 45-90-300, and when he raised it to his shoulder and took aim the crowd of spectators who stood near, and partly in the line of fire, shrank back as far as possible, while still gazing intently at the turkey, who was then sitting down comfortably in the dead grass and preening his feathers.

The turkey was shot, and an instant after the roar of that enormous charge was heard, there was a great commotion in turkey. The bird sprang instantly to the limit of his tether, then with many vigorous flops and bounds he whirled round and round, and over and over, while his great strong wings beat a rapid tattoo against his sides or the ground. The commotion soon subsided, and he turned partly over and was still. Then a mighty yell arose from the crowd, and they were all congratulating the lucky rifleman over his splendid shot.

When the turkey was shot, the landlord said he did not waste any time looking for blood, he saw at once that the turkey was very dead, so he cut him loose and tied on another bird.

The landlord gazed reproachfully on the author of the mischief, and remarked that if we kept on at that rate there wouldn't be much profit in it for him, as he had lost a dollar and a half turkey and only forty cents was on the book for shots. He was assured that it was an accident, and the price was raised again very soon, and after moving us back along the piazza a little further the match was allowed to proceed.

There were but few rules and no formality about this match; it was in fact, a free-for-all, go-as-you-please affair for everybody, and all appeared to enjoy themselves to the utmost. The spectators, of whom there were a hundred or less, walked round freely among the shooters, and took part in the conversation, and with either a total disregard of consequences or else a trust in Providence, they were not at all startled, if not startling, to an observer at all accustomed to the rules and regulations enforced on an established rifle range. It may be that for this occasion the

"Sweet little cherub that sits up aloft"

"To keep watch for the life of poor Jack," like some of the city boys, had his precinct changed, and been assigned to the special duty of looking out for the turkey, and the reckless fools who deliberately walked around in front of loaded and cocked rifles.

The shooters were mostly armed with repeating rifles, and the shooting was very rapid. Shortly before noon I downed No. 10 turkey, and stopped the match until after dinner, because that was the last one they had on hand. The landlord assured us, however, that there would be plenty more ready for us after dinner, and at once reached up his team and started one of his men off to a neighboring room to get some more, and we adjourned to the sitting-room to discuss the match and await a summons to dinner.

So far as we had gone the cost of shots and value of turkeys very nearly balanced, and as the bar trade was good the proprietor had very little reason to complain.

When we were summoned to the dining room we found as good a dinner as was ever set before hungry men, and the morning's sport had given a keen appetite for its enjoyment. Then, with the inner man well braced up and every one in the best of humor, we again gave our attention to the turkeys.

The man had returned from his call on the farmer and had brought back two turkeys with him; they were good ones; the combined weight was a little under 20 lbs. and he would be got that day, and the landlord said when we had them killed he would set up chickens

THE INTER-STATE M. AND D.

THE Interstate Manufacturers' and Dealers' Association held their annual meeting at Taylor's Hotel, Jersey City, Tuesday, Dec. 19. The meeting was called to order by President Chas. Tatham, and the call of roll showed the following present: Messrs. Chas. Tatham, J. A. H. Dressel, J. Von Lengerke, H. A. Penrose and Noel E. Money. Messrs. George H. Sampson, O. D. Delano and Colt's Patent Fire Arms Manufacturing Co. were represented by proxy.

The minutes of last meeting of stockholders were accepted as read. Report of treasurer was accepted and ordered filed. Report of manager, on motion, was accepted and ordered filed.

The secretary was instructed to cast an affirmative ballot electing the old board of directors. Stockholders' meeting adjourned.

The meeting of board of directors was immediately called to order with Mr. Charles Tatham temporary chairman and Mr. H. A. Penrose temporary secretary. The following officers were elected to serve during the year 1897:

Mr. Chas. Tatham, President.  
Mr. O. D. Delano, Vice-President.  
Mr. J. Von Lengerke, Secretary.  
Mr. J. A. H. Dressel, Treasurer.  
Mr. Elmer E. Shaner was reappointed manager.  
On motion the following committees were appointed:  
Executive Committee: J. A. H. Dressel, J. Von Lengerke, Charles Tatham.  
Classification and Tournament Committee: J. Von Lengerke, Noel E. Money, H. A. Penrose.  
Club Organization Committee: H. A. Penrose, J. Von Lengerke, Noel E. Money.

After an informal discussion of plans, etc. for next season, the meeting adjourned.

Manager Shaner's report reads as follows:

The I. M. and D. A.

The Interstate Manufacturers' and Dealers' Association was incorporated under the laws of New Jersey, October 27, 1892, Mr. Chas. Tatham, Mr. J. A. H. Dressel and Mr. George H. Sampson being the incorporators. By the name the association exists until January 1, 1942. Outlined in the charter are the association's objects: To encourage field and trap-shooting throughout the United States and territories by organizing and assisting to organize clubs for that purpose; to give shooting tournaments and to distribute to sportsmen the prizes therefor. The association organized by the election of the following Board of Directors: Chas. Tatham, President; O. D. Delano, Vice-President; H. A. Penrose, Secretary; J. A. H. Dressel, Treasurer; Geo. H. Sampson, Justus Von Lengerke and Noel E. Money. Elmer E. Shaner was appointed manager.

The Great Live Bird Shoot.

The inaugural tournament for 1897 was the "Grand American Handicap" at live birds, which was decided at Dexter Park, L. I., April 5, 6 and 7. This event was at 25 live birds, \$35 entrance, 21yds. boundary around each trap, handicaps ranging from 25 to 33yds., and the three highest scores to take the purse. The Interstate Manufacturers' and Dealers' Association added \$200 to first money. There were 21 entries and 3 forfeits. Robert A. Welsh won first money, \$477.60; Noel E. Money won second money, \$166.50; George Work won third money, \$111. During the tournament 1,356 live birds were trapped.

The success of this handicap led the association to decide on a similar contest for 1894, under slightly altered conditions, viz.: 25 live birds, \$35 entrance, 50yds. boundary with a dead line, handicaps ranging from 25 to 33yds., and \$1,000 guaranteed by the Interstate Manufacturers' and Dealers' Association. There is every reason to believe that in course of time this contest will be looked upon as the greatest pigeon-shooting event in the United States, and will attract shooters from abroad.

On Jersey's Soil.

The second tournament was given at Passaic, N. J., May 19 and 20, under the auspices of the Passaic City Gun Club, and \$500 were guaranteed by the Interstate Manufacturers' and Dealers' Association. Forty-five shooters took part. There were ten events each day. Average entry first day 23<sup>10</sup>, second day 23. 6,255 targets were trapped in regular events. Total amount of money divided in purses was \$770. Total amount of surplus money was \$41.99.

Down the Ohio.

The fourth tournament was given at East Liverpool, O., July 12 and 13, under the auspices of the East Liverpool Gun Club. Four hundred dollars were guaranteed by the Interstate Manufacturers' and Dealers' Association. Thirty-five shooters took part. There were ten events each day. Average entry first day, 31<sup>10</sup>; average entry second day, 18<sup>10</sup>; 6,370 targets were trapped in regular events. Total amount of

money divided in purses was \$787.50. Total amount of surplus and average money was \$150.55.

Recapitulation.

Number of tournaments given.....	7
" " shooters taking part.....	231
" " targets trapped.....	47,530
" " live birds trapped.....	1,336
Amount of money divided.....	\$5,610.75

Novelty Rule.

All target events were shot under the Novelty Rule which is as follows: Five traps are used in a straight line, 5yds. apart, placed 14yds. from the score, with 3 traps in a straight line, 10yds. apart, placed in the field 35yds. from the 5 traps. The outside traps are numbered 6, 7 and 8. No. 1 will throw a right-quarterer, No. 2 will throw a left-quarterer, No. 3 a straightaway, No. 4 a right-quarterer, No. 5 a left-quarterer, No. 6 right-quarterer income, No. 7 straight income and No. 8 a left-quarterer income. All traps to be pulled by the indicator and shooters get targets from any of the 8 traps. Unknown traps, unknown angles, different distances.

With Our Kind Regards.

In closing this review we would state the foregoing is an accurate transcript taken from the cashier's books.

We would also announce the Interstate Manufacturers' and Dealers' Association will give a series of tournaments during 1894.

Clubs desiring the Association to give tournaments under their auspices should make application early, bearing in mind that the Interstate Association carries all paraphernalia necessary to conduct a first-class shooting tournament. Respectfully yours,

THE INTERSTATE MANUFACTURERS' AND DEALERS' ASSOCIATION.

The Grand American Handicap

At live birds will take place at Dexter Park, New York, April 4, 5 and 6, 1894.

The conditions are 25 live birds, \$25 entrance, 50yds. boundary and \$1,000 guaranteed by the Interstate Manufacturers' and Dealers' Association. Programmes containing full information will be ready Feb. 10, 1894.

Trap at Watson's Park.

BURNSIDE, Ill., Dec. 5.—The following is the score made here to-day by Chicago Shooting Club, 15 live birds, new club medal, Illinois State rule:

Answers to Correspondents.

No notice taken of anonymous communications

W. J. F., Marion, O.—Will you please inform me through your paper whether the Mongolian pheasants used for stocking purposes are the silver and golden varieties or some single and distinct variety? Ans. Silver and golden pheasants are included under the general name of Mongolian pheasants. But as now used the term refers usually to the ring pheasant (*Phasianus torquatus*).

C. L. H., Scranton, Pa.—Will you please inform me as to—1. The best time to sow wild rice in Florida? 2. What is the best way to sow it and will it grow in brackish water? 3. Do you consider wild celery as good to sow there as the rice? 4. Where can I find the rice? Ans. 1. Immediately after the crop is ripe and the seed can be procured. 2. Sow it in places where the water is sluggish and there is a muddy bottom. Soak the seed first in water, so that it will at once sink to the place selected and not be drifted away by wind or current. It will thrive in brackish water. 3. Yes. 4. If possible arrange with local parties to gather it for you.

SAVE YOUR TROPHIES.

Write for Our Illustrated Catalogue  
"HEADS AND HORNS."

It gives directions for preparing and preserving  
Horns, Antlers, etc. Also recipes for Heads and  
Bugs, Birds and Fish, and all kinds of work in Taxidermy.

Hints

for making the GAME LAWS  
IN BRIEF more useful to  
shooters and fishermen will  
be gladly received. The  
BRIEF is handsomely illus-  
trated and costs only 25 cents.  
Forest and Stream Pub. Co.

FROM the first issue of this paper it has been used, and for nearly twenty years this particular space has been occupied by

ABBEE & IMBRIE,

who now say that only 25 cents, per advertising at least for the present.

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silks and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliances necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NEMMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages. 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksman; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, \$7. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/4. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.
